That expressions of community sentiment are so frequently negative may seem surprising in view of the findings of current studies, reported in the preceding chapter, that roughly half of the white population of the United States expresses willingness to live in the same neighborhood with Negroes. But, as was pointed out in that chapter, this balance between expressions of willingness and of unwillingness to live near Negroes probably does not represent an even balance between approval and disapproval of mixed neighborhoods. Many of the people who express willingness to accept Negro neighbors may be indifferent rather than actively in favor of mixed neighborhoods, while many of those who express unwillingness to have Negro neighbors may be strongly opposed.

Perusal of reports of several instances of neighborhood protest suggests a number of additional, though closely related, clues as to the reasons for predominantly negative expression of community reactions.

First, there is seldom any evidence as to <u>how many</u> of the neighbors are opposed. One letter of complaint, one threatening telephone call, may be enough to convince the prospective seller that his neighbors object. A colleague has related to us an incident in which acceptance of a single complaint as evidence of neighborhood opposition would have been quite misleading. Since he was about to leave the small midwestern community in which he had been living, it was necessary to sell his home. Partly as a result of a public statement in which a good many residents of his general neighborhood had expressed approval of residential integration, he decided to make the house - which was in an all-white neighborhood -

available for sale without regard to race. However, he was not acquainted with the views of many of the residents of his immediate block. He did know that one woman had previously expressed opposition to the idea of admitting Negroes to the block. When it became known that our colleague's house was for sale, and after a prospective Negro buyer had visited the house, this woman called on the prospective seller and expressed the hope that he would find "a nice new neighbor for us." In the light of her previously expressed views, the prospective seller took this to be a subtle way of requesting that he not sell the house to a Negro family. Concerned lest this might represent the general feeling on the block and thus that the Negro family, if they moved in, would be met with general hostility, he made inquiries about the probable reactions of other neighbors. He was assured that several of them would be very much in favor of the idea of making the house available to Negroes, and so he decided to continue with his plan - which he might have abandoned if he had accepted without question his first assumption that the opposition of one neighbor represented the general reaction.*

- - - - - - - - - - -

*Personal communication from Murray Horwitz.

- - - - - - - - - - -

Sometimes, of course, the rest of the community does share, or is led to share, the views of the protestors; in the case of the Sing Shengs, reported in the prededing chapter, the overwhelming vote, by secret ballot, not to admit the Oriental family into the community seems clear evidence that the objectors were not a minority. Where the objection is registered not by secret vote but by signatures on a petition, the status of community opinion is less clear. It appears that some people sign protest petitions, not because they themselves object to the presence of a nonwhite family, but as a result of pressure from the circulators of the petition and their own desire to "get along with the neighbors."*

- - - - - - - - - - -

*Such a situation is reported, in the case of a Japanese-American family in a town in California, by Robert H. Sollen, in Property and Prejudice, p. 76. Unpublished

manuscript prepared for the Commission on Race and Housing, 1956.

- - - - - - - - - - -

The number of names on a petition may be misleading in another way; the persons who sign may be genuinely opposed to the sale, but they may not be the persons most directly concerned. In the case of a petition protesting the sale of a home in a California town to a Mexican-American family, the white seller reported that, of the twenty names on the petition, only three were "immediate neighbors."*

- - - - - - - - - - -

*Robert H. Sollen, op. cit., p. 74.

- - - - - - - - - - -

In general, then, it appears that persons who are opposed to the presence of a nonwhite family are more likely to express their views, and to express them more vigorously, than those who are not opposed. This is a common phenomenon with regard to many controversial issues; if it appears that a certain action is about to be taken, there is obviously more incentive for those who are opposed to it to speak up, in order to head it off, than there is for those who are not opposed.

A second, and closely related, clue to the generally negative character of expressed neighborhood reactions to the anticipated coming of a nonwhite family is that those who are opposed usually speak out <u>sooner</u> than those who are not opposed. This seems to be partly due to the fact that in many communities there are organized channels for the expression or mobilization of opposition - real estate boards, for example, or home owners' associations devoted to the objective of keeping the neighborhood "pure" - whereas often there are no individuals or groups who have as a major function the expression or organization of support for mixed neighborhoods. Moreover, opposition, if it is to be effective in preventing the entry of a nonwhite family into the neighborhood, must be expressed quickly; approval is frequently not expressed except in reply to opposition.

The importance of the <u>first</u> reactions in setting the tone of subsequent behavior of other people is commented on by Kohn and Williams in an observational

study which involved the introduction of Negroes into situations where they had not previously been present - neighborhood bars, meetings of voluntary organizations, adult education classes. They point out that one of the characteristics of such novel situations is that patterns of appropriate conduct have not been established, and many participants are confused about how to react. This uncertainty about what is appropriate behavior, they note, is characteristic also of situations where the definitions of appropriate conduct are in process of change.

> In the situations studied, the participants who were primarily confused actively sought cues from others' behavior that could be useful in clarifying their own definitions of the situation. Where formal leadership roles existed, other participants turned to the presumed leaders for clarification. Members of organizations almost invariably took their cues from the presiding officers -- if the club president greeted a Negro lecturer warmly, the members were likely to listen to his speech attentively. Similarly, waitresses and bartenders studied the reactions of owners and managers for hints as to whether or not service to Negro patrons was in order.
>
> But in the nature of the case it most often happened that the people in leadership positions were themselves confused; for them the situation was not structured enough even to suggest where to turn for clarification. In consequence, action on the part of any participant became disproportionately important in determining their definitions. Expressions of discomfiture on the part of any customer were taken as an index that "the customers" objected to the presence of Negroes. Direct intervention on the part of a customer almost invariably proved decisive. If any white undertook to act as intermediary for a Negro patron, by ordering a drink for him, or buying him a drink, the bartender served the Negro. Even if the white were a disheveled drunk with a friendliness born of liquor, the bartender was likely to take his action as an index that the customers did not object to his serving Negroes. The possibility that the drunk's attitudes were atypical of the attitudes of other customers was for the moment ignored.*#

*Melvin L. Kohn and Robin M. Williams, Jr., "Situational patterning in intergroup relations," American Sociological Review, vol. 21, no. 2, April 1956; pp. 164-174 (quote on pp. 168-9).

#Kohn and Williams believe that this decisiveness of the first expressed reaction for setting the tone of behavior holds only in the case of participants who are confused about what behavior to expect from others and what is appropriate action to take themselves. When an individual has reasonably definite, but contradictory, expectations of how others will act and how he himself should act, or where different individuals have definite but contradictory definitions of appropriate behavior, Kohn and Williams believe that other processes will determine the outcome. But it

seems to us that the first expression is likely to be an important determinant even when there are "reasonably definite" expectations, so long as there is any element of uncertainty.

- - - - - - - - - - -

The combination of earlier and more vigorous expression of objections buttresses the impression that dominant community opinion is opposed to the entry of the non-white family. A third clue relates not so much to the development of the impression of predominant community opposition but to the apparently greater effectiveness of expressions of opposition than of support. It seems likely that the arguments used by persons who oppose residential integration are generally more effective than those offered in favor of it, for the reason that they involve predictions of direct consequences while arguments in support of integration tend to involve abstract appeals. The persons who oppose the coming of nonwhite families predict that their presence will lead to a decrease in property values, or will increase delinquency rates, or in some other relatively specific way will make the community less desirable. Or they threaten the prospective seller with specific consequences, which may range from following him to his new neighborhood to tell his white neighbors there how he has "betrayed" his race,# to physical injury to himself or members of his family.

- - - - - - - - - - -

#Abrams reports that on occasion representatives of home owners' associations in Chicago have in fact gone to the neighborhood into which a man has moved and have publicized the fact that he sold his former house to a Negro. Charles Abrams, Forbidden Neighbors: A Study of Prejudice in Housing, p. 110, Harpers, New York, 1955.

- - - - - - - - - - -

Arguments in favor of integration tend to be less vivid; they concentrate on denying the opposition predictions, such as loss of property values, or they appeal to abstract values, such as human rights or Christian brotherhood, whose relevance to the decision is less apparent than is that of the arguments of the exclusionists.

It seems, then, that for most white Americans social considerations are associated with the question of living in an interracial neighborhood, that their influence is strong, and that this influence is likely to be in the direction of

segregation. But there are, of course, individual differences. The strength of the association between social considerations and the idea of living in a mixed neighborhood, the importance attached to social approval and disapproval, and even the direction in which social factors influence action, depend in part on characteristics of the individual and of his social situation.

For example, the security or stability of the individual's own social position may affect the extent of his concern with the social-status implications of living in a mixed neighborhood. There is some suggestion that individuals who are in the process of moving from one socio-economic level to a higher one, or who hope to do so, may be especially sensitive to the status-threat presented by a Negro neighbor. If it is true, as has sometimes been reported, that there is less disruption following the moving of a Negro family into an area of expensive housing than into less expensive housing, this may be partly attributable to the relative security of upper-income white families about their own social position.

It may occasionally happen that social considerations operate "in reverse" -- an individual's behavior is motivated by resentment of social pressures or by antagonism toward his neighbors rather than concern for them. A woman in Dallas is reported to have willed her home, in a fashionable all-white district, to the National Association for the Advancement of Colored People, to spite her neighbors, who had obtained a court ruling that she must remove a ship which she had placed in her back yard.* The man in South San Francisco who had sold his home to the

- - - - - - - - - - -

*"Feuding Dallas Woman to Sell Home to Negro," Chicago Daily News, January 25, 1956.

- - - - - - - - - - -

Sing Shengs (see preceding chapter) is reported not to have felt strongly about the matter until, as he said, "I started getting threatening phone calls and was smeared by pressure groups. Now I'm all for Sing."* Despite the unusual direction

- - - - - - - - - - -

*Earl Raab, "Where Bigotry Won an Election," A.D.L. Bulletin, March 1952, pp. 4-6.

- - - - - - - - - - -

of these reactions, it seems clear that they were the result of social considerations rather than of the individuals' own racial attitudes.

Other individuals may act in a way which is disapproved by their neighbors simply because the neighbors are not an important "reference group" for them - they do not care what the neighbors think. Kerckhoff, in his study of two streets in Detroit which were shifting to Negro occupancy, interviewed the first few white families on each street who had sold their homes to Negroes. On each street, he found that the first sale to Negroes was made under conditions which made it important for the owner to sell quickly and at a good price, and no potential white buyer appeared. The second sale on each street, he found, was made by people for whom the neighbors were not an important reference group. One was a woman who was an isolate in the community, was out of town for long periods, never visited with any of her neighbors or had more than casual conversation with them. The other was a couple who had never gotten along well with their neighbors; rather wealthier than most of the residents of the block, they were oriented toward a "society page" group, and moved to a fashionable suburb rated highly by members of that group.*

- - - - - - - - - - -

*Kerckhoff, op. cit., pp. 10-18.

- - - - - - - - - - -

The strength of the association between social considerations and the idea of living in a racially mixed neighborhood may be affected by specific circumstances. A real estate dealer's remark, "Of course you don't want to buy a house on that block, there are colored people there," or a neighbor's angry telephone call, may be powerful reinforcers of the association between the concern for social approval and residential segregation.

A major factor in determining the direction of influence by social considerations - that is, whether they lead toward or away from acceptance of an unsegregated neighborhood - is the position taken by groups which are important to the individual.

The person who is oriented toward some subgroup which favors integration - one who is, for example, a member of a professional or a religious group which has taken a stand in favor of integration - may find in such a group sources of support which outweigh his neighbors' disapproval. The greater the number of respected individuals or groups in a community which have taken a position in favor of non-segregation, the greater is the possibility that social considerations will influence the decision in that direction.

An interesting example of action based on this principle occurred in Champaign-Urbana, Illinois, where a group of citizens placed a full-page advertisement in the local paper. Addressed "To our fellow citizens," the statement began:

> We believe that many among us will welcome an opportunity to make known to the entire community our individual commitment to democratic principles.

It continued with an affirmation of "faith in an unsegregated community," with no racial, religious or nationality distinctions in employment or housing. The reference to housing read:

> We believe that any family should be free to choose its place of residence. We would welcome neighbors on a personal basis without regard to race, creed, or country of origin.*

- - - - - - - - - - -

*The News Gazette of Champaign-Urbana, Illinois, April 22, 1956; cited in Community, Vol. 18, No. 10, June 1956, Friendship House, Chicago.

- - - - - - - - - - -

The names of 1,341 citizens who had signed the statement filled the rest of the page.

Expected Consequences other than Social Approval or Disapproval

A great variety of anticipated consequences for the individual, in addition to social approval or disapproval, may influence his behavior regarding interracial neighborhoods. Some of these may be unique to a particular situation. But there seem to be at least three kinds of possible consequences which occur sufficiently

often to merit discussion. These have to do either: (1) with the quality of the housing and/or of the neighborhood in which one will live as a result of the action taken, (2) with the direct financial consequences of the action or (3) with objective rewards or reprisals which other persons may offer or inflict as tangible evidence of their approval or disapproval of the behavior.

It goes without saying that among the major considerations in the selection of a home are characteristics of the house itself: its attractiveness, the quality of its construction, its appropriateness in size and other respects to the needs of the family, its convenience to the wage earner's place of employment. Characteristics of the neighborhood which influence its desirability, quite apart from its racial composition, are also taken into account. The expectation that a given house will provide a more pleasant and comfortable setting for family living than other available housing may constitute a strong incentive for moving into, or for remaining in, a neighborhood.

Mayer, in his analysis of forces influencing white residents to remain in or to leave a neighborhood in Detroit into which Negroes were moving, listed a number of influences of this type. Inadequacy of community facilities - such as schools, shopping and recreational services - or their anticipated deterioration, appeared among reasons for leaving the neighborhood; so did the availability of desirable features (more modern kitchens, more economical heating systems, etc.) in new houses in other areas. On the other hand, of the four reasons which he identified as operating to keep people in the neighborhood, three had to do with the desirability of the houses and the neighborhood facilities: (1) Houses in the area are "a rare bargain compared with what can be obtained in the suburbs and newer parts of the city." (2) The location of the neighborhood is convenient for people who work in the central city and do not have cars. (3) The neighborhood has religious facilities which are important to the present residents - specifically, Orthodox

Jewish synagogues.*

- - - - - - - - - - -
*Mayer, op. cit., pp. 25-42.
- - - - - - - - - - -

A study of white families who had recently moved into three mixed neighborhoods in Philadelphia had similar findings. Asked why they had chosen the particular neighborhood into which they had moved, respondents gave such reasons as that it was convenient to their place of work, or that they had friends or relatives in the neighborhood. Analysis showed that the newcomers tended to resemble the white residents already in the neighborhood in religion and in national origin. One of the neighborhoods had a predominantly Jewish population; the white families moving into this neighborhood were likely to be Jewish. The white families moving into another neighborhood, which had a concentration of Italian Catholics, showed a high proportion of people of Italian descent. Evidently these families had chosen these neighborhoods in the expectation that they would find the general social atmosphere congenial.*

- - - - - - - - - - -
*Chester Rapkin et al., "The Demand for Housing in Racially Mixed Areas," Institute for Urban Studies, University of Pennsylvania, Philadelphia, January 1957; unpublished.
- - - - - - - - - - -

Motivations of this sort may remain completely independent of the question of racial composition of the neighborhood, unless the fact that there are nonwhite families in the neighborhood is taken into account in evaluating its desirability. A decision to buy a house because it offers the best value for the money may lead to moving into a neighborhood which is interracial, but the decision made in these terms is not, per se, for or against interracial housing.

On the other hand, the expectation of a change in the general physical attractiveness of a neighborhood or in the quality of housing because of the entry of nonwhite families does directly involve the question of mixed neighborhoods. To

the extent that the expectation results from a stereotyped assumption that Negroes do not take care of their property, it is, in terms of this analysis, an instance of racial attitudes. But, quite apart from stereotypes, there may be a realistic basis for expecting, in a given situation, that the entry of nonwhites into a neighborhood is likely to be followed by actual physical deterioration. It may be, for example, that the neighborhood is one of big old homes, that those which have been sold to Negroes have been sold at inflated prices, and that in order to meet the payments it is necessary to subdivide them or to take in boarders or to skimp on other expenses such as painting and repairs. Or there may be reason to suppose that, even though the new Negro occupants care for their property as well as or better than the former white residents, the quality of city services such as schools, garbage collection, and street maintenance will be reduced once the neighborhood has become racially mixed. Expectations of this sort, especially if they are based on observation of changes already starting to take place, may lead to a decision to leave the neighborhood, even though the individual might be willing to accept Negro neighbors under more favorable circumstances.

Expectations about financial consequences are in some ways similar to expectations about physical changes in the neighborhood. To the extent that they are based on a belief that the presence of Negroes automatically lowers property values, they may be thought of as part of the individual's attitude toward racially mixed neighborhoods. But here again there may be more or less realistic considerations relatively independent of attitude. The offer of a very high price, from a Negro buyer pressed for living space, may be a strong inducement to sell one's home and thus to leave the neighborhood, quite aside from any considerations about the desirability or undesirability of remaining in a place where one has Negro neighbors. The warning of real estate dealers that values are about to go down - and thus that wise home owners should immediately sell to the dealers - may have a similar effect, though the warning may be quite unjustified. On the other hand, if there <u>is</u> panic

selling and the price at which the house could currently be sold is below what it would otherwise be, the foresighted owner, especially if he is sophisticated about property values in changing neighborhoods, may conclude, whatever his attitudes, that his financial interests will be better served by remaining in the house, at least until such time as prices rise again.

The consequences we have been discussing - the acquisition of a comfortable home, the gain or loss of money - follow more or less directly from the act of buying or selling a house, of moving into or out of a given neighborhood. Even though the actions of other persons may enter into the anticipated consequences, and may even be directed toward influencing the individual's decision, they have some purpose other than rewarding or punishing the individual's behavior. For example, a real estate dealer may initiate rumors about an impending drop in property values in an attempt to induce home owners to sell their property to him at reduced prices; his goal is to make money on the transaction, not to penalize the home owners for having done, or not done, something of which the dealer disapproves. But other anticipated consequences may take the form of sanctions, that is, acts taken by other persons specifically as an expression of approval or disapproval of the individual's conduct. Such actions may be taken by persons who feel strongly about what the individual has done or proposes to do, even though they have no official responsibility for supervising his behavior with respect to the given issue. Reprisals in the form of boycott, loss of employment, cutting off of credit, against both whites and Negroes in the South who have advocated school desegregation are of this sort. Or the actions may be taken by an organized group to which the individual belongs and whose rules he has violated. The sanction in this case is likely to take the form of fine or expulsion. Or, finally, the sanctions may be enforced by legal authorities because the individual's behavior has violated a law.

Theoretically, consequences of this sort may include rewards for approved behavior; in practice, they almost invariably take the form of punishment for disapproved

behavior. In the case of interracial behavior, punishment may be threatened for actions which lead toward segregation or for actions which lead toward non-segregation. It may even happen that an individual expects penalties from one source for behavior leading toward non-segregation, and penalties from another source for behavior leading toward segregation. Thus, a member of a school board or a community official in the South may forsee reprisal from his constituents, in the form of not voting for him at the next election, if he takes steps to desegregate the local schools; at the same time, he may foresee imprisonment by federal authorities for failure to comply with the order of a federal court directing that schools be desegregated.#

- - - - - - - - - - -

#Reports from communities in the South suggest that this apprehension of imprisonment may exert a strong force toward desegregation. Holden et al., in the study of Clinton, Tennessee, mentioned earlier, state that the County School Superintendent is personally very much opposed to desegregation, and quote him as saying that the County went ahead with desegregation because "they had no choice; we were under court order and we did not want to go to jail." (Holden et al., op. cit., p. 16) Expectation of punishment for violation of the law is distinguishable from allegiance to the value of law-abidingness as an influence on the individual's decision.

- - - - - - - - - - - -

At the present time, there do not seem to be any sanctions regularly applied to individual behavior with regard to housing segregation or non-segregation. Before restrictive covenants were declared legally unenforceable, the possibility of a lawsuit and an award of damages may well have constituted a strong deterrent to the sale of a home to a family of the proscribed racial or nationality group. The current interest in state legislation against discrimination in housing may foreshadow an application of legal sanctions against the individual home owner who refuses to sell his home to an otherwise qualified nonwhite buyer. At the time of this writing, however, only two states have anti-discrimination laws which apply to private housing, and then only if it is covered by FHA or VA mortgage insurance. Moreover, in New York State the law does not apply to the owner of a single home.#

- - - - - - - - - - - -

#See page 17 for a somewhat more detailed account of proposed state legislation.

- - - - - - - - - - - -

Unofficial sanctions seem to take the form primarily of threats of physical injury to the white seller or his family. Although there is no evidence as to how often such threats are made, one may guess that they are quite rare, and that they are almost never translated into action.

Reprisals in the form of vandalism, bombing, and personal injury are sometimes inflicted on the nonwhite family moving into a white neighborhood. The possibility of such consequences may be an important deterrent to attempts of minority groups to enter neighborhoods new to them, but presumably they do not enter in any major way into the decision process of the white person, which is the subject of the present analysis.

For persons who have an institutionalized role with respect to housing, however, there are institutionalized sanctions against behavior which fosters interracial neighborhoods. This point will be discussed in a later section.

When reprisals of some sort are expected or threatened, their effectiveness as a deterrent is conditioned, of course, by the individual's vulnerability to the particular consequences which are foreseen. Threats of imprisonment or of personal injury, if taken seriously, are likely to be weighty considerations for all but a few persons with intense convictions or out-of-the-ordinary personality make-up. Threats of economic sanctions, however, may vary considerably in effectiveness, depending on the individual's position; they are likely to be much more salient considerations for the man who is dependent for his income on his job or his business than for the man with a comfortable income which cannot be affected by firing or boycott.

The Availability of Alternative Courses of Action

If circumstances are such that only one course of action is open to an individual, his behavior will of course be determined by this fact, rather than by his attitudes, values, or expectations of social or other consequences. It pro-

bably seldom happens that alternatives which would lead toward segregation, or those which would reduce segregation, are completely unavailable. However, one alternative may, realistically, involve so much more delay or so much more effort than another that it appears practically unavailable.

No matter how reluctant a man may be to sell his home to a Negro, if it is important to him to sell the house within a certain time and at a certain price, and if the only prospective buyers who appear within that time are Negroes - let us say because the house is a large old one in a neighborhood which is no longer fashionable - he may conclude that the only feasible course is to abandon his earlier intention to sell to whites only. Kerckhoff found that the first sale to Negroes on each of two previously all-white streets in Detroit occurred under such conditions. In at least one of the cases, the sale to a Negro was made with great reluctance.*

- - - - - - - - - - -

*Kerckhoff, op. cit., pp. 10-14.

- - - - - - - - - - -

On the other hand, the owner of a home in a white neighborhood may want to sell it to a Negro - because of convictions about the desirability of residential integration, or out of a desire to spite his neighbors, or for whatever reason. But if it is important to him to sell within a certain time and at a certain price, and if he is unable to locate a prospective Negro buyer within that time, he will probably sell the house to a white buyer.

In this situation, the alternative of selling to a Negro family may be made unavailable either through the action of key persons in the housing market or through the reluctance of Negro families to venture into neighborhoods where they feel they are not welcome. Real estate dealers may refuse to offer the house to potential Negro buyers; financial institutions may refuse mortgage funds to a Negro for the purchase of a house in a predominantly white neighborhood.

On the other hand, it may happen that no nonwhite purchasers appear even when there are not such specific obstacles. Persons who are engaged in action programs

to reduce residential segregation report that one of their difficulties is in finding Negro families who are willing to be the first to move into white neighborhoods.

That this reluctance does not stem to any considerable extent from a preference for living in Negro neighborhoods or from a distaste for having white neighbors is evidenced by replies in the Gaffin study cited earlier. To the question, "Do you think that most Negroes want to live in white neighborhoods or in Negro neighborhoods or that it doesn't matter to them?" the great majority of Negroes, both North and South, replied, "It doesn't matter." Only 9 percent of Negroes in the North, and 24 percent in the South, said that Negroes prefer to live in Negro neighborhoods. The replies to the direct question as to whether the respondent himself would be willing to live in unsegregated neighborhoods were even more striking. In the North, 98 percent of the Negroes interviewed said they would be willing to live in the same neighborhood with white families, and 97 percent said they would be willing to live next door; in the South, the corresponding figures were 86 percent and 79 percent.*

- - - - - - - - - - -

*Ben Gaffin and Associates, op. cit.

- - - - - - - - - - -

Kitano asked 505 Japanese-Americans living in the San Francisco Bay area:

> Suppose you wanted to buy or rent in a certain district and someone told you the neighbors would not like to have a Japanese family in the neighborhood. What would you do?

Sixty-one percent of the interviewees replied that they would stay out of the area or, if they had already moved in, would leave; only 23 percent said that they would move in at any cost; the remainder said they would move in only under certain circumstances which might be expected to reduce the opposition. Next the interviewee was asked why he would take the kind of action he had described. Among those who said they would stay out of the neighborhood, the typical reasons were, "It's not worth the trouble," or, "I don't want to be the cause of any unpleasantness." Only a very few gave answers that suggested a wish for self-segregation, such as,

"Japanese people should stay together."*

- - - - - - - - - - -

*Harry Kitano, report prepared for the Commission on Race and Housing, unpublished; pp. 104-106.

- - - - - - - - - - -

We do not know of any similar systematic studies among other minority groups. It seems likely, however, that the desire to avoid unpleasantness keeps many nonwhite families from moving into, or trying to move into, predominantly white neighborhoods. The Friends Housing Committee of Syracuse quotes a Negro interviewee as saying, "I don't want to have to lie awake thinking someone may throw a brick through my window or set fire to my house."*

- - - - - - - - - - -

*Friends Housing Committee, Religious Society of Friends, Syracuse, N.Y., "Survey of Negro Families Living outside 15th Ward Area in Syracuse, N.Y. and Surrounding Areas," p. 3. July 1955, mimeo.

- - - - - - - - - - -

Like the white family with a house to sell, the white family intent on buying or renting a home may find that certain alternatives are not available. Given the present prevalence of segregation, the family that wants to live in an all-white neighborhood is not likely to have trouble finding such a location. However, the family which would prefer to live in an interracial neighborhood - in this case, presumably because of convictions about the desirability of integration - may find the possibilities in this direction severely limited. Although there are probably few, if any, communities where segregation is so complete that no mixed neighborhood exists, it may be that the only mixed areas are in the slums. If the white family's interest is in living in a racially mixed neighborhood of desirable housing, it may conclude that it has no choice but to live in an all-white neighborhood after all.

Or, even though there may be areas of desirable housing where both white and Negro families are living, real estate dealers may be unwilling to show homes in these neighborhoods to white buyers. Experiences of this kind have been reported

in a number of communities. For example, Weaver, in his account of the acceptance of Negro families in Hastings-on-the-Hudson (referred to in the preceding chapter), adds the comment:

> Whites who have recently moved into the area report, however, that white realtors often had to be pressured into showing them the property they ultimately purchased.*

- - - - - - - - - - -

*Robert C. Weaver, "The effect of anti-discrimination legislation upon the FHA- and VA-insured housing market in New York State," Land Economics, November 1955, Vol. XXI, No. 4, pp. 303-313 (quote on p. 310).

- - - - - - - - - - -

And the Council for Unity of New Rochelle, N. Y., in reporting on efforts to stabilize as an interracial community a neighborhood into which Negro families had moved within the preceding five years and in which, at the time of the campaign, about ten percent of the homes were occupied by Negroes, stated:

> The biggest stumbling block to further progress to date is the almost solid reluctance of white real estate brokers to show homes for sale to prospective white buyers.*

- - - - - - - - - - -

Factors Influencing Persons Professionally Engaged in the Housing Market

The preceding discussion, as well as other material presented in this volume, suggests that the activities of real estate dealers and other persons who occupy key positions in the housing market constitute a major barrier to the establishment of interracial neighborhoods. Why should the activities of persons in these positions be so frequently directed toward the maintenance of segregation? What are the special influences affecting their behavior?

For the individual home owner or home buyer, the way in which his values, his expectations of social and other consequences, his perception of the available alternatives, become associated with his decision for or against living in an unsegregated neighborhood may be determined to a considerable extent by circum-

stances which are more or less unique to his individual situation. But in the case of persons who have an institutional role with respect to housing - real estate dealers, builders, lenders of mortgage money, etc. - certain of these factors are brought into prominence by the nature of their professional activities and operate regularly to influence action in a direction opposed to interracial housing. For the sake of simplicity, the position of real estate dealers is used as an illustration in the following discussion. However, with some modification of details, the points made apply equally well to other persons professionally engaged in the production or sale of housing.

There seems little reason to suppose that real estate dealers, as individuals, differ markedly from their fellow citizens in their attitudes toward minority groups, in the general values to which they subscribe, or in their needs for social approval. The crux of the real estate dealer's situation seems to lie in the fact that, by the very nature of his occupation, his activities with regard to interracial housing may be expected to have direct financial consequences. Refusal to sell a home in a white neighborhood to a Negro is seen as "good business" because it is believed to keep local good will and to encourage a continued flow of white buyers into the community. Once a few Negro families have entered the neighborhood, encouraging the rapid transition to a segregated Negro neighborhood is also "good business," since it leads to many sales and thus many commissions.#

- - - - - - - - - - -

#The dealer may genuinely believe that he is doing his white clients a service by suggesting that they leave a neighborhood in the face of a Negro "invasion." But that such activity is also to his financial advantage is unmistakable.

- - - - - - - - - - - -

Moreover, the approval or disapproval of community members and of other realtors is easily translated into economic consequences for him. There is no reason to suppose that real estate dealers, as individuals, are more sensitive to public opinion than are other people. Yet interviews with 90 real estate brokers in Chicago, reported by Helper, suggested that their major consideration

in deciding whether or not to sell a given house to a Negro was, "Will the community be willing to accept it?"* Apparently the function of real estate dealers

- - - - - - - - - - -

- - - - - - - - - - -

in the housing market sensitizes them to community reactions. The reason seems obvious: a dealer's success in business is largely dependent on the good will of the people in the community, who are his prospective clients. And the real estate dealer's position tends to make him even more subject than other people to the impression that white residents are uniformly opposed to the coming of Negroes.#

- - - - - - - - - - -

#The Friends Housing Committee of Syracuse, in its report on the experiences of Negro families living in predominantly white areas, suggested that "the greatest opposition to integration stems not from the average citizen but from the 'gatekeepers' -- the realtors and builders, who think that the neighborhood will be less oriented toward a democratic housing pattern than it really is." (Friends Housing Committee, Religious Society of Friends, Syracuse, N. Y., op. cit., p. 1.)

- - - - - - - - - - -

Complaints about sales to Negroes are especially likely to be addressed to the broker who handled the sale or to the local real estate board, whereas approval or acceptance of such sales is not likely to be expressly communicated.

In addition, the official position of the National Association of Real Estate Boards adds pressure toward the maintenance of segregation. The Code of Ethics of NAREB, adopted in 1913, contained the following provision:

> A Realtor should never be instrumental in introducing into a neighborhood a character of property or occupancy, members of any race or nationality, or any individuals whose presence will clearly be detrimental to property values in that neighborhood.*

- - - - - - - - - - -

*National Association of Real Estate Boards, Code of Ethics, Part III, "Relations to Customers and the Public," Article 34.

- - - - - - - - - - -

In 1950, after the Supreme Court decision against the enforcement of restrictive covenants through judicial processes, this article was changed to read:

> A Realtor should not be instrumental in introducing into a neighborhood a character of property or use which will clearly be detrimental to property values in that neighborhood.*

- - - - - - - - - - -
*In the 1950 revision, this article was renumbered 35. In a 1955 revision, it became Article 5 of Part I, "Relations to the Public."
- - - - - - - - - - -

All member boards accept the Code of Ethics of NAREB. Many, if not all, have provisions in their own rules which are similar to the article quoted. That the deletion of the references to "race or nationality" from the article in the NAREB code has not resulted in any general change in the meaning attributed to it is evidenced by a letter dated June 1, 1955, sent to all active members of the St. Louis County Real Estate Board, which read in part:

> Our Board of Directors wishes to call to your attention, our rule, that no Member of our Board, may, directly or indirectly, sell to Negroes, or be a party to a sale to Negroes, or finance property for sale to or purchase by Negroes, in any block, unless there are three separate and distinct buildings in such block already occupied by Negroes. By a "block" is meant, both sides of the street on which the property fronts, between intersecting streets.
>
> This rule is of long standing and has our interpretation to be directly associated with Article 34 of the Code-of-Ethics of the National Association of Real Estate Boards, reading: "A Realtor should not be instrumental in introducing into a neighborhood a character of property or use which will clearly be detrimental to property values in that neighborhood."*

- - - - - - - - - - -
*Cited by Rose Helper, in The Role of the Real Estate Business in Minority Group Housing, op. cit., pp. 63-4.
- - - - - - - - - - -

So long as the provision of the Code of Ethics is interpreted to refer to sales to nonwhite families, the article establishes for real estate agents a connection between an important general value - adherence to professional ethics - and actions which lead to maintenance of residential segregation. For an individual who enters the profession, the Code operates to influence behavior in a direction in which his own attitudes and value system might not have led him.

Should this result not follow from the value which the individual places on

living up to the ethical standards of his profession, it may still follow from a fear of unpleasant consequences. Violation of the NAREB code, or of the regulations of the local real estate board, may lead to expulsion from the board.# There seems

- - - - - - - - - - -

#Although it is possible for a real estate dealer to function, and to be financially successful, without being a member of a real estate board, membership confers certain advantages. The major one is a multiple listing service available to members, under which they have access to a list of properties for sale through other members and which makes possible quicker sale of their own listings. Obviously, consideration that sale of a home to a minority group member may result in the loss of this service may become an important determinant of a dealer's behavior.

- - - - - - - - - - -

to be no public record of how often such expulsions have occurred, but two recent cases in the Los Angeles area make it clear that the practice does exist. These cases have received public notice because the dealers have filed damage suits against the local real estate board. Both the expulsions occurred in 1955. In one case, the dealer had sold a home to a Mexican-American family; in the other, to a couple of Italian-Spanish descent, born in the United States. Both dealers assert that they were brought before the local real estate board on charges of violation of the above-quoted article of the Code of Ethics, and that the only questions which were raised had to do with the race or nationality of the purchasers. Both dealers were found guilty of unethical conduct, and fines were levied. Technically, the two dealers were expelled for failure to pay the fines, but both, in their suits, maintain that the expulsion was imposed because they had sold homes to minority group members.#*

- - - - - - - - - - -

#In one of the cases, it appears that the dealer was not given an opportunity to pay the fine, but was suspended without notice.

- - - - - - - - - - -

- - - - - - - - - - - -

*The circumstances of these cases are described by Robert H. Sollen, op. cit. The lawsuits are:

Earl Wing v. Southeast Realty Board, I. B. Young, and Ardell Thomas, (SG C-1125). Filed in Superior Court of Los Angeles County, Department "A", South Gate.

Harry E. Beddoe v. Southeast Realty Board, Ardell Thomas, I. B. Young, Russell

Kerber, Catherann Schrader, William Young, H. M. Erickson, Bob Compton, and four John Does, (SG C-1050). Filed in Superior Court of Los Angeles County, Department "A", South Gate.

- - - - - - - - - - -

The board denied that its action was based on race discrimination. At the time of this writing, the cases had not yet come to trial.

Summary

We have suggested a number of influences which may affect an individual's actions as they relate to the development or prevention of interracial neighborhoods: the individual's own racial attitudes, the general values he holds as a guide to conduct, his expectations of social approval or disapproval, his expectations of other consequences, his peception of the courses of action available to him. We have suggested conditions which may make a given type of influence more important or less important to an individual, or which may enhance or weaken its connection with actions affecting segregation or desegregation.

We have been able to say little or nothing about the interaction of determinants in the very complex picture we have presented. That this nevertheless may be the crucial consideration, we realize. To illustrate this, we quote from another of Robert Penn Warren's conversations in the South:

> Another man, with a small business in a poor county...He is telling me what he has been through. "I wouldn't tell you a lie," he says. "I'm Southern through and through, and I guess I got every prejudice a man can have, and I certainly never would have got mixed up in this business if it hand't been for the Court decision. I wouldn't be out in front. I was just trying to do my duty. Trying to save some money for the county. I never expected any trouble. And we might not have had any if it hand't been for outsiders, one kind and another.
>
> "But what nobody understands is how a man can get cut up inside. You try to live like a Christian with your fellow man, and suddenly you find out it is all mixed up. You put in twenty-five years trying to build up a nice little business and raise up a family and it looks like it will all be ruined. You get word somebody will dynamite your house and you in it. You go to lawyers and they say they sympathize but nobody'll take your case. But the worst is, things just go round and round in your head. Then they won't come a-tall, and you lay

there in the night. You might say, it's the psychology of it you can't stand. Getting all split up. Then, all of a sudden, somebody stops you on the street and calls you something, a so-and-so nigger-lover. And you know, I got so mad not a thing mattered any more. I just felt like I was all put back together again."

He said he wished he could write it down, how awful it is for a man to be split up.*

25. The Concept of a Planning Region—The Evolution of an Idea in the United States*

JOHN FRIEDMANN

Part II of this paper was written in 1955. It does not purport to describe the *practice* of planning in the United States; it attempts, rather, to sketch the *evolution* of an idea: the concept of what is a suitable area for the administration of planning programs. Reference is to the United States, of course, and the focus is on planning activities that in scope exceed municipal boundaries. For urban and regional planning in this country have developed as two different specializations as, indeed, they have in most parts of the world. City planners have been concerned mainly with creating a more efficient physical environment; regional planners have been principally engaged in solving problems of resources and economic development. The reason for this divergence is shown to lie chiefly in the controls available to urban, state, and federal governments for the implementation of policy objectives. The article concludes with a plea for the integration of the regional and urban approaches to planning within areas that have the city as their center of dominant influence.

PART I

American planning practice, and not only the practice but the idea of planning itself, has always been in sharp contrast to the approach popular in Central Europe and elsewhere. Characteristically, it is almost completely devoid of ideological overtones; it is, for the most part, loose and informal; and it is closely linked to operations.[1] As such, it is congenial to the American pragmatic temperament and well adapted to the federal system of decentralized government and ad-

* Reprinted from United Nations, Department of Economic and Social Affairs, Working Paper No. 12, June 25, 1958, and *Land Economics*, Vol. 32 (Feb. 1956).

ministration. The Grand Conception, the Five-Year Plan, is a phenomenon unknown in the United States. Planning tends rather to be piecemeal and experimental.

This is well illustrated by the history of American economic development, a development which might almost be called spontaneous. It was certainly not and still is far from being a centrally directed or planned development. This should not be taken to mean, however, that government has not taken a very active part in economic affairs, be it through fiscal policy, grants-in-aid, subsidies, regulations, research, or resources management. But programs such as these were never, except superficially, related one to the other in a total planning operation. And consequently, there has been no attempt to achieve a regional integration of national policies. Just as no priorities are assigned according to function, so also are there no priorities according to area. Spatial integration has been left to take care of itself. That this approach has, on the whole, been successful is a tribute to the American system. There is no assurance, however, that it would work equally well in other parts of the world.

Regional planning in the United States has at various times had reference to different types of activity as well as to different types of area. There was a time, roughly from 1933 until the end of World War II, when regional planning meant primarily the development of water resources and adjacent land resources within a given river basin. The basic planning unit was the watershed and the objective, the fullest possible use of all physical resources for the improvement of living levels within the area. The Tennessee Valley Authority has been the outstanding example of this type of planning, but a number of other river basins have followed suit: the Columbia, the Central Valley of California, the Missouri, the Arkansas and Red Rivers. Several administrative schemes were tried. The TVA, however, remains the only "authority" in full charge of a comprehensive development program.

The postwar era brought to the fore a different set of problems, and the undogmatic character of planning in the United States made possible a quick adjustment to the new conditions, as attention shifted from the watershed to the metropolitan region as the major planning area. As more and more people streamed into the sprawling urban communities, problems of urban settlement leaped suddenly into the limelight of public concern. City limits had lost their practical significance as population spilled beyond it and as large parts of the United States came within the immediate influence of urban centers. In consequence, so-

called regional metropolitan planning agencies sprang up in many parts of the country.

At the same time, there was also a sharp and growing awareness that many states and groups of states had been left behind in the race for industrialization or, at least, were growing less rapidly than the more advanced centers. There were, for instance, the older industrial areas that had failed to create favorable conditions for the expansion of dynamic industries: chemicals, synthetics, electronic machinery. And there were the "new" regions whose spectacular economic growth had, within a few years, created pressing social and physical problems of adjustment. The phenomenal expansion of industrial and commercial investments following the war had thus created a highly competitive mood in all of the 48 states. Each state wanted to get its share of the new wealth. And so there came into being a new type of "regional planning"—area development. Nearly all of the states established planning or development agencies whose principal job was research into the resource possibilities of their respective areas, information about industrial opportunities, and promotion. In very few instances, however, were these agencies also given control over the planning of state capital budgets.

All told, there are in the United States today a vast number of organizations and institutions concerned with various aspects of regional development. Dr. Perloff lists 19 types of groups, comprising hundreds of individual organizations, from City Planning Commissions in the multimillion cities such as Los Angeles and New York, to official Metropolitan Planning Organizations, Metropolitan and Rural Special Districts, State Planning and Development Agencies, Interstate Organizations, private Area Development Agencies, Regional Authorities, consulting firms, and so forth.[2] This multiplicity of "planning" is truly amazing; and yet there is no plan! A plan is largely an instrument for the integration and coordination of policies. But there exist other means for integration, and Americans have generally preferred more informal methods for bringing together various programs to the rigid "blueprint" of a master or development plan.[3]

What is the relevance of this approach to regional planning for other countries, especially for those which are only now beginning their march towards economic independence and higher levels (and standards) of living? In some respects, the approach is difficult to copy, if only because it assumes certain habits of mind and of administration that are peculiarly American. On the other hand, U.S. experience sug-

gests some guidelines that it may be useful to explore, regardless of what the national style may be.

Experimental Character of Planning

As has been mentioned before, American planning has been particularly undogmatic. As new problems have arisen, the approach to planning—concepts, methods, administration—has changed to meet new challenges in the best possible way. Intellectually this may not be as satisfying as a more theoretical approach; on the other hand, it is appropriate to a view that considers planning not as an end in itself but as a means toward the solution of specific problems. Much, of course, will depend on the definition of the problem itself, the scope that is given to it, and on the objectives to be reached. But in each case, it is the problem that suggests the means for solution, and not the other way around. In situations that are rapidly changing—as with all of the transitional economies throughout the world—the experimental attitude is much to be preferred to the dogmatic.

Flexible Planning Regions

Flexibility in the application of regional concepts is a corollary to the experimental character of planning. Economic development proceeds through different geographic or spatial arrangements: from rural to urban areas—a shift from agriculture to industry; from one or a few small urban-industrial centers and their surrounding regions to progressive regional decentralization of industrial activities; from "dual" economies to a single national market area. At each stage of development, different regional delimitations will be the most convenient and efficient for purposes of planning. Thus, large multistate regions may be the answer in the beginning, and upon these may be superimposed river basin development schemes; later, the metropolitan region may be the answer, with special programs designed for subregions that need particular attention. No one set of regions is ever completely satisfactory. Each problem must be analyzed in its own terms.

Integration of City and Regional Planning

Cities may be considered as centers of economic development: they affect economic patterns in the areas over which their influence extends, and, at the same time, they are affected by the growth which surrounds them. No effective regional planning can be done—in the sense of resource and economic development—without considering the role of cities, without considering the *core* of economic progress. Similarly, a

good city planner cannot afford to ignore the character of the "city region" and the whole vast hinterland that surrounds the urban nucleus: the characteristics of growth and the requirements of planning are determined by it. The recent trend in the United States toward metropolitan planning recognizes this interrelationship and is taking measures to cope adequately with it. But even less urbanized countries must face up to this problem, and the delimitation of planning regions and the organization of planning administration should take the unity of city and region into account.

Program Planning

Planning is not really planning unless it is effectively related to action programs and administration. That is partly the reason why planning in the United States has been relatively unobtrusive, so that many visitors to this country have, in fact, gone away convinced that planning here does not exist. But it does exist—as an approach to problem solving. Planning activities are very much a part of the way in which existing organizations carry on their daily business. There may not be any specific group indicated to do the planning because everybody is in a sense engaged in planning. A plan that lacks operational significance is a museum piece, and planning does not necessarily begin with a plan but with introducing greater rationality into public decision-making, through better information (research and analysis) and through foresight (projection). Many alternatives for organizing the administration of planning present themselves. But one of the cardinal rules should be that every planning endeavor must be intimately related to the operations of the institution for which the planning is to be done.

It is reasonable to expect that at least these characteristics of American planning are transferable to other parts of the world. There are other aspects which probably are not, and in certain respects, U.S. experience may not be applicable at all to less developed countries. For example, in the question of evolving a national policy of regional development; or in adjusting national policies according to the unique problems and characteristics of the different regions in a country; or, again, in the integration of national programs within individual regions. These are essentially new problems for much of the world and each country will have to feel its own way, perhaps committing mistakes, but learning from them also, and so, by a method of trial and error, evolving an approach to regional and national planning which will be adequate to meet present and foreseeable problems and will be designed to fit within an existing structure of values and institutions.[4]

NOTE

The remainder is reprinted from *Land Economics*, Vol. 32 (February 1956), pp. 1–13, by permission of *Land Economics*. (Copyright, 1956 by the University of Wisconsin.)

NOTES

[1] Harvey S. Perloff, *Education for Planning: City, State, and Regional*, Baltimore, The Johns Hopkins Press, 1957, pp. 89–103.

[2] *Ibid.*, pp. 101–103.

[3] Master plans, however, have been used very successfully in city planning, and "blueprint" planning is, of course, customary in private industry. Only in relation to public economic life has formal, over-all planning been rejected.

[4] Interest in problems of regional development has in recent years received great stimulus from the activities of the Regional Science Association with headquarters at the University of Pennsylvania and Resources for the Future, Inc., a Ford Foundation subsidiary located in Washington, D. C. These organizations have contributed greatly to the general revival of academic concern with regional questions, and much interesting work is now going on at a number of universities throughout the country.

PART II
THE CONCEPT OF A PLANNING REGION*

With few exceptions, public planning activities are delimited and organized in space. The region, the county, the metropolitan area, and the city are usually considered to be the basic units for planning.

In the present essay we shall be primarily concerned with the functional relation between the two main forms of areal planning, between city and regional planning. Theoretically, there should be little to distinguish one from the other. In both cases the major problem is the same: how to bring the physical environment in which men live under the controlling influence of the public interest. In practice, however, city and regional planning in the United States have proceeded along diverging paths.

* The writer is indebted to Drs. Harvey S. Perloff and Harold M. Mayer, both of the University of Chicago, for many helpful comments and suggestions during an earlier formulation of this essay.

To explain this lack of unity we would have to go far into the historical origins of planning in this country—a task too ambitious for the present essay.[1] But the basic distinction between city and regional planning appears when we consider it as primarily a difference in *controls* available to local and federal government for guarding the public interest.

In the cities, planning has evolved largely as an effort to maintain existing rental values and to improve the circulation of people and the flow of goods.[2] Zoning, subdivision control, and the powers of eminent domain are among its principal and most effective tools. Occasionally, too, city planners are charged with the preparation of capital improvement budgets, and the planning function has been extended to problems of internal growth and development. In most cities, however, the predominant concern is still with the present. Only peripheral attention seems to be given to a comprehensive approach which would determine the "needs" of the community ten, twenty, or even fifty years ahead and would proceed to show how these "needs" might best be met in the present. Rarely is the community offered a choice to consider what kind of a future it would have. The element of *design* in planning is almost totally lacking, and the evolution of life in the community is left by default to the haphazard interaction of private interests.

Regional planning, on the other hand, has grown up under quite different circumstances.[3] "Regional planning," wrote the National Resources Committee in 1935, "should, in the main, confine itself to dealing with the physical resources and equipment out of which socio-economic progress arises."[4] By this definition, regional planning has one major focus of interest: the development of physical resources. But the control powers of the federal government were so restricted that its point of entry into regional planning was the field of water resources where it had primary jurisdiction. Through the development of water resources for a multiplicity of uses it was hoped that social and economic advance in the watershed would be furthered.[5] The watershed, therefore, became rapidly identified as the "proper" region for planning, and the recognition that land resources are intimately re-related to the use of water only strengthened this view. Whether it was called the Tennessee Valley, the Columbia Basin, the Missouri Valley, the Central Valley, or the Arkansas-Red River Valleys, the physical setting was always a major drainage basin organized for comprehensive resource development. Flood control; the development of facilities for navigation, electric power, irrigation, and recreation; stream sanitation; erosion

control and reforestration; even mineral development came to be included under development schemes in major river basins.[6]

The best known and certainly the most advanced regional planning agency in the United States is the Tennessee Valley Authority. Elsewhere in the United States a more complex scheme for regional planning has been worked out which involves a multiplicity of federal agencies such as the Bureau of Reclamation, the Corps of Engineers, the Soil Conservation Service, and the Forest Service; and, to an increasing extent state and local organizations. In every instance, however, administration is found to be organized along regional (watershed) lines.

The contrast between city and regional planning which we have attempted to sketch may be summarized by saying that city planning has been primarily concerned with community conservation through land use planning and control while the purpose of planning for regions has been economic progress through the development of natural reresources. What Catherine Bauer calls an "iron curtain" has descended between city and resources planners.[7] Two different professions, two different vocabularies have grown up. Communication between them has become exceedingly difficult, and on the level of practical action there appears to be little coordinaation between schemes of regional and urban development.

Now, coordination is no absolute value. It becomes valuable only where it furthers a particular objective. Thus, we may well ask whether regional planning as currently organized can achieve the end of sustained economic progress without taking explicitly into account the existence of urban centers and whether city planning in its present form can effectively achieve *its* purposes while ignoring the larger regional framework within which the city has to function. These questions have not as yet received adequate attention.

The concept of the region as a tool for planning had its origin in the Great Depression. There had been forerunners, of course, such as the Regional Planning Number of the *Survey Graphic* in 1925,[8] and the writings of Benton MacKaye[9] but, as late as 1934, Hedwig Hintze could write in the *Encyclopedia of the Social Sciences* that "in the United States regionalism has never really appeared."[10] To be sure, there existed many examples of metropolitan planning in New York, Boston, Washington, Chicago, Los Angeles and several of the other large American cities but, as we shall see, the "new regionalism" explicitly rejected the metropolitan area as a logical unit for planning.

The new philosophy took hold especially in the South where planning came to be looked upon as the truly dynamic aspect of regionalism.[11] It was an essential particle of the regionalist's fate that planning would provide the means toward the "rehabilitation of the people, toward the reconstruction of regional economy, toward increasing the region's revenue to the nation as well as its own wealth, and toward general regional, cultural adjustment."[12] The South saw in regional planning an opportunity to halt the decline of its resources and its people and to achieve what came to be vaguely referred to as "regional balance," while yet maintaining its unique agrarian culture and tradition. Whether there was not, indeed, a conflict among these objectives is a question that was not apparently considered.

The writers primarily responsible for elaborating on this concept of the planning region were teaching at Southern universities.[13] And the South, in their view, was indeed the archetype of a "true" region. It was identified with a distinctive "folk culture," the region being "an expression of the folk who occupy it and who give it a distinctive character through their 'natural' extra-organized, extra-technological, and unrationalized ways of life."[14] Folk culture, no doubt, was the cohesive bond that held a region together. But it was not sufficient for a definition. The region was also a distinctive area because it possessed "the largest possible degree of homogeneity measured by the largest possible number of economic, cultural, administrative, and functional indices, for the largest possible number of objectives."[15] Clearly, only a rural economy could, by any stretch of the imagination, be considered sufficiently "homogeneous" to qualify as a region. Though urbanization had made progress in the South, it had not yet drawn the focus of regional interest upon itself.[16]

An imagery of rural values still prevailed in the 1930's.[17] Perhaps the most amazing document of the times is a collection of essays written by twelve Southern writers in which the issue was unambiguously posed: agrarian versus industrial society.[18] These essays turned into a vigorous defense of the "Southern way of life," of traditionalism against what the authors called the "American or prevailing way," against progressivism. Industry must never come to the South in large numbers; the South was to remain a separate cultural enclave, a sanctuary of leisurely culture in the "European" sense.[19] And when a few years later TVA set about to develop the great hydro-electric potential of the Tennessee River, even *Fortune* magazine in an otherwise sympathetic article expressed grave doubts that all of the energy produced by federal dams could ever be sold to industrial consumers.[20]

Economic betterment in the South could be accomplished only by over-all planning—that, at least, was the current belief. *Laissez-faire* as a solution to the difficulties confronting the South was rejected as "futile and cruel."[21] The New Deal provided the impetus for planning. And the homogeneous, natural region seemed to be ideally suited to the comprehensive planning approach. No one, it might be added, seemed to be especially surprised by this strange wedding between Southern rural conservatism (region) and Northern progressivism (planning).[22]

The National Resources Committee which sponsored an extensive study of the region for planning tried to avoid some of the pitfalls of the ideological approach taken by its Southern proponents. "Regional planning," the Committee stated, "is not an end in itself; rather it is an instrument for [illegible] basis for action. It is a means for [illegible] programs, and it should be an aid in determining what kinds of devices are most suited to carrying out these policies and programs."[23] But the ideology was in the air; it was pervasive, and it entered as an unconscious bias into the thinking of the Committee when it rejected the concept of the region based upon metropolitan influence:

> "To construct regions which would adhere to cities rather than to the broader aspects of resources, economic patterns and regional interests is to place the emphasis upon one factor rather than the total region. Upon such a basis, regional planning tends to become an expanded form of city planning. On the other hand, it is by no means certain that planning has not arisen at least in part out of necessity of preserving local rural culture and resources against chaotic economic and social forces emanating from the city. Even were cities themselves carefully planned, this would still be true, for the city is an organism whose very nature places its nutritive processes above larger regional considerations."[24]

This was in 1935. In 1938, Lewis Mumford published his brilliant study on *The Culture of Cities*.[25] While generally sympathetic to the Southern exponents of regional planning, he could not—and would not—escape the basic fact that it was the city which gave a region its cultural vitality. Like his Southern brothers-in-arms, he thought he recognized the region as a "natural area." But, he added, "to define human areas, one must seek, not the periphery alone but the center."[26] The city was thus a fact of the utmost geographic importance "for the urban center tends to focus the flow of energies, men, and goods that passes through a region, concentrating them, dispersing them, diverting

PAGE PARTIALLY ILLEGIBLE

them, rerouting them, in short, exerting a close and controlling influence over the development of region as a dynamic reality."[27] The city was viewed as analogous to the heart of the body: a controlling mechanism which pumps the life blood of energy, people, and commerce to all parts of the regional organism.

Shortly after the appearance of Mumford's book came the war, and with it began the sudden and startling rejuvenation of the American economy. Already by 1942 there were signs that the wind had shifted: the city was beginning to make an impression on the consciousness of the nation. In a challenging article, Louis Wirth proposed the metropolitan region as a planning unit.[28] That a restatement of the principles of metropolitan planning was necessary at this time only emphasizes the pervasive influence which the Southern School of regionalists had had on the spatial organization of planning. Wirth proposed that the immediate area constituting the region should be the area of daily intimate and vital interrelation between the city, its suburbs, and periphery and, further, that the region should be a unit "which takes account of the city's and its surrounding area's place in the national and world economy."[29]

Toward the end of the war there appeared a sharply critical article which attacked what it recognized as the rural traditionalist bias of regionalism on the grounds that it had failed to do justice to the facts of the technological revolution that was remaking America. "Regionalism," wrote Kollmorgen, "runs counter to the technological aspects of society which are universal and dominant and will eventually prevail over discordant folkways which regionalists may try to perpetuate."[30] Urbanism, to Kollmorgen, was the "wave of the future" that would sweep everything before its onrushing advance.

But the rural values propounded by the regionalists derived from a hardy stock and would not die so easily. Two years after Kollmorgen's incisive critique, and already well into the postwar era, a group of Yale University social scientists and planners resurrected the imagery of a natural region with its foundation in folk culture.[31] This time, however, the regionalists went beyond the traditional requirements of "geographic unities" and "homogeneous desires, attitudes, and wants," and suggested a forceful analogy of the region with individual living organisms.[32] Living in one of the most urbanized, industrial "regions" in the United States, the authors of the Yale Report searched for a regional philosophy that would somehow conform to their urban experience. In "biologism" they found an adequate basis for their beliefs by which

they could challenge the mechanistic aspects of an urban society which they at once accepted and opposed. In this, they came very close to Lewis Mumford's own interpretation a decade earlier.

The Yale Report was perhaps the last outburst of the regional planning ideology in this country. But it did not mean the end of regional research as such. Since 1947 a number of regional studies have been published which continue the long line of such studies first begun by the National Resources Planning Board in the 1930's. The *Economy of the South*, sponsored by the United States Council of Economic Advisers, was one of these and a typical example of the difficulties that the older regionalists encountered.[33] The study included 13 Southern states, chosen on the basis of a "certain homogeneity in geography, population, climate, income, and history," but especially because each of these states was felt to be vitally concerned "in the production of one or both of the two great cash crops which dominate the agriculture of the region, cotton and tobacco."[34] But no sooner had they stated it, than the authors of the Report retracted this inclusive definition. "In fact," they continue, "the problem of homogeneity arises almost as soon as more than one State is included if, indeed it does not arise within the borders of a single State."[35] From a rigorous, scientific viewpoint a definition of the region according to homogeneous factors seemed rather a shaky one in 1949.

A second important regional study dealt with the New England economy.[36] But here the problem of definition appeared in even a more striking form. While purporting to deal with the whole of the "region," the report is actually preoccupied with southern New England, to the relative neglect of rural Maine, Vermont, and northern New Hampshire. Although in their statistics the authors were compelled to admit the basic north-south distinction inherent in the human geography of the region, they described New England elsewhere as an "old industrial community." But surely this is no more than half of the story. The "region" turns out, in fact, to be two, divided among an even greater number of metropolitan spheres of influence.

The very ambiguity of both these reports regarding the nature of their "regions" suggests that the old conceptions had become of doubtful value. A new regional order and a new kind of planning appeared in the making, an order based on "interdependence" instead of a spurious homogeneity. And again it was Louis Wirth who spoke out for the new concept.[37] In such a region, he wrote, "the component parts are not necessarily similar or identical but stand in a relationship of significant interdependence or integration of life in one or more respects. Such a

PAGE PARTIALLY ILLEGIBLE

region finds difficulty in delineating its boundaries, but is more likely to have a salient or dominant center . . . ."[38] His article helped to clear the way to a view of regional planning that would be in greater accordance with the facts of economic development. To an elaboration of this view we shall now proceed.

It was primarily through the efforts of the Chicago school of sociologists during the 1930's—building on the pathbreaking work of McKenzie—that the concept of the metropolitan region as the logical unit for planning was developed and refined.[39] Concurrently with these studies at Chicago, the German geographer, Walter Christaller, suggested that any inhabited area would exhibit a certain structure of settlement which may be read as a hierarchy of central places standing in a mutually dependent relationship to each other.[40] The validity of Christaller's rigid geometrical pattern of central places has been variously questioned.[41] Its main influence, however, was to provide a new perspective on regionalism and regional structure. To the attentive reader it suggested an approach which by-passed the old problem of delineating homogeneous "folk-regions."

The first major advance beyond these pre-war researches was achieved in this country by Donald Bogue, who provided large-scale empirical evidence for the theory of metropolitan dominance advanced by McKenzie and offered aggregate measurements of metropolitan regional structure.[42] The next step in the development of metropolitan theory soon followed with an attempt to bring together the theories of regional structure as a system of central places (Christaller) and of metropolitan structure (Bogue). Rutledge Vining of the University of Virginia, in a highly stimulating paper, proposed to view the human landscape as an "inter-connected system of central places."[43] Vining appeared to be strongly influenced in his theory by certain traffic flow maps he had seen for the United States. Indeed, his maps seemed clearly to indicate an hierarchical pattern of cities that transcended any "regional" boundaries and presented instead a picture of economic "flows" of different densities, joining one city to another.

This novel view of the "region," in effect, dispensed with the traditional regional concept altogether. Rather, it pictured a *system of cities* having certain properties of stability, though individual units within the system might always be shifting.[44] Considerable support for this view can be found in the long-run trends of the American economy.

An ever-increasing proportion of the total population lives today in

cities or on the periphery of cities. According to Bogue, 57 percent of the population in 1950 lived in the 162 metropolitan areas defined by the Census, and the proportion continues to rise with each year.[45] Shift of population from rural to urban-metropolitan areas implicit in these figures is well portrayed in recent Census maps: population appears to move into clusters around a relatively small number of central places, and most of the rural countryside is becoming rapidly depopulated. Much of this growth during the past two decades occurred within the "rings" of metropolitan areas, however, rather than in central cities.[46] A rough picture of this important trend may be got by comparing the growth rates of urban and rural non-farm populations during recent decades. Between 1930 and 1950 urban population in the United States increased by 30 percent, contrasted with a 64 percent gain in the rural non-farm sector.[47] Most of this gain was in the suburbs.

With a high concentration of population in cities and in the areas peripheral to them, central places also gained relatively in economic power. Transport and communications systems came increasingly to focus on the dominant cities. The traffic flow map reveals the striking instance of "nodality" in the flow of the economy.

Population growth centering around cities must be viewed in the context of the upheaving changes in the American economy which have led to a progressive reduction of employment in farming and to a corresponding increase of opportunities in manufacturing and other sources of employment. The full development of a system of cities is related to economic changes and the particular pattern to which it conforms is dependent on the stage of economic maturity which the economy has reached. With rapid industrialization, new non-farm jobs tend to become available at a faster rate in the larger cities of an area than elsewhere.[48] And income changes, on the whole, parallel this movement of jobs to the large cities.[49] Economic development seems, indeed, to act in such a way as to enhance the possibilities of further growth at central places.[50] Not only does industrialization tend to improve the accessibility of an area by encouraging the provision of a wider variety of transportation services in the center, but it creates its own markets, tends to tip the balance of available capital for investment in favor of the city, and contribute to the progressive specialization of the labor force.[51] And once a pattern of urban settlement is established, its basic structure tends to perpetuate itself.

As the larger cities become more heterogeneous, the smaller cities and communities within their sphere of influence become functionally more specialized. Some grow into "satellites" of the center, others into specialized service, industrial or market cities. While the center of economic power in this pattern is the metropolis, all the communities within its economic reach are mutually dependent upon one another and upon the metropolitan center in its turn.[52]

The emerging pattern of the economy—what Lampard calls its metropolitan phase[53]—is thus built up increasingly around the *city region* with its dense urban core, its less densely populated outer "ring" (population declining outward toward the periphery of this "ring" along the major routes of access), and its satellite communities.[54] With increasing industrialization the conditions for further rapid growth in city regions tend to improve, and the "links" between and among city regions—in terms of population flows and the flows of goods and communications—tend to be strengthened. There is increasing interdependency throughout, and the structure of the whole economy tends to become more precisely defined along functional lines.

If this description of the spatial structure of a developing economy is substantially correct, we conclude that the city region has, in fact, become the basic areal unit for carrying out comprehensive developmental planning below the national level. It is a region defined by an

intricate pattern of economic and social interdependencies; it is, therefore, a "community" informed of certain common interests; and above all, the locus of socio-economic power for a broader geographic area.

The basic requirement for the existence of a city region is transportation. Modern transportation facilities permit the outer "ring" to extend outward from the city core for about one hour's driving distance along major highways and connecting tributary roads.[55] Rapid transportation makes possible the ingathering of materials (e.g., lumber) from within this "ring" as well as the distribution of goods to outlying points of consumption. And it enables individuals to commute freely to most places of employment within the city region which, in turn, permits a more rational ordering of residential, industrial, commercial, and recreational areas. Accessible and rapid transportation is the means by which the various sections of the city region are welded together into a unified whole; it is modern transportation which has made the city region at all possible.

In the past, regional planning in the United States has dealt primarily with the problem of resource development as a means for improving the economic welfare of people, while city planning has been mainly concerned with problems of land use control and circulation. Now we may argue that both of these functions—development and control—should be brought together in a common framework and that the logical framework for this purpose is the city region.

The focus of economic development is thus shifted from a broader territorial basis and an emphasis on *natural* resources to the city region and an emphasis on *metropolitan* resources, such as transportation, space, and community organization. Given this focus, planning for the city region should proceed along two parallel courses of action: (1) in the direction of developing metropolitan resources with a view to encouraging general economic prosperity; and (2) in the direction of controlling land use so as to create a pleasing, no less than an efficient, environment for living. Thus conceived, the planning function should extend across the entire area dominated by the central city.

The resources of most city regions in the United States are far from being fully developed. Yet the socio-economic reality of city regions will not be wholly attained until its resources have been brought to optimum productive levels.

Transportation is perhaps the most strategic of these sources where it unfolds the locational advantages of the city region. It allows for

accessibility to the center and for rapid circulation among the various parts of the city region. Speaking in metaphor, we may say that transportation is the "nervous system" of a regional organism and is absolutely vital to its survival. It will influence both the structure and the efficient functioning of the city region as a center of economic development. Robert B. Mitchell, in the foreword to a study of accessibility in southeastern Pennsylvania, writes much in the same vein:

> "Our 20th century technology makes possible a close and rapid contact among all parts of a great metropolitan area. Distance need be measured no longer by miles, but by minutes and convenience. This is the one most powerful fact in shaping the nature and arrangement of the various metropolitan localities. The potential of each locality is largely determined by its accessibility to other parts of the region. In turn the prosperity of the region as a whole will be very much affected by the quality of its internal circulation system."[56]

In improved internal transportation, Mitchell sees a way to "maximize opportunities for the good life and for prosperity in the Region."[57]

Second in importance only to transportation, are the space resources of the region. It is true that both transportation and space have traditionally been recognized as areas central to the concerns of city planners, but they have seldom been looked upon as *resources* which may be *developed* to assist in the economic growth of a "region."

Space is always in limited supply, modified as it is by its location, physical attributes, and the extent of man-made improvements on the land. It would be a radical mistake to believe that useful or "economic" space in the area surrounding a central city is co-extensive with the total number of square miles of this area, simply because this area does not as yet appear to be densely settled. The techniques of land use planning, subdivision control, and zoning are becoming quite as necessary in the less inhabited areas of a region as within the crowded urban core itself.[58]

A third important resource of the city region is found in the organization of its community life. As the city proper is itself often composed of different "neighborhoods," and as these join with one another in the polity of city life, so does the city region form a "community" which is composed of a number of interrelated parts: the urban core, industrial "satellites," "suburban" residential areas, village communities, and areas reserved for recreation and agricultural use. The economic integration of the city region will be expressed through the proper planning of its transportation and space resources, but it must be reflected in the social

integration of the city region as well. Social integration sets limits to the possible economic integration of regional life. No part of the city region can fully develop its potentialities except within this larger regional framework. Functional differentiation compels the component parts of the region to strive for closer mutual ties and always greater interaction. It is the development of the city region as a truly urban *community* which assures to each component part its special advantages and resources.

The basic spatial relations in an economy are found (1) between a central city and its surrounding region and (2) between one city region and another. The first type of relationship and its significance for planning has been described in the foregoing section. The second type of relationship has greater relevancy for national planning. Differences in the level of economic development among larger socio-economic "regions," such as those defined by the Census, are gradually disappearing in the United States.[59] A truly *national* economy is emerging, with individual "regions," in the old sense, gradually losing their claims to special federal attention. Regional criteria of "need" are no longer as determining to policy as criteria derived from purely national "needs."

Not only are the old regional differences in the United States disappearing, but most of the more densely settled parts of the country may eventually come within the influence of city regions. The landscape will be overlaid with a network of such regions, one region joined to the other. Donald Bogue came to a similar conclusion when he wrote:

> "In the not too distant future . . . . the number of metropolitan centers may increase to such an extent that 65 miles will be the maximum distance which most areas lie from a central city, and technological improvements in transportation may permit all communities within this radius to participate directly with the metropolis."[60]

If this hypothesis is correct, and already it seems to hold true for large sections of the country, attention in national planning will have to shift increasingly to the relations *among* city regions. Transportation assumes a major role in defining these relations, and the current high pitch of interest in express highways is indicative of this trend.

In addition to planning for the city region and inter-regional relations, special resource problems may arise from time to time which call for

a different areal organization than the one we have emphasized in this essay. In the case of power, water, or recreation resources, to cite some prominent examples, development may be organized on the basis of "functional" regions. Such a region may consist of an integral number of city regions grouped together for the purpose of planning a single function. In view of the interlinked pattern of city regions emerging in the more densely populated parts of the country, this particular form of regional organization is one likely to be followed. There are other possibilities, of course, where a functional region such as a watershed would cut across city regional boundaries or where several states would join in the solution of a mutual problem. But even here, the fact that city regions exist will loom large in planning considerations.

Although as much as 90 percent of the total population of the country may eventually reside within city regions, there will be large areas of sparsely settled land that fall outside the immediate influence of central cities. Such areas as the Cumberland Plateau, the Blue Ridge Mountains, the Ozarks, the Great Lakes cut-over regions, parts of northern New England, and large sections of the Southwest and West fall in this category. They pose special planning problems due to the poverty of their populations and their limited resources. An extensive type of development through recreation, forestry, or grazing will ofen form the basic approach to these areas. They are regions characterized by special physical disadvantage for a more intensive development. They may be called "functional regions" when public policy addresses itself specifically to problems related to the development of their resources. However, the name is unimportant. What is important is the recognition that special problems beset these areas; that they fall outside the existing pattern of city regions and thus outside the main stream of economic progress; and that only a small proportion of the country's population will reside in them.

Apart from these special areas, the United States economy maintains a definite spatial structure expressed in the pattern formed by city regions, and functional planning will usually be carried out successfully where it is closely related to this pattern, point for point. City regions are the nerve centers of economic life in an area. They are the seats of economic power where most of the population is concentrated, where most of the vital decisions affecting larger areas are made, and where the financial means are present for carrying these decisions into action. Any planning which ignores this primary fact about the spatial structure of an economy must be judged unrealistic.

THE SECOND DECADE OF CREATIVE PLANNING

Address by William L. Slayton
Commissioner, Urban Renewal Administration
Housing and Home Finance Agency
at the
8th Annual State Planning Conference
Co-sponsored by the
Division of State and Regional Planning of the
Department of Conservation and Economic Development
and the
New Jersey Federation of Planning Officials
Hotel Stacy Trent - Trenton, New Jersey
February 2, 1965

Summary: In 10 years, urban planning authorized by the Housing Act of 1954 has grown to become a major national program--with almost 4,000 communities participating. But now it's time to emphasize the process of planning, "a challenge to planners to develop more programs instead of package plans."

Urban renewal planning and execution show how planning programs can become more effective. Single project, like single package plan, has been outmoded by communitywide programmatic process to deal with continuing complex of problems.

Metropolitan area is the "common denominator for all local urban planning" in the 1960's, an inescapable result of 10 years of concern with planning.

Transportation, Open Space, other metro problems point to metropolitan-type federalism, as in San Francisco's ABAG, or PenJerDel Regional Conference, as mechanism to keep the local planning process "elastic enough."

New developments: urban renewal plan districts, cluster zoning, demonstration projects, creative urban design, operations research, systems analysis, input-output models--and regional planning programs as in Southeastern Wisconsin and in Detroit, and Community Renewal Program in San Francisco--are providing bright prospects for urban planning.

"Let's make the 1960's the second decade of creative planning."

These are indeed times of change, and I would like to begin by changing the excellent theme of your conference. The prospects for local planning are as broad and as bright as your own horizons as planners, so I know you won't object to my talking of prospects for urban planning, and not of New Jersey alone.

It is important, I think, to review what "local" planning means today. Ten years have passed since Congress made its major commitment to urban planning in establishing the Urban Planning Assistance Program.

This program, known as the "701 Program" because it was authorized by Section 701, Title VII, of the Housing Act of 1954, extended Federal assistance on a matching-grant basis to meet the planning needs of small cities and towns, and of State, metropolitan, and regional areas. Beginning with only 39 communities in its first year of operations--all under 25,000 population as the original statute required--the 701 Program had grown by mid-1964 to assist the comprehensive planning of almost 4,000 cities, towns, and counties, more than 160 metropolitan and regional areas, and 26 individual States.

With two major amendments to Section 701 since 1954, Congress has reaffirmed its commitment to urban planning by providing more favorable formulas for planning grants, and wide expansion of the program scope. Today, our definition of "local" planning is broad enough to span nearly all governmental units of our urbanizing regions--States, counties, cities, and towns--and indeed almost any combination of these that can work together to make metropolitan plans.

And today all of the constituents of the Housing and Home Finance Agency are involved in local planning, one way or another.

Much of the credit for creating this program for planning goes to the planners themselves. Planners have accomplished much since the famous Columbian Exposition in Chicago more than 60 years ago, even though, as we look around, it seems ironic that our urban planning began with a "city beautiful" theme. We owe much to the creative planning work of the 1920's, when the legal foundations for the programs of today were laid by true planning pioneers. With the pace of urban growth ever since, it has taken great ingenuity and dedication to develop methods, manpower, and financial means for urban planning. But the missionary period is over. Urban planning as a concept has come of age, with political impact, practical results, and public appeal. And it is now time to examine some problems in the practice of urban planning.

First, let's talk about continuity and process of planning.

Professor Charles Haar of Harvard has described the master plan as an "impermanent constitution." His phrase is particularly pertinent because we know that many present plans will not survive the 1960's. And by this I do not condemn the quality of the work that went into the plans, but I do feel these plans lack a sense of <u>process</u>. Too many stand today as static frames where dynamic programs are needed.

This is a problem of local planning that planners must face and solve. A major prospect for local planning, then, is a challenge to planners to develop more programs instead of package plans.

I strongly believe that planning must be explicitly conceived as part of the political process of government, and that it must serve political action. The political process of government never stops, and the needs

of people continue to change. It follows that planning--planning responsive to the needs of people and useful to their decision-makers in government--cannot stop with a package plan, but must be involved in and proceed with the process of government.

In urban renewal we have had to learn this lesson of process in local planning, and under considerable pressure. I am not changing the subject, because urban renewal planning, of course, is local planning of the most intensive kind. Urban renewal plans, in fact, must be local by virtue of law. The local community plan reflects the political, social, and physical context of the entire community, and also projects a physical and economic bridge to the future. Properly conceived, a local program for urban renewal does the same, and it carries its own tools for action.

Urban renewal project plans are sharper in focus and narrower in range than total community plans, but they demand the full process of planning with a greater depth of detail--and a premium placed on timing. In local urban renewal, the flow of events from perceiving the problem to executing the plan spans the entire spectrum of local planning activity from analysis to implementation. And urban renewal also must respond to the continuing tests of the market place and local political life. With these added conditions and its orientation to action, local urban renewal has had to develop program control and its own continuous process of planning.

The Housing Act of 1949, which authorized Federal aid for slum clearance and redevelopment, placed several significant milestones along the path of urban planning. But the limited scope of urban redevelopment planning as it began in the Housing Act of 1949 was recognized by Congress

in 1954--the year of Section 701--and the program scope was broadened by adding rehabilitation. Two years later, Congress further enlarged the scope of urban renewal planning by authorizing the General Neighborhood Renewal Plan to permit the planning of several related urban renewal projects in a context appropriately large and in a program schedule that was realistic for staging their execution. In 1959, the need for process in planning for urban renewal was formally affirmed by Congress with the establishment of the Community Renewal Program, the CRP.

Planning as a process is basic to the CRP. The CRP also has become a vehicle for innovation in techniques and concepts of planning embracing not only slum and blighted areas, but all aspects of community growth and change. With the CRP, we have advanced beyond "projectitis," a practice of treating the urban slum, a complex problem of urban ecology, as though it were simply a wart on the city's nose. Through the CRP approach, a total of 124 cities have set, or are setting, the stage for meaningful programs of urban renewal. They are approaching the problem of urban decay with analysis of appropriate depth and scope. More important, they are demonstrating the process that can link action with contemplation in the framework of the comprehensive plan.

A second prospect for future planning is the emergence of the metropolitan area as the common denominator for all local urban planning. We are getting accustomed to thinking of ourselves as a Nation of urban dwellers, and it is well that we do, with nearly 115 million people living in major metropolitan areas. I suspect that you in New Jersey, in the heartland of Megalopolis, contemplate with some concern the prospect of adding between 65 and 80 million more people to all of our metropolitan areas within the next 20 years.

Because of this further surge of urban growth, the attention of government at all levels has turned increasingly toward solving the problems of cities at the metropolitan scale. There is wide recognition of the need to understand better the critical relationships among urbanizing forces, and to develop better methods for guiding metropolitan growth. I need only suggest a few recent developments to illustrate the trend and to show the importance and growth of metropolitan planning in the 1960's.

In 1963 the HHFA prepared a National Survey of Metropolitan Planning and found that 142 of the 212 Standard Metropolitan Statistical Areas had some form of metropolitan planning activity underway. It is significant that today there are 16 additional SMSA's with a recognizable process for metropolitan planning.

Especially important developments are evident in metropolitan planning for transportation. The Housing Act of 1961, for example, provided special incentives for metropolitan area transportation planning in the form of increased Federal grants to finance comprehensive planning for entire urban areas having common or related urban development problems.

The Federal-aid Highway Act of 1962 is still another case. Too many times in the past you have been told that "planning is at the crossroads." It may be well, nonetheless, to remind you that this year planning is at the interchange. The terms of the Federal-aid Highway Act of 1962 require the development and use of "... a continuing comprehensive transportation planning process carried on cooperatively by the States and local communities ..." Such a planning process must be in being <u>by 1965</u> as a basis for approving federally assisted projects in any urban area of more than 50,000 population.

No longer can highway planners, town planners, regional planners, and others enjoy the luxury of exclusive professional domains.

Prior to the Highway Act of 1962, the Secretary of Commerce and the Housing Administrator stated in a Joint Report to the President that comprehensive planning is the first step in achieving good urban transportation, and that transportation planning should be considered an integral part of comprehensive planning for urban development. The 1962 Presidential Message on Transportation called for the planning of urban transportation systems, including all modes and facilities, as part of comprehensive urban planning. The Federal-aid highway legislation that followed reflected this policy direction. Later, in the Urban Mass Transportation Act of 1964, the Congress required that federally assisted public transportation projects must be included in a program for an urban transportation system as part of the comprehensively planned development of the urban area.

The Open-Space Land Program, authorized by the Housing Act of 1961, also reflects the growing interest of Congress in planning and development at the metropolitan level. It includes a provision for increasing the Federal grant from 20% up to 30% if the open-space land is acquired by a public body exercising authority for an urban area as a whole or by one that participates in the exercise of governmental responsibilities for a substantial portion of an urban area in accordance with a formal intergovernmental agreement. I think it is also significant that 99, or 45%, of all Federal open-space land grants to date have been based on the higher Federal share. It is especially important to note that 69 of these 99 grants have been made to communities on the basis of their

participation in voluntary intergovernmental agreements to coordinate open-space land acquisition for an entire urban area.

The Federal Government also is improving its ability to deal coherently with airport planning. HHFA has developed agreements with the Federal Aviation Agency to assure that the planning for airports and their staggering land use demands is part of a comprehensive metropolitan planning process.

Local governments, too, have reacted positively to the challenges of metropolitan urban growth. Recognizing the prospect of diminishing ability of smaller urban political units to cope with the problems of public service and the protection or creation of amenities, many have joined forces to plan for and gain common goals. In California, the Association of Bay Area Governments is a vigorous organization of elected officials who have realized the need to organize for metropolitan action. Here in New Jersey, you, too, have had experience with the problems of organizing for teamwork among governments to meet the challenges of metropolitan growth. The Penn-Jersey Transportation Study, involving Federal, State, County, and City agencies, is a significant example of metropolitan regional planning activity.

And apart from the purely governmental scene, there have emerged private and semi-public organizations designed to study metropolitan regional development problems from many points of view. An example is the Regional Conference of Elected Officials in the PenJerDel region. The scope of PenJerDel (3 States, 11 counties, 377 municipalities, and a host of special districts and authorities) permits the coordination of action

on problems affecting several or all of the region's political units. The voluntary cooperative nature of the Regional Conference allows at least partial response to the demands of rapid urbanization. And partly because of the success of a similar effort in Detroit as well as the PenJerDel Regional Conference, organizations like this are beginning to appear in metropolitan areas across the country. They are a promising development in our American Federal system, for they deal and plan with meaningful units of urbanization while remaining responsive to local governmental units.

As my chief, Housing Administrator Robert C. Weaver, has said:

"What is the community with which metropolitan planning is concerned? It is all the people who rely upon a transportation system that laces together hundreds of residential neighborhoods and scores of work centers; it is all the people who make use of the beaches and parks; all who send their waste waters into a single drainage basin; all who live within a common sootfall district. For these area-wide needs, autonomous planning and programming by dozens of local governments is bound to be wasteful or ineffectual. For such functions, metropolitan planning is most obviously required, and indeed is gaining increasing acceptance."

The new metropolitan matrix of the 1960's has clear implications for the practice of urban planning. Metropolitan planning means much more than drawing bigger maps. The local planning <u>process</u> must be elastic enough to grow as the role of the local community in its urban setting expands. So I must add the need for a dynamic perspective to the new list of prospects for local planning. Traditional plans and counter-plans prepared for cities

and towns will have to be judged by how well they react with each other in time, in the comprehensive context of metropolitan area plans.

I want to turn now to the prospects and challenges for urban planning that arise from a technical lag. Too many of the traditional planning techniques are ancient artillery today. Together with meaningful process and dynamic perspective in planning, the professional must sharpen the technical tools.

For example, we have generally recognized the limitations of zoning, but have failed to develop more sensitive means for direct and positive land use control. These are promising prospects in the use of urban renewal plan districts in local zoning to free redevelopment areas from conventional rigid and negative controls, but more work on this must be done. We all have watched the painful birth of cluster zoning, and while the infant seems healthy, it is still very small. We are gaining experience in using Planned Unit Developments with Homes Associations, and a valuable tool for relating architectural design variables in development analysis has emerged in the Land-Use Intensity Rating.

But in spite of these hopeful advances in practical methods for implementation, much remains to be done. The process of urban renewal has brought to light many long-standing and deep-rooted problems of our cities. Through the Urban Renewal Demonstration Program, such problems as skid row, industrial blight, and historic preservation have been defined in preliminary terms. These studies, by and large, were demanded, designed, and done by planners. And now, the cities await your review and evaluation of your work, and the application of what you have learned. URA will help to make more accessible this reservoir of information on the process and problems of

urban planning, with new funds for writing and publication of reports on these activities.

In the field of urban design, the cities eagerly await the innovations of architects and planners to help remove the oppressive cloak of urban drabness that years of public disinterest permitted. Cities have much worth saving, but many areas must await completion of their economic life to replace the drab with the beautiful. Also, we may learn much about rebuilding visual charm and excitement into the urban scene from the nearly 100 new cities that are emerging today across the country as an entirely new form of urbanization.

The urban-study and urban-action professions still have not developed dependable methods for integrating the wide range of professional skills that the problems of urban area demand. Important advances in analytic techniques, computer technology, and the processes of problem-solving are being made in other fields. These must be applied to the complex phenomena of urban growth and change, and urban planners will need better means for bringing to bear through a team approach the benefits of research and development in other disciplines.

In other fields of professional activity new techniques are available and need to be applied in the process of urban planning. Despite their acknowledged complexity, the fields of urban renewal and planning as yet have had little benefit of operations research, systems analysis, simulation model analysis, and economic input-output models. With the new range of urban planning information potentially available through mechanical data systems, it is especially important now to focus professional attention beyond the

data bank to the application of the planning process to actual decision-making. Operations research has a special affinity for approaching urban development problems with its interdisciplinary basis, comprehensive systems analysis, and orientation toward actual solving of problems, but a bare beginning has been made in applying this technique to the systems of local planning. There is evidence that advanced analytical techniques, a continuing program approach, and even interdisciplinary planning can be applied to urban planning and renewal.

Before closing, I want to call your attention to a few cities where planning theory, technology, and practical processes are being applied with promise of significant new developments.

First, the Southeastern Wisconsin Regional Planning Program has made significant studies in the design and use of a regional economic simulation model and a land use plan design model. The land use simulation model employed in this study is unique in emphasizing alternatives for actual plan implementation, rather than forecasting future land use.

The Detroit Region Transportation and Land Use Program is of special interest for its use of regional growth and transportation models to examine the interrelationship of all major determinants of land use development, including economic activity, traffic generation, and population factors to each other, as well as to sociological, attitudinal, and governmental factors in an effort to select a land use and transportation plan which best meets the needs of the total area. It will also relate the major elements of a balanced transportation system--highways, mass transit, water, rail and air--to each other and to the major determinants of land use in order to provide for the movement

of goods and people. The study program is designed to provide a policy structure for broad participation by citizens and public officials in the planning process itself and to insure policy participation throughout plan development. Unique to the study is the development of a regional design concept and design principles and standards to improve living environment.

Similar work of special interest is underway in the San Francisco CRP, where a simulation model of investment flows has been developed. Pittsburgh, a national leader in urban renewal, continues to lead as our first city to design an urban renewal simulation model. So you can see, there are new ways to plan.

President Johnson, in his recent State of the Union Message, said:

"In our urban areas the central problem today is to protect and restore man's satisfaction in belonging to a community where he can find security and significance. The first step is to break old patterns--to begin to think, work, and plan for the development of entire metropolitan areas ... New and existing programs will be open to those cities which work together to develop unified long-range policies for metropolitan areas."

Prospects for urban planning are bright. Let's make the 1960's the second decade of creative planning.

-0-

FOR RELEASE:
Tuesday P.M.
May 11, 1965

"METROPOLITAN COOPERATION IN ACTION"

Remarks by William L. Slayton
Commissioner, Urban Renewal Administration
Housing and Home Finance Agency
at a
Conference on Goals for
Transportation and Regional Development
Sponsored by
The Forum for Detroit Area Metropolitan Goals
Veterans Memorial Building
Detroit, Michigan
May 11, 1965

Summary: Metropolitan areas, overwhelmed by twin forces of growth and decay, suffer from "a moratorium on order and beauty."

PROBLEMS: Local government has no clear voice in metro planning and physical growth; planners either place themselves above political leaders or seek only the lowest common denominator of mediocrity---"the planner must temper absolutes with reality." Metro planners do not deal with the central city, its vitality, and its socio-economic problems; too often they present no real choices, only non-alternatives hemmed by "fiscal restraint on choice," and work in a decision-making vacuum.

OPPORTUNITIES: "Creative metropolitanism," with five basic ingredients, should be encouraged: (1) a metropolitan sense of community; (2) metropolitan citizenship transcending parochialism; (3) responsible and politically responsive permanent areawide decision-making; (4) candid public deliberations of race, poverty, slum, and moral issues; and (5) a metropolitan civil service---"an enlightened technocracy"---that is devoted to the interests of the entire metropolis.

It is most appropriate to schedule a conference on goals for transportation and regional development in the spring---the season of planting and hope. The eagerness and anticipation that comes with this season is in evidence here today. I share this feeling; I am pleased to help you turn fresh soil, and hopefully to plant a few seeds of my own.

The topic which you have given me---"Metropolitan Cooperation in Action"--has, as you know, neither a simple textbook answer nor a standard blueprint. There is no proven model that I can hold before you and urge you to copy. I can only help you lay out the problem and offer guidelines that you may choose to follow. I remind you, however, that it is extremely important that you find a workable solution for dealing with the metropolitan forces which surround you---those forces that cause or contribute to a series of galloping maladjustments that distort and frustrate the people and the environment of the Detroit Region, as well as the rest of urban America.

President Johnson, in his recent message on the problems of the central city and its suburbs, underscored this theme by noting that ".....two giant and dangerous forces are converging on our cities; the forces of growth and decay." And, in order to combat these forces, the President outlined a number of positive proposals, and he challenged metropolitan communities to cooperate and jointly plan for the future. He added authority to the challenge by proposing to make areawide cooperation and planning a condition to numerous Federal grant programs which assist local governments to supply needed services and facilities.

Congress, too, is responding to this challenge. The presence of Senator Edmund S. Muskie on your program this morning is evidence of the growing legislative interest to help State and local governments cope constructively with the forces of metropolitan growth and decay.

But why all this interest from all of us?

Simply this: we are caught in a crisis. Changes, or revolutions if you like, in our society, our technology, our economy have vastly altered the face and functioning of our nation. We have experienced regional population shifts, concentrations of economic activity and wealth, and an unparalleled growth in the artifacts of urban society. In the process, we have spawned the metropolis and expressed in it all that is good and all that is bad. It grows and spreads itself in amoebic fashion, at the same time consuming and creating. There is no apparent guiding hand. There is, it seems, a moratorium on order and beauty.

And where are the political scientists to help us find guidance? Are they standing idly by, watching the last remaining vestiges of their doctrines and principles slip into a limbo?

Can we expect anyone to come forward with a solution or is the problem too complex? Could it be that the price of cooperation and regional concensus is too high to pay?

These pessimisms tend to diminish when I find groups such as this audience. Your transportation and land use study, to which the Urban Renewal Administration has contributed, offers an opportunity to focus on metropolitan area problems. I hope you will also find it an opportunity to experiment with devices for metropolitan cooperation.

I am impressed by this study because it will bring together the Detroit Metropolitan Area Regional Planning Commission, Michigan State Highway Department, City of Detroit, Supervisor's Inter-County Committee, and Metropolitan Fund, Inc; and I'm glad to see that it provides for a Citizens' Assembly, composed of representatives from regional, county and

local nongovernmental organizations. It is commendable that this program today involves, and is underwritten by, the Forum for Detroit Area Metropolitan Goals.

I might add as an aside that just the number of groups involved is impressive. Here is clear proof that metropolitan cooperation always occurs on a pragmatic, highly individual basis. However, one wonders whether you have produced a workable arrangement and whether you will be able to cope with your problems.

At this point, I should first warn you of potential pitfalls---four of them in particular---in the transportation and land use study itself, and secondly indicate what I believe to be the basic ingredients of metropolitan cooperation in action. The two areas are related, since the pitfalls you may encounter in the study are in many respects directly related to the problem of achieving effective cooperation.

My first caveat is, who will make the final decisions when it comes to implementing the plans which are to be prepared? This arises from a study of the 85 transportation studies which the Urban Renewal Administration is helping finance---sometimes jointly with the Bureau of Public Roads---in metropolitan areas across the country. If you ask the question: "Have we appreciably altered the basic decision-making pattern regarding transportation so as to permit a clear voice of local government?" the answer is "No."

Despite the trappings of local representation and advisory committees associated with study projects, most such agencies and organizations operate in a decision-making vacuum. Local jurisdictions are simply unable to resolve fundamental differences among themselves.

The result is that decisions are made for them. The reason is clear---we lack metropolitan government organization and processes for planning and deciding. There is no machinery for developing a metropolitan constituency, developing goals, and acting in concert. I shall address myself to these points later.

My second warning is, beware of those who spend their days seeking The Perfect Plan, the planning panacea that will cure everything, there are those planners who would place themselves above the political leader, the administrator, and the citizenry.

And at the opposite extreme is the soft-sell, common-denominator approach which adds the total of local attitudes and then pressures for the average. The average in many respects is the lowest common denominator of mediocrity---certainly no inspiration in the pursuit of excellence.

Our goals and plans must be between the absolutes and averages. The politician must be able to elevate short-term pragmatism, the planner must temper absolutes with reality.

The third pitfall lies in the nature of metropolitan planning as it is often practiced. There is a tendency to treat metropolitan planning as an activity concerned with the suburbs and not the central city, to divorce growth and decay where the problems are interrelated. This undermines every confidence placed in planning because it leaves unsolved the bed-rock problems facing metropolitan areas. These problems are located, more often than not, in our central cities.

If metropolitan planning is to succeed, it must deal with central-city and suburban disparaties, with low-income housing, discrimination, education, employment, and the host of other socio-economic problems. After all, the vitality and image of the central city, no matter how weak or strong, is transferred to the entire metropolitan area.

The fourth danger is, in many respects, the most important, because it leads to acute frustrations that could prevent effective metropolitan cooperation in the future. Many people in projects similar to yours try to deal with non-alternatives. This is to say, they often present their clients with recommendations that do not represent real choices. I do not recommend that we should always lower our sights to what appears readily achievable, for very often this does no more than maintain the status quo. However, we should make the consequences of any proposal readily apparent by measuring them in terms of real costs---in terms of both money and freedom---and from this determine if the proposal is valid.

When you examine the proposed regional growth forms in the transportation and land use project, you will probably be faced with the "non-alternative syndrome" of planning. Be prepared to ask: What does it cost? Does this represent a true choice?

The design for your transportation and land use project provides for a study which has two objectives:--"to determine the influence that governmental policies have had on shaping the growth of the Region, and to devise alternative governmental and financial plans to provide for the necessary land use and transportation improvements in the area."

This is one of the most important phases of the project. Here is a clear opportunity for the Detroit Region to evaluate its ability to expand choice. I say this knowing that you are up against two formidable obstacles, both of a governmental nature. First, in most metropolitan areas, local governments actually have little to say about how the region should grow. As Dr. Robert Wood of M.I.T. has observed, "the conscious impact of political decisions on the development of urban form has been slight in comparison to other influences."

Secondly, there is the fiscal restraint on choice. The established pattern of revenue and expenditures in any given area exert tremendous influences on how and for what purposes public funds are spent.

Both of these obstacles can be overcome. The public can exert an influence on how, where, and when growth occurs, and it can replace or modify traditional taxing methods--for example, by establishing regional taxes for regional facilities. This type of action requires what I call "creative cooperation" or, if I may borrow from President Johnson's concept of "creative federalism"--"creative metropolitanism." I contrast this with what might be called "ameliorative cooperation" or "ameliorative metropolitanism"--the stage at which most of our advanced metropolitan areas are in at present.

You are familiar with ameliorative cooperation. It takes many forms. Sometimes it is achieved by an emergency or stress which warrants immediate attention. Occasionally, it develops as the "right" thing to do, to talk

things over at no risk to anyone. At other times it develops with all parties committed to the best intentions.

However remarkable ameliorative cooperation may appear to local observers---and sometimes it appears remarkable because it occurs at all---it does not and cannot meet the metropolitan challenge. It fails to provide a setting and mechanism for regional decision-making, eradicate public apathy toward regional problems, increase the capacity of local governments, and cope rationally and effectively with growth and decay.

The consequence is that we never expand or elevate choice and opportunity. Problems are either left unsolved, or solved because local governments unwittingly have abdicated their responsibilities.

It is difficult to speculate on the long-range implications of the failure of our metropolitan areas to advance beyond their present stages of cooperation. The most frightening consequence of not moving into the area of creative cooperation or metropolitanism is the possibility of continual eroding and dimunition of the real prerogatives and functions of local government. But what is the substance of creative metropolitanism.

As I told you at the beginning, there is no standard blueprint. I can supply only what are considered basic ingredients. I can tell you that I am not plugging metropolitan government in the sense of a monolithic, superimposed form of regional government, nor am I talking about voluntary Councils of Governments, which incidentally, I consider to be a high point in ameliorative cooperation. Instead, I am again talking about the area between extremes and urging cultivation of the middle-ground.

I will list five basic ingredients for creative metropolitanism, fully recognizing that I have by no means exhausted all requirements, and that I may

be begging too many questions.

The first basic ingredient of creative metropolitanism is a sharpened image and emotional response to the metropolitan area as a community. For it is a community in the sense that numerous dependent parts are linked together, both physically and with common interest. It functions economically in the classic manner of the traditional community, but magnifies the efficiency of agglomeration. It functions socially and culturally in the classic manner of the traditional community, but magnifies the quantity and quality of communications. It functions, also, to provide the individual citizen with major points of contact with social, cultural, political and economic institutions.

The second basic ingredient stems from the image of metropolitan community. It is the development of what Norton E. Long in a recent issue of the Journal of the American Institute of Planners calls "metropolitan citizenship"--the development of a philosophy and political leadership that casts aside parochialism. It is a philosophy, a way of viewing things that develops and nourishes a regional constituency, raises issues and erases public indifference. It takes a broad perspective by rising above distinctions of jurisdiction and territory. It seeks out and becomes part of those within the metropolitan community--from business, labor, industry, government, and every walk of life. It inspires leadership to develop positive responses and a workable basis for dealing with issues of the entire metropolis.

The third basic ingredient is the creation and maintenance of a permanent process of areawide decision-making that can resolve conflict and is therefore the focus of metropolitan politics. The process feeds on information and communications and bases its form and structure on a respect

for our traditional, democratic ways of government. This kind of decision-making is therefore representative, but not necessarily organized in a hierarchy of command. It is authorized to act and has the ability to act. It is responsible and politically responsive.

The fourth ingredient is a pervasive morality which permits the smoldering moral issues of urban America to reach the public forum, to be discussed with candor and resolved with commitment. I am talking about the issues of race, of slums and housing, of poverty and human degradation, and of vested interests. All must be elevated to public discussion and confrontation, else the metropolis will become a house without foundation.

My fifth and final exhortation is for the development of an enlightened public technocracy--a metropolitan civil service that understands and can work with metropolitan problems. The complex task at hand calls for more than handicraft tools. We must follow the lead of progressive business management, to promote efficiency and strive for optimal results. Tax dollars must be viewed as capital, and spent with an eye toward marginal return. This calls for a mobilization of trained and highly skilled specialists to deal with the myriad facets of the metropolis. They must bring to the task willingness to serve, and find gratification in the accomplishments of the public officials they serve.

I have given no final answers today. You have been warned of potential pitfalls and the staggering challenge of the metropolitan area. Several basic ingredients of creative metropolitanism have been offered as guidelines. The correct recipe for creative metropolitan planning will vary from place to place, but it will always include large proportions of the ingredients I have given you. Moreover, I do not want to leave the impression that I disparage

the cooperative efforts now being made in Detroit and other metropolitan areas of the Nation. I know from personal experience the great progress you have made.

I remain, however, alarmed and concerned that we are not going far enough. It is not a matter of being concerned about the quality of severage effluents or efficient traffic movements.

Unless we can build a metropolitan process of cooperation, having the attributes I have outlined, the metropolis is apt to become an oppressor of man's dignity, his spiritual inspiration and his will to accomplish.

This is not a matter of physical survival, for man can survive dungeons, plagues and torture. But he must be free, know opportunity, and be able to realize his dreams, large or small.

Charlotte News

Experts Tell Charlotte To Wake Up And Plan

By TOM BRADBURY
News Staff Writer

The planning Charlotte is doing today is nowhere near the scale that is needed to prevent a big, ugly, unliveable urban sprawl within 20 years, an expert speaker told city and county officials at a forum here yesterday.

The speaker was James W. Rouse, a profit-watching visionary, who built a chain of regional shopping centers of which Charlottetown Mall is the smallest, and is now building from scratch a city for 110,000 peolpe.

The occasion was an all-day forum yesterday on 'The University and the Development of the Modern City" at the University of North Carolina at Charlotte. Mr. Rouse followed the governor and three other top-echelon experts in addressing the audience that at times numbered over 500 persons.

Among those present were Mayor Stan Brookshire, City-County Planning Director William McIntyre and County Commission Chairman Sam T. Atkinson Jr.

JAMES W. ROUSE

cities, is growing without rational guidance, by "accident and whim" and the result is unrelated "non-communities with no respect for the land or the people," he said.

And the present level of planning just isn't adequate, he said.

Using knowledge the city has now, it could become "the best big city in America" he said, if it would plan for people on a big enough scale.

Planning and action on a big enough scale will sweep away problems that would frustrate and defeat smaller plans, he said.

What Charlotte should do, he said, is to study the people who will be living here and their needs, and account for them in "human scale communities."

Stop the sprawl with a "green belt" around the city, he said. Accommodate the increased population in planned satellite cities of populations of 15,000, he said.

In urban renewal, don't plan people to fit the streets, but find out what the people need and plan accordingly, he said.

The city should acquire the land and right-of-way necessary to do this, he said. A big plan has an economics of its own, he said, and can turn a profit.

LEO MOLINARO

The speaker who preceded Mr. Rouse said the same things in different words.

Leo Molinaro, executive vice president of the West Philadelphia Corp., called for four steps to revitalize our cities.

—Concentrate on policy rather than piecemeal action.

—Bring into play "organized creative intelligence." Tap the brainpower of the country that now is being siphoned off into government research, he said.

—Make the city an "entrepreneur", not a "custodian," he said. An entrepreneur city is willing to make investments to get the things it wants and needs, he said.

—And stop viewing the city as an uncontrollable organism, he said, but as a "artifact . . . made by men that can be remade by men."

In Philadelphia, Mr. Molinaro said, the "human balance sheet" is being put before a "balanced budget" which is "no particular civic virtue if it's done at the expense" of people's needs.

The Philadelphia government decided private hospitals and universities and even church schools, were desirable downtown, so it provided the land from urban renewal, he explained.

And the urban university is right in the middle of it all, Mr. Molinaro said.

In the University City redevelopment in downtown Philadelphia, the universities cooperated with the school board to improve the public schools, he said. The result: faculty members are moving back downtown to get their children in these schools.

Some 15 universities and colleges invested $3 million in a research center that since has "spun-off" more than 100 new industries, he said.

Cities are not sick or dying, he said, they are aging, growing and changing.

"The city must seek out and oranize its capacities for creative intelligence . . . to work on civic problems and . . . the local economy," he concluded.

THE NEW YORK TIMES, MONDAY, FEBRUARY 6, 1967.

A New Experimental City May Rise in the Midwest

By ROBERT B. SEMPLE Jr.
Special to The New York Times

WASHINGTON, Feb. 5—The Federal Government and the University of Minnesota are about to embark on an experimental project that could lead to the construction—in the Minnesota farmlands—of a new city with a population of a quarter of a million persons.

High officials here confirmed today that only a few minor details remained before final approval was given for total grants of $248,000 from three different Government agencies. The money will help to finance the planning phase of the project.

The project, which has the strong backing of Vice President Humphrey, the Cowles publishing interests in Minneapolis and some elements of big business in Minnesota, is unusual in that it does not contemplate the construction of another suburban community, or even a satellite "new town" such as Reston, Va., or Columbia, Md.

Rather, the project's planners are seeking a self-contained urban center that would be built at least 100 miles from any existing center.

The project is based on the assumption that the nation cannot now comfortably accommodate the three million more persons who must be housed each year—the equivalent of 12 cities with 250,000 persons living in each—simply by cramming them into existing metropolitan areas.

Aim Called Experimental

Its purpose, however, is frankly experimental. It does not seek to solve the urban problem overnight. Its aim is to test the proposition that by judicious planning and experimentation the nation can preserve the advantages of high-density living and yet avoid its disadvantages — ugliness, pollution, noise and congestion.

The staff director of the project is Walter N. Vivrett, professor of architecture and planning at the University of Minnesota. Dr. Vivrett, interviewed by telephone today, told a reporter that the university's applications for Federal funds "had been generally agreed on." He said he expected final approval before March 1.

Associated Press

Vice President Humphrey is a backer of the project to build city in Minnesota.

Officials here, conceding that final Federal approval is imminent, are not at all certain what will come of the project but are willing to make a bet of $248,000 on it.

The three Government agencies contributing to the project are the Department of Housing and Urban Development, the Department of Health, Education and Welfare and the Department of Commerce. The man who is said to have put the whole "Federal package" together is Neil Peterson, one of Mr. Humphrey's top aides.

The cost of the first phase of the investigation—known as the "project definition phase"—is estimated at $330,000. The difference between the Federal share and the total cost will be made up by the University of Minnesota and local companies.

Although formal staff work cannot begin until the grant application is approved, much thought has gone into the project. In addition, the university has named a top-level steering committee to oversee the project and to lend guidance.

Among its members are:

Walter W. Heller, former chairman of the Council of Economic Advisers and now professor of economics at the University of Minnesota.

Dr. James C. Gain, a Mayo Clinic surgeon, who is President Johnson's personal physician.

Gen. Bernard Schriever, former chief, systems command, United States Air Force.

R. Buckminster Fuller, designer and engineer from the University of Southern Illinois.

William L. C. Wheaton, director of the Institute of Urban and Regional Development at the University of California at Berkeley.

Paul N. Ylvisakr, director of Public Affairs for the Ford Foundation.

Total Cost Unknown

No one has tried to estimate the cost of constructing a new city. Nor has a site been chosen, although given the Minnesota cast of the project's directors and backers, there will doubtless be strong preferences for building the city in that state. But Dr. Vivrett emphasizes that the question of investment is "the sort of thing we will be trying to answer in the early stages," and the question of precise site is "a long way off."

The origins of the idea are obscure, but much credit is given to Dr. Athelstan Spilhaus, Professor in the School of Physics at the University of Minneseota. In a recent interview here, Dr. Spilhaus said he had first become interested in the notion of an experimental city while working on a pollution study for the National Academy of Sciences.

'If the 100 million people that represent half the population of the United States today lived in the same high density as they do now but were distributed in 400 dispersed small concentrations of 250,000 apiece, there would probably be no serious pollution problems," he says. "What we need is urban dispersal—not urban renewal."

Dr. Spilhaus's conception of the things that might be tried in an experimental city is tentative but energetic. Among other components, he visualizes:

An urban environment with a transportation system eliminating or reducing the need for automobiles, new communications systems, industries that either re-use waste products through processes of "industrial symbiosis" or bury them in "fume sewers," and a system of land management in which schools, homes, shopping centers and the like would be grouped so as to lessen the impact of the cost of commuting. The objective, he says, is to bring abzout "a full mating of the city and current technologies."

These and other ideas will be considered during Phase One of the project.

According to Dr. Vivrett, the basic objectives of the first phase are to identify city problems, examine the possible components of an experimental city, analyze its social implications, assess the role of the private sector and how to mobilize its interest and support and discuss the fundamental values — "in a humanist sense" — that should govern the design of the city.

The second stage would involve further and more concentrated study leading to eventual construction of test models, a design for the city and construction.

Dr. Vivrett's staff will consist initially of himself and six colleagues from the University of Minnesota but he plans to draw as much as possible on the talent and insights of other experts here and abroad.

Dear ~~Mr.~~ Nat Strong:

Many thanks for your report on the proposed Lincoln Park Redevelopment Project. If you have not done so, I suggest you send a copy to Ed Tucker (Office of Community service, Diocese of Miami) and to Moreland Griffith Smith (Southern Regional Council, Atlanta). You're becoming an expert - you ought to become a consultant on housing and community development!

There's some chance I'll be visiting my family in Ft. Lauderdale in October. In fact I had hoped to take off a week in September but I have too many other committments here.

We have been making progress but not as much as I would like. The downtown renewal project should be moving into the new construction phase next year. Hopefully, we should see the start of 352 units of 221 (d)(3) high-rise housing, 21 story office tower, 1200 car parking garage - and maybe a 200 unit downtown motor hotel. We need to get into some neighborhood projects and we're trying to help one group launch a 75 unit 221 (d)(3) project, assembling the site under new state legislation, and if we become real lucky another area may press for a model cities application. The mayoral election comes up soon and, as you know, political results have an impact on urban programs.

Best regards to Goline, Beauregard and everyone.

Very truly yours,

James B. Hibben
Director of Urban Renewal

The Crisis of the Cities:

The Battle We Can Win

A former Army commander, now a prominent management consultant, outlines a bold strategy based on investment of Vietnam war funds on our most urgent domestic needs.

DOMESTICALLY, America has begun a new revolution. I use the word "revolution" precisely and not just as a figure of speech. Unless we realize the size and nature of our problem, any answers we make will be too little and too late—and, indeed, quite irrelevant. Violence will increase, and the overall breakdown of our national life will follow as a scientific certainty.

The environment in which more than 80 per cent of Americans live is the great city complexes sprawled across the nation. We face this environment and attempt to deal with it bewildered, confused, whipsawed by the Scientific Revolution. We have the newest tools of science in our hands. We have masses of information available about what we should or should not do. We have inventions, machines, experts, statistics, calculators. Yet the environment in which we live, instead of becoming more and more responsive to our wills, swings and jumps in alarming patterns that seem quite beyond our abilities to control. There is a reason for this. And that reason is basic to the understanding of our domestic crisis. But, unfortunately, the concept is one that many have found hard to grasp.

THERE has been a fundamental change in the way we affect our environment and how it, in turn, recoils upon us. Before the Scientific Revolution, the population explosion, and the concentration of mankind in cities, our external environment was what scientists call in an equation a given or constant. The balance between animal and plant life, the weather, the energy of the sun—i.e., the ecological balance—had gone unchanged for centuries. When a man felled trees to build a house, or shot a deer, or laid rails across the plains, he knew the result of what he was doing because he was slightly changing a constant—the vast pattern of nature—subtracting three from five. There were not enough of him, nor was the power of his science great enough, to upset the ecological balance in which man himself lived.

Now that has changed. When we alter our urban environment, we are not changing a system that has been stable for a great period of time. We are changing an extension of ourselves that is in the process of rapid complex growth, and about which we have a limited understanding. We spray pesticide and the birds vanish; we build a superhighway and start a riot; we extend charity and break up families; we pass a law to renew our cities and spill slums over the land. Each action we take alters the total system in ways we do not understand and makes the next crash program more immediately necessary and more ultimately hazardous. This is the grim background against which, with inadequate plans and strength, we are presently trying to attack our domestic revolution.

For example, one of the solutions being advanced to make better use of the city's scarce land is the construction of more high-rise apartments. This would increase the population density in certain areas and clear other parts of the city for parks, arts, recreation, industry. Yet in recent laboratory experiments in which rats were raised in artificially cramped quarters, the overcrowding not only broke down the rats' normal social patterns of mating, child rearing, and food gathering, but also changed the rats physiologically. Their adrenal glands were enlarged and chemical differences appeared in their nervous response.

WE do not know if even present levels of urban congestion are doing the same thing to ourselves. We know the enforced overcrowding of slum life creates psychological damage, but what of physiological damage? And even the affluent and semiaffluent in their high-rise apartments or suburban people-boxes may be more affected by population density than we realize. I don't mean to imply that this is so, but rather to cite it as an area in which we are proposing

---

Lt. Gen. James M. Gavin, USA (Ret.), former senior U.S. Army planner and strategist and later U.S. Ambassador to France, is chairman of the board and chief executive of Arthur D. Little, Inc., management consultants in Cambridge, Massachusetts. This article is a preview of his book *Crisis Now*, written in collaboration with Arthur Hadley, to be published by Random House.

solutions without being fully aware of the consequences.

The crisis in our cities, however, cannot be understood or attacked except as part of the total American pattern; cities cannot be considered apart from the rural life they have replaced. Between 1960 and 1970, an estimated 10,000,000 farmers will have moved to the city. The majority of these migrants—white and black—are the poor, the underprivileged, the undereducated. In 1910, 81 per cent of all Negroes lived in the rural areas of the former Confederate States. By 1960, 73 per cent of America's Negro population were living in cities, primarily in the North. Seventeen per cent of the population of the core cities of the North were Negroes. And two-thirds of the adult Negroes living in Northern cities had been born in the South. Such a population movement would have raised tremendous problems by itself—without being reinforced by discrimination and poverty.

These figures, moreover, are only partly reliable. The 1960 census, the most thorough in our history, appears to have undercounted the number of people in America by some 5,700,000 bodies—an error roughly equivalent to failing to count Chicago and Los Angeles. The vast majority of those not counted were nonwhites—one out of every six Negro males between the ages of twenty and thirty-nine was not counted. This vast number of people had simply disappeared from the fabric of organized society—or, at least, from a society organized the way the census-takers thought it should be. They exist in the cities, but where and how? Such a gap in our knowledge not only frustrates planning, but causes injustice in the distribution of federal funds and the districting of Congress. One-man-one-vote requires our ability to locate the invisible man.

The driving force in this migration from the farms to the city has been the changes in agriculture brought about by science and technology. Many of those in rural areas would like to stay on the farm rather than migrate, but economically they cannot do so. If they did move, they would rather move to some nearby town where they have relatives and where customs are the same. But, just as there are no jobs on the farm, there are no jobs in the small town.

AT the same time, in ways not entirely understood, the cities exert some form of social pull: better jobs, cars—at least a change. There is also evidence that in some communities local politicians abuse the federal food stamp program to starve Negroes off the farms and hasten the exodus to the city. Civic groups put advertisements in local papers offering to pay the fare cityward of any Negro who wants to move. One U.S. Government program, the Labor Mobility Demonstration Project, is actually speeding the movement of people off the farms and into the already overcrowded cities. Such bureaucratic confusion is found continually throughout the present efforts to deal with our domestic crisis.

The vast majority of the migrants, both white and black, lack—through no fault of their own—the education, training, and job habits to fit into the complex patterns of urban life. The cities make few efforts to ease the entry of the new arrival. There are no special communities to receive the migrant, retrain him, place him in decent housing, find him a job. At this crucial moment of his life, when a whole complex of resources should be focused to aid him, he finds himself alone. Isolated, discriminated against, lacking the education, skills, and knowledge necessary in a highly industrialized society, bewildered by his new environment, the migrant separates from the mainstream of America and joins the undercurrent—the underculture of poverty.

In the urban ghetto, migrants slowly begin to leave—if they have not already—what we like to think of as "our America." They become among those uncounted by the census. Denied participation in the American dream, they become "they" and "them." So the cities—and, through them, the nation—tragically divide into "we" and "they." And inflaming this division to the raw edge of violence is the fact that overwhelmingly "we" are white and "they" are black. This underculture of poverty has now gone on for so long that the Negro poor are already practically a separate society. They are not yet a separate nation with aspirations different from our own. But unless we both work together—"we" and "they"—America will in fact divide more fatally than at any time in our history.

I wish there were some eloquence I could use, some fact I could cite, some verbal Pearl Harbor I could deploy, so that all Americans would rise and say: "That is true. I personally must do something about it." The riots in Watts and Detroit are there for all to look at. A recent report to President Johnson by a White House-appointed board of experts opened with the words: "You are the last President to have the option of governing one nation." I would not be that definite. But I do not believe that the report —at this writing, unreleased—exaggerates by much.

Inside this underculture of the poor —20,000,000 people, white and black—the goals and aspirations of American society appear as one vast fraud. Each act of discrimination, each act of violence, each magic program that remains unfunded drives them tighter into their

world. A new superhighway is to be built; immediately all the neighborhoods with power in city politics lobby to make certain the highway does not disrupt their lives. In the end, the highway goes through the ghetto, where the residents have no political punch. This recently happened in Washington, D.C., where Congressmen shifted a planned federal highway from the northwest—where most of them live—to the northeast, where the residents are mostly black and in poverty. Too often, "improvements" have been merely words spoken by the dominant society to keep "them" quiet. Until the riots, there was no office of the U.S. Employment Service in Watts. New York City has been much "improved." But there is still no shopping center or cultural center in Bedford-Stuyvesant, an area containing some 400,000 people.

The process goes on. The gap widens. Six out of ten nonwhite children will have been supported by the Aid to Dependent Families program by the time they reach the age of eighteen. More than 600,000 people are now receiving welfare in New York City—roughly 200,000 more than were receiving such aid in 1941, the welfare peak of the Great Depression. For the past ten years, while the rest of America has grown more affluent, the ghetto dwellers have gotten poorer.

The United States devotes a smaller percentage of its Gross National Product to social welfare than does any other Western democracy. In 1964, we devoted 7 per cent of our national income to welfare; by contrast, West Germany devoted 17 per cent. We alone of Western democracies consider welfare as something to be doled out to the poor rather than as a basic right of citizenship. New civil rights legislation has been enacted, but these legal guarantees have been slow to take effect. Is this the national life we want for ourselves as a great nation?

Compressed into the ghettos of the central city, alienated from American society, lacking the cohesiveness of family, denied not merely equal opportunity, but the barest stake in the future, yet offered some hope by recent civil rights advances, and strengthened by colonialism's end in Africa, a small minority of Negroes in the ghettos of America have rioted. The surprise is that most Americans were surprised. As de Tocqueville stated of revolutions: "A grievance patiently endured so long as it seemed beyond redress becomes intolerable once the possibility of remedy crosses men's minds." If we doubted it before, we should realize now that there is an intolerable grievance. The question now is what are all of us—"we" and "they"—to do to remove this grievance?

To attack our decaying environment, we need to undertake simultaneously a series of actions, each one of which is staggering in itself. We must build 5,000,000 new homes. We must end discrimination. We must redirect our use of farm land. We must construct 100,000 new schools—and provide a philosophy, atmosphere, and teachers for these schools so that rapid learning can take place for all. We must provide a decent standard of living for those not able to work. We must create new social services, provide new hospitals, find more doctors, build new libraries responsive to electronic data processing, and halt the pollution of our environment.

We need to find jobs for roughly 20,000,000 people. We must attack problems that will require vast concentrations of power to solve, without sacrificing regional differences and the uniqueness of individual people. We must create new institutions without creating new bureaucracies. Portions of the power structure of the cities, the states, and the federal government must be revitalized and reorganized. No wonder some despair while others riot. The solutions seem beyond human size.

I believe that never before in our history have we faced a crisis of such magnitude. The size and urgency of what must be done lead to two conclusions:

First, we must make sure that the solution we are applying to a given aspect of our domestic revolution actually will solve the problems; we must understand the revolutionary situation we are in and make certain our responses fit this new situation. The crisis is too immense and time too precious for us to prescribe once again yesterday's medicines for today's ills.

Second, the response we make must be of a size appropriate to the emergency. No strategy, however correct, is going to work if applied in a small way. Challenge and response must be of the same order of magnitude.

We have seen the scope of the crisis. What must be the magnitude of the process of solution?

Let me use money to illustrate the amount of change I believe we need to make our environment livable for all. I propose that we take the amount of money we are now spending each year in Vietnam and add it to the amount that we now spend on ourselves. This would add to our budget for domestic improvement roughly $32 billion a year. Not all of this amount would be paid out each year. Some of it would take the form of tax credits, insurance guarantees, loans, and other incentives to local governments and private institutions as well as private individuals.

Our present efforts come nowhere near this amount. For example, the federal government asked $537 million for the much touted "Model Cities Program." And Congress appears unlikely to pass even that. Yet $537 million is a little less than the amount that San Francisco alone needs to renew the substandard housing within its city limits. The programs of the Urban Renewal Agency have resulted in a net decrease in low-income housing. Such programs practice deception on the public as a whole—though the effects of the false hopes they raise fall with particular damage on those in poverty.

Economy in government is important. Having overseen economies both in government and private industry, I am well aware how attention to costs sharpens the cutting edge of endeavor. But again we must look at the present with a present eye, and not consider economy in yesterday's terms.

An unemployed member of the underculture with a family on welfare can cost the country roughly $4,000 a year—

"Dad, can I wear the sheep's clothing tonight?"

and that is only the dollar cost. The cost in human terms—a wasted natural resource—is far higher. The same human being—trained, decently housed, given the opportunity for rewarding works—may in five years be earning $10,000. Not only is the government saving $4,000; it is then collecting taxes from him. And, further, the individual contributes to society children and values that multiply his own pride and worth. People often forget this basic equation of human economics when they talk about balancing the federal budget in any given year. Private families and corporations go into debt for some time, confident of increased benefits in the future. A wise government calculates its economic policies in terms of the utilization of its human resources as well as in more classic economic terms.

"You mean to tell me, Dr. Kleinmutz, that after all those days of hope, those countless sleepless nights, and those lonely hours of experimentation—all your invention could produce for you was a thimbleful of something that tastes like beer?"

We have billions of dollars invested in our central cities: buildings, communications, transportation nets, people who live there. A private corporation that, through poor policies, let so much of its basic plant decay would go out of business immediately. The principle is the same here. America cannot afford to sit by and see so much of its basic plant destroyed. Bluntly, one of the reasons we need to solve our urban crisis is to protect our huge investment in the central cities. The preservation of this investment must also be weighed against criticism of the expense and scope of government programs to rehabilitate our environment.

To improve our domestic environment, the basic tool we must put to work is human energy. A great deal of human energy is now being expended on the Vietnamese war; but, beyond this, we waste this vital national resource in a number of other major ways. Much human energy is locked into the ghettos of the central city or exists in patches of rural poverty, virtually unable to make its presence felt except by riot. Other energy reservoirs are trapped without outlet in the bureaucracy, administering obsolescent programs that often damage the society they are meant to benefit. Even where able officials try to start change, tradition, and legal and institutional barriers, often prevent action.

Everywhere in our society we need strategies and inventions to free human energy and direct it in the attack against our blighted environment. I cannot make too clear that what we need are strategies, inventions, new processes to create change. One thing we do not need is more programs. We have plenty of programs. The very number of programs, plus the severe financial restraints under which they labor, prevents them all from reaching full effectiveness.

We need to start change now. And then to provide ways for that change to snowball. One aspect of problem-solving we learn from science is that the first steps generate both fresh problems and fresh ideas and possibilities for new solutions. We cannot begin to see what these are until we start to attack a problem.

I have no complete solutions to the decay of our environment. What I wish to do is indicate a few strategies that will nourish new ideas and free energies that can start the process of change. We must beware of our American love for large organizational solutions in domestic as well as foreign affairs.

As an example of a typical "organizational" solution: In an effort to prevent more riots, we can take the structure and functions performed by an average city and break them down. Police, sanitation, education, fire control, ports, construction, welfare, courts, jobs, road building, etc. We can then devise new programs for each department to help prevent riots. Perhaps we can even devise a new department to coordinate all the other departments. This would take much time, energy, and skill. All this would be the wrong approach. What is needed is a strategy to break down the divisions between the various departments, to liberate the energies inside them, and make them all more responsive to the needs of all the people.

To solve the problem of urban decay, all the people and institutions of the city government and private sector must be involved. The task cannot be left to the schools, or the welfare department, or the housing department, or private charity, or government or private capital. The key group whose energies must be involved in the solutions of their own problems is the ghetto dwellers. They do not want to be handed out solutions to their problems without any say, any more than anybody else. One of the major causes of the Newark riots was a plan to locate the new campus of the New Jersey College of Medicine and Dentistry in the slum area. This campus would have been beneficial to the ghetto, upgrading the area around it and providing desperately needed medical services to the community. But the ghetto residents had not been consulted. They saw their homes and businesses being demolished at the whim of "they." No one had taken the time to explain to them the future benefits—much less consult them where best the campus might go or what it should look like, as would have been done in a wealthy suburb. The ghetto residents want the same power as others—to be listened to without having to resort to riots.

The Neighborhood Development Corporation is one recent invention that has shown strength in liberating and mobilizing the energies of the ghetto to solve urban problems. Though designed primarily to liberate energies in the ghetto, the Neighborhood Development Corporation indicates a process that could be of benefit to all of us. With the Neighborhood Development Corporation providing the means, local residents can now take part in the process of changing their environment. If a business wants to construct a plant in the neighborhood, its officers would deal with members of the Neighborhood Corporation. The corporation would make certain that local officials had some say in the plant's policies, that local contractors were used in the construction, that local businessmen supplied the plant with goods and services, that local banks handled the plant's business—in short, that the plant conformed to neighborhood standards.

One of the most successful of the pioneer Neighborhood Development Corporations is ECCO (the East Central Citizens Organization) in Columbus, Ohio. First organized as a neighborhood foundation to receive funds and run its own community center, ECCO has become an economic and political force in Columbus. In ECCO's early days, in dis-

"Are there any democracies left with a warm climate?"

cussing what local projects needed to be done immediately, its community decided a highest priority should be placed on free rabies shots for all local dogs and cats. This priority—the focus of human energy in this specific direction—made perfect local sense. The area was rat-infested, and almost all the local residents had large dogs or cats. No bureaucrat located in City Hall—and certainly none as far away as Washington—could possibly have identified rabies shots as a No. 1 local need. Nor would another neighborhood want to put its energies in such a program.

Later the ECCO community refused the gift of a government-financed health center. The residents liked neither its design nor its proposed location. Instead, with their own funds they bought title to an old house in the community that had belonged to a doctor who had treated many of them freely and decently. They turned this building into a health center as a memorial to him, finding and hiring the necessary medical equipment and staff themselves.

Neighborhood Corporations such as ECCO are themselves in the process of change and development. This is precisely what the forecast of a successful attack on our domestic crisis calls for: initiative that snowballs. Among future strategies that look promising is a proposal that the Neighborhood Corporations be given the authority to issue tax-exempt bonds guaranteed by the federal government, enabling financing of local improvements. The Neighborhood Corporations could buy local buildings for rehabilitation, and, after improving them, either run them as low-income housing or sell them to local individuals. The money thus generated would pay off the interest on the bonds and provide the Neighborhood Development Corporation with further working capital.

In the controversy between neighborhoods and the central government over control over police and education, the leaders of the corporation can negotiate for the neighborhood with the wider community. They can help devise standards for the whole urban environment. All of us like to see our personal ideas and ideals incorporated into our environment. The free interplay between our various wants creates the excitement and life of democratic politics. The Neighborhood Development Corporation gives local citizens a chance to make their needs and wants felt inside the structure of national politics; it allows local initiative to check the pervading sprawl of centralized bureaucratic power.

Merely the task of designing and constructing the millions of new structures needed to revitalize our urban environment is enormous. How are we going to provide the national energy to accomplish this miracle of construction?

To act with sufficient energy to solve the housing problem we need to end the tired debate about the public versus the private sector, or liberal/conservative methods. The Sixties are not the Twenties. We live in a mixed economy. The debate between those who believe that private industry is always bad and federal intervention always good, or that the federal government is always wrong and private industry is always right, has ceased to have meaning. What we need are new inventions; new ways to attack our urgent problems.

One strategy of attack against the housing shortage is for government and industry to create together a special-purpose corporation. Such a corporation would be a mixed public and private company formed for social purposes. In structure, the special-purpose corporation would be somewhat similar to the Communication Satellite Corporation (COMSAT). It would exist not merely to maximize profits but to rehabilitate the environment. Created with the help of the federal government, but independent from it, this special-purpose corporation for housing would combine the management skills and flexibility of private industry with the scope and, in part, the funds, of the federal government. Such a corporation might be called URBX, or Urban Experimental Corporation. In addition to attacking the problem of housing, URBX would serve as a model for other special-purpose corporations that might be created to bring about change in other areas of national life.

The size and scope of URBX would permit it to fracture many of the barriers now blocking progress in the construction of housing. The on again-off again job situation in the construction industry would be stabilized by building a guaranteed number of housing units each year. The number of these units would provide both industry and unions with incentives to modify present restrictive practices. URBX could buy land outside the city for new towns, create performance criteria so that new technological approaches could be used in building, and provide the cities with such an incentive to participate in the building program that they would be willing to modify obsolete local statutes.

COST analysis indicates that, permitted to benefit from new technology, URBX could in five years reduce the cost of a $16,000 home to $8,000. By the same period, housing units that now must economically rent for $134 a month could be rented for $67 a month. Recently, in California, a systems approach to school construction agreed to by business and labor reduced in six months the cost of school ceilings from $3.24 per square foot to $1.81. Costs for other units on which agreement could be reached were also reduced substantially—and the new schools were more beautiful and flexible than previous models.

There is a great deal of wisdom about our domestic environment located in America, but it is scattered around: in government, industry, the foundations and universities. Many able people drift off to work on other problems for lack of money or career incentives. Others duplicate one another's work, or spend frustrating hours on problems recently discovered data could simplify. We need

(*Continued on page* 57)

Cities

Continued from page 34

to marshal a portion of this talent and energy in one place and provide the time and the physical equipment for scientists from various disciplines to help contribute to the process of urban change.

This pooling of scientists to help link human energy to social change would be similar to the mobilization of scientists in the Second World War to apply nuclear energy to warfare. That organization was known as the Manhattan Project; we might call the marshaling of scientific effort to help solve our domestic crisis Manhattan Project II. This would show that we are as serious about improving our domestic environment as we were about creating nuclear weapons.

Already, small groups of scientists have begun to gather on their own to help social change. MARC in New York and OSTI in Cambridge are examples. Manhattan Project II would provide the means for a wider grouping of such talents. These scientists should be free to describe a whole series of alternative solutions that different cities or neighborhoods may wish to apply. Perhaps some of those in Manhattan Project II will produce charts of what we wish our cities and therefore ourselves to be like in the future. Not detailed blueprints for action—the process of change will generate those—but dreams of what we might like to become: new Jerusalems between which we could choose.

"A great city," said Walt Whitman, "is that which has the greatest men and women." One measure of men and women is the size of their dreams. The beauty of many ancient European towns is legendary. Their style and proportion come in large part from the central role of a Church, from Zeus through Roman Catholic, during the time of their creation. We, too, need a dream—a concept of what we are—at the heart of plans for our environment. Or for all our efforts, we may wind up creating new ugliness, new slums, new uniformity, to replace the old.

Historically, we have been at our best on the frontier or in time of peril. The hydra-headed problems of poverty, discrimination, and urban decay are certainly the greatest challenge we have yet faced. But let those who, appalled by the size of our present crisis, count us out, remember our moments of defiance and triumph in the past. For we, too, have not yet begun to fight.

Schooner to the Small Islands

BEQUIA, AN ISLAND that is remote but reachable, rises abruptly from the sea about eight miles by schooner from St. Vincent, a West Indian refuge connected by air to Barbados and points north. Ominous-looking from a distance, it is the northernmost of the Grenadines, an archipelago which stretches 70 miles southward to Grenada. Several boats make the run from Kingstown harbor, including a biweekly craft under charter to Barclay's Bank—a sure sign of civilization. The midday schooner, to my tropical surprise, sails on schedule, pulling out of the harbor at 1:30. The trip took an hour and a quarter, and the charge—a fair one for the ride—was [West Indian] $1, or about 60 cents.

Two-masted schooners like the *Sea Hawk,* the boat I sailed on, are basic to the local economy. They are painstakingly built, 60 to 80 feet long, each beam hewn by axe and fitted into the hull according to its natural shape. The keels are huge single timbers, more than 50 feet long. On launching day the boats take to the water after a double ceremony—one pagan, one Christian. The pagan ceremony involves the sacri-

National Planning Association

Planning Pamphlet No. 125/$1.00

1968 Survey of Metropolitan Planning

GRADUATE SCHOOL OF PUBLIC AFFAIRS • STATE UNIVERSITY OF NEW YORK AT ALBANY

The first type of metropolitan planning was conducted by single purpose special districts which had been organized to solve a particular area-wide problem. Comprehensive metropolitan planning is principally a post World War II development although a few isolated instances of earlier comprehensive planning may be cited. The most famous early plan is The Regional Plan for New York and Its Environs which was sponsored by the Russell Sage Foundation and completed in 1929.

Although public planning commissions are established under provisions of a state enabling act, the federal government primarily has been responsible for the growth of area-wide planning by using conditional grants-in-aid to persuade local governments to organize a planning commission in each of the 233 Standard Metropolitan Statistical Areas (SMSAs). Since July 1, 1967, a local government within a metropolitan area becomes eligible to receive federal grants for specified projects—airports, highways, hospitals, libraries, open space land projects, sewerage facilities and waste treatment plants, transportation facilities, water development and land conservation projects, and water supply and distribution facilities—only if its grant applications are reviewed by a metropolitan planning commission.[1]

In 1962, the National Municipal League, with the cooperation of the Conference on Metropolitan Area Problems,[2] American Society of Planning Officials, and United States Housing and Home Finance Agency, published an annotated inventory of metropolitan, regional, and joint planning commissions.[3]

The United States Housing and Home Finance Agency in 1963, carried on the work of the National Municipal League by preparing a report—*National Survey of Metropolitan Planning*—for the Subcommittee on on Intergovernmental Relations of the Committee on Government Operations of the United States Senate.[4] This report was based upon a questionnaire completed by 126 metropolitan planning commissions in 142 SMSAs where metropolitan planning was being undertaken. A second report was published in 1965.[5]

Last year, the Local Government Studies Center of the Graduate School of Public Affairs of the State University of New York at Albany mailed a similar questionnaire to 259 metropolitan planning commissions; responses were received from 178. The 1967 survey clearly revealed a number of trends which have developed since 1963.[6] An expanded questionnaire was mailed to metropolitan planning commissions to obtain information for the 1968 survey.

NEW YORK:

ARE CITIES A BUST?

Here's the way out, says our top city-saver: think smaller, spend bigger, pay more, go private

BY EDWARD J. LOGUE

PRESIDENT AND CHIEF EXECUTIVE OFFICER OF THE NEW YORK STATE URBAN DEVELOPMENT CORPORATION

NEW YORK CITY, like the other major urban centers of the U.S., is suffering from a degenerative disease that if unchecked might well be fatal for the entire country. The day when more than one million people in New York rely on welfare will be reached this year. Local taxes are at a peak, yet the budget gap is greater than ever. New York is not alone. Youngstown, Ohio, closed its public schools for one month because of a lack of funds, and Newark threatened to shut the public library and the museum for the same reason. Summers of discontent have racked more than 100 American cities in the past three years. The urban crisis is getting worse. Yet I do not believe the problem is hopeless.

My prescription for curing the ills of the city focuses on two main headings: housing and schools. While unemployment, job training, mass transportation, pollution, municipal housekeeping, recreation and parks also pose problems, turning the system around in housing and education could serve as a key for solving other troubles.

The place to start is with decent housing for low-income families. The average American family is better housed than the average family in any other nation. Yet our record in decent housing for low-income families stands as one of the worst of any developed Western nation.

As the inner-city housing crisis worsens, we persist in the notion that the central city *by itself* must provide for the housing needs of ill-housed low-income families. We cling to this fallacy despite the reality that the central cities no longer have significant amounts of vacant land and no large supply of decent, available, low-cost relocation housing. We have, in short, adopted an approach to the city-housing problem that is guaranteed to fail. But there are answers.

There is an ample supply of vacant land suitable for housing low-income families in a ten-mile-wide belt around just about every one of our cities, except possibly New York and Los Angeles, where it may be necessary to go 20 miles or farther. Yet access to this land and the good schools, safe streets and open spaces that go with it has been denied to low-income families, and particularly black families, on a shockingly systematic basis. The noble tool of zoning has been perverted to "maintaining the character" of affluent lily-white suburbs.

One can hardly expect a locally elected suburban official to lead the way in tearing down these barriers, but it is not too much to ask of Federal officials and legislators. It is, however, perfectly possible to develop a suburban-housing program for low-income families that will aid them while not threatening the character of the suburbs.

The proposition is simple: build housing for low-income families, in groups of 40 to 50 houses, on the ample vacant land in suburban locations by providing exemptions from local zoning ordinances that perpetuate exclusiveness. Given the go-ahead, the private home-building industry could create such housing in six to nine months at savings from 25 percent to 40 percent off the current cost of building public housing in the central city. The homes would be rented from a private owner, perhaps the builder, and the occupants would have options to buy. Any subsidies required would be in the form of rent supplements. As family income rose, the subsidy would be cut and eventually eliminated. This is a much better incentive system than public-housing programs that evict tenants whose incomes increase too much.

To make sure that there would not be an excessively large concentration in any one suburb, the number of such homes would be limited to five percent of the total local-housing supply. This would guarantee that no single community's character would be basically changed. We would not be substituting huge suburban projects for the dreary city projects.

These days, the suburbs tend to equal or exceed the center city in population. Even with the five percent limitation, this program would have a very substantial impact. It would mean that anywhere from 20 percent to 50 percent of a city's low-income families could be rehoused within three years in such suburban colonies.

This would be done without unbalancing suburban schools, without overcrowding suburban parks or unbalancing suburban tax rates. The new residents would find work in the industries that have moved in increasing numbers to suburbia. Rehousing would also raise the level of hope, and indeed of achievement, of low-income families.

Next, at a distance farther removed from the inner city, we should have a large-scale program of building new towns. The British now have almost a million people living in 26 new towns built since 1946. Tapiola, the Finnish garden city, and the Stockholm suburbs of Vällingby and Farsta have accomplished the same objectives and are strikingly attractive, as are most of the British new towns.

With large-scale relocations, it becomes possible to demolish a substantial number of structures in the inner city that have outlived their usefulness and replace them with new housing, schools and other facilities. There could be large-scale housing developments, built, owned and managed by private enterprise but leasing a substantial percentage of apartments to low-income families. Here, too, as incomes rose, there would be no evictions, just a gradual reduction of the subsidies. That most of our large inner-city housing developments have been ugly does not mean they cannot be handsome if we try hard enough.

Finally, we must stop the deterioration of the existing inner-city housing supply. We have had a lot of experience with rehabilitation programs, not much of it successful. I suggest the establishment of local rehabilitation corporations that could provide a one-stop service, including inspection, programming, costing, financing and construction.

The second main heading of my prescription is the central-city school systems. Once quite competitive with suburban systems, they are no longer. They are falling further behind, losing their white students rapidly, and being pulled apart by the conflict over community control. The failure to adjust to the very different needs of the black students has meant that these schools have been disastrous to the child, to his family and to society. Quite unfairly, the central-city schools have been asked to bear a very heavy burden of the impact of population change. A balanced metropolitan approach would have been wiser but seems unlikely now.

I do not believe the quarrel over community control will be resolved by currently contending groups—emerging communities, teachers organizations and school bureaucracy. I see the need for an ingredient that can bring new strength, new enthusiasm, fresh imagination, youth and, indeed, scholarship to bear on public-school education.

I propose a contract between a local university or college and a local school system for the management and control of one or more ghetto schools. Universities show an increasing desire to help ghetto communities, and at the same time have a natural credibility for the teaching profession. Incumbent teachers would all be protected in their jobs. The university would have the right and the responsibility to hire new instructors (teacher turnover in such schools is enormous) and set standards. The university would establish the curriculum, select the teaching materials and even supervise the custodians. It could not set salary

NEW YORK:
Business is much more comfortable doing good if it is also making money

schedules different from those that were a result of collective-bargaining agreements. The new teachers might even be expected to join the union if there were one. The local school system would agree to provide money under a per-pupil-cost contract as the basic funding. The university would be permitted to scrounge for more. The university would agree that its faculty, graduate students and undergraduates would focus their research and experiments and field work on the contract district.

From the beginning, there would, of course, have to be an elected community education advisory board that would work with the university and reflect the needs and aspirations of the local community.

I have attempted in discussing housing and schools to suggest that there are practical ways of coping with what seem like insoluble problems, and that would include also the areas of unemployment, pollution, municipal housekeeping, transportation, recreation and parks. I believe equally practical programs in these areas can be established.

If our goals are to be achieved, however, there are five areas in which our way of thinking will have to change. They are competence, organization, public money, private money and commitment, and we continually underestimate their importance.

Competence. We still automatically think that civil service (the so-called "merit system") is the only proper public-employment method in an era in which trained talent is in short supply and tenure is of waning importance. State and municipal government stopped competing with business for the most capable graduates in 1941 or earlier.

Without jeopardizing incumbents, I suggest we eliminate civil service for executive and professional positions, except for teachers, who are a separate problem. I suggest that we pay executives, professionals and interns salaries comparable to those being paid in your favorite local utility. The idea that a utility vice president has a more demanding job than a police chief, a superintendent of schools or even a commissioner of public works is silly. The prestige and the satisfactions of local public service have never been enough to corral the best talent available. Salary and opportunity incentives are still the surest recruitment tools.

Organization. The structure of local government is typically a fragmented, unbalanced, irresolute and unprogrammed mess, often presided over by a mayor with a minimum of training for the job and an understandable yen to move on to a higher and less-exposed perch.

The authority of the average mayor is too meager. His term is too short. His salary is too low. The executive talent available to him is too limited: his municipal landscape is cluttered with too many independent boards and commissions, obsolete holdovers from an earlier day.

The structural, organizational and personnel systems that are municipal orthodoxy today rank as most significant causes of the low standards of municipal performance, of low morale and of the rising level of public dissatisfaction with local government.

I urge that the Congress authorize and the President appoint a Commission on the Organization, Structure and Staffing of Local Governments. The commission would examine such politically hazardous questions as the relevance of civil service in this time of talent shortage and widespread collective bargaining. It would look into the critical question of municipal boundaries: Are present boundaries drawn to provide the most effective units of government? To what extent do present boundaries guarantee an unbalanced tax base and segregated school systems, black inside and white outside? Can city governments be decentralized and made more responsive to the will of the people?

Public Money. The absolute top-priority need of cities today is more cash, lots more. Sorry if that makes you uncomfortable. It is much cozier to believe that more efficiency and less corruption are all that is required. Hogwash. The level of service in the cities is lower than in the surrounding suburbs because the funds are not there. The cities need more cash to compete, and if they can't compete, they will surely die. The cities have squeezed about all they can out of the real property tax. In some places, it has become a major reason for fleeing to the suburbs.

The only source able to provide this needed new cash in the required amounts is the graduated Federal income tax, which is national in scope, universal in application. Basically, this is because the income tax is growing at a more rapid rate than the national income, as increasing affluence moves more people into higher tax brackets.

I doubt that the income tax would have to be raised to cure our urban crisis. The continuing growth of the American economy and the faster growth of Federal revenues can provide the funds needed. A gradual shift in priorities could guarantee it. Defense and space programs do not have to receive all that money. They can be cut back, and they can also be stretched out. An America without slums and without forced segregation would be a more powerful force in the world than an America that had become an armed camp.

Federal money can be readily found, but we must remember that those in charge in Washington naturally prefer the fun of spending it themselves—either on those industrial-military projects President Eisenhower warned us against or on the proliferating categorical grant programs (now over 400 in number) that have grown in such profusion and complexity in the last eight years. How much Federal money are we talking about? I would suggest from five percent to ten percent of the Federal budget, say $10 to $20 billion a year, as an early goal.

Private Money. American businessmen have just begun to concern themselves seriously with the ills of the cities. Though late, their interest is a healthy and welcome one. Our business system is as responsible as any other part of our society for the sickness of our cities. We must recognize as well the level of prosperity that the business system has brought to so many. The system is productive, imaginative and flexible. Its massive involvement in the urban crisis could be a great boon.

HOWEVER, I AM CONCERNED that businessmen are likely to get discouraged too easily. The hostile reaction they often get from people they are trying to help is unsettling to them. They find the inevitable governmental red tape disheartening. Exhortation will carry the business community just so far. Businessmen are basically profit-oriented. Doing business in the slums is just not profitable today. If, as is likely, we are not prepared to finance city rebuilding entirely out of the Federal treasury, then we must maximize private participation. The best way to do that is to make such investment highly profitable by amending the income tax laws so that investments in urban housing and job opportunities will become as attractive to the private sector as the oil-depletion allowances are to Texas millionaires. Business is much more comfortable doing good if it is also making money.

We must understand that neither the Federal treasury nor the Ford Foundation is going to create black capital. Black businessmen on their own will have much too slow a time of it. It seems to me that joint ventures pooling white capital and know-how with black commitment and black desire are the way. The Internal Revenue Code could be amended to make black capitalism highly desirable to white investors.

Commitment. The urban crisis in America is deepening. Public housing, urban renewal, the poverty program, the Model Cities program have made no more than a dent, again with a handful of exceptions.

It is time we recognized that all of these efforts have been barely token when matched against the size and scale of the urban problem. We have never mustered more than a small fraction of the resources required. We need a commitment on a scale comparable to the urban crisis itself. As a nation, in my opinion, we do not yet care enough. Until we do, I would urge LOOK readers to visit the old cities and the new towns of Europe to see what a different order of public priorities has done for their urban environments. They can remind us that solving the urban crisis is not mission impossible. END

Planning General

John Fischer

HARPER'S Nov., 1969

THE EASY CHAIR

Planning for the Second America

If General Electric expected to double its plant capacity and office space within the next thirty years, you can be sure it would assign a platoon of its ablest executives to figure out the best way to do it. In fact, General Electric almost certainly is doing that right now. I have talked to some of its planning officers, who were (for obvious reasons) discreet about their specific projects, but they were candid enough about their operations in general. Their job is to answer questions about the future. When will a new factory be needed—for radios, refrigerators, or some entirely novel product? What should be its initial capacity, and how much allowance should we make for expansion? How shall we raise the money? Where should it be built—taking into account the location of markets, labor supply, raw materials, rail and highway networks, the quality of local schools, and dozens of similar considerations? Such inquiries, for example, underlay the company's decision to build a $250-million manufacturing and distribution center at the new town of Columbia, Maryland; within ten years it is expected to employ 12,000 people.

In such long-range planning, General Electric is not remarkable. It is simply following sound business practice. Every enterprise of any consequence has a professional staff at work on its plans for future growth. Every enterprise, that is, except the United States of America.

Within the next thirty years, this country can expect to double the physical plant of all its cities. To take care of the predicted growth in population, it needs to build a new house, school, and office building for every one that now exists. It will need twice as many parking lots, universities, bus lines, jails, garbage dumps, airports, and bars. For the number of Americans almost certainly will rise from about 200 million to 300 million before the end of the century; and virtually all of the new people will live in cities. Indeed, our long-dwindling rural population probably will shrink still further, as displaced farmers continue to move to the metropolises. This means that we face the job of building a Second America—of duplicating all of our man-made assets—within a single generation. What our forebears did in three hundred years, we have to do in thirty. Such is the inescapable arithmetic of the population explosion.*

The task probably is not impossible. A nation which can explore the moon ought to be able to tend to its own housekeeping, if it sets its mind to it. The odd thing is that, up until now, we haven't. During the years when we were cheerfully spending $23 billion on outer space, we spent peanuts on the space we have to live in. Even today thousands of talented people are busy planning what to do on the moon, but no agency of government is planning the Second America. Nowhere in Washington can you find anybody who is responsible for figuring out where those 100 million extra people are going to live, how they will get to work, or who will put roofs over their heads.

Many agencies—indeed, far too many—are fiddling with bits and pieces of the problem; but they work at cross purposes, because they have no common goal. Neither the White House nor Congress has set forth an overall policy to guide them. No one in authority has said, "Here is the blueprint. This is what we want the United States to look like thirty years from now. Every one of you bureaucrats, from the county farm agents to the Atomic Energy Commission, is hereby directed to work to this pattern. Your first responsibility is to make sure that we reach these national goals by the end of the century."

Such a blueprint actually exists. It is traced out, in considerable detail and with hundreds of pages of supporting data, in four recently published books. The goals they set are clear, sensible, and well within the country's capacity. They are proposed by some of the best minds in America, after many months of argument and grinding labor. So far, of course, the plan has not been accepted by either Congress or the President. (I doubt whether Mr. Nixon has even read the books, although Daniel P. Moynihan and some of his other aides certainly have.) Under our habits of government, it cannot be accepted in Washington until it has been thoroughly discussed throughout the country, and has won a considerable degree of public assent. This process has not even started, because the four books are practically unknown to the public at large. So far as I know, not one of them has been reviewed by the *New York Times* or any other major newspaper, though they have had casual mention in a few news stories. But they will not be ignored forever; on the contrary, they are likely to become central texts for the political debate of the coming decade, because they deal with issues which will shape the lives of all of us, and our children.

The books which comprise The Plan were produced by a curious, and uniquely American, process. It would be an exaggeration to call them underground publications, but they were created so quietly that they almost look surreptitious.

Until quite recently, the American credo held that planning was just dandy for businessmen, but was forbidden to politicians and civil servants. *Public* planning was regarded as a sin, indulged in by godless Communists but unthinkable for any right-minded American. This dogma was formally proclaimed some thirty years ago, when President Roosevelt tried to set up a National Resources Planning Board, on the theory that it might be useful to know what assets we had and how they were being used. The elderly conservatives who then dominated Congress promptly denounced the Board as subversive, cut off its money, and drove some of its staff into political exile. This ruthless lesson was enough to make prudent bureaucrats shun the very word "planning" for decades to come.

Nevertheless many people in govern-

*People who enjoy arithmetic can find the detailed figures in two recent publications of the Census Bureau: *Projections of the Population of the United States by Age, Sex, and Color to 1990, with Extensions of Population by Age and Sex to 2015* and *Projections of the Population of Metropolitan Areas: 1975.*

ment realized that some planning was necessary for the efficient conduct of the public business, just as it is for private enterprise. Their problem was how to go about it without attracting the malevolent attention of the Eastlands, Goldwaters, and House Un-American Activities Committee. A customary solution—imperfect, but better than none—is to work behind a political heat shield: a commission.

Almost anybody can set up a commission. Usually it is appointed by the White House, but on occasion it may be created by a Cabinet member, a Congressional committee, a foundation, or by some convocation of mayors or governors. Its chairman is a more-or-less eminent citizen without political ambitions, and therefore not too nervous about criticism; his fellow commissioners ordinarily are obscure characters, vaguely described as "experts." Since it is a quasi-official body, it can be financed with tax money, or in a pinch by foundation grants—usually enough to hire a highly competent staff. Such a commission is directed to study some question—almost always a politically ticklish one—and to come up with recommendations. If these recommendations turn out to be palatable, they can be adopted, with hosannas, by the original sponsor. If not, they can be repudiated or ignored.

Occasionally a commission produces immediate results, as in the case of the Hoover Commission which led in 1949 to a useful overhaul of the executive branch. More often a commission's findings will sound so radical, or expensive, that neither legislators nor executive agencies will dare to touch them right away. Nevertheless the findings—and the thousands of pages of testimony and studies on which they are based—are now in the public domain. With luck, they will attract the attention of academics and maybe a few journalists; they will be referred to in books and Congressional debates; and so their once-startling propositions gradually become familiar. At that point they may be ripe for political action. Thus, for example, President Nixon's recent recommendations for reform of the welfare system are the outgrowth of suggestions put forth years earlier in half a dozen commission reports.

Several of Mr. Fischer's reports in "The Easy Chair" during the past year have dealt with current innovations in American government. He is the author of Master Plan: U.S.A. *and other books.*

So it is with the four books which outline a plan to accommodate the country's next 100 million people. They are reports of commissions (although one calls itself a committee). While these groups worked independently of each other, their ideas are remarkably similar; and the recommendations of each one tend to complement and reinforce the recommendations of all the others. Nobody intended that their reports should thus fit together to form a reasonably coherent scheme of action—but it isn't altogether coincidence, either. You might say that the pieces fell into that pattern because the spirit of the times demands it; or, more prosaically, that when intelligent men stare long enough at the same body of facts, they are likely to arrive at similar conclusions. As usual, most of the politicians who are aware of these conclusions have greeted them with wary, not to say stunned, silence. It will take a little time yet for them to become commonplaces of political discourse.

Only one of the reports is likely to be read in its original form by any substantial number of ordinary people. Entitled *The New City*, it is the product of the National Committee on Urban Growth Policy. It was brought out last August in an attractive format, with plenty of pictures, by a commercial publisher, Praeger ($12.50), and is available through bookstores; moreover, it was edited by Donald Canty, a professional writer-editor. The other three reports were published by the Government Printing Office in its usual drab style; they have to be ordered from the Superintendent of Documents; and they are written for the most part in the Late American Mandarin dialect which is now standard with bureaucrats and social scientists. Consequently their ideas are not likely to reach many readers, aside from determined urbanologists, until they are available in translation.

All I can attempt in this space is to indicate the main thrust of their argument. Each of the commissions concluded independently that it would be a hideous—and expensive—mistake to force the next 100 million Americans to live in our present cities. Yet that is precisely where they will end up, if present trends are permitted to continue. Already two-thirds of our population is living in some 230-odd metropolitan areas: cities of 50,000 and more, together with their suburbs. According to the Census Bureau projections mentioned earlier, virtually all of the anticipated increase will crowd into those same cities unless we do something to divert it elsewhere. Not because everybody wants to hive up that way.* People are being pushed in that direction by government policies of long standing—the farm program, the welfare system, the location of science centers, the obsolete rules for building public housing and insuring home mortgages, the way government contracts are let. None of these policies was meant to shove people into the already clotted-up metropolitan centers. Each of them was originally devised for an entirely different, and well-intended, purpose. Only belatedly did it become apparent that they are, as an unexpected by-product, influencing the direction of future growth—and that the cumulative result may well be a national disaster.

How this works is explained in two of the reports: one by the National Advisory Commission on Rural Poverty, the other by the Advisory Commission on Intergovernmental Relations. The first was a temporary *ad hoc* group appointed by President Johnson; he did not like its findings, presumably because they were critical of measures to which he was committed, such as the oil-depletion allowance and the subsidy of rich farmers. For months the report (*The People Left Behind*) lay buried in the White House and might never have been released, if it had not leaked inadvertently to the press. The other commission is a permanent body established ten years ago as a joint enterprise of federal, state, and local governments. In its quiet way it has been doing some of the most hardheaded and farsighted planning ever undertaken in this country, and has issued more than forty reports, many of them highly technical. The most important of these (in my opinion, at least) appeared in 1968 under the title *Urban and Rural America: Policies for Future Growth*. It not only presents a reasoned criticism of the country's present policies—or non-policies—but also sets forth an array of alternatives. The fourth book, *Building*

*Jane Jacobs does, and a certain number of kindred souls who believe the boondocks begin just west of the Hudson. But a Gallup poll taken last year indicated that 56 per cent of the people questioned would prefer to live, if they could, on farms or in small towns rather than in a metropolis. Moreover, the steady movement from the core cities to the suburbs demonstrates that a considerable additional percentage yearns to get as far away from downtown as possible. Although sociologists, novelists, and urban intellectuals have been excoriating suburbia for the last thirty years, it still looks like the promised land to a growing number of Americans.

the American City, is better known as the Douglas Report, after Paul H. Douglas, former Senator from Illinois and chairman of the Commission on Urban Problems. It is the longest (more than 500 pages) and offers the most detailed diagnosis of the cities' ills, together with prescriptions for curing them.

Anyone who reads the four reports together quickly realizes that they are revolutionary documents — perhaps as revolutionary as anything published in this country since *The Federalist* papers. They demand nothing less than a reshaping of American institutions—the whole web of local governments, the tax system, the labor unions, the welfare programs, and many another hallowed relic—and they make such a compelling case that the reader is likely to find he has become a revolutionist himself before he reaches the last page.

The most dramatic proposals are those designed to channel our growing population away from Megalopolis. This is a prime goal of all four commissions, although each of them approaches it in a different way.

The New City recommends the building of 110 new communities within the next thirty years, to provide homes and jobs for 20 million people. Ten of them would be cities of at least one million population; the rest would average about 100,000 each. The Rural Poverty Commission in its report, *The People Left Behind*, puts more emphasis on encouraging the growth of existing small towns, especially in those parts of the country such as Appalachia, the South, and the Midwest which have been sending the most migrants to the big cities. Many a shabby and discouraged village of, say, 5,000 people can be converted into a thriving and attractive community of 50,000 to 100,000, if the right steps are taken to bring in new industries.*

Urban and Rural America: Policies for Future Growth endorses both of these strategies. They supplement each other, and both are clearly needed since the proposed new cities would take care of only a fifth of the added population. But this study, like the Douglas Report, also devotes considerable attention to the things which have to be done to make our present big cities livable and governable. All four recommend the setting up of a new and muscular arm of government to handle the detailed planning for future growth, and to see that the plans are carried out. (Mr. Nixon's Council for Urban Affairs, headed by Pat Moynihan, might well evolve into just such an agency.)

My first reaction to this Grand Design was skepticism. It sounds great, all right, but isn't it too grandiose to be practical? And how could the country ever pay for it?

As I prodded deeper into the assembled evidence, however, my skepticism began to erode. I ended up convinced not only that the plan is feasible, but that it probably will be achieved in large part before the end of the century. Moreover, this undertaking could turn out to be more exciting than the exploration of space—and far more likely to enlist the enthusiastic commitment of alienated young people.

Cost is not so big an obstacle as it might seem. The new cities should pay for themselves; indeed, they might actually return a profit to the public purse. And in any case, most of the capital would come from private investors rather than the taxpayers.

That is one of the lessons we have learned from Western Europe, where new cities are an old story. Great Britain, for instance, already has built fourteen of them, providing homes and close-at-hand jobs for half a million people. They have proved so successful, both socially and economically, that fourteen more are now in the works. The latest of these, announced only last January, will be the most ambitious new city yet undertaken; eventually it alone will accommodate a half-million people, and the total population of the twenty-eight projects should reach three million. The experience of Finland, Sweden, and Holland with similar projects has been equally encouraging.

Our own experience has been encouraging too, although few people realize it. For new communities are also an old story in America—so old it has been largely forgotten. Every schoolchild learns that Washington, D.C. was designed from scratch by Major L'Enfant. But how many know that he also planned Paterson, N.J. in 1791 as a new city sponsored by the Society for Establishing Useful Manufactures? Or that Marietta, Ohio, Salt Lake City, Bethlehem, Pennsylvania, and Winston-Salem all originated as new towns, to mention only a sampling out of dozens of such ventures?

Most of these were started before the Civil War, when cheap land was plentiful, by private corporations or religious sects. A few more were built with government money during the Depression years, when private capital was hard to come by: notably Norris, Tennessee, and three so-called "Greenbelt Towns" near Cincinnati, Milwaukee, and Washington, D.C. They served as proving grounds for new ideas in design—the superblock, cluster housing, the separation of auto and pedestrian traffic—which eventually were widely adopted by private developers. At the time, however, they brewed up a storm of irrational emotion, which I had a chance to observe at first hand, because I worked for a couple of years with the Greenbelt Towns project. Real-estate operators denounced it as a socialistic threat to the divine rights of land speculators. And one Congressman, the late John Taber of Auburn, New York, actually believed that the new town north of Washington was designed as a hiding place for arms, in preparation for the day when that madman Roosevelt would dispatch a ravening mob to sack Capitol Hill. He told me so, and refused my pleas to come see for himself that the Greenbelt toolshed hid nothing more sinister than lawn mowers and baby carriages. If you think some Congressmen are peculiar today, you should have known the prime specimens of the Thirties.

Only in the last decade has big business started to invest in new communities, on a scale far larger than is generally realized. Fifty-two such projects were under way in 1968, each of them covering at least a thousand acres and offering all the facilities needed for a community of three thousand or more residents.* The most famous are Reston and Columbia, on opposite sides of Washington, D.C., but most of them are located in California, Florida, Arizona, and Colorado. The largest is California City, embracing more than 100,000 acres and designed to accommodate eventually 600,000 people; it is the brainchild of a rich young man named William M. White, Jr., the head of Great Western United Corporation. Other major corporations involved in

*For a case history of such a transformation, see "The Lazarus Twins in Pennsylvania: How Scranton and Wilkes-Barre Are Rising from the Dead" in the November 1968, issue of *Harper's*.

*A full listing, of possible interest to both home seekers and investors, is given on page 78 of *Urban and Rural America: Policies for Future Growth*.

building new communities are General Electric, Westinghouse, IT&T, Boise Cascade, and the Del E. Webb Company. All of them, and a dozen smaller firms in the same field, obviously expect to earn a profit.

In that case, why shouldn't we depend on private enterprise to build all the new cities we need, with little or no help from government? In theory, this sounds reasonable, because the financial arithmetic is enticing. All you have to do is buy a few thousand acres of farmland at, say, $500 an acre, build the nucleus of your town, and then sell off the land at perhaps ten times its original price, plus construction costs. The creation of a new population center is all it takes to send land values skyrocketing; witness what has happened in Rockland County, New York, or in the new city of Columbia, Maryland.

In practice, alas, private enterprise can't do the job alone, for two reasons.

First, it is too hard to assemble large tracts of land in places where new communities are needed. Only a genius like James Rouse could have assembled at a reasonable cost the 14,000 acres needed for Columbia, in the fast-growing area between Washington and Baltimore, and he probably could not duplicate the feat today. Several of the new-town builders in the West avoided this problem, because they already owned huge expanses of farming land; examples are the Irvine Ranch and the acreage where Great Western United once raised sugar beets. But few such situations are left.

In the second place, a new town requires a lot of "patient capital" to finance the initial streets, sewers, water supply, and other community facilities. The investment is safe enough, but it cannot be fully repaid until the whole project is completed—which may be twenty or thirty years, or longer. Even the strongest corporations find it hard to raise that kind of capital, especially in a tight money market. That is the reason why Robert Simon, the original developer of Reston, Virginia, got into trouble and had to turn control of the management over to Gulf Oil.

If we are going to get the new cities we need, therefore, some arm of government will have to help out in three ways. (1) It must assemble large blocks of land, without running up the price, by use of its powers of condemnation and eminent domain. (2) It must put up a good part of the "front end money" for building community facilities, in the form of long-term loans. (3) It must take responsibility for the overall planning, which no private corporation is capable of handling; only a public agency can, or should, select the sites for the 110 new communities, set standards for protection of the environment, and arrange inducements, when necessary, to create job opportunities. (This does *not* mean government subsidy to business; usually all it takes to bring new industries into the desired location is provision of a good highway, a dependable water supply, and perhaps an industrial park, a government installation, or a nearby university. Witness what happened when Route 128 was built as a ring highway around Boston.)

The rest of the job can confidently be left to private enterprise. Experience to date, both here and abroad, indicates that plenty of businessmen will be eager to flesh out the new community with homes and factories, once the skeleton is in place: that is, the basic plan and the infrastructure of streets and utilities.

It makes no sense to calculate the cost of building the Second America according to the four-book plan—or some variant—without also looking at the cost of the alternative. If we simply let our present cities double in size, in the chaotic and heedless way they are now growing, the cost will be infinitely greater. One reason is what economists call "diseconomies of scale." After a city reaches a certain size, the per capita cost of providing services—water, police protection, transport, and all the rest—begins to rise sharply. (Nobody knows for sure what the optimum size might be, because our political scientists have done surprisingly little research on this question; the most plausible estimates I have seen suggest that the desirable population ceiling may lie somewhere between 200,000 and one million.)

Far greater, however, are the social costs of urban elephantiasis, and tax costs which inevitably follow. The events of the last five years have made one thing unmistakably clear: when a city gets too big, it pays an enormous price in crime, drug addiction, spreading slums, decaying schools, and racial turmoil.

If he is interested in saving money, therefore, every true conservative ought to be a passionate advocate of The Plan. So should everybody who simply wants the country to be a decent place to live in. And, after all, why shouldn't we build the Second America in a sensible and humane fashion? If the British and the Finns can do it, why can't we? □

Planning General

FORWARD ATLANTA

OFFICIAL MONTHLY NEWSLETTER OF THE ATLANTA CHAMBER OF COMMERCE SPRING, 1969

"Headquarters : Atlanta" Goes to Press

The Atlanta Chamber of Commerce is introducing a publication of a new breed. The concept is vast: Atlanta is a headquarters city. But the audience is a select one: top level executives of national and regional firms. The book, photographed in full color, is designed for these executive decision-makers. It invites them to make Atlanta home. Home for their business: all the pertinent facts are here. Home for their families. All the amenities of life in Atlanta are included. The tone is crisp, businesslike; yet conversational and reservedly friendly. It speaks to executives on their own terms.

The book begins with a success story. A prominent firm asked Atlanta why its headquarters should be here, and got the right answers.

What are the questions?

Is Atlanta ready to be a headquarters city? Yes, because it has long been the center of the southeastern region. It has the people, the buying and selling power. It has a vast array of service industries, and great research capabilities. It is oriented toward becoming an even larger city. And so it is now planning solutions to the problems that already choke cities like New York and Chicago.

Does Atlanta have space for headquarters? Yes, because over 19 million square feet of office space has been built since 1960, and office and industrial parks are springing up in abundance.

Is Atlanta accessible? It has the fourth busiest airport in the nation. And it will be expanding its air facilities. The freight transport facilities are good. Railroads,

(Continued on page 9)

"Only a handful of American cities deserve to be called great; fewer still can be called truly unique. Only one deserves the name Atlanta."

Institutions

Anyone who smokes cigarettes is either stupid or is devoid of will power. Wish I had the guts to quit.

Today's community leader could spend every lunch hour and every evening of the year attending the many meetings to which he is invited. It is one of the penalties of leadership.

The jury is still out on what effect conglomerates will have on traditional corporate citizenship. Some of the early evidence is ominous.

The parking situation at the airport grows more critical every day. Relief is needed and needed now.

If you haven't already done so you should visit our new Governor's Mansion. It is very handsome and is furnished in good taste.

The new fire, smoke and burglar alarm system that *Safeguard* has installed in our house will probably bring on heart attacks until we become accustomed to sirens wailing and bells ringing, caused by forgetfulness.

It took about twice as long to repair the fire and smoke damage at our house as it did to build the entire house originally.

Opinion: Worst TV commercial: The Tareyton filter transplant; best: Georgia Power Company's "What will a penny buy?"

The "Gawker Go Home" legend on our expressway safety signs was a mistake. Many tourists on their way home from Florida vacations thought we meant them. The mail was hot and heavy.

This is the season when most of us play hell. We go out and spread fertilizer all over the yard so we may have the pleasure of mowing all summer long. Wonder how much it would cost to cover a lawn with Astroturf?

If Rev. William Holmes Borders ever tires of the pulpit he can earn a good living as a stand-up comedian. And he doesn't need to use four letter words either.

One good thing about a fire: it gives you a chance to compare apartment living with that of living in a house. Be it ever so humble ----- etc.

our town

by OPIE L. SHELTON

"Dear Ivan: It's true, our downtown area is becoming more trashy every day. Those of us who mess up the streets and sidewalks deserve a stiff fine.

housing and redevelopment

THE WEST END STORY has been more than a hundred years in the telling. Residents of this Southwest Atlanta community, though, will tell you quickly and enthusiastically that the best chapter of all is taking place right now.

Heritage and history notwithstanding, West End looks to 1969 as a pivotal year in its destiny. What happens or doesn't happen this year will determine the success of West End's redevelopment program.

A large portion of the community–some 675 acres–has been under Urban Renewal since mid-1966 and in the planning process for several years before that. The West End project is the largest and most ambitious of all Atlanta's Urban Renewal Program projects.

What has happened recently, and what's going on now? How do the residents feel about their community's prospects? Is West End still a "model project" which could become a testimonial to what Urban Renewal can accomplish?

Those were some of the questions in the minds of a subcommittee of the Atlanta Chamber's Housing and Redevelopment Committee, when it conducted an inspection field trip recently.

Members of the subcommittee saw and heard ample evidence to agree with what the residents believe so firmly: West End's future has never looked brighter.

Subcommittee Chairman W. L. Waronker of Ward Realty Company summed up the findings: "The physical, tangible sings of progress and rebuilding in this fine community are encouraging, if not amazing. But even more stimulating were the intangible signs–the many examples of how strongly West End believes in itself and in its future."

Since its inception, the West End project has been geared to keeping the area largely residential, as it has been since the area was chartered as a town in 1868. (It was a fashionable suburb during the latter part of the 19th century and was considered a residential showplace in later years.)

Plans for the area also include considerable commercial development, featuring an enclosed-mall shopping center in the heart of the present business district. No firm dollar figure has been placed on the shopping center, but it is estimated to involve some $3 million.

Construction will start on the shopping center during 1969, says the Atlanta Housing Authority, the city's agent for administering Urban Renewal projects. It is one item of several which represent some

(Continued on page 9)

Moreton Rolleston, Jr., a long-time member of the Chamber's Transportation and Traffic Committee, explained his idea for "Atlanta Urban Airways," a new rapid transit concept, at a recent meeting of the committee.

The idea, which would involve an elevated rail system using expressway rights-of-way, has also been presented to the MARTA Board and Design Committee for study.

transportation and traffic

HIGHWAY BOARD CONSIDERING "COUNTY CONTRACT" POLICY

State Highway Board Member Alex W. Smith, Jr., has focused attention on the need for implementing the 1965 Bowdoin Commission recommendations concerning "County Contract" type of highway construction.

The Chamber of Commerce has advocated adoption of the recommendations since the day the study first was released. Mr. Smith, Fifth Congressional District Board member, urged the Highway Department to prepare policy regulations on county contracts in relation to the Bowdoin Commission report. He asked that the department report back to the Board.

Board member Jack Embry, from DeKalb County and the Fourth District, seconded the motion. It passed by a 5 to 4 vote, with N. N. Burns, Jr., of Rome, Clark W. Duncan of Buena Vista, and D. Douglas Barnard of Augusta joining in a favorable vote.

These Board members made it plain they were not attempting to abolish the county contract system, under which the Highway Department contracts with the county governments for the paving of off-system county roads. Instead, they expressed the views that they feel a hard look at the Bowdoin Commission study is just good business procedure.

Chamber President Frank Carter wrote Mr. Smith a commendatory letter, in which he stated in part:

"We agree with you, the Governor's Commission (Bowdoin Commission) and Highway Management Associates (the highway consulting firm on the report) that County Contracts serve a good purpose and should be continued. But we also agree with you and the reports that it is just good business sense to revise and modernize policies and management of the County Contract Program.

"We commend the Highway Board on its action . . . and we urge all of the members to join with you in adopting new regulations which will result in continuing improvement in the operation of our Highway Department."

education

Under the leadership of its new chairman, Frank Smith, Jr., of IBM Corporation, the Education Committee has diversified its interests into many areas of education. The Committee is now working with the Atlanta Public School System in the Community Resources Workshop, a summer course for teachers. Beginning July 16, the three week course will take the teachers out into the business world to get a first hand, in-depth picture of what is expected of young people about to seek employment.

world trade

Masao Anzai
Chairman of the Mission
President, Showa Denko K. K.

JAPANESE ECONOMIC MISSION

A Japanese Economic Mission to the Southern United States will visit Atlanta April 22 to April 24.

The Mission, organized under the sponsorship of the Japanese Government, is composed of leading members of the nation's business and industrial community. It is designed to promote good will and understanding between the United States and Japan through an exchange of views and ideas with leaders in various sectors of American life.

Masao Anzai, President of Showa Denko, one of Japan's largest integrated chemical companies, will head the mission.

Expansion of U. S.-Japan trade on a mutually beneficial basis will be discussed, and the Mission also hopes its visit will serve as the first step toward exchange of visits on a regular basis between the business communities of the Southern United States and Japan.

WORLD COUNCIL TRADE SEMINAR

"The social and political environment of the entire human race has been changing so radically over the past two decades, that world commerce is a whole new ball game–revising some of the old rules of the old game won't suffice."

Walter R. Johnson, Assistant to the Publisher, *Fortune Magazine*, made this statement in addressing the World Trade Council's "Trade With Europe" seminar, February 26.

The seminar's intent was to promote interest in trade with Europe by presenting speakers and panelists who could review the old rules of the game and at the same time stimulate thinking about the "new ball game."

Mr. Johnson, in emphasizing the stake of American business in international development, said, "any policy structured with the conviction that the interdependent world of business is man's best hope for stability and order provides the best hope for the future of the United States."

ATLANTA Magazine

Advertising income of *ATLANTA Magazine* for the first three months of 1969 jumped 20 percent over the same period last year, Advertising Director Ronald K. Hill announced.

In addition, the March, 1969 issue included a record 75 pages of advertising, and advertising revenue for March was also a new high.

"The increased sales are a direct result of increased readership and a better awareness of *ATLANTA* as an advertising medium," Hill Stated. "Circulation now is over 23,000, but total adult audience, including pass-along readership, is more than 160,000. Advertisers are recognizing that exposure is what they want for their advertising dollar, and they're getting it with *ATLANTA Magazine*."

Governmental Affairs

GENERAL ASSEMBLY ADJOURNS; DISAPPOINTMENT TO MANY

1969 was to be the year in which local government finally received authority to broaden its tax base so that it could begin to solve some of its most pressing problems. That seemed to be the mood as the 1969 session of the General Assembly opened. There was much talk and strong support for "home rule", and everybody had a plan to help property tax payers carry the local government load.

And what happened? The 1969 session of the Georgia General Assembly adjourned Wednesday, March 26. It had provided that in fiscal 1970, state grants to municipalities would be one million, two hundred fifty thousand dollars less than they are in fiscal 1969. County grants were cut $250,000.

Legislators arrived in January to face a confused tax situation. The Governor wanted $214 million in new spending, but the legislature wouldn't "revise" taxes to that extent.

They made an effort to raise some extra money through restructuring the personal and corporate income tax law, but an error resulted in dropping the personal income tax revision and increasing the corporate tax rate by 20 percent. Gasoline taxes were raised from six and a half cents per gallon to eight cents. The Governor vetoed the gas tax hike.

He also vetoed the urban road bond bill, one of a very few bills which would have helped heavily populated areas. One other, a home rule measure to permit a tax on mixed drinks, was adopted.

Of all the plans proposed to help local governments and relieve the burden on ad valorem taxes, one is still alive, postponed until next January. It would allow local option 1 percent sales taxes with 40 percent of collections returned to point of sale, and 60 percent put in a pot and rebated per capita among those counties participating. School systems and local governments would share equally in the revenue.

All in all, it seems more than a little surprising that things turned out as badly

as they did for local government in this session. After all, cities and counties had been told in 1968 . . . "wait till the tax commission makes its report." Prior to that, it had been . . . "let's appoint a commission to study the whole tax structure" . . . Now it's "wait till next year," which will be an election year, which will make it even more difficult. Unless enough people get tired enough of digging deeper and deeper each year when ad valorem taxes come due . . . .

Top Producer: J.L. Jerden

Forward Atlanta will honor a Contact Club member in each edition for his individual achievement.

J. L. Jerden, top producer for the Contact Club, likes to tell the story of how his wife, Jane, almost made him stop refereeing Southeastern Conference football games when he had to miss an important dinner party she was giving last fall for her cousins.

"It was only last week that we decided I could referee again this fall," he laughed.

An enthusiastic sportsman, he began working at a golf course when he was 9, and at 12 his score was in the low 40's. Today he plays at the Ansley Country Club.

When he entered Southwestern College at Memphis, he played football and baseball. Today he's Regional Chairman of Southwestern's Alumni Association.

After graduation from college in 1959 he came to Atlanta and took his Master's Degree in Business Administration from Emory University. Now Vice-President of Prichard and Jerden, Inc., a fast-growing 8-year-old insurance agency, Jerden carefully programs his many activities.

He says his job as Contact Club Chairman is the biggest he has this year, although he still finds time to be Treasurer of the Atlanta Touchdown Club, a Director of the Braves "400" Club, a United Appeal Zone Chairman, and a Boy Scout leader.

Married last summer to the former Mrs. Jane C. Bowen of Atlanta, Jerden recalls 2 years ago when he was the first bachelor to win the Contact Club's promotional prize trip to Puerto Rico.

"It was a trip for two, and they didn't quite know what to do with me," he smiled.

Jerden, his wife, and daughter Susan Bowen, 4, live in their new home on Angelo Drive in Northeast Atlanta.

One day Membership Drive

The Contact Club, led by Chairman J. L. Jerden, brought in $4,450 in new revenue for the Chamber March 27 during the One-Day Membership Drive.

Members, their "buddies", and special volunteer workers spent the entire day soliciting new members to help meet their $4,500 per month goal. The total revenue brought in so far this year is $18,290.

Member Ed Nidever and his "buddy" Howard Shaw were high men for the day, bringing in $1,000, and Bill Harrell and Bob Rhinehart of Merrill Lynch, Pierce, Fenner & Smith, led the volunteer workers in total revenue. Each winner was awarded a $25.00 gift certificate.

At the Kick-Off Breakfast for the Drive, three members were presented awards for their individual production to date in 1969. J. L. Jerden, Prichard and Jerden, Inc., received his five year award, while Richard Bell, Crow, Pope and Carter Co., Inc., hit the mark for the third straight year. Don Enzmann, General Electric Company, earned his second year award.

Public Relations Report

Atlanta has become a favorite "show and tell" subject for the nation's magazine journalists. Not all end up producing the grandiose *National Geographic* type article, but each visiting editor, writer, and photographer returns to share his impression of Atlanta with thousands or millions of readers.

Holiday Magazine sent first a feature editor to write a vignette on Peachtree Street. After viewing the street all the way from the Top-O'-Peachtree to Pershing Point, talking with those who work along its length and sampling the good life and food Peachtree can offer, he decided that *Holiday* was overdue a major feature on Atlanta.

Others come to see how we tackle the problems which plague all big cities to near frustration. Such was a writer from *U. S. News and World Report* who came to see if and how Atlanta would survive the financial problems of cities. His conclusions, after an escorted tour to visit the city's financial and political leaders, were that if any city can find a way to lick the problem, Atlanta will show the way.

Often the subject is on the prettier side. The Editor of *Interior Design* recently visited Atlanta looking for beautiful interiors. Visits to the Memorial Arts Center, the Governor's Mansion, and the Midnight Sun restaurant left him in a mood to have an Atlanta issue in the fall.

Sherman Emery, Editor, Interior Design Magazine was in Atlanta on March 3rd preparing a feature on Atlanta interiors.

National Advertising

With the accumulated years of national advertising experience during the years of the sixties behind us, the Forward Atlanta ads continue as the most distinctive of the major community advertising programs apperaing in national publications. Or at least we are told that frequently by the visiting delegations from other U. S. cities—and we tend to believe them. We're flattered that our format, illustrations and copy approach have been widely copied by several of the competing cities, and the creative people at our agency are determined to stay a jump or two ahead of imitators who borrow the Atlanta look.

Advertising Committee Chairman Al Richardson and his group of volunteer advertising professionals have so far put together five ads covering the general topics of finance; the city's accessibility to the rest of the U. S.; Atlanta a national city; a headquarters city (regional or national); and one based on the Fortune 500 firms count for Atlanta.

(Continued from page 3)

$59.7 million worth of Urban Renewal improvements to start this year.

Something of a symbol, the shopping center will be a rallying point for revitalizing the business district, and stimulating trade from a large area beyond West End.

The West End branch of Sears, Roebuck and Co. has been for years the pace-setter among all Sears Atlanta stores. Sales figures continue to climb.

Officials of the Sears store have been among the hardest workers toward realization of the shopping center dream, and they are predicting even higher sales records for the store once the shopping center gets going.

To preserve the residential nature of the area, the emphasis has been on rehabilitation. Some homes have had to be demolished, including a few of the stately old homes of another era, but most of the clearance has involved buildings in the last stages of decay and blight.

An estimated 1,200 structures eventually will be rehabilitated. Direct grants of federal funds–up to a maximum of $3,000 each–have been made to 127 residents, totaling $197,705 in improvements. Some 338 other individuals are eligible for grants.

The impact of these efforts is dramatic. In some areas, entire blocks of homes show sparkling, fresh-paint exteriors, and visitors can visualize similar results within.

In West End, the local involvement in urban renewal centers around a house at 662 Peeples Street, S. W., converted into a functional office building. This is the West End Project Office, headquarters for Project Director Wilson McClure and a staff of 16. Here the mechanics of Urban Renewal take place, innovations are born or tried out, complaints are registered, and all kinds of information is passed along while it's still news.

If West End could have one wish come true, it probably would be this: To be able to convince more private developers of the real potential of the area and to get some developers to take advantage of the opportunity. There is room for a variety of developments, including apartments, and residents believe the developer who casts his lot with West End will be glad he did.

(Continued from page 1)

motor freight, air cargo transport and the new C-5A are all in Atlanta.

Does Atlanta have varied communications service? To name a few types, Atlanta has Southern Bell Telephone and Telegraph headquarters, national TV network offices, plus advertising agencies, marketing agencies, news media, national magazine offices. Whatever a company wants to communicate, in whichever media, Atlanta is well-equipped to handle it.

Does Atlanta have good leadership? Atlanta takes seriously the role that government can play in providing a better environment for its citizens, and a stable climate for business. Mayor Ivan Allen, Jr. is the latest in Atlanta's line of enlightened mayors.

Is Atlanta a good place to live? If you like sports . . . there are four major league teams. And an $18 million stadium. And if you appreciate the arts, you can go to the new Memorial Arts Center to see a play, or a ballet, or an art exhibit, or hear an opera, or the Atlanta Symphony Orchestra. And for night life, there are supper clubs, discotheques, and good restaurants. And for those who make their own fun, there are parks, lakes, and golf courses in every direction. Home can be atop a high rise apartment, a wooded residential area, or quite literally, in the country.

But the book, and these facts are only an introduction. The executive is invited to investigate first hand this new kind of headquarters city. To ask questions. To probe. To consider . . . and hopefully to move here in the near future.

Copies may be purchased at $3.00 each by calling Linda Holley in the Economic Development Department.

Business Briefs

A recent tabulation of the present Fortune 500 list shows 440 with one or more operations in the Atlanta area. This is a gain of 19 over the previous year . . .

Interesting item from the 1946 H. W. Lockner Highway and Transportation Plan estimating that "Metropolitan Atlanta's population will reach the three-quarter million mark by 1970". Who would have predicted the actual total would be very close to twice that figure!? . . . .

Engineering News-Record recently quoted figures compiled by the American Appraisal Co. of Milwaukee relative to 10 building cost indices (counting US average 1926-'29-100). Sample readings for Dec. 1968: US average for brick residences, 405.9; comparative Atlanta figure, 345.0; US average for commercial and factory bldgs., brick and concrete, 457.6; comparative Atlanta figure 375.9. Of the 21 cities covered, four were the Southern cities of Atlanta, Birmingham, Dallas and New Orleans. Birmingham's figures were slightly lower than Atlanta's in 9 of the 10 categories; Atlanta and Dallas were virtually the same, each recording the slightly lower figure in 5 of the 10 categories. All the New Orleans totals were higher than Atlanta's, but cost figures for the metropolitan centers in other regions were considerably higher than those in the four Southern cities . . . .

A delegation of four executives from Quincy, Illinois called on the Chamber staff last week, bringing to 137 cities the number of such groups coming here to study our Forward Atlanta Program since its inception . . . .

Office Space Study Available in May

From 1960 through 1968, Metropolitan Atlanta recorded a net employment increase of 182,950 persons. A high percentage of these now work in the 101 major office buildings completed during this same period.

The Chamber's development staff spends time each day helping people find office space in the Atlanta area. Some choose Atlanta as a convenient base to serve the rapidly growing Southeastern U. S. markets, and an endless complex of new data processing, professional, and technical services is attracting many others.

To fill an increasing demand for information, copy is being prepared for a new volume entitled "Office Space in the Atlanta Area", which will include three maps locating office buildings downtown, on Peachtree Road, and on Interstate Highways. A recent study covering the 19 suburban office parks (March *ATLANTA Magazine*) will also be included, with locations shown on the maps. Publication is planned for the month of May.

Jobs

The Atlanta Regional Metropolitan Planning Commission in its Population and Economy Report Number One, "Atlanta Silhouettes," published in January 1962, analyzed Atlanta's regional character and compared 1960 employment in major categories with other cities and the U.S.

The report stated that, "In general, the employment profiles of the inland regional center are much more like that of the United States as a whole than are the profiles of the resort, port or factory communities. A greater proportion of employment in regional centers is concentrated in the finance-insurance-real estate, transportation-communications-utilities, and wholesale trade industries than in the country as a whole. A lesser share of their employment is in manufacturing."

Since ARMPC issued its report, Atlanta has added 182,950 new jobs, an increase of almost 50 percent.

The chart below shows a comparison of Atlanta's 1968 employment in each major segment of the economy expressed as a percent of total.

Source: U. S. and Georgia Departments of Labor

Atlanta.. Data Processing Study Underway

Among the many inquiries received by the Chamber from manufacturing firms, distributors, and other businesses are those concerning the extent and capabilities of the electronic data processing (EDP) industry in Metro Atlanta. To facilitate the gathering of accurate and comprehensive information, a survey has been launched by the Economic Development and Research Departments with the help of the Industrial Development Division of Georgia Tech.

Approximately 400 questionnaires were mailed to two major groups. Group A consisted of computer manufacturers, EDP programmers, software, service, supply, and maintenance companies. Atlanta area companies who could utilize EDP in their operations received form B.

The Chamber will publish a brochure from the information which will document the area's data processing resources and potentials. The brochure will be available in early summer, 1969, to all who could benefit from the information.

In the event that a reader of the newsletter qualifies in one of the two groups mentioned above and has not received a form, please contact H. Harold Carter at the Atlanta Chamber (521-0845). Any who have received the form and have not returned it are encouraged to do so as the validity of the survey will depend upon the response from the industry.

Senator Russell Guest Speaker

Senator Richard B. Russell, Georgia's senior senator and president pro tempore of the Senate, was guest speaker and featured panelist at a business-government luncheon on the day after Easter in Atlanta.

Senator Russell spoke briefly, then answered questions from the audience for almost an hour in a spirited dialogue with the capacity crowd which asked its questions through a panel of presidents from the eight sponsoring metropolitan area Chambers of Commerce.

Terming inflation America's most pressing domestic issue, Russell predicted the extension for another year of the ten percent income tax surcharge, but expressed the hope that the Congress would require cuts in federal spending as the price of extending the surtax.

"We can't launch a full-scale attack on our domestic problems while we are entangled in the Vietnam conflict," he said.

Asked how he would end the Vietnam war, Russell replied, "I would begin with an ultimatum. If the North Vietnamese want to talk peace, we will listen, but otherwise, we should give notice that the United States will use all conventional weapons available to us to end the conflict."

The Russell business-government luncheon was sponsored by the Atlanta Metropolitan Area Council of Chambers of Commerce, and was the first such function to be sponsored jointly by the group which includes the Atlanta Chamber of Commerce, The Atlanta Women's Chamber, the Clayton Chamber, Cobb Chamber, DeKalb Chamber, Gwinnett Chamber, the Hapeville Chamber and the South Fulton Chamber of Commerce.

PLANNING AND POLICIES

1968 - 1969

INTERNATIONAL INDEPENDENCE INSTITUTE

Incorporated

Exeter - New Hampshire

INDEPENDENCE FOR MEN EVERYWHERE

THRU ECONOMIC EDUCATION AND ITS

CREATIVE APPLICATION

INTERNATIONAL INDEPENDENCE INSTITUTE, Inc.

I. Purpose

The goal of the International Independence Institute (I.I.I.) is to help create in the underdeveloped, primarily rural, areas of the world conditions which will bring about a rejuvenation of economic and social life in non-urban locations.

To achieve this goal, the implementation of certain key ideas, primarily involving creative uses of economic instruments, will be sought through education.

The central concept behind the Institute is that concern for the individual, the family, and the community should be the first priority of those organizations dealing with the economic development of underdeveloped regions. Schemes based on the assumption that efficiency of production must take precedence over human values are bound to fail, because they do not get to the heart of the human problems or the population problem.

The urban areas of the world are incapable of indefinitely absorbing an increasing number of people without also increasing unemployment, crime, water and air pollution, traffic and other already critical problems of urban life. Programs for rural renaissance are essential to help reverse the flow of migration to the cities.

The National Advisory Commission appointed by President Johnson to study economic conditions in rural America, headed by Gov. Edward Breathitt of Kentucky, reported in 1967 that

> "...urban riots have their roots in rural poverty, because a high proportion of the desperate people crowded into city slums are refugees from even worse rural slums... One person in eight is poor in the cities, but one in four in the countryside."

The Commission estimates that there are almost 14 million poor people in the rural United States.

II. Key Ideas

A. Credit, or the availability of credit, not technology, is the primary force in development.

Technology actually follows credit. Certain technologies will develop and others will wither, depending on the availability of credit. Development goes where credit goes. For example, the greatest development of modern technology, our military hardware, has been made possible only by money being constantly made available for it. Military hardware and other large scale industrial technology is developed at the cost of not developing other intermediate technologies, which might be of direct value to the rural dweller and small farmer in the underdeveloped areas of the world.

The rural poor, in the South American Pampas or the cotton fields of Alabama, are forced to suffer the burdens of a vast technology which at once deprives them of their meager livelihood, while offering its benefits only to those who can afford them.

B. The world can best be divided into developed and underdeveloped areas, not into developed and underdeveloped countries.

Nearly every country has its ultramodern cities and its backward, rural areas. Again and again it has been witnessed that in underdeveloped areas, credit is not available to the small producer except at exorbitant rates of interest. Some producers pay as high as 80%, 100%, or more, even in the rural areas of the Southern United States where State laws allegedly prohibit such usurious rates. There racism contributes by preventing Negro small producers from operating at their potential levels of efficiency. Neither the Farm Home Administration nor the Rural Extension Service of the Department of Agriculture serve the really small farmer effectively, nor does either agency serve the Negro farmer adequately.

C. Short-term loans to small producers constitute a sound and reasonable investment, as has been indicated by many studies in the field, such as those conducted on a worldwide basis by the FAO. (*)

Such capital is usually not available - except at exorbitant interest rates - not only because of racial prejudice, but also because of the inherent difficulty and cost of making relatively small short-term loans, rather than large, long-term ones. This is a very important problem, but one which the Institute believes can be overcome through the availability of trained credit supervision specialists and field workers.

(*) Simon Williams, Harvard Business Review, Nov./Dec. 1966: "Experience in many countries with directed and supervised credit is proving that small farmers will repay loans promptly and fully, and that in the great majority of cases, no other security than trust, and potential for increased production and income is required to insure repayment of loans by small farmers."

D. Credit, when made available to small farmers and producers, must be carefully supervised.

Investments should be made in the light of plans which have been developed in accordance with the generally accepted principles of community development. Decentralization of decision-making and local planning are an essential part of the creation of rural renaissance. The involvement of low income families in the process of initiating plans for the development of their own institutions is the essence of rural revitalization. Emphasis, therefore, should be placed on the development of cooperatives, credit unions, land trusts, etc., where democratic participation and values can grow. Intermediate technologies such as those advocated by the British economist E.F. Schumacher hold the most hope for the small producer, who must begin to improve his methods---starting where he is, building one step at a time.

E. Land ownership and control must lie in local hands.

Land reform is essential in many of the underdeveloped areas of the world. But where land reform has taken place, when it was not accompanied by the availability of production credit to farmers, the farmers had to re-mortgage their land to obtain fertilizer and seed, and thus have again become dependent upon their former landlords. By contrast, in Japan, where land reform after World War II was accompanied by an increase in available credit, small producers using supervised credit have given evidence of the success that might be realized elsewhere.

F. Gifts or grants of assistance (domestic or foreign) for purposes of development are inadequate, because they forestall the growth of the infrastructures necessary for permanent economic independence.

In other words, not only does outright charity have a debilitating effect upon the dignity and morale of its recipients, but it serves only as a palliative, and can have little effect upon the essential re-structuring of economic relationships.

III. Role and Functions of the Institute

Although significant private capital resources exist, both in the developed areas and even in the underdeveloped ones, these resources have not been channelled into the kind of programs needed to achieve rural renaissance, primarily because the human resources necessary have not been available. The Institute proposes to make funding programs possible by providing the trained supervisors and field-workers that are essential.

The major function of the Institute is to assist in establishing field training programs on the local level for the benefit of individuals involved in rural renaissance projects. For example, working with universities and colleges, the Institute plans a curriculum for training regional field organizers who, in turn, participate in setting up permanent regional institutes for the training of local personnel.

The Institute does basic research necessary to carry out the key ideas. In this connection, it has worked with lawyers, economists, bankers, voluntary agencies, church and mission organizations and many others.

Among other functions of the Institute are the following:

1) Public education concerning the key ideas underlying rural renaissance and the progress that has been made toward their implementation in programs of various types in all sections of the world.

2) Providing encouragement and assistance in the establishment of pilot programs.

3) Publishing a regular Bulletin; theoretical, background and research papers.

4) Establishing and maintaining a reference library.

5) Sponsoring conferences relating to the revitalization of non-urban living.

6) Identifying new opportunities for field programs and referral to the proper organizations for their consideration.

IV. Immediate Objectives

Root causes of urban crises are not in the U.S. cities---but in the rural South. A multiplicity of agencies, public and private, are dealing with the problem in the cities. Insufficient activity is directed at the rural roots of this massive problem, which will affect American life everywhere.

The Institute is currently concentrating its activities in the establishment of pilot projects in the U.S. South which will provide viable tests of creative new economic methods.

Dealing with the urban problems, while essential, is nontheless treating only symptoms. It is the Institute's policy to bring all its energies and abilities to bear on imaginatively but practically attacking the causes of the nation's present crisis.

V. Experience

A successful project creatively utilizing economic techniques in which the Institute played a key role is the highly publicised Southwest Alabama Farmers Cooperative Association (SWAFCA).

A report prepared for the Federal Government describes SWAFCA:

"SWAFCA is a cooperative of poor farmers, mostly Negro, in ten counties of the Alabama "black belt" (Lowndes, Dallas, Perry, Hale, Green, Sumter, Marengo, Choctaw, Wilcox and Monroe). The average family income of its members is less than $1,500 a year.

"SWAFCA was formed towards the end of 1966, as a desperate response to the economic and social forces that have driven many poor farmers out of the area in a disastrous migration to urban slums (around 20% during a recent five year period alone). These forces are all too familiar throughout the South: a backward one-crop agriculture, preserved into modern times by the abuses of debt peonage, absentee landlordism and share cropping; a class of poorly-educated small farmers, pressed by forces they have not been taught to comprehend; the economic upheaval caused by competition from more progressive parts of the country (e.g. Western cotton growers), and compounded by the side effects of cotton acreage restrictions.

"Large farmers have been able to increase yields almost as fast as acreage was cut; poor farmers have not had the skill, access to technical advice, working capital and equipment to follow suit. Nor do poor farmers have enough land or equipment to engage in extensive agriculture. Nor - until the advent of SWAFCA - did they have any practical means to diversify into other intensive crops. And if they had, there would not have been markets available to them. So poor farmers were gradually squeezed off their land, or off land they had share-cropped for generations, or off plantations they had served for wages since the days of slavery.

"Encouraged by a small group of civil rights "agitators", some of the poor Negroes of the "black belt" made one last effort to keep their rural homes. They formed the "Southwest Alabama Farmers' Cooperative Association", and began to try to put their idle land and labor into the growing of vegetables.

"Reprisals came quickly. Some of the farmers had been growing pickling cucumbers and Southern peas for Alabama processing plants; processors cut off their purchase from members of the cooperative. Fertilizer, previously bought from an all-white cooperative (*) mixing plant, became unavailable to Negroes. Lime trucks suddenly ceased to deliver lime to members of the cooperative. Truckers hired by SWAFCA were halted by police for alleged traffic violations, and a number became too frightened to continue to serve the cooperative. The local telephone company tried to charge $700 for the installation of a few telephones. A bitter campaign against SWAFCA was conducted by local political figures and information media. Many subtle and not-so-subtle pressures of the rural South were mobilized to discourage farmers from joining.

(*) The few original Negro members had been eliminated as soon as the cooperative paid off its initial capital loan from Federal Government sources.

"Despite these pressures, SWAFCA's members stood fast and more farmers joined. The price of cucumbers and Southern peas rose, for members and non-members alike (though non-members continued to complain of short-weighting and short-grading). New distant fresh markets were found for okra; previously the local market had been swamped whenever a few pickup truckloads were delivered.

"When important financial and moral support came from OEO, it began to be clear to all that SWAFCA was there to stay. The campaign against it has now died down, and there are even some signs of willingness of some parts of the "power structure" to cooperate."

- - - - - -

The Institute received the following letter from SWAFCA:

Mr. Robert Swann,
Field Director,
International Independence Institute
Voluntown, Conn.

Dear Mr. Swann,

We are writing to express our appreciation to the International Foundation for Independence. We are greatful for the help you have given the Southwest Alabama Farmers Co-op. Association.

Through our financial struggle, you helped us to purchase fertilizer and seed, making it possible to begin growing vegetable crops in this area of the South.

In March 1967, we contacted your organization for some financial assistance. On April 4, 1967, we received a check in the amount of $25,000.00 from the International Foundation for Independence. Through this assistance the Co-Op was able to purchase seed and fertilizer for the farmers until their crops are sold.

The Southwest Alabama Farmers Cooperative Association consist of the following ten (10) counties: Lowndes, Hale, Dallas, Greene, Marengo, Sumter, Perry, Choctaw, Wilcox and Monroe. In these ten counties, we have some of the poorest people in this nation. They are poor mainly because the system is so designed to keep them in an impoverished condition.

The International Foundation for Independence came to the rescue of 600 organizing farmers. To explain in detail, we were able with your assistance, to let the farmers from this ten county area have 600 tons of fertilizer, and 6 tons of seed. In Greene county alone we credit the farmers $2,500. In Dallas county, $7,500, and in Perry county $5,600. This is just to point out a few of the counties we were able to assist.

One main point I would like to bring to your mind: the cooperative have saved the farmers as much as $10.00 per ton on their fertilizer this year. The farmers have also purchased seed at a lower price. The poor people for the first time in the history of the Black Belt of Alabama have

(Letter from SWAFCA - cont'd)

been able to purchase their fertilizer and seed together. This gave them one or two advantages they had never experienced before.
1. It gave the farmers an opportunity to manage their own operation, and make decisions. The main thing has been the education aspect of the project. These people are beginning to understand the marketing process and the advantages of doing business through a cooperative venture. They have also developed a tie that brings them closer together and the realization of one anothers problems.

Again we are expressing our gratitude to you and the organization which you represent. If we had not secured your aid and assistance 600 farmers in the State of Alabama would have been without fertilizer or seed to plant a crop.

These 600 farmers affect the lives of many more people. Each of these farmers have families ranging from 5 to 12 in each family. The work of the International Foundation for Independence is one that cannot be overlooked when it comes to shaping this true American way that is set out for the people that survive in this country.

We hope for the International Foundation for Independence a long life in helping to bring out the true philosophy of the founding fathers of this country.

Sincerely yours,

/s/ Joe Johnson, Pres.

/s/ Lewis Black, Coordinator
Southwest Ala. Farmers
Cooperative Association

- - - - - -

(Note: Mr. Shimon Gottschalk, member of the Board of Directors of the I.I.I., and planning director of the Rhose Island Council on Community Services, made a visit in August, 1967, to Southwest Alabama, and at the suggestion of SWAFCA board members made a number of suggestions to help strengthen the SWAFCA organization.)

VI. Projects in Progress

A. At present the Institute is working on the design of a Land Trust program for the U.S. South, which, if successful, could become the equivalent in importance of the Jewish National Fund in the development of Israel.

Drawing on the experience of the Institute's members, such as Dr. Ralph Borsodi who designed such a Trust in Suffern, New York, and in consultation with members of the Jewish National Fund, as well as legal consultation with several lawyers, including the firm of Delson & Gordon, New York, designers of the Mutual Real Estate Investment Trust, the Institute is developing a specific plan for 900 acres of farm land in Southwest Alabama. Unlike the Jewish National Fund, which has relied entirely on donations, the Institute's Land Trust Plan is designed to attract both donations and investments. Once established, the usefulness of such a plan would, similarly to the Jewish National Fund, include the following features:

1) insure that those who actually work the soil remain on the soil if they wish, and cannot be dispossessed or cast into any form of debt peonage through a system of mortgage or credit strangulation.

2) land speculation which forces up land values and all other prices without returning any value to the community, can be ended or at least strongly inhibited.

3) create an ongoing experienced body or legal entity (Land Trust) which can act as a channel for both donations and investment funds now and in the future as more land becomes available for those without land. It could also act as receiver of land for redistribution should the Federal Government be persuaded to seriously entertain a land reform.

This program originated in part as a result of the SWAFCA program. Individuals and organizations involved in helping set up this program in the South include: Lewis Black, Rural Advancement Project of the Alabama Council on Human Relations; Mildred Black of the Southern Cooperative Development Program; Donald Jelinek, Southern Rural Research Project; Albert Turner, Southern Christian Leadership Conference; James Wood, Southern Regional Council; Connie Curry and Winnifred Green, American Friends Service Committee.

B. Closely related to this program for a Land Trust is a program for low-cost self-help housing in the rural South. Acting on a consulting basis with the National Sharecroppers Fund, Robert Swann, of the Institute, and Tom Karter, formerly head of Title III (OEO), have developed an initial prospectus for Rural Housing Development Corporations in the Rural South.

Building on the experience gained (and now coordinated by the International Self-Help Housing Association) throughout the world in self-help housing, this program is aimed primarily at creating a new approach and, hopefully, a breakthrough in financing self-help housing. It is aimed at the problem created by the fact that at the present time virtually the only agencies involved in financing low-cost housing are the OEO and FHA (Farm Home Adm.) . However, the poor are caught in the squeeze between the OEO's mandate to "furnish technical assistance only to self-help programs that have the assurance of mortgage financing before construction--in other words,

to families who are likely to be eligible for loans from FHA or other mortgage sources", and FHA's requirements which are usually too high to reach the rural poor.

A full prospectus on this will be available shortly and will be sent on request.

VII. Plan of Action

A specific goal for 1968 is the establishment of three Land trusts.

Locations in which preliminary work is underway are Berks County, Georgia; the area surrounding Albany, Georgia; and Sumter County, Alabama.

Associates and personnel of the Institute have made a close study of both the successes and failures, here and abroad, of past projects,---- and some had personal experiences with them----such as the Gramdan Movement in India; the Jewish National Fund in the U.S.A. and Israel; the School of Living in Suffern, New York; and the Quaker community in Bryn Gweled, Pennsylvania. These experiences are providing sound guidance for the organization of Land Trusts.

To add to the fund of knowledge required for the projects, and to provide contacts in the local communities, the Institute is working closely with such organizations as the Southern Regional Council, the National Sharecroppers Fund and its Rural Advancement Program, and the Southern Federation of Cooperatives.

In developing Land Trusts, the Institute acts as catalyst in the organizational and supervisory functions. These functions include, although they are not necessarily to be performed by the Institute: finding and procuring land, making feasibility studies, enlisting and screening families, designing and constructing housing and construction supervision, ascertaining sources of financing, and in general supervising the establishment of a viable organizational structure for the Trusts. Local desires and conditions are being given priority consideration.

Rural poverty presents a paradox to the sharecropper and landless farmer in the South where the rich soil around him represents the potential for an adequate livelihood, but which is denied him because the land and the means of production are unavailable to him. The successful establishment of three Trusts this year will provide a pattern of operation which will enable the Institute to accelerate activities in future years.

VIII. Operations

International Independence Institute is chartered by the State of New Hampshire as a non-profit educational corporation. The Internal Revenue Service has granted it tax deductible status under section 170, 2106, 2205, and 2522 of the Internal Revenue Code.

For headquarters, I.I.I.'s choice has fallen on Exeter, N.H., where, as a coordinating center, research can be carried on in proximity to the Greater Boston, New England, and New York-Northeastern university complexes. Meetings of its directors, and conferences and seminars with advisors and field personnel will benefit from the educational atmosphere created for the town by the Phillips Exeter Academy.

While the I.I.I. headquarters serves as a support base, the field personnel spend most of their time in the rural South.

Board of Directors

Stanley Andrews	Alamo, Texas	farmer; first director of US overseas aid programs
Ed Cohen	Princeton, N.J.	Dept. of Education, State of New Jersey
Richard Dewey	Durham, N.H.	professor of sociology, University of New Hampshire
Shimon Gottschalk	Providence, R.I.	planning director of R.I. Council of Community Services
Miriam Jackson	Epping, N.H.	public relations
Gordon Lameyer	Exeter, N.H.	educator
Devi Prasad	Enfield, Middlesex, England	executive secretary, War Resistors International
Jean Rau	Stratham, N.H.	geologist
Porter Sargent	Boston, Mass.	publisher
Robert Swann	Voluntown, Conn.	architect and builder
Jerry Voorhis	Chicago, Ill	former congressman; retired executive director Cooperative League of U.S.A.

Staff

Field Director:	Robert Swann
Field Representatives:	Al Ulmer - Vilas, N.C.
	John Lewis - Atlanta, Ga.
Research Director:	Ralph Borsodi, economist
Community Planner:	Richard Dewey, Ph.D., sociologist
Social Planner:	Shimon Gottschalk, MSW
Communication Planner:	Patrick Jackson, PRSA
Business Manager:	Erick Hansch

Legal Counsel:	Eugene Struckhoff, Esq., of Orr and Reno, Concord, N.H.
Public Relations Counsel:	Jackson, Jackson & Wagner

Des Wilson

THE SOCIAL AIMS OF PLANNING

Mr. Des Wilson, Director of SHELTER, gave this address at the London Conference of the Town Planning Institute of Britain, May 15, 1969. It was first published in the *Journal of The Town Planning Institute*, Vol. 55, No. 7, July-August 1969.

Planning and Poverty

My concern is primarily with the urban poor—the people who are forced to chew on the rotten core of our cities. Because poverty in an affluent society is relative deprivation and the homeless are also the slum dwellers, I am desperately concerned with what is happening to the twilight zones of our cities today, and what others are or are not planning to do with them tomorrow.

The city is many things—it is a commercial centre, an industrial centre, a cultural centre, an educational centre, a recreational centre, and a residential centre. But in our competitive society, it is also the battlefield. And just as you will find on the fringe of a battlefield its hospitals and its burial grounds, so you will find in all of our cities there are corners apparently reserved for the economic losers and the socially dead. Because planners control many of the levers of change, it is within their power either to be the undertakers or the architects of their revival or survival.

Thus, I believe the alleviation of poverty and all that is related to it is not only relevant to the planner, but should be his central concern. I believe the planner should not be a dispassionate and detached assessor, but rather an advocate himself. He should not be waiting to be persuaded that he should plan not just to meet poverty, but to overcome it; he should be doing the persuading.

Planning, like politics, seems to be for the consensus. One sometimes gets the impression that planners deny the existence of the poor because the poor could not afford what the planners want to plan. The middle class—the new élite in our society—get planning for people; the rest get planning for the proletariat. The poor must either live in grim isolation on soulless, friendless estates on the fringes of our societies, or walled off in squalor and slums in the centre. The lower income group cannot be blamed if they dread our cities in the year 2,000—cities full of strangers, centres of alienation, with housing estates like social deserts, breeding drinking and violence, or slums 20 or 30 storeys high, dangerous and more squalid than anything that went before.

You may think this is extremist, or alarmist. Maybe so. But this is the way they see it, and you would do well to remember that you will be effectively serving the poor not when you think you are, but when they think you are.

What, then, should be the social aims of the planner—to plan for real equality of opportunity for everybody; to seek a reasonable degree of satisfaction of life for everybody, instead of the greatest happiness for the greatest number; to identify with the poor, with the minorities in our society, and in integrating them fairly into our society, to achieve a genuine improvement in the quality of our life, and not a superficial one. An affluent society with poverty is superficially wealthy; a society that demands of or comes to expect of its planners a campaign of action and ideas to achieve equality of opportunity both through the environment and in other ways for everybody is both wealthy and healthy. Because permanence is built into poverty, and poverty is to a great degree self-perpetuating, apathy or inertia in the face of its existence today will guarantee its existence tomorrow. In the face of poverty, apathy and inertia, accommodation or

EKISTICS, vol. 29, No. 172, March 1970

toleration, are negative forces in themselves.

Ministry of Social Security figures in 1966 revealed that some ½ million families, involving well over 1 million children, were living below the poverty line. Previous to that, the most recent White Paper on housing revealed that 3 million families in Britain still live in slums, near slums, or in grossly overcrowded conditions. 1·8 million occupied houses in our country are unfit for human habitation. The number of people in hostels for the homeless today is around eighteen and a half thousand.

The number of children 'in care' for no other reason than that they come from unsatisfactory housing conditions is now over 4,000. The number of families queueing up for a council home in London alone has gone up in the past 2 years from 150,000 to 170,000.

We could, of course argue, about how many of the people who exist within these figures are really poor, absolutely poor. Such a debate would be irrelevant. For poverty in any affluent society, is relative deprivation, and this is just as materially and socially crippling. Suffice to say that absolute poverty does exist and that whereas relative deprivation involves a comparison by the individual of his situation and that of other people, and also a comparison by the individual of his aspirations and his potential and the real opportunity he has to realize them, the victim of absolute poverty is totally engrossed with the struggle for survival.

No words of mine could be as eloquent as theirs.

One woman wrote:

It means breaking into your gas meter during the school holidays because you cannot afford to feed the children, and not being able to sleep at night wondering where you are going to find the money to put back before they come at the end of the month.

Another woman told *The Guardian:*

I goes to the butcher's shop with only three bob in my purse. I felt like a real prawn. There they all were buying their weekend joints. I asked for three pork strips, and told him I needed them for my neighbour's dog. I'm afraid I'm a proud woman and I don't like being poor.

This is absolute poverty, but I repeat: poverty is not merely a material thing. It is a psychological process. It deprives the individual not only of comfort but also of human dignity and fulfilment. It reduces choice, it saps the ability of the individual to be responsible, or to know what must be done, and it saps the will to take action. It has been called 'the complex interlocking set of circumstances, caused by and in turn reinforcing each other, that combine to keep the individual without money, without help, without work.'

I think that Coates and Silburn in their study of St Ann's in Nottingham wrote meaningfully and movingly on this subject. They argued that human personalities and appetites are socially formed, and that we must recognize that there is no easy escape from the given social environment in which people find themselves placed, and that with technological advance, what yesterday were luxuries become today's necessities.

They said:

While this argument is widely accepted, its implications are often ignored. Not only do people come to feel they need electric light, and think of candles as an inadequate substitute, but after a certain point has been passed their need for electric light can be so deeply registered in the fabric of their personalities that they come to feel it more powerfully than that for various other goods, which might be thought otherwise to be primary needs. It is most unhelpful to assume that it is simply an act of personal folly that produces the situation in which people go hungry in order to pay the television rental. Such responses commonly spring from deeply engrained social needs; it is only in the imaginary work of crude rationalism that men are motivated by primary belly-drives alone.

The more complex a society, the more diverse the needs it creates, the more possibility there is that people might risk malnutrition rather than fail to satisfy some socially engendered want.

Coates and Silburn concluded:

The kind of poverty we have been exploring in St. Ann's is not absolute, does not express itself in starvation or nakedness, but it does reveal its face in a whole network of assumptions and standards which add up to a veritable culture of the rejected, a half-world which links a whole neighbourhood, whether the people inhabiting it are themselves physically below an arbitrary standard set up by investigators or not. It is the world of the back end of the queue, of reach-me-down services and pawn shops, where happiness is felt to be achieved if tomorrow is not worse than today.

My own experience and that of SHELTER bears them out.

Poverty and the strain of living in slum housing and hopelessly overcrowded housing conditions turns mother against father, father against mother, parents against children, and children against parents until the whole family tears itself apart.

Poverty is need, but it is also bitterness, bewilderment, frustration, strain, tension, and a deeply rooted sense of hopelessness.

And there is no more crippling psychological disease than that of hopelessness: all of the qualities that might enable them to escape—energy, enthusiasm, idealism, expectation—all are based on hope. Where hope is gone, any potential will remain unfulfilled.

The Effect of a Slum Environment

One reason why a slum is self-perpetuating is because poverty and bad housing perpetuate inequality of opportunity. SHELTER in 1967 carried out a research project to establish the effect of a slum environment on the educational capacity of children. The report 'Back to School from a Holiday in the Slums' (1967), found that children from

slum districts are hopelessly handicapped. Childhood for them is a time of lost opportunity.

Teacher after teacher talked of chidren who lacked play space and the opportunity for experience, for seeing and learning new things.

They talked of children who were too tired to work at school because of overcrowded sleeping conditions.

They talked of frequent absenteeism, because of unhealthy housing.

In such conditions, it needs only one child to fall ill and the whole house goes down.

They talked of children so nervous and insecure because of the strain and tension of overcrowding, that they became neurotic, and could not concentrate for more than a minute at a time.

They talked of children moving from school to school as their parents sought a better home—one child had been to 8 different schools in one term.

They talked of their own desire, as teachers, to get out—one school in North Kensington began a term with a 100% new staff—what good to the children is that?

Perhaps saddest of all, they talked of children with a basic potential leaving school at 15 both because they could not keep up—no peaceful place to do their homework—and because they wanted to escape.

Without a decent schooling, they can't get a decent job, they can't earn a decent income; without a decent income, they can't afford to get decent housing; and so they end up back there where they began—trapped in a vicious circle.

In our indadequate attempts to solve the housing problem, we are seen to be perpetuating some of the worst repercussions of poverty. Not only do we undermine family life, for the home is the basis of family life, but we breed our social problems. There is a steadily growing pile of evidence to substantiate the claim that bad housing and overcrowding are the root causes of nearly all our other social problems.

Commenting on his Newcastle research, Gordon Cherry, now deputy head of the Center for Urban and Regional Studies in Birmingham, said:

> The relationship is inescapable: overcrowding may be positively correlated with virtually all aspects of social malaise in Newcastle, often in a most marked fashion.

An Island of Poverty

Martin Luther King said of the American negro:

> He lives isolated on a lonely island of poverty in an ocean of material prosperity.

The figures that I quoted earlier, and my own experience, convince me that there is a significant section of our people who are so isolated from the affluence and prosperity of the mass that they might just as well be living, too, on a lonely island for all that they share, and for all the opportunity given to them to share.

The social aim of planning should be to build the bridge between that island and the mainland.

The planner's concern should be to bring them over. To integrate them into our society, to give them fresh hope and opportunity. This is what they should be planning for. This should be the great idealistic aim of the planner, an aim that not only absorbs all his thinking, but dominates his action.

The Volunteer in Rehabilitation

I believe that the answer to our housing problem lies somewhere in the balance between new building and rehabilitation of existing houses and neighbourhoods.

Rehabilitation of communities, in that it will enable new building to genuinely increase the housing stock, in that it makes the best of what we already possess, in that it keeps people and neighbourhoods together, in that it offers unique opportunities for participation by people in improving their environment and way of life, is an exciting concept and one that I hope will be advanced. In particular, I hope others will appreciate the unique rôle that the volunteer can play in urban affairs in this respect. The volunteer has already achieved much in the field of voluntary housing. Perhaps his greatest achievements could lie ahead in the field of rehabilitation of neighbourhoods.

One of the great values of voluntary activity is that it can experiment. It is neither tied by red tape nor by the importance of retaining political power. It can afford to make mistakes. It can call for participation from an independent and relatively objective position in the community. It can ask people to take part who would be immune to appeals from either the authorities or the people on the ground. This is something planners should watch closely. For I believe that the planner should encourage the volunteer in urban affairs, and not to brush him aside. People should be encouraged to potter about in their cities, in the same way as they potter about in their gardens.

Planning with the Poor

And so, to sum up, one cannot see much hope for the urban poor unless the planner is prepared to identify himself with that poverty, and seek fresh ways of communicating with and working with both the underprivileged and the volunteers who are closest to them. The gap between all governmental levels and the individual families or communities—sometimes called 'the bureaucratic distance'—might possibly be bridged by closer working with the volunteer.

You cannot get too close to the poor. As one American planner said:

"If the democratic ideals of decentralized decision and individual choice are to be pursued concurrently with the officially defined community goals of health and welfare... extraordinary efforts must be made to bulwark the choosing process of the disadvantaged with vast amounts of technical information, political leverage and economic means, in particular, it may be necessary for the poor and disadvantaged to have their own planners.

Perhaps the greatest benefit to working with, rather than superficially for, the poor, is that one may come to concede that it is crazy to believe that the character of people can be changed by environment alone. It is by increasing opportunity and widening the area of choice that better environment will serve the poor and the homeless.

It is no good planning to change them. You can only plan for them as they are. This will be harder but it guarantees our society the full richness of human experience, and the variety of human approaches and responses that make the ideals that we jointly hold of community and neighbourhood worth having.

For all the need and misery and hopelessness that surround me, I am really an optimist: I believe the wealth of our society could be more evenly spread, that genuine opportunity could be made available to all, that poverty and squalor could be drastically reduced, and that this could all be brought about by a coalition of all levels of government, of all the professions, including planning, of all the volunteers and of all the people. I can think of few groups who can be more influential than the planners.

THE WALL STREET JOURNAL, TUESDAY, APRIL 7, 1970

Harvard Heresy: What Urban Crisis?

* * * * * * * * *

By ROBERT L. BARTLEY

With no little prescience, Harvard and MIT established their joint center for urban affairs way back in 1959. That same year, accordingly, Harvard also snapped up Edward C. Banfield, who had been showing the same prescience by staking out the academic field of urban government at the University of Chicago. Today, as Henry Lee Shattuck Professor of Urban Government at Harvard, Mr. Banfield clearly is one of the top few names in his chosen academic pecking order.

Political scientists and sociologists concentrating on urban affairs have all along tended to be icon-breakers, likely to come up with conclusions like "political machines are good for you." Or as Daniel P. Moynihan, on leave from the Harvard-MIT center as counselor to the President, put it, "The social sciences are in a very early stage of finding out that most of the things we thought were so aren't so."

The Bookshelf

So a careful observer has for a few years now been able to sense a storm brewing, as one supposes observers sensed the intellectual ferment that Martin Luther triggered into the Reformation. And so now the Wittenberg Theses come from Professor Banfield, in his new book, "The Unheavenly City."

A Lust for Virtue

The only urban crisis is the one in your head, Mr. Banfield concludes—or more specifically, the one in the head of the upper middle class. In fact, all measurements show the problems of our cities—poverty, poor housing, school dropouts, mistreatment of Negroes—are rapidly turning toward the better. The crisis results only because national expectations are rising so fast no conceivable progress could keep pace. Indeed, the more the problems dwindle the faster expectations rise, making progress itself self-defeating. The principal reasons for the unrealistic expectations lie in the psychic needs of the upper middle class, particularly the lust to prove itself virtuous.

Such heresy is only a start. As Professor Banfield reviews the statistics and case studies that social science has accumulated, he repeatedly finds himself challenging the most deeply held views of the American elite. The problems of the city trace themselves, as gendered and strengthened feelings of relative deprivation. This subjective effect may have more than offset whatever objective reduction occurred in income inequality."

Finally and most eloquently, on race: Racial prejudice obviously is the historical cause of the Negro's present disadvantage, and a morally disturbing amount of prejudice remains today. But the main disadvantage a black faces today is not prejudice, but "that he is the most recent unskilled, and hence relatively low-income, migrant to reach the city from a backward rural area. The city is not the end of his journey but the start of it. He came to it not because he was lured by a cruel and greedy master but because he was attracted by job, housing, school and other opportunities that, bad as they were, were nevertheless better by far than any he had known before. Like earlier immigrants, the Negro has reason to expect that his children will have increases of opportunities even greater than his."

Most of the statistical disparities between Negroes and whites are caused by factors other than current prejudice. A large factor in the differences in median family income, for example, is that a disproportionate number of blacks live in the rural South, where incomes are lower for everyone. Yet current prejudice is commonly stressed as the single cause of such disparities, an emphasis that leads both to self-defeating "solutions" and to crippling hysteria.

Prejudice is emphasized because black leaders obviously must focus on discrimination so long as any of it remains at all. "Whites, too, will find prejudice a peculiarly satisfying explanation for the troubles of the Negro." Mr. Banfield continues, "it is characteristic of upper- and middle-class culture not only to try to improve oneself and one's society but also to blame oneself for not doing more and succeeding better."

In each of these cases, the upper middle class is pursuing its wholly worthy ideal of moral and social improvement. Yet this apparent altruism is not without its self-serving aspects. "One recalls Macaulay's remark about the attitude of the English Puritans toward bear-baiting: That they opposed it not for the suffering it caused the bear but for the pleasure that it gave the spectators. Perhaps it is not far-fetched to say that the present-day outlook is similar: The reformer wants to improve the situation of the poor, the black, the slum dweller, and so on, not so much to good many people will conclude that if American society cannot live up to the ever-escalating ideals of the morally concerned, that society is simply not worth keeping. Despite the ills that are ticked off under the rubric of the urban crisis, "no disaster impends unless it be one that results from public misconceptions that are in the nature of self-fulfilling prophecies."

Now, Mr. Banfield also concludes that not much can be done to change this state of affairs. He thinks the current ferment in the social sciences will lead both to more educated policy planners and to a change in the conventional wisdom. But clearly Americans are not likely, no matter what political party is in power, to repeal such laws as those on school attendance. And it is, after all, pretty fatuous to exhort the upper middle class to go out and get itself some moral realism.

Even so, the current "urban crisis" is not merely the general product of a growing middle class but the specific product of the 1960s. It was the rhetoric about "wars" on poverty and about "two societies" and the rest that brought to boil whatever underlying tendencies are also responsible. Even if Professor Banfield is right that the current proclivities of our best citizens cannot be changed, if the hyperbole could be restrained those proclivities could be controlled at least well enough that the prophecies of disaster need not be self-fulfilling.

Correctives at Work?

Some of us—a few of us—have a sense that certain correctives are already at work. Whatever its progress toward ever higher social class, the American public has become fed up with hyperbole. On balance, the American-society-stinks themes now generate political opposition. Certain politicians are awkwardly but clearly relearning how to use affirmation as a tool for generating support. In this may be the makings of the political era that succeeds the New Deal one.

The most prestigious class—the Establishment, if you must—obviously remains devoted to hyperbole. But in the long run it would not be surprising if the elite, like the Supreme Court, follows the election returns. "The Unheavenly City" is particularly intriguing in this respect. No doubt many in the upper middle class will try to dismiss it as the work of an ill-tempered old fogey. Yet Professor Banfield comes from Harvard and speaks the language of social science; the

are rapidly turning toward the better. The crisis results only because national expectations are rising so fast no conceivable progress could keep pace. Indeed, the more the problems dwindle the faster expectations rise, making progress itself self-defeating. The principal reasons for the unrealistic expectations lie in the psychic needs of the upper middle class, particularly the lust to prove itself virtuous.

Such heresy is only a start. As Professor Banfield reviews the statistics and case studies that social science has accumulated, he repeatedly finds himself challenging the most deeply held views of the American elite. The problems of the city trace themselves, as he says, not to the vices of American character but to its virtues. No brief review could take account of the data and social theory that sustain his conclusions, but time and again he finds that the biases of the upper middle class either cause or vastly compound the problem:

On education: "The boy who knows that he has learned nothing since the eighth grade but that he must nevertheless sit in boredom, frustration, and embarrassment until he is sixteen or seventeen (in a few states, eighteen) when finally he will be labeled a 'dropout,' must be profoundly disaffected by the experience. He senses that the school authorities and the whole apparatus of middle- and upper-class opinion that confine him there neither understand nor even care about the most palpable realities of his situation: That he will very likely work with his hands all his life, that he is not learning anything, that for such work he would not be helped by learning any more, and that one who works with his hands had better start early because he will be 'old' by the time he is forty."

The Crime Picture

On crime: The most obvious and most important reason for higher crime in central cities is an increasing proportion of the lower-class youths historically prone to lawbreaking. Another factor, though, is that the upper middle class, in an attempt to "educate" others into its own internally based morality, has systematically attacked and belittled the external moral authority on which obedience to the law has usually depended. Also, if criminals are poor and/or black, public opinion decrees that they "have kind of a quasi right to have their offenses against the law extenuated or even to have them regarded as political acts reflecting a morality 'higher' than obedience to the law."

On poverty: For some persons poverty is a symptom and not a cause of the distress, which is actually that they are incapable of making provision for anything beyond the immediate moment. But for many, possibly most, below the "poverty line" the problem is not really one of hardship judged by an absolute standard. Some 40% of them own cars, and nearly all own television sets, for example. Yet rhetoric emanating from the middle-class had made them *feel* hardship. "By constantly calling attention to income differences, the war on poverty has probably en-

[illegible] only to try to improve oneself and one's society but also to blame oneself for not doing more and succeeding better."

In each of these cases, the upper middle class is pursuing its wholly worthy ideal of moral and social improvement. Yet this apparent altruism is not without its self-serving aspects. "One recalls Macaulay's remark about the attitude of the English Puritans toward bear-baiting: That they opposed it not for the suffering it caused the bear but for the pleasure that it gave the spectators. Perhaps it is not far-fetched to say that the present-day outlook is similar: The reformer wants to improve the situation of the poor, the black, the slum dweller, and so on, not so much to make them better off materially as to make himself and the whole society better off morally."

That society displays a concern not merely for the material but the moral, he adds, is just and good. What is lacking is "what Lionel Trilling has termed moral realism—'the perception of the dangers of the moral life itself.' " In this case, the danger is nothing less than that the attitudes of the American elite are going to destroy this nation, that a

[illegible] cal opposition. Certain politicians are awkwardly but clearly relearning how to use affirmation as a tool for generating support. In this may be the makings of the political era that succeeds the New Deal one.

The most prestigious class—the Establishment, if you must—obviously remains devoted to hyperbole. But in the long run it would not be surprising if the elite, like the Supreme Court, follows the election returns. "The Unheavenly City" is particularly intriguing in this respect. No doubt many in the upper middle class will try to dismiss it as the work of an ill-tempered old fogey. Yet Professor Banfield comes from Harvard and speaks the language of social science; the elite finds itself assaulted from its own citadel and in its own patois. It is not the sort of attack merely brushed aside.

It is, though, precisely the first crack in the elite's own ranks one would expect if those correctives really are at work, precisely the spark of heresy that would be both a symptom and ingredient of an incipient sea-change in American social and political sentiment.

The Unheavenly City. By Edward C. Banfield. Little, Brown and Co. 308 pages. $6.95.

From 'The Unheavenly City'

* * * * * *

Edward C. Banfield, in "The Unheavenly City":

The politician, like the TV news commentator, must always have something to say even when nothing urgently needs to be said. If he lived in a society without problems, he would have to invent some (and of course "solutions" along with them) in order to attract attention and to kindle the interest and enthusiasm needed to carry him into office and enable him, once there, to levy taxes and do the other unpopular things of which governing largely consists. Although in the society that actually exists there are many problems, there are still not enough—enough about which anyone can say or do anything very helpful—to meet his constant need for program material. Moreover, the real and important problems are not necessarily the ones that people want to hear about; a politician may be able to attract more attention and create more enthusiasm—and thus better serve his purpose, which is to generate power with which to take office and govern—by putting real problems in an unreal light or by presenting illusory ones as if they were real. The politician (again like the TV news commentator) can never publicly discuss an important matter with the seriousness that it deserves; time is short, if's, and's, and but's make tedious listening, and there are always some in the audience who will be confused or offended by what is said and others who will try to twist it into a weapon that they can use against the speaker. Besides, the deeper a discussion goes, the less likelihood of reaching an outcome that the politician can use to generate support.

The changes brought about in the political system by the process of middle- and upper-class-ification have greatly reduced its effectiveness in finding the terms on which people will act together or even live together in peace. The upper-class ideal recommends participation as intrinsically good, but unfortunately, the more participants there are, the larger the number of issues that must be dealt with and the greater the disagreements about each. The ideal also requires that issues be settled on their merits, not by logrolling, and that their merits be conceived of in terms of general moral principles that may not, under any circumstances, be compromised. In the smoke-filled room, it was party loyalty and private interest that moved men; these motives always permitted "doing business." In the talk-filled room, righteous indignation is the motive, and therefore the longer the talk continues, the clearer it becomes to each side that the other must either be shouted down or knocked down.

Looking toward the future, it is impossible not to be apprehensive. The frightening fact is that large numbers of persons are being rapidly assimilated to the upper classes and are coming to have incomes—time as well as money—that permit them to indulge their taste for "service" and doing good in political action. Television, even more than newspapers, tends to turn the discussion of public policy issues into a branch of the mass entertainment industry. Doing good is becoming—has already become—a growth industry, like the other forms of mass entertainment, while righteous indignation and uncompromising allegiance to principle are becoming *the* motives of political commitment. This is the way it is in the affluent, middle-class society. How will it be in the super-affluent, upper-middle-class one?

THE CHURCH AND HOUSING - A RATIONALE

Introduction

The Board of National Ministries has stated that one of its primary objectives is 'to develop programs in coordination with secular agencies and other church boards and agencies which work to relieve specific areas of human need.' In partial answer to this objective, Corporate Social Ministries presents this rationale to the Board of National Ministries so that the Board might become more deeply involved in housing for people of special needs.

I. BACKGROUND

In 1968, Jerome P. Pickard, in an Urban Land Institute Research project, took a long look at the metropolitan future. Pickard projected the shape of American settlement in the year 2000, and found, essentially, that the big urban areas would get bigger. He dealt primarily with the 'major urbanized areas' which he defined as places of 100,000 population or more. In 1960, there were 160 such areas in the U.S.; by 2000 there will be 223 (assuming, as do all of his projections, that present trends continue). The total population in these major areas, 91 million in 1960, will rise to 220.5 million in 2000 out of a total U.S. population of 300 million. In 1960, these were the living places of just over half of all Americans; in 2000, they will accommodate 70%. By then, in fact, more than half of all Americans will live in the 43
urbanized areas of a million or more and in all probability 75% of the people will be huddled onto only 11% of our land area. Therefore, in each year in the coming generation the nation must add the equivalent of 15 cities of 200,000 each in order to accommodate the projected population.

"The projected geographical extent of the greater metropolises of 2000" said Pickard, with understatement, "is difficult to envision." What he calls a "new dimension" of urbanization will occur through "both the continuous enlargement of the urban fringe and by merging into the fringe of previously outlying urban areas which are either independent satellites or separate suburban communities today." We can foresee the continued population movement toward more pleasant climes and large bodies of water, spurred on by the Interstate Highway System. Population growth will also be limited in some areas due to inadequate space, water, resources and raw materials.

As for expected geographical shifts in employment opportunities, today one out of every six jobs is located in just 3 states, California, Texas and Florida. Looking into the future, the 10 states slated for the biggest percentagewise labor force increase during the coming decade will be California, Florida, Nevada, Arizona, Colorado, New Mexico, Washington, Maryland, Idaho, and Georgia, in that order.

By 1985, the number of housholds nationally will increase 50% over the 1960 figure, emphasizing the national goal of 26 million new housing units by 1980. FORTUNE Magazine anticipates that "total housing starts should average two million a year in the first half of the Seventies, and the rate should get up close to that by the end of the Sixties. These are impressive numbers, not only compared to the 1966 total of 1,250,000, pinched by tight money, but also compared to the 1,450,000 average of the past ten years." While the figure did get up to 1,497,000 in 1969, housing starts in January,1970 dropped to a rate of 1,166,000, the lowest in almost three years; the rate did increase in February to 1,300,000, however. Yet, new housing starts will have to increase significantly to reach the national goal of 26-28 million new housing units in the 1970 to 1980 period.

a

At least one-third of the housing units built over the next several years are going to be apartments according to FORTUNE, although some experts forecast a fifty-fifty split between houses and apartments." Just within the past 5 years, the percentage of apartment buildings with 5 or more units has risen from 36% of all building permits issued in 1965 to an estimated 48% of those issued in 1969. Correspondingly, the percentage of single-family building permits dropped from 56% in 1965 to an estimated 45% in 1969. The increase is showing up all across the country but the shift from single-family homes to apartments with 5 or more units is greatest in the south where the increase over 1969 was 9 percentage points. While all private non-farm new housing units in 1969 dropped 2% below 1968, the percentage of units in apartments rose 14% and the number of apartments under construction last September was 16% greater than one year earlier. In 1960, 3 SMSA's in our General Assembly reported that over 30% of the number of housing units built were in apartment buildings of 5 or more units. By 1967 the number had risen to 32 metro areas and in 12 of these SMSA's, the percentage of new starts in apartments was more than 50% of the total.

Despite these rosy figures, housing, be it apartment or single family unit, is not available to many. Housing construction and living costs in general are going up faster than the income of many people, especially the aged, the infirm and the poor. And in an affluent land such as ours, it is difficult to understand that the housing conditions of millions of people are getting worse rather than better. Safe, decent, and sanitary housing in balanced neighborhoods at prices that people can afford to pay is a painfully unmet need for the low and low-middle income levels of our American society..

The 1960 census discovered that of all families with an income of less than $4,000 annually, 18 percent occupied substandard rental housing and another 13-1/2 percent were owner-occupiers of substandard homes. Of all families with an annual income of $4,000 or more, 5-1/2 percent lived in substandard housing.

Not only Federal but state and local statistics point up the poor conditions in our urban centers, towns, villages and on our farms. In this most prosperous country in the world, conservatively over 4,000,000 people live without heat, without indoor or private bathrooms, and exposed to vermin and fire and electrical hazards.

Today, it takes about 65 million housing units of all types to shelter 58 million households. By 1975, there will be 68 million families needing shelter, a situation that could produce severe shortages unless the housing industry shifts into high gear. Before long, net additons to new households will be taking place at a rate of more than 1 million a year, as the post-war baby boom moves up through the age brackets.

Business Week suggests (May 6, 1967) that because of new family formations housing demolitions, and housing conversions, there will be an "average annual market of at least 2-1/2 million units" for the 1970's, nearly double the volume for 1966.

"By 1975, the nation will add nearly 8.8 million new households, better than one third of which (some 3.2 million) will be headed by persons less than 25 or more than 65 years of age, nearly one third by unmarried persons.

"Indeed, by 1975, nearly 5.3 million households will be headed by youngsters under 25 - a 1.4 million increase over the present count. Of these, a goodly

number will be single.... Young single households already number 616,000 and influence apartment markets in many cities. By 1975, young singles are expected to number 920,000 or more.

"At the other end of the scale, the 65-plus group already accounts for one in every five households. Not long ago, this group tended to move in with relatives. Now, pensions, savings, and old-age benefits let them get out on their own. The 11.4 million households in this age bracket will increase 1.8 million by 1975, and 3.1 million by 1980".

It should be observed that in our country the quality and size of today's houses and apartments for young families, and the changing life style of both the young and the old, whether in the city or the suburbs, are such that Mom and Dad either prefer not to or simply cannot move in. Even if there were room, they value their independence. The need for housing especially adapted to our so-called senior citizens is increasingly evident.

Business Week notes that "Apartments and maintenance free town-house communities are especially appealing to this group. So are condominiums, which afford both tax advantages and some elements of ownership.

"Indeed, the condominium frequently meets the desires of all age groups. Thus, experts predict that a growing share of urban redevelopment in the 1970's will be devoted to such residences".

Under the programs designed to reduce the shelter costs of elderly and moderate-income persons, the monthly minimum expenses incurred for a typical apartment with living room-dining alcove, kitchen, two bedrooms and bath are estimated as shown in the following table.

	cost of the unit	
	$12,500	$18,000
	monthly expenses	
*Interest charge (3% below market rate)	31.25	45.00
Utilities (including electricity, heat, water, and garbage removal)	25.00	30.00
Taxes	25.00	35.00
	(more likely higher)	
Maintenance and depreciation	10.00	15.00
Management fee (5%)	4.75	7.15
Sub-Total	96.00	132.15
*Amortization	12.50	18.00
Total Monthly Minimum Cost	$108.50	$150.15

Allowances for vacancy reserve, insurance, and (where appropriate) protective services, landscaping costs, elevator maintenance, etc., have not been included.

It is a general rule of economists that the monthly payment for the home should not exceed one week's income. Accordingly, for the unit that would cost $12,500, the family income should be at least $110 per week or $5,720 per year. For the $18,000 unit the family income would need to be at least $150 per week or $7,800 per year. The $18,000 unit is probably a feasible figure for most

metropolitan areas although many say this is too conservative an estimate.

Admittedly, these figures are for new construction, but the required rentals certainly show that this is not low-income but rather moderate-income housing.

These figures can also be used to determine costs for the rehabilitation of old housing; that is, if it costs $18,000 for the purchase and rehabilitation of an old house or apartment, the costs would be about the same as those above. Using the $18,000 unit cost as a basic figure, it is possible proportionately to estimate the cost of any unit.

The very real need in the United States is for housing for families with annual incomes below $4,000 and especially for those of $3,000 or less.

Rental supplements, which are paid to the landlord rather than the tenant and are the difference between one-fourth of the family's total income and the yearly rental cost of the house or apartment, are essential if adequate housing is to be within the reach of these low-income families. This would mean that for the $12,500 unit, a family's own monthly rental payment would be a little more than $25 on an income of $1,200 per year; or for the $18,000 unit, the family's rental payment would be slightly under $40 on an income of $1,800. As their income increases, they pay a proportionately greater amount toward the full rent.

Because of economics, politics, and public sentiment, we are not presently meeting the needs of the disadvantaged for safe, decent, and sanitary housing, housing which would be a benefit to the rest of the community rather than a liability. In fact, we are not building enough homes and apartments even to meet replacement needs, to say nothing about new needs resulting from the influx of people from other areas or the increase in new family formation due to the heavier birth rate following World War II.

It is obvious that the concern with housing as with almost any social concern is deeply interrelated with all of the problems of the disadvantaged. It is not really meaningful to isolate housing from the problems of segregation, of education, of employment, of hunger, or of the crisis in our cities.

A national strategy must be found wich will provide adequate income for all citizens to meet basic needs. At the same time the great sector of private industry must find more efficient methods of housing production which reduce the cost and preserve the profit.

To date, contemporary technology has only meagrely been applied to the construction trades. Housing is still typically built in units of one. The mass production of housing and new towns is a possibility on the horizon; though the concept causes some apprehension as to human-scale values, it promises one answer to present need.

We know we cannot allow our slums to grow bigger and worse with all of the attendant ills of hunger, disease, breakdown of morale, and disintegration of family life. Meanwhile, the building or leasing of many millions of units of public housing, although unsatisfactory as a human-scaled solution, is the only present massive assault on the problem.

The United States government and Congress is, of course, not unaware of this situation and has over the past thirty years worked toward the alleviation

of slum conditions and substandard housing, the most recent major action having been taken in 1968.

The Housing and Urban Development Act of 1968 is the most comprehensive and largest housing bill ever enacted by the United States Congress. The scope and depth of its concern for people intends to make our national housing laws serve social as well as concrete purposes.

This mosiac began to evolve in the depression racked 1930's when the FHA and Public Housing Programs were created primarily to stimulate business and employment and only secondarily to provide housing, a status which endured until post World War II. Thereafter came Urban Renewal and the 1949 National Housing Act. The Housing Act of 1949 contains the proposition that the general welfare and security of The Nation "requires housing production and related community development sufficient to remedy the serious housing shortage, the elimination of sub-standard and other inadequate housing through the clearance of slums and blighted areas, and the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family. A decade or more elapsed before the next big breakthrough came, marking realization of the need to cope with many aspects of urban difficulties rather than shelter alone.

A series of new programs came into being in the 1960's. They included plans for parks and playgrounds, for mass transit facilities, for water and sewer systems, and rent supplement payments. There were new housing programs for those of the low-middle-income range. Public Housing was expanded to enable leased housing for larger families in the private sector. The concept of scattered public housing sites was introduced to reflect recognition that the dignity of man is at least of co-equal importance with a waterproof roof.

During the program from 1965 to the present, five new pieces of legislation were enacted that will have major impact on the future: The creation of the Department of Housing and Urban Development (HUD), the Model Cities Program, the Civil Rights Act of 1968, the Housing Act of 1968 and most recently, the Housing Act of 1969. Its net effect is that the nation now has federal urban legislation capable of fully administering today's programs and to meet the urban problems of tomorrow by focusing a whole range of federal, state and local resources on areas which most need help giving clear expression to upgrading people as well as buildings.

Major innovations in the Acts of 1968 and 1969 make it possible for lower income families and individuals to become home-owners by means of conventional financing with the aid of HUD mortgage subsides. And the same principle of mortgage subsidy is carried into the field of rental and cooperative housing for low and moderate-income groups when sponsored by non-profit cooperative or limited organizations.

There are a number of Federal programs of use to non-profit sponsors in the field of housing for lower income families, but they are too numerous to mention here. A digest of all HUD low-income programs, including rent supplements, public housing, and the most recent program will be made available for distribution.

II. GENERAL CHURCH INVOLVEMENT IN HOUSING

The United States Government under the National Housing Act has passed legislation enabling non-profit organizations, such as churches, councils of

churches, ecumenical bodies, labor unions, fraternal organizations, neighborhood councils and civic groups, in cooperation with private enterprise, to enter the housing market to help meet urgent needs.

During the past decades the Church has been involved in housing for the aged in our country. This is a role of the Church accepted by its constituency. The Church historically has undertaken housing and care of the ill. The nature of old age and illness suggest the nature of the facilities that will house and serve them. Poverty cannot be served by brick and mortar alone.

In our concern for the impoverished, we need to look beyond housing per se to community. We must investigate what it is about the total environment that is destructive to the quality of human life, both spiritual and material, and what it is that is beneficial. Housing is a part of the whole.

The Church does not necessarily have to become a landlord, but its interest in the total life of people includes meeting the need for shelter that is decent, safe and sanitary. Pronouncements have suggested that every citizen should have the opportunity to have decent housing, but we still have a long way to go in realizing that goal. We need to find out how to get at it more broadly and more effectively.

Many churches today are entering into the development of new or rehabilitated housing as a part of their contribution to community growth and development. This is not a new thing in our society. Back in 1869 the New York City Mission Society was busily engaged in a "model tenement" program as part of its outreach. "Let any one walk through the poor streets of our city, any day after school hours, and see how the children swarm," said the Society's annual report. "Let the churches of our city consider. Oh! that they would forget for a few years to multiply mission chapels, and give some money and attention to the homes of these children." A similar choice faces the churches today. But they should carefully consider not only HOW, but also WHY and TO WHAT PURPOSE.

Our Biblical faith proclaims that God is concerned with man and his needs as they relate to his personality - spirit, mind and body - and to his fellowmen as they live or fail to live in true community.

The concern for housing finds itself in the basic elements of the Churchs' life. In our worship we praise God for the blessing of the shelter we enjoy, and we intercede for those who are without adequate shelter. In Christian education we should give specific contemporary content - facts and figures - to the injunctions of Christ and the prophets. The pastoral ministry of both clergy and laity must be extended to the impoverished suffering housing deprivation. The service and witness of the Church find a concrete expression in work ranging from influencing housing legislation to discriminating use of church funds for the actual building or rehabilitation of dwellings.

Margaret E. Kuhn, of the Board of National Missions of The United Presbyterian Church in the United States, wrote in Houses and People:

"Every church is inseparably a part of the community that it serves. The quality of community life around the church is both a reflection of and a commentary on the church's influence and ministry. If the church is true to its concern for every part of human life and attempts to lead every generation to Christ, the church cannot neglect the conditions under which people live and establish their families. It cannot brush aside the needs of growing children,

of the aged, and of families who suffer from discrimination and poverty. Nor can the church be indifferent to the social patterns and policies that largely shape our communities and neighborhoods, for these have decisive effects on human lives and the character of our society. The church's own growth and vigor as an institution cannot be separated from the community's welfare.

"If American cities are to be saved, housing and community life must be strongly affirmed as the business of American churches. Housing programs and policies must be a matter of Christian vocation and stewardship among church members who are property owners, builders, carpenters, bankers, realtors. The elimination of residential segregation is basic to inclusive Christian fellowship and the solardarity of the human family under God."

There are several distinctive roles for the Church in planning a housing strategy.

1. The Prophetic Role. In proclaiming the concerns of the Lord for the disadvantaged and the alienated, the Church is speaking to the issues of the day, calling upon the institutions established by society to get about the tasks that they have been commissioned to do. The Church can be a watch-dog, critic, a stimulator, to the society of which it is a part.

2. The Enabling Role. The Church may take the initiative for (a) developing and mobilizing leadership, (b) articulating a demand for the necessary tools to get at the housing problems in relation to the total environmental needs of man, and (c) spurring legislative action.

3. The Experimental or Demonstrational Role. The Church should be prepared to commit itself, risking its own resources, to demonstrate possible ways in which society can quite feasibly provide adequate housing, which is more property society's business.

Historically the Church has performed through its hospitals and schools the mission work calling society to its responsibilities, demonstrating the need and the response to needs in unserved and underdeveloped communities. Now the Church is called to a similar demonstration in housing. The Church cannot significantly affect the housing supply through building and operating housing itself. What it can do, however, is to demonstrate experimentally, through carefully planned and managed projects, what is feasible, imaginative, and practical. Any actual housing projects in which the Church involves itself, always with thorough professional consultation, should be undertaken with the larger view of calling both the government and the private sector to their responsibilities.

Churches for years have been involved in housing for specific segments of society, the elderly and children. The Moravians erected a Brothers House in each of their settlements soon after the founding of their communities. Catholics have housed Sisters and Fathers for generations. Senior citizens homes have been a part of church life being established by local congregations, judicatories and denominations. Likewise, orphanages, in days past, were established by judicatories and denominations.

In recent years, many denominations have moved more broadly into the field of housing, either by establishing spin-off organizations to erect and manage housing or by offering the technical skills to local churches and judicatories in erecting housing for low-income persons.

The United Presbyterian Church has been more broadly involved in housing for nearly ten years, first offering from the denominational level the counseling needed and by setting up a separate corporation to provide the necessary seed monies and loan funds.

The American Baptist Church has also set up its own separate corporation which provides all the technical skills and management abilities, as well as making available the initial monies for that denomination to become vitally involved in housing. Like-wise, the United Methodist Church and in recent months the Disciples of Christ have moved into the field of non-profit housing sponsorship.

In the last ten years literally hundreds of non-profit corporations have been established by local groups and ecumenical agencies specifically to erect housing for low-income people and at least one such corporation can be found in almost every major American city. These are groups of local churches and/or judicatories which have banded together for strength in order to move into housing.

Nationally, within the past year, the Joint Strategy and Action Committee has given housing serious study and has drawn up preliminary recommendations for the formation of a non-profit housing corporation. The purpose of the proposed corporation would be to develop technical services, management consultative services, training and education programs, legislative policies, community organization and community development programs and to act as a catalyst and an enabler in the housing field. This would permit all the participating denominations to promote and assist local church and judicatory entrance into the non-profit housing field using the best expertise available.

While there has been some question in recent weeks as to whether FHA would give further approval to non-profit sponsors, FHA Commissioner Gene Gulledge stated in March, 1970, "it is not our intention to eliminate participation by non-profit groups in our housing programs. Churches and other qualified and well-motivated long term non-profit groups have and will continue to have an important role in sponsoring housing for low income people." Consequently, FHA will strengthen its criteria for approval of non-profit sponsors to avoid the problems it has encountered and will make it simpler for the non-profit sponsor once he becomes involved in housing for low-income people.

III. PRESBYTERIAN CHURCH, U.S. INVOLVEMENTS

As a denomination, the Presbyterian Church in the United States has been involved in several forms of housing to date, and, for the most part, has been successful and has fulfilled a great need.

The Presbyterian Church in the United States built its first home for senior citizens - for 20 older ladies - in 1912, the second as late as 1949. Since then our denomination has built 22 more senior citizens facilities and is affiliated with four others. At least one other is currently under construction and several are planned. All of those established since 1957 were built after the mandate of the General Assembly placed the newly formed Division of Homes and Christian Welfare in the Board of Church Extension with responsibilities for counseling and collaborating with synods and presbyteries in all matters relating to policies and standards for Children's Homes, Nursing Homes and Homes for the Aging. In addition to the senior citizens facilities, there are some 18 homes for children related to the PCUS in various ways.

In recent years several presbyteries have considered the establishment of non-profit groups for the sponsorship of housing for low-income people or have considered becoming part of such groups and have consequently inquired of the Board of National Ministries about possible assistance, both financial and technical. Up to the present, neither this board nor any other PCUS agency has been in a position to offer assistance toward the establishment of a non-profit housing organization. Yet, it is known that a number have been established and several are here cited. Nashville Presbytery has an interest in housing and is leanding support to a local non-profit group, HOPE, and has assisted in securing housing for one family. Lexington Presbytery has established a housing credit endorsement plan which basically will back a second mortage. Winston-Salem Presbytery also has established a non-profit housing corporation but as of mid May had not been successful in obtaining any specific projects but is now developing an overall plan for low income housing in Winston-Salem and expect some positive results.

A number of Presbyterian congregations have become a part of various non-profit groups. At least five PCUS churches here in Atlanta have joined Interfaith, Inc., whose purpose is "the improvement of housing, neighborhoods and living environments of low-income families through the organization of a non-profit corporation to assist in providing new low and moderate income housing for population growth and relocation needs, the repair and rehabilitation of existing housing, the elimination of discrimination in the marketing and renting of housing, the creation of neighborhoods with racial and economic variety, and the provision of complementary services needed by the residents of such housing and neighborhood." In Louisville, two individual Presbyterians are two of 11 persons incorporated as the Smoketown Housing Improvement Corporation whose purpose is to provide good housing to poor families at a reasonable price.

The Board of National Ministries is now participating in the second year of an experimental ministry project in Auburn, Alabama in cooperation with East Alabama Presbytery, using an anonymous foundation grant to fund The Presbyterian Community Ministry, which seeks to help individuals and families obtain more adequate housing. At the end of the first year, February 28, 1970, Presbyterian Community Ministry had made loans and grants to 27 projects and families who need financial aid mainly for housing matters and related concerns, including health, child care, home arts, transportation and education.

In the most basic sense, housing can be defined as the provision of shelter. However, the word "housing" has broader connotations. It means a place where family life, comfort and health are fostered. It also means many different types of living accommodations for many different peoples as needs change several times during the course of a lifetime.

A large proportion of religious and other non-profit sponsors who decide to undertake to provide additional low-cost housing will doubtless do so under various programs of the National Housing Act. This enabling legislation is necessarily too confined to the terms of financing and insurance, to maximum costs and minimum units, to interest rates and mortgage guarantees. Steel and glass and a bank loan only build a house. A home is created by a good family environment. A sense of satisfaction and identification with the community makes possible those inter-personal relationships that make a community meaningful.

Church sponsors must see their contributions of decent housing as only one aspect of a well balanced and fully realized human environment.

If the Presbyterian Church in the United States is to seriously enter into the housing field, there are a number of criteria which should be considered before any local church, presbytery, church board or agency becomes a part of a non-profit group, or incorporates as one. Not only must the housing be safe, sanitary, adequate and reasonable, it should also be in a community which offers the residents a balanced environment and will fulfill the needs of the residents as determined by the residents themselves beforehand - in the initial planning stages. Some of the aspects of a balanced environment are as follows:

1. A variety of housing types which satisfies and meets many different needs.
2. A community which offers both economic and racial integration.
3. Community aesthetics including design, circulation and open space.
4. A transportation network which is convenient.
5. Shopping convenience.
6. Household and personal services centers including all forms of child care.
7. Educational quality and opportunity for all ages.
8. Full employment opportunities for all.
9. Opportunities for on-the-job training.
10. Religious vitality including witness and service.
11. Health and social service including counseling opportunities.
12. Cultural resources and opportunities.
13. Political participation and planning.
14. Recreational opportunities and leisure.
15. Police and fire protection.
16. Mass communication media.

Good urban environment design and aesthetics must be incorporated into the construction of new communities or the renovation of existing communities if they are to be a credit to society. Innovations in urban living facilities and environments should be developed and utilized; condominiums, cluster subdivisions, modular construction, economic and racial integration, etc.

Many types of services, education, and assistance to families and individuals relating to their ability to improve and/or maintain their living status are needed. Some of this is provided through public agencies, some can be provided by private organizations. In any case, improving neighborhoods and housing requires a parallel social service to the occupants to be permanently effective and in order to gradually reduce some problems that have existed in the past in other communities. Many of the problems can be eliminated in the beginning if community residents are able to participate in the planning, implementation, and formation of tenant policies for a housing development, leading to a share in the management or ownership of such a project.

The church cannot alone meet the housing needs of the poor and provide for the overall improvement of the physical and social environment which currently destroys the spirit of so many people. And there are many places and times where the Church should not invest its time, personnel, and funds in such activities.

However, at this moment in history, with the resources of the nation extended to a critical point; with the housing needs of the poor becoming increasingly severe; with the general physical environment of our metropolitan areas destroying the very qualities of life essential to the spirit of man; with the vast numbers of persons and institutions indifferent to these needs; and, until other institutions of our society are prepared to face these issues, it is believed that these urgent housing needs lay claim on the Church for response through service in helping to improve both the quality and quantity of housing in our country.

Planned Unit Development

PUD: A BETTER WAY FOR THE SUBURBS

ULI Special Report

PUD

A BETTER WAY FOR THE SUBURBS

At last a handsomely illustrated book all about Planned Unit Development that *everyone* can understand—72 pages of narration, site plans, and full-color photographs.

PUD: A Better Way for the Suburbs is ULI's latest contribution toward a better understanding of an often misinterpreted development innovation. This unique presentation:

- tells what PUD is
- shows what PUD looks like

Written for the Institute by Maxwell C. Huntoon, Jr., senior editor of *House & Home* magazine, this Special Report provides a practical analysis of Planned Unit Development—the current newsmaker in residential land development which offers an alternative to the traditional single-family, detached housing development. The report gives a history of PUD; discusses the current suburban response to PUD; and describes PUD from the viewpoint of the community resident, planning board member, designer, and developer—yet in language easily understood by the layman.

Highlighting the book is a discussion of twelve actual PUD developments representing several of the many possibilities of the PUD concept. Site plans and vital statistics such as size, location, density, and number of housing units accompany the description of each PUD. But to really understand PUD it must be seen. Each development is illustrated with attractive photographs, many in color, providing a visual tour of a dozen PUDs throughout the U. S. and Canada.

The developments featured are:

Bahl Patio Homes Sunnyvale, Calif.	Nuns' Island Montreal, Quebec
Baymeadows Jacksonville, Fla.	Oronoque Village Stratford, Conn.
Briarwood Lakes Oakbrook, Ill.	Pine Run Camden, N.J.
Heritage Woods Avon, Conn.	Saybrook Mews Huntington Harbour, Calif.
Inverrary Ft. Lauderdale, Fla.	Sixty-01 Redmond, Washington
Mission Hills Palm Springs, Calif.	Village Greens Staten Island, N.Y.

PUD: A Better Way for the Suburbs is a valuable working tool for both professionals and nonprofessionals who are seriously concerned about new housing and wish to learn what the PUD concept can mean to their community.

Fill out the coupon on the next page and order your copy today . . . for your personal library . . . office . . . or as a useful gift to someone you know who is responsible for planning decisions in the community.

Enclosure

~~Gentlemen:~~ Moreland,

Archer Smith was kind to make this available and I am happy to forward it to each member of our panel —

Bob Winn

October 15, 1968

Mr. Paul Goldsmith
Mr. Freeman Hutton
Mr. Horace Sibley
Mr. Jimmy Elliott
Mr. Cecil Conley

Gentlemen:

The purpose of this memorandum is to furnish the members of the Committee with a proposed list of the various flaws in the Plumbing Code, with which this Committee should deal and attempt to correct. They fall into three basic areas, General, Provisions Hindering Low Cost Construction, and Health Inadequacies.

GENERAL

The salaries of the inspectors are inadequate, the appeals are not binding upon the plumbing inspectors, costs of the appeal is borne by the contractors, there is a need for the consolidated Code for the entire metropolitan area, and there is no provision for periodic review of approved standards, as allowed in the Southern Standard Plumbing Code.

INNOVATIVE RESTRICTIONS

1. A local plumber must, in effect, be used on any contracting job, thus eliminating any pre-fabrication plumbing work done in another city in Georgia, or out of State;

2. The Code specifies in Section 164 that only lead may be used to achieve a water tight joint, whereas, there are numerous other materials that have been proven to be as equally feasible, but less costly;

3. Section 306 of the Atlanta Code requires cut-offs for each toilet or bathroom, whereas, the Southern Standard permits two adjacent bathrooms to be controlled by the same valves, which reduces substantially the costs;

4. The length of a sewer waste line is limited under the Code, whereas, it should have no limit if it is on a slope as gravity will handle the job;

5. Improved construction techniques have proven that a three inch pipe leading from a water closet need be used, whereas, the Atlanta Code requires four inches, which is much more costly. In addition, this one three inch pipe is sufficient to handle two water closets, whereas, the Atlanta Code makes one employ one four inch pipe for each water closet;

6. No plastic pipes or fibre glass bath tubs are allowed;

7. No neopreme gaskets are allowed under the Atlanta Code, and even though these gaskets are more costly, they save great labor time;

8. A plumber or journeyman plumber must connect all joints which lead into the City's water or sewer system, which can be done easily by an apprentice plumber.

INADEQUACY FROM A HEALTH STAND-POINT

1. The Code is not as comprehensive as the Southern Standard Code, and other National Codes, in that it does not require a clean-out joint near the junction of the building, drain, and sewer;

2. The Atlanta Code has no requirements applicable to commercial dish washers, which is needed owing to the abrasive effects of various soaps on the plumbing;

3. There is no disinfection provision applicable to the water system's pipes;

4. There is no energy shut-off device required on water heaters.

Finally, I contacted Mr. Joe Elliott, President of National Homes Construction Corporation, at 1388 Colony Hill Court, Stone Mountain, Georgia. His company acquired land for construction of some seventy homes in the Thomasville Urban Renewal Area from the Atlanta Housing Authority. He secured a building permit and, at the time the permit had been approved, he submitted plans for pre-fab plumbing as part and parcel of his design. Later, the plumbing inspector refused to approve them, stating that a local plumber must be hired, plastic pipe could not be used, fibre glass tubs could not be used, and that the plumbing could not even be pre-fabbed by a Clayton County plumber; it had to be an Atlanta plumber. Elliott relates that this forced him into constructing plumbing at the site, and resulted in an additional cost of $500.00 per unit, directly raising the cost from $10,000.00 to $10,500.00 per unit.

In addition, Elliott is willing to give us an affidavit to this effect, to back up our report, as long as his name was not used in the report itself. I will obtain an affidavit from him some time within the next two weeks.

I have also made an appointment with Mr. Wiley Mitchell, Chief Plumbing Inspector, for October 22, 1968. He has been on vacation for the last two weeks.

Yours very truly,

Archer D. Smith, III

Final Population Counts

(The figures in this report supersede the preliminary State counts published in the PC(P1) series of reports. This series consists of 52 reports—number 1 for the United States and numbers 2 through 52 for the States and the District of Columbia in alphabetical order rather than in order of publication.)

This report presents a summary of the final 1970 census statistics on the number of inhabitants of each State and the District of Columbia previously published in the individual reports of this series. Statistics on the population of counties, county subdivisions, and places are shown in the separate State reports.

The figures presented here are being issued in advance of their publication in Final Report Series PC(1)-A. The final reports have already been issued for some States and the entire series is scheduled to be published during the next several months.

Data on selected population characteristics for States and certain of their component areas are currently being issued in Advance Report Series PC(V2); and on selected housing characteristics in Advance Report Series HC(V1). An outline of the publication program for the 1970 Census of Population and Housing can be obtained free of charge from the Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

Note: With the issuance of this report, all 52 reports in the PC(V1) Series have been published.

POPULATION AND THE AMERICAN FUTURE

by Howard D. Samuel

America's population growth and the accompanying problems have become a popular issue. The Census Bureau and the Presidential Commission on Population Growth and the American Future have been issuing reports on it. Environmentalists have been talking it up; some minority group and religious spokesmen have been talking it down. It's beginning to look as if the population problem is attracting partisans as varied—and sometimes as narrow—as the mythical elephant who was judged by six blind men.

One group, for example, views population growth as one of the most serious impending crises, largely because of the relentless drain imposed on our environment. To these viewers, continued growth costs us more in air and water pollution and in the depletion of mineral and other resources than any benefits it could bring us.

Another group is equally alarmed because of what population growth does to the individual in an increasingly crowded society. More people means less privacy, more shoving and pushing in intolerably concentrated cities, greater difficulty in getting back into some sort of equilibrium with nature.

From the other side of the elephant, a couple of groups don't view the population problem as a crisis at all. A few spokesmen for minority groups have labeled the whole issue an effort to commit genocide, especially on the black population. And some spokesmen for some church groups, opposing the use of certain measures like contraceptive devices, deny there is any population problem in the first place.

Also on the other side are some who think that a steady rate of continued growth helped make the United States the most prosperous nation in history and any flattening out in our growth could lead to economic decline, recession and unemployment.

But exactly what do the statistics say is happening to the population of the United States today? The rate of population change is governed by three factors: births, deaths and net international immigration. The birthrate has been going down steadily since 1900, from 32 births per 1,000 people each year to 18 births. But one highly significant interruption in the downward slide lasted more than 10 years after World War II—the period we characterize as the "baby boom."

The death rate has also slid downward, from 17 per

HOWARD D. SAMUEL, a vice president of the Clothing Workers, served as the labor member of the Presidential Commission on Population Growth and the American Future

thousand in 1900 to just below 10 per 1,000, and life expectancy has risen from 57 to 70.

The net result is that our growth rate is down from 2.1 percent annually in the first decade of this century to 1.1 percent annually in 1970, with some of that growth stemming from immigration.

So far this doesn't sound as if population is getting out of hand, but an annual growth of 1.1 percent means 2.2 million new inhabitants every 12 months—enough to double our population every 70 years.

Furthermore, the bulge in our population created by the baby boom has not worked itself out of our system. On the contrary, those babies of 1947-1959 are now forming households and having children of their own—thus perhaps creating another bulge in turn.

Thus near-future growth is inevitable. The question is how much growth and with what consequence.

The contrast between a nation of two-child families and a nation of three-child families gives a clearer picture. Excluding immigration, if families on the average have only two children from today onward, the United States would have a population of 271 million by the year 2000 and 350 million by 2070. But if families on the average have three children from today onward, we would have a population of 322 million in the year 2000 and 650 million in 2070. Thus the three-child family would result in 51 million more people in this century and almost double the population by 2070.

When the baby boom bulge finally works itself out, the two-child family represents a realistic approach to population stabilization, which would be achieved in about 50 to 70 years, depending on immigration. The practical mathematics of the problem indicate that is about as fast as we can reasonably achieve population stabilization, despite the earlier cries of the fans of zero population growth. Immediate zero population growth would result in sharp swings and require a far sharper cutback in family size—to the one-child family, on the average—and that is probably impossible to achieve without a degree of coercion that our democratic system would not tolerate.

Census Bureau figures indicate the United States is moving along the road to stabilization. Our fertility rate is now 2.28 children per mother, lower than was anticipated.

Can we count on the downward trend continuing? In the field of demography—population statistics—one soon learns not to count on anything. Almost every prediction made by the demographic experts over the past several decades has turned out wrong. History teaches us that demographic statistics don't turn into trends, they simply evolve into new statistics. The fact is that the effects of the baby boom will continue to be felt in our population for a long time to come. We are inevitably in for a period of continued growth in the short run. The only question is whether we decide to opt for stabilization or growth in the long run. Even if we choose stabilization now, we will probably not be able to achieve it for about 70 years.

Last question: what's the difference? Are the environmentalists right, that we are heading for disaster if we don't opt for stabilization, or should we listen to those who claim that without growth, there is no progress? Does stabilization mean a last reprieve for our vanishing resources, or genocide for emerging minorities, or both?

The answer, in a nutshell, is none of these.

The President's Commission on Population Growth and the American Future recently concluded two years of research, including extensive public hearings, on the impact of continued population growth on some of the major elements of national life. The commission took alternative growth rates—symbolized by the two-child and the three-child family—and analyzed the effects of each in such areas as education, health and welfare services, government, environment, resources and the economy.

The result made it fairly clear that a stabilized population could be better and easier accommodated in the world of the future than a population which continues to grow. For example, the faster growth rate would lead to somewhat higher demands for public services, such as health and housing, but the difference between growth and stabilization is not dramatic. Because growth means more children, the impact on education facilities would be greater. It would cost us 50 percent more to provide education to a growing population than to a stabilizing one and this only at the present level, which many educators and parents and students think is not good enough.

The commission's analysis of the effect of population growth rates on resources and the environment was based on a study undertaken by Resources for the Future, a research organization based in Washington, D.C. The organization examined population's impact in a number of different areas and found that continued growth would have its greatest impact on the supply of water in certain areas and on the availability of land for agricultural and recreation purposes. Less impact would be felt on the supply of minerals. The availability of energy is so dependent on changing technology that prediction served no useful purpose. For instance, many scientists assume that at some time in the future we will unlock the key to peaceful use of atomic fusion, which would make energy production cheap and easy and pollution-free.

Pollution, of course, will increase under the impact of more people producing and consuming more. This challenge must be met, but here again the shape of technology in the future is too unclear to make a firm prediction of how we will do it or how much it will cost.

Although the commission came to the conclusion that continued population growth might not result in the apocalypse, nevertheless any possible advantage in the future lay with stabilization, not growth. "The United States can cope with population growth for the next 25-50 years," the commission concluded, "but doing so will become an increasingly unpleasant

and risky business. Unpleasant because 'coping' with growth means adopting solutions we don't like; risky because it means adopting solutions before we understand them."

A number of other individuals and institutions have also entered the battle over the impact of growth, population or otherwise. Two doughty warriors in the field of ecology have been clashing head-on over the issue of population and resources: Barry Commoner, biology professor at Washington University in St. Louis, insists that technology has a far greater impact on pollution than population growth; Paul Ehrlich, biology professor at Stanford, thinks population is a major cause of pollution.

Earlier this year the battle over growth erupted with even greater force as the result of a computer-based study prepared by a group at the Massachusetts Institute of Technology, which forecast a worldwide collapse within 100 years unless population growth and industrial output are speedily curbed. Collapse could not be avoided, according to the MIT study, even assuming vastly improved technology, reduced demand on resources and greatly improved pollution controls. Only a speedy stabilization of population and production could save us.

The MIT conclusions, which did not conform with the analysis of the Population Commission, were immediately questioned by other economists, who did not believe that the methods used by the MIT study were realistic or even scientific. It understates current technological advantages, underrates the potential growth of technology and "fixes" the roulette wheel of future development so the world can't win, under any circumstances. The MIT prediction was also characterized as "an upper-income baby," a call for an end to economic growth by those who have already made it, which might not be accepted so happily by the millions of Americans and billions of people in other lands who have not yet won the fruits of our productive society.

Short of saving the world from an apocalypse, population stabilization also has important ramifications for the nation's economy, in terms of gross national product, per capita income, the composition of the labor force and certain sensitive industries.

Gross national product would eventually rise faster in a nation with a growing population than with a stabilized population, since increases in the number of people multiply the volume of goods and services produced and consumed. But per capita income—a better way of measuring prosperity—would improve more under a stabilized population. According to the Population Commission, by the year 2000 "per capita income may be as much as 15 percent higher under the two-child than under the three-child population growth rate." The reason is simple: the stabilized society will have fewer children and more working adults, so the products of our society will have to be divided among fewer people. In addition, fewer children will free additional women to enter the labor force. "Taken together, these trends mean relatively more workers and earners and relatively fewer mouths to feed," the commission said.

Another major effect will be the gradual aging of our population and the labor force. This does not mean there will be more older people; for the next six decades the actual numbers in the older age groups will not be affected by future birth rates, since they are already born. Stabilization will affect the proportion of aged, for as fewer children are born, older people will begin to make up a larger proportion of the total population.

In terms of percentages, if we were to reach stabilization, the population aged 65 and over would represent 16 percent of the total population, as compared to 9.8 percent in 1970. This will mean fewer teen-age problems, including teen-age crime and unemployment, but it will also mean the nation will have to do a better job than it is now doing in meeting the needs of the elderly, from providing retraining and employment opportunities for those displaced by technology to increasing Social Security benefits for those beyond their working years.

Elementary logic would indicate that some indus-

THE LABOR FORCE OF THE FUTURE

Thirty-five million new workers will be seeking their first job in the decade of the 1970s. That is 7 million more than in the 1960s. This is one of the legacies of the baby boom. As that generation comes of age, swelling numbers of job applicants will put an extra burden on full employment policy.

The pressure should be off in the 1980s. The number of new entrants to the labor force will probably be close to the figure for the 1970s, due to declining birthrates in the past decade. Once all the new entrants and women resuming work after their children are grown are balanced out against withdrawals through retirement and death, the labor force in 1990 should number some 114 million, or 28 million more than the 1970 figure.

What happens thereafter depends mainly on the number of births in the 1970s. If fertility should follow the two-child projection, the number of people looking for their first job in the 1990s should be about the same as in the 1980s. However, if fertility follows the three-child projection, the number of job seekers in the 1990s will jump 10 million, to a total of around 44 million; and by the year 2000, the total labor force will number some 136 million. Beyond 2000, the difference in labor force growth between the two projections becomes immense.

—From the report of the Presidential Commission on Population Growth and the American Future.

tries, especially those serving infants, would take a nose-dive if population were to level off. Not so, the commission says, because it will take decades before growth actually ceases and other, more significant changes—new technology, such as disposable paper diapers instead of cloth—probably will take place long before population stabilization takes its toll.

A doubting Thomas, remembering the link between growth and prosperity which has characterized our history, might still wonder if stabilization might not spell trouble for our economy. But he forgets that much of our economic expansion in the past was tied in with periods of tremendous immigration. Immigrants, being of working age and already productive, give an immediate boost to the economy, unlike infants, who remain dependent for many years. Immigration rates today are considerably lower than in the era of rapid growth and they are not likely to get much higher in the future. The other factor is whether continued total economic growth is really supportable by available resources and by the environment. It would appear to make more sense to aim for the goal of raising per capita income, through population stabilization, rather than raising gross national product.

Adding up all the consequences of population growth, as against population stabilization, supports the generalization that stabilization would make it somewhat easier to solve the many problems that face society today. Continued growth—more and more people—may not send us straight to perdition, but it will certainly intensify and multiply our problems and make their solution more difficult.

How about the impact of population stabilization on minority groups; is it just an excuse for genocide? The answer is no by any standard. As a matter of fact, although minority group members have somewhat more children than other groups, because of their smaller numbers they contribute less to population growth than does the rest of the population. If we are to achieve population stabilization, it will have to come through stabilization of the majority white population, which produces most of the babies.

Meanwhile most members of the largest minority group, the blacks, themselves would prefer to have smaller families. In a poll taken for the commission, 86 percent of black respondents felt that continued population growth was a problem for America. Data from a national study in 1970 show that with increasing availability of contraceptives, poor black women will choose to have approximately the same number of children as would whites. The birth rate among poor blacks is falling even faster today than the birth rate for more affluent whites.

If population stabilization seems to be a wiser course, what should the nation do about it? First, we will have to agree on stabilization as a deliberate public policy. Sen. Alan Cranston (D-Calif.) and 33 other members introduced a Senate resolution to this effect, which so far has only reached the hearing stage.

At the current rate of fertility, the population stabilization level—the two-child family average—could be approached if all families have only the children they want to have. A series of studies over a period of years shows that about 15 percent of all births between 1966 and 1970 were not intended, according to their parents. If the day is to come when only intentional births take place, it will only come when the nation is willing to improve sex and population education, expand family planning services and spend more money on scientific research. At the moment some extreme right-wing organizations are attacking sex education in the schools on the basis that teaching youngsters about sex will lead to promiscuity. There is absolutely not one bit of evidence to justify this conclusion.

Family planning services are already being expanded, and so is scientific research—both under legislation passed by Congress in the past few years.

One indispensable condition is to guarantee freedom to parents—all parents, rich and poor, black and white—to make their own choices on family size. Unfortunately, a couple of states at one time or another have tried to force smaller families on welfare recipients, which is completely foreign to our basic democratic philosophy and an invitation to a charge of genocide. When it comes to family size, coercion has no place in a democracy.

One of the most controversial elements in the population problem is the question of legal abortion, which is now available on a broad basis in only four states. Actually, abortion has little to do with population growth in this country. Those who favor abortion do so in the belief that women should have control over their own bodies. Those who oppose it believe that once conception has taken place, a life has been created which no one has the right to destroy. But legalized abortion is not intended to serve as a population control measure and where legal abortion has become available the principal consequence until now has been a reduction in illegal abortions.

Demographic impacts stem not only from the growth of population, but also from its distribution. Twentieth Century distribution trends in the United States have magnified the effect of growth. In 1900, 60 percent of all Americans lived on farms or in small towns. Seventy years later the proportion is more than reversed; 69 percent live in metropolitan areas.

Much of this has resulted from migration of people from rural to urban areas, largely because of the revolution in agricultural technology, but at present about three-quarters of the continued growth of our metropolitan areas comes not from migration but from natural growth, or more births than deaths. In other words, unless we can reverse the migration trend—which is highly unlikely—the die of continued metropolitan concentration is already cast.

A different kind of migration in recent decades may have even greater significance. That is the migration of people, mostly whites, from the central city to the suburbs. As a result, nonwhites now account for 22 percent of the population of central cities and that figure is projected to rise to 40 percent by the end of the century. It appears from these figures that the principal impact of the demographic changes in past decades has not only been concentration but also segregation.

The effect of these trends—concentration and segregation—has been felt on both city and country. Despite national population growth, one-third of all the counties in the United States lost people in the last decade. And the problems have continued to mount in the cities. But so long as people continue to find economic opportunity and social and political advantages in metropolitan areas, they will continue to live in metropolitan areas. Meanwhile a lot of things could be done to alleviate the consequences of metropolitan living, such as expanding planning on a regional basis, opening up the suburbs to people of all economic levels, helping in the development of new growth centers—and stabilizing population growth.

Another question is population density, or do crowded living conditions change people? The limited experimentation in this area hasn't produced any solid answers as yet, but it appears that density at current levels does not have much effect on people socially or psychologically. And as a matter of fact, in some other nations, the level of population density has risen far higher than in the United States, without noticeable ill effect.

As was indicated, not all population growth comes from the surplus of births over deaths. Immigration today provides about 20 percent of our annual growth. But immigration is a peculiarly productive kind of growth from an economic standpoint, since immigrants are usually adults, often with needed skills or talents and they support rather than overload our economy. Permitting continued immigration also conforms to our long humanitarian heritage, which few people are willing to jettison. As a result, a majority of the commission, although fervently supporting population stabilization, felt that achieving it by reducing immigration would be counter-productive.

Summing up all the facts about population, perhaps the only conclusion which should be reached is that it is not a time for extremism or hysteria. We used to think that growth went along with progress. That philosophy belongs to the past. But neither is the opposite extreme justified—the extreme of crying for population to come to a screeching halt, which is impossible anyway. The answer is to aim for a stabilized population through voluntary means.

As the commission's report summed it up: "Slower population growth can contribute to the nation's ability to solve its problems—by providing an opportunity to devote resources to the quality of life rather than its quantity and by 'buying time,' that is slowing the pace at which problems accumulate so as to provide opportunity for orderly and democratic solutions."

LABOR'S RETIREES: AN EMERGING FORCE

For many Americans, the dream of enjoying the golden years of retirement is tarnished by the threat of poverty. Inadequate pension checks and Social Security benefits won't stretch beyond basic living costs.

The needs of retired workers have long since prompted unions to place pensions and health insurance for retirees alongside the goals of decent wages, hours and working conditions during the union member's working life.

In recent years, the discontent with inadequate retirement income levels has prompted retired workers to band together to work for improvements. One of the vehicles has been the retired members' clubs, which have evoked a growing response within numerous unions.

These clubs provide a wide range of services to their members, but also enable the members to serve their communities through volunteer programs. Many clubs have developed into solid voting blocs to effectively lobby in local and state governments to improve conditions for the elderly. On the national level, the clubs are allied with the 3 million-member National Council of Senior Citizens, which works in their behalf in cooperation with organized labor and other liberal groups.

Local efforts in a number of communities have brought about lower bus fares and property taxes for the elderly, free concerts and movies, cut-rate vacation trips, reduced prices on medicines and other benefits for their members.

A growing number of unions are stressing the organization of clubs for retirees to complement their retirement programs. The list includes the Machinists, Steelworkers, Ladies' Garment Workers, the International Brotherhood of Electrical Workers, Painters, Electrical Radio and Machine Workers, Communications Workers and Auto Workers.

The 1969 AFL-CIO convention called for federation affiliates and state and local bodies to:

- Establish active retired members' clubs and to affiliate them with the NCSC.
- Undertake pre-retirement planning courses that will better prepare members for retirement during their working years.
- Work with retiree centers to help meet the needs of older people for education, recreational activities and social relations.
- Support national, state and local programs bring-

Philadelphia, Pennsylvania 19102

6052

REPORT

PREPARED FOR

NATIONAL ADVISORY COMMISSION ON RURAL POVERTY

February 15, 1967

Mr. Chairman and Commission members: My name is Barbara Moffett. I am Secretary of the Community Relations Division of the American Friends Service Committee. I am accompanied by Eleanor Eaton, Assistant Secretary of the Division, responsible for rural programs, by Pamelia Coe, National Indian Program Representative and by William Channel, Director of our East Coast Migrant Leadership Education Program. I appreciate being asked to present this testimony on behalf of the American Friends Service Committee. I speak for that Committee and for many like-minded Friends. However, no single body can speak officially for the Quakers, The Religious Society of Friends.

The Experience From Which We Speak

The American Friends Service Committee (AFSC) is this year celebrating its 50th Anniversary. During these 50 years the Committee, through its volunteers, its committees and its professional staff, has been involved in efforts to help rural people find a way out of poverty and deprivation in literally hundreds of communities around the world. For some, such as the peoples of Korea, Algeria, or the Gaza Strip, poverty was exacerbated by war or revolution. Some had never been far from starvation as are so many of the villagers of India and Mexico. In the United States, self-help and community development programs among textile workers in North Carolina, unemployed coal miners in West Virginia and Pennsylvania and Negro farmers in South Carolina date back to the 1920's.

Currently, through our Community Relations Division, we have staffed field programs among farm workers, settled and migratory, in Tulare, Fresno, Ventura and Kings Counties in California, as well as in Florida, New Jersey, Pennsylvania and New York; we have staff at work with the San Carlos Apache Indian Tribe in Arizona, with the Northern Cheyenne Tribe in Montana, with various tribes in southern California and in the state of Washington, and at Intertribal Friendship House, serving members of over 90 tribes who have sought employment and a new life in the Bay area of Oakland and San Francisco, California. In North Carolina, South Carolina, Georgia, Alabama, Mississippi and Louisiana, AFSC staff is in close contact with rural Negroes and in Texas with Mexican American families who are seeking to break out of the syndrome of poverty and discrimination. It is on the basis of this extensive and continuing grass roots experience that we speak today.

Rural people are, in the main, scattered and unorganized, unable to exercise influence for programs comparable to their need. Rural areas have to date

presented no serious threat to the peace, as has violence born of despair in the cities, but mass violence is just below the surface in some rural areas. Furthermore, the use of violence and the threat of violence to discourage rural people from exercising their rights and improving their condition is documented over and over again in southern states.

Statistics show the degree of unemployment and underemployment in rural areas, the urgent housing needs and conditions, low income levels, the lack of public and private services that characterize most rural areas, and the patterns of forced migration which so clearly link the problems of rural and urban poverty.

The disparity between the needs in rural areas and the size and number of anti-poverty, manpower and welfare programs in rural areas and for rural people are also well documented.

We will, therefore, concentrate in this testimony on suggested remedies for specific human needs with which our various programs have sought to deal. As we said in testifying before the Special Subcommittee of the House of Representatives Committee on Education and Labor in 1964 when the Economic Opportunity Act was being drafted, "There is no poverty in the abstract, only poor people, with many problems..."

What We Recommend and Why

I. Congress and the Executive Branch of the Federal Government must commit themselves to an attack on poverty which recognizes the need for broad Federal planning and policies designed to bring Federal benefits to all citizens, massive Federal resources both of funds and of technical assistance directed to the rural poor, and maximum development of local

leadership and organization through encouragement of independent, locally initiated, and administered programs operating in accordance with Federal policy.

The war on poverty has been both piecemeal and puny. It promises to be even more so in the year ahead, with cutbacks in funds, especially in the rural sector and an apparent lessened Federal commitment to deal with the related issue of racial discrimination with its resulting inequality of access to the benefits and decision-making centers of our society.

We deplore the trend in Congress and the Office of Economic Opportunity to back away from programs which stress the organization of the poor to solve their problems in innovative ways. Limitations on funds available for community action programs and emphasis on pre-packaged programs that eliminate local leadership involvement are in our view a serious step backward in the war on poverty.

Our experience demonstrates that in rural areas where those in need and those with on-going relationships with them have themselves organized and implemented programs according to their own needs as they see them the climate of despair turns to one of hope. Leadership has developed and improvements been made.

The recognized success of CAP programs on some Indian reservations are notable examples of this development of the local leadership so desperately needed as one element in the nation's war on poverty. Our staff working among the San Carlos Apache Tribe writes that at San Carlos the predominant attitude of the people on the reservation has been, "What's the use?", "Even if we did this, no one would listen," "We can't really do anything about it anyway." With the advent of a CAP program of considerable scope which involves the Indian poor, supported by the local power structure (the Tribal Council) and predominantly staffed by Indian people, things have changed. There is continuing interest. Volunteers

meet weekly, self-help projects are initiated and carried through. Some of these self-help projects, for instance the Tribal newspaper and the Neighborhood Youth Corps projects, are expansions of work started initially by local people with AFSC assistance but without adequate financial base. Others are new.

On the other hand, "top down" implementation of programs, without full participation of those whose needs programs are designed to meet, has not been successful. Channeling of programs through previously uninclusive and undemocratic bodies has also often defeated their purposes.

An adult education program at San Carlos, using VISTA volunteers working under the direction of Indian committees, was successful. When the program was taken over by local school districts, notably unrelated to Indian interests, Indian participation quickly disappeared.

A Head Start program on the reservation provided a real opportunity for Indian parents to become involved in the process of learning their children are undergoing. A threat to put this program under the state school system is viewed with alarm, our staff reports. Parents feel they will lose their voice in the program.

In Mississippi, the involvement of poor parents and adults in the Head Start programs of the Child Development Group was so basic and thorough that when funding was withheld these people, poverty-stricken in the extreme but rich in leadership qualities, continued many Head Start programs on a volunteer basis rather than turn them over to others or let them die. Holmes County in the same state provides an example of what we mean by the value of local leadership development and organization. Here there is not only a climate of hope but a thriving community center, an emerging cooperative, cooperative home building, and a growing potential for cooperation between the poor and those economically more successful, both Negro and white.

Contrary to its intention, the OEO requirement of a broadly representative organization prior to program development and funding has stymied local initiative and participation by the poor. This is of course particularly true in areas of intense racial discrimination and segregation, not only in the South but in rural areas in other parts of the country as well. White and Negro participation as equal partners in an attack on poverty is not feasible in many areas and insistence upon broadly representative groups in such areas results in very little action against poverty.

In the Black Belt counties of Alabama there is not one Community Action Program and only two OEO funded efforts -- these funded under Title IIIB in Lowndes and Wilcox Counties. As one Negro leader in the area put it, "You either have to 'Tom' or lie to get a program." Alabama ranks 11th in number of rural poor; it is 23rd in the amount of OEO funds received. Most of these funds have gone to urban areas.

A successful attack on poverty in rural areas must include policies and programs which will develop rural leadership and enable it to stay on the scene. This will take the combined efforts of the many governmental agencies which impinge on the problems and lives of the rural poor.

In many instances when local leadership has emerged in southern rural areas, political, economic, and hostile social forces have combined to "encourage" such leaders to emigrate to northern and western cities regardless of their ability to adjust to urban society. Young people, from the south, from Indian reservations, from Spanish-speaking villages in New Mexico, from rural South Jersey, frustrated in efforts to get jobs or a decent education, have, sometimes with encouragement from their parents, sought their future in urban areas. Others seek status and good pay in the armed forces. Leadership is being drained off.

We would like to cite ~~two~~ specific instances here--~~one~~ in a rural southern county and one from the San Carlos Apache Indian Reservation in Arizona.

In a Mississippi county, a Negro family, leaders in their community, had applied unsuccessfully to a federal agency for assistance in securing their own home. In discussing the case with one of our staff, the government official suggested that instead of trying to improve their situation locally they should go to Detroit "where with his skills he could earn $3.25 an hour."

Our staff in San Carlos, Arizona writes: "The Bureau of Indian Affairs has had for over ten years now a program of relocation (now called Employment Assistance) of Indian people to major urban areas for employment. The BIA aggressively recruits the most acculturated, those who can best adjust and those with the greatest leadership potential. The leadership gap on the reservation is obvious. The Bureau of Indian Affairs fills the leadership gap with non-Indian or non-Apache leadership.

"The lack of jobs (75% unemployment) on the reservation does not encourage leadership to remain or develop within the community and thus hinders true, balanced community development.

"The leadership gap is evident at San Carlos when it is seen that not one single Apache college graduate is on the Reservation. The problems of locating secretaries, accountants, etc. from the Apaches to work for the Tribe are compounded by the competition of salaries which can be offered them by the BIA or in the cities. The gap in community leadership below the Tribal Council level results in most problems being funneled to the Tribal Council for solution. In addition, there is frustration in the community of not being able to get what they want done, of having to rely on non-Indians to get leadership, and of breakdowns in efficient management of tribal assets for the benefit of the community."

Two final thoughts on local leadership development and local responsibility. Some local leadership may fail or be misguided. We should expect a degree of failure. Successful local organization to meet the problems of the poor will find local opposition from those who have been comfortable with the status quo. This should be expected and local groups encountering it should be sustained by the commitment of the Federal Government and the nation to a successful attack on poverty. It will not be without its tension and conflict.

II. The opportunity to earn a steady income and participate in decisions affecting the nature and availability of such income is an urgent need of rural low income people. This means access to the means of production and equal access to jobs.

A. Land for farming and supplementary income

The current advance in agricultural technology, the ASCS programs which benefit the large land owner and give little if any benefit to the small holder, the tenant farmer, or sharecropper, the lack of enforcement of the 160 acre water law (Reclamation Act of 1902), the cost of equipment, marketing difficulties and the population growth whereby more and more farm land is being bought up for housing developments, make small holdings almost impossible to acquire or maintain.

The small farmer, whether owner or renter, has virtually disappeared in south Florida, California, Texas and many areas of the mid-west. He is rapidly on his way out in the southern states because of lack of access to land related resources. Today, with the growing world need for food, the great number of people who know how to farm and like to farm but have not

the skills for other work should not be cast aside. It is not enough to say "the family farm is uneconomic and is on its way out."

Our program experience attests to the needs and ability of such people. The migrant streams and the ghettoes of our cities are crowded with families deprived of access to land as a means of production. And once these people are so uprooted, they become more and more poverty stricken and the escape hatch becomes more tightly closed. [The growing number of people in tent cities further attests to the unavailability of land.]

We urge ~~this commission to~~ consider the needs of people now, not a theoretical situation 25 years from now. (One Federal official said to us, "We just have to forget these people; there is no help for them until they can draw their Social Security ten years from now.")

We do not suggest a return to 40 acres and a mule. We do suggest a reexamination of government owned land policies and an exploration of the potential for an inclusive homesteading act, whereby land for farming, small industry, and housing, equipped with water, sewage and street financing, can be made available to low income rural people.

We recommend a program that will make available modest land holdings for farming through subsidy or tax incentives or long term interest free loans, coupled with locally based programs of research and experimentation on intensive farming that will demonstrate what crops are high yield and require high labor input, can contribute not only to the world's food needs but to the elimination of poverty and dependence. How can we make maximum use of our human as well as physical resources?

Our California staff writes on the basis of AFSC work and experience there:

"Small acreage farms can thrive in California, but heavy equipment investment is needed. Thus, capital funds, improved access to land, water and agricultural advice are needed.

"Farm labor families in areas where inadequate annual labor demand exists could supplement annual income through part time farming, as many now do. This would tend to stabilize the labor force as well as improve living standards. Such opportunities, if made available extensively, could reenliven rural communities, form a basis for the establishment of small processing and service enterprises, lessen the influx of untrained, impoverished people to cities, and give new opportunities to farm laborers who because of age, language and cultural barriers, lack of education, have nothing to gain in the city.

"Many large holdings in the San Joaquin Valley are far beyond the size of optimum efficiency. New irrigation developments there are coming into prime agricultural lands where, without adherence to the provisions of reclamation law, the benefits will all accrue to large land companies. The reclamation law is not being enforced. The DiGeorgio Corporation in Kern and Tulare Counties signed recordable contracts ten or more years ago to divest itself of excess land. Recently it sold some tracts, presumably complying with the law, but the land sold at prices between $2,000 and $3,000 per acre (the going price for land in full production with grapes, olives, or citrus) whereas reclamation law requires that excess land disposed of must be sold at dry-land prices. Enforcement of the law in this manner does not actually make land available to small, independent producers as was the intent of the law.

"The re-establishment of an extensive system of small holdings dedicated in

perpetuity to agriculture could go a long way toward conserving land. California is a major agricultural area, yet it lost over one million acres to urban use since 1942, and at present rates will lose another 1½ million acres out of a total of eight million by 1972."

Coupled with this is the need for fair adjudication and protection of water rights for the rural poor. For example, in northern New Mexico small previously productive farm holdings are often no longer viable because of the diversion of water to corporation farms and industries in the southern part of the state.

Threats to the water rights of Indian people are frequent. In southern California we have worked with the Soboba reservation which is the only landholder in the "take area" not yet compensated for water taken by a new metropolitan Los Angeles water conduit system built about thirty years ago. There was an abundance of good water on the reservation when the system was built; the present water supply is greatly inadequate and the best compromise now possible is probably that the metropolitan water system would allow the reservation to tap into the metropolitan system without charge for the hookup, after which the reservation would have to pay for water, which they had available free and in abundance originally. Other land in the area, for which compensation has been made, is now well watered productive farm lands. The reservation is barren and unproductive.

This is only the most dramatic of the water problems which plague almost all the reservations and rancherias in southern California.

Indian reservations throughout the United States have had great difficulty in establishing their right to water for agricultural and recreational development. The Bureau of Indian Affairs, which is trustee of the land and

has been reasonably vigilant in conserving the land base itself, has been so lax in protecting water rights that it was a matter of great surprise when the Superintendent of the Fort Apache Indian Reservation in Arizona actually championed the Tribe's right to develop a lake on their own land, in the face of opposition from the powerful Salt River Water Users Association.

Currently at issue are the water rights of the Pyramid Lake Tribe in Nevada, who own a magnificent wilderness resource which is losing water at a rate which threatens the existence of the lake and limits its potential as an economic resource.

B. Capital and direct loans at little or no interest for farm improvement are a major need. Administrative rulings within the Farmers Home Administration, and inadequate appropriations weaken the potential of the Farmers Home Administration to help the rural poor. We suggest a re-examination of the Farm Security Administration program of the 1940's whereby 60 acre farms complete with house, well, land, 20 acres clear and 40 acres wooded were sold to displaced tenant farmers on 40 year mortgages. In Holmes County, Mississippi, many such farms begun in this way by Negroes are today viable and provide stable community leadership and a sound tax base.

We know a family in a rural Alabama county which had been successful tenant farmers for some years. On January 1, 1966 fire bombs (presumably designed to get the parents to withdraw their children from the newly desegregated school) destroyed their home and all their possessions. This farmer, in addition to providing for a family of 12, had been able to save enough cash from his tenant farm operations over a five year period to pay $3,000 towards the $3,750 needed to purchase 40 acres of farm and timber land. After the

fire he applied to the local Farmers Home Administration for a farm development loan and a loan to build a house. His ASCS cotton allotment was 3.4 acres. He was refused a loan for his house on the grounds of insufficient income. He was given no farm development loan, only the pious hope from a top USDA official that "they could increase their income."

Private funds for housing and farm improvement are not available. No initiative is forthcoming from the USDA to help the family make their 40 acres viable through intensive farming, wise use of timber, etc. We can cite similar examples of lack of positive, coordinated assistance to low income Negro farmers in other southern counties and states.

We, therefore, strongly urge this Commission to reevaluate the ASCS and other policies of the USDA as they affect low income farmers, both in terms of allotments and services.

In many cases the legislative authority exists by which executive agencies can meet the challenges of rural poverty but, too often, bureaucratic rivalries, lack of coordination and lack of determined, imaginative staff work at the local level frustrate and negate this authority.

C. Small, locally relevant, nondiscriminatory industry is an urgent need. We recognize that this will require federal planning, low interest financing, perhaps some subsidy and a coordination of federal, state and local efforts in a cooperative spirit to provide the land, the power, the public services and roads. On-the-job training programs can in most instances be provided either by the industry itself or by small specific short term efforts.

Rural areas have resources to offer small industry. Clean air and water

and a labor pool are some of those. We suggest, however, that the focus of the Commission's recommendation be not primarily on what industry needs but on what the people and the area need. National planning is needed. National planning that will give the poor and underemployed access to the means of production is as logical as national planning of recreation areas, highway systems, etc. We were told that one agency of government could not assist a group of individuals to utilize land they had secured for home building because there were no jobs nearby and they might have to move for employment.

Private efforts are struggling against great odds to create such job opportunities. The successful creation of a silk screen operation in Taliaferro County, Georgia, providing jobs for over 25 people would have been greatly facilitated by federal assistance. But here, as in rural areas of the Northwest, the urban mentality and orientation of the Small Business Administration has limited assistance from that source. The Economic Development Corporation appears to have more understanding of rural needs and opportunities and should be strengthened. But again this resource has not been available to a local group of people in Greene County, Alabama who have developed a cement block factory which will not only provide materials for self-help housing projects but is developing a commercial market at a competitive cost.

The Bureau of Indian Affairs economic development effort is praiseworthy in its effort to develop industry on reservations, but the effort has been hampered by lack of investment of private capital in Indian enterprises because of special restrictions on Indian land. Some 50 industries have been attracted nationwide, most of them requiring fine hand-eye coordination in which Indians have excelled because of their crafts tradition.

Tax breaks, factory construction and many other gimmicks are being used to lure northern industry to southern cities. We suggest that economic incentives to the poor themselves to establish and develop relevant industries in rural areas deserve serious study. The placing of government contracts to industries in or accessible to rural areas should be aggressively pursued. The Federal Government through its contracts has the power to encourage or require subcontracting to areas of rural need.

D. Special Indian hunting and fishing rights should be protected. Such rights, often mentioned specifically in the treaties whereby Indian tribes ceded large portions of the United States to the Federal Government in return for certain services and undisturbed enjoyment of the small remaining proportion of their land and property, are under attack today in many parts of the country, notably the Pacific Northwest, the Great Lakes states, and Oklahoma. To local game and fisheries enforcement agencies the existence of a group of citizens with special privileges may seem to pose an intolerable obstacle to the development and enforcement of a rational conservation program. However, in our experience, Indian groups, particularly those which still depend in large measure for their subsistence on hunting and fishing, are more aware than most non-Indians of the vital importance of conservation of game and fisheries. Approached in a cooperative rather than a punitive spirit, they will take advantage of opportunities to improve their hunting and fishing resources.

The AFSC recently conducted a survey of the controversy over off-reservation fishing rights of Indian citizens in western Washington state. From talking with a large number of concerned Indian people, as well as the appropriate state and federal officials, the AFSC drew conclusions and

recommendations which we believe would apply broadly in any situation where treaty-based hunting and fishing rights are being threatened by non-Indian interests.

Our preliminary report is attached to copies submitted to the Commission. We draw your attention particularly to pages seven and eight, points II, B through F, and III, A through F. Additional copies are available on request.

III. The nation must address itself in earnest to the "goal of a decent home and a suitable living environment for every American" set forth in the Housing Act of 1949. In the rural areas of America shelter is a problem second to none. It is composed of such factors as lack of access to land, unavailability of loans, and requirement for local housing authority or local government approval of public housing projects. The problem is compounded by the prevalence of employer-owned housing, which puts severe restrictions on the freedom of farm workers.

The sit-ins at the Greenville Air Force Base in Mississippi and the subsequent tent colony in Lafayette Square in Washington temporarily dramatized one of the major aspects of rural poverty...the need for adequate shelter. Our experience in rural areas confirms this need. We see daily in human terms the need in California for 730,000 units of housing and the need in Mississippi for 100,000 units.

For farm workers employer-owned or controlled housing creates a condition of 20th century serfdom. Freedom to seek change in working conditions, to participate in community activities, to receive community services, to register to vote, to enroll children in the school of your choice, to change your job become myths. The threat of eviction and loss of job prevails.

Our experience not only in the Deep South but also in Florida, California, North Carolina, New Jersey, and Pennsylvania supports this statement.

AFSC workers have on a number of occasions been ordered to leave camps where they were conferring with farm workers. In January of this year staff members were ordered off of an FHA-financed camp, now under the control of a large labor contractor, where they just had scheduled a meeting with a small group of workers. Our Chester County, Pennsylvania, staff has been refused admission to grower controlled housing to talk with mushroom workers.

In New Jersey, an AFSC worker was arrested by a farmer and held at gun point by him until state troopers arrived, after he had been invited on to the camp by the crew leader to help some of his people fill out social security applications. The charges were later dropped.

Eviction was resorted to extensively in the Delano, California strike.

In North Carolina, after farm laborers had been two weeks without work, it was determined by the Welfare Department that there was near starvation in certain camps and that U.S. Government surplus food was needed to alleviate the situation. Farmers exerted enough pressure to force the Welfare Department to reverse itself, and the U.S. Government surplus food was denied. A number of churches provided the necessary food. But a farmer let it be known that he would shoot anyone who tried to get on his farm to distribute the food.

In addition, residents of housing enclaves on grower property are often denied the benefits of public health services, and community and other workers are prevented from communication with them.

When a camp is on the property of a private farmer he exerts his right to deny entry to anyone whom he pleases. In Florida, the Department of Health was denied

the right to hold a clinic on one farm until the son of the farmer convinced his father that it was a good thing.

Employers often excuse low wages because "housing is provided," though too often the housing is inadequate and may have cost the employer nothing for many a year. The worker should receive his payment in wages.

Growers and farmers frequently resist community efforts to build community owned housing for migrant workers because of their need for a "captive" labor force. A recent headline in the Miami Herald (10/2/66) reads: "Protests May Kill Farm Worker Housing Project: Pahokee Landlords Organize."

In some southern communities eviction is openly used as a weapon in driving the Negroes out of the county and state to northern and western cities. Community development and basic education programs, cooperatives, credit unions rarely reach the "plantation Negro." Rarely does he become a part of voter education programs, training programs, etc. Why? Because of the threat of eviction, potential or actual and because there is no place else to go. One plantation family we know well spent a year and a half seeking to buy, rent or find land to build on within the school district where their children were enrolled and doing well. Fear kept fellow Negroes from renting or selling; the white community presented a united front, again partly from fear of a few.

The evils of employer owned and/or controlled housing are not squarely faced or even recognized by some. Already in the 90th Congress a bill has been introduced to provide "rapid tax amortization for farmer-owned housing for farm workers." Its sponsor is a real friend of the rural poor but such legislation perpetuates and expands a basic cause of rural poverty. All such tax gimmicks and special loan programs to individual farmers for farm labor housing should be ended at once.

The shortage of independent housing in rural areas is acute. Need for shelter has high priority. One AFSC staff member working in rural areas writes: "I used to feel that housing problems were second only to wages in the farm labor field. I am beginning to feel they are now equal, not secondary." And wages often depend on housing. A farm laborer in Pennsylvania got a job offer at wages three times his present earnings. He couldn't take it because there was just no independent, non-grower controlled housing available.

Our California staff writes that people who live in grower-owned housing may reduce their potential annual employment by as much as one-third because they cannot readily work for other employers.

Three large camps built in Florida with Farmers Home Administration loans to a person who applied as a "nonprofit corporation" have been frequent violators of health regulations and on occasions been closed down. The original owner now subleases sections of the camp to individual farmers in the area. The farmer uses it to house workers who are working for him. If they want to work for someone else, or change jobs, he can force them to give up housing so that he can have the house available for someone else who will work for him at wages he wishes to pay. If a man has a family and no prospect for other housing he may be forced to accept inferior conditions.

The requirement that some federal housing programs of the Department of Housing and Urban Affairs can only reach an area through a local housing authority, in rural areas not usually very enlightened, prevents many needy persons and areas from benefiting from these programs.

In California such Authorities may be established by a local governing body (City or County Board of Supervisors) through appointment of Commissioners. Commissioners often have practically no relationship with the people needing their

services, and they are relatively immune to public pressure. They act as a power unto themselves, and as experience in Tulare County suggests, it is difficult to force elective governmental bodies to exercise control over them.

Federally assisted rural rental housing is blocked in Chester County, Pennsylvania because of the requirement that the local government (township) invite or approve and that the housing must be in an area with a "workable urban renewal plan." The rent supplement program provided hope for a break through. Private nonprofit groups could build housing, but the rider to the bill making such supplements available only in areas with a "workable renewal plan" again discriminates against rural areas.

Land is a major factor in meeting the need for rental and independently owned rural housing. The Farmers Home Administration can now loan money for the purchase of land as well as for house construction but the cost of land, even the 3/4 acre necessary in rural Chester County or the two acres deemed essential in the rural South, or the minimal plots in California, puts both land and loan at current interest rates out of the reach of the poor.

Income qualifications for loans and inadequate loan funds present problems to the rural poor in search of housing.

To qualify for self-help housing loans from the Farmers Home Administration, rural families must in many cases have incomes above the poverty level, even though from their limited funds those families most needing houses put payment of shelter above all other needs and expenses. At the same time OEO funds for technical assistance for self-help housing groups are curtailed because the income level required by the Farmers Home Administration makes too high a proportion of participating families ineligible for assistance by the war on poverty.

Another block in the achievement of decent housing in rural areas lies in the availability of loan funds. A 1966 Senate Committee recommendation makes it possible for OEO to provide "brick and mortar" grants of $1,500 to low income home builders under Title IIIB. But funds appropriated by Congress are so limited for this title that the authority is almost meaningless. Similarly the housing loan authorization for the Farmers Home Administration is woefully inadequate. In one California project alone, requests for self-help housing loans in 1967 will total $800,000 but by a Bureau of the Budget ruling FHA has only $3,000,000 available nationally for loans to all self-help housing projects in the first quarter of 1967.

American Indians are in a special bind. Their lands are held in trust for them by the Federal Government, and many live on reservation land owned collectively by the tribe. The Farmers Home Administration and most private lending groups require individual ownership.

The Department of Housing and Urban Development has been particularly open to the needs of reservation Indians. Since few Tribal Councils resist the creation of Tribal Housing Authorities, public housing programs on Indian reservations serve as an example of progress in meeting the needs of the rural poor. But in view of the fact that 90% of the housing on Indian reservations is below minimum standards of safety and decency, public housing programs meet only a small portion of the need. Public housing programs need to be expanded and ways found to provide housing for people who don't qualify for public housing assistance. Indians with employment may actually have poorer housing than unemployed Indians, because their income is too high for them to qualify for public housing assistance, but neither can they qualify for conventional Veterans Administration or Federal Housing Administration financing because of their special status.

A. A coordinated attack on the problem of housing in rural areas should have top priority ~~in the recommendations of this Commission~~.

Recommendations should include:

1) the elimination of government support for employer-controlled housing --a version of the "company town";

2) increased authority and appropriations for direct grant and long term low interest (perhaps as low as 2%) loans for land and housing;

3) a 1967 Homestead Act that will make available adequate size land holdings to low income families who seek to build or acquire their own home and which would give landless Indians the preferential status they have now in theory but in fact have not been able to exercise;

4) elimination of the artificial 5500 population ceiling which makes many individuals ineligible for rural housing loans;

5) funding and expansion of the rent supplement program to meet the needs of rural areas;

6) reevaluation of income requirements for home ownership loans including proper assessment of priority given to the shelter and current payments for that shelter;

7) funding of existing authority and increased programs for repair and improvement of existing homes;

8) reevaluation of requirements for Housing Authorities and/or local government approval or sponsorship of housing projects and reconsideration of the "workable urban renewal plan requirement."

IV. Rural education needs to be upgraded drastically if rural people are to have the opportunity to break out of the syndrome of poverty.

Rural schools demonstrably offer fewer courses, less adequate equipment and often limited and secondhand books. Teachers in rural schools tend to have less training and to be more provincial in their outlook than teachers in urban and suburban school systems, and it is difficult to attract well qualified teachers to rural school systems. County school boards tend to set more restrictive policies and engage in little coordinated, enlightened planning to correct the deficiencies of local schools.

These inequalities, found rather generally in rural school systems, are compounded particularly in the South where the dual school system is still the predominant pattern, in spite of the Supreme Court's school desegregation decisions and recent efforts by the Department of Health, Education and Welfare to speed the process of desegregation through enforcement of Title VI of the Civil Rights Act. Most Negro schools in the rural South, for instance, are not regionally accredited and do not offer courses in physics, chemistry, foreign languages and higher math. Instead the emphasis, often expressed in the very name of the school, is on vocational skills which may or may not have a market.

An example of the effects of this double standard in education comes from our program in Florida. We hired a Negro secretary who had graduated from a rural high school and taken a secretarial course at a junior college. She had mechanical ability and intelligence but through no fault of her own, because of the poor quality of the schools she had attended, she was educationally handicapped, unable to recognize words or sentence structure or to spell. She could not make the grade as a secretary and is now doing substitute teaching in the very school from which she graduated, perpetuating a cycle of incompetence.

From our California staff comes the observation that vocational education is limited and stereotyped. "Aside from limited offerings in math and English all that is offered in Tulare County is carpentry, electricity, and auto mechanics, none of which lead to employment. Dairy-hand training is the only class that offers the prospect of employment and the only one that pays a stipend. There are about 20 men in this. In the entire central valley of California there are opportunities for fewer than 100 rural people to enroll in MDTA courses leading to more skilled employment."

Many of our rural citizens are Mexican Americans, Puerto Ricans or Indians, for whom English is not their first language. Individuals who come from homes where English is not spoken or who have not used standard English need special instruction in English taught as a second language. The quality of the instruction they actually receive in rural schools is often well below the average quality of instruction for English-speaking children in the country as a whole.

Rural school systems need further consolidation to eliminate dual school systems and to provide for more modern educational equipment and courses. Particularly in rural areas where average educational attainment is low, schools should serve adults as well as children, keeping in mind that they are adults and thus need instructional materials which will be of interest to adults. Professional educators easily forget that adults who have not had an opportunity for formal schooling are not necessarily stupid and have learned a great deal informally. In rural areas the school often serves as one of the few available institutions capable of serving as a center for community development and should be utilized in this way wherever possible.

Basic education and literacy programs sponsored and funded under Title IIIB of the Economic Opportunity Act have been of real value. Stipends for students are

essential. Massive additional funds for this program are needed.

Where cultural values differ from those of the majority, as among American Indians or Mexican Americans, these values should be respected. Education will fail as an antidote to poverty if it is based on the assumption that current material middle class values are the only ones appropriate to American citizens. Too much of the curriculum in the public schools today is culturally weighted in favor of those who are "in the mainstream."

V. Accessible services, including aggressive employment services, welfare offices, medical, cultural and recreational opportunities, credit and legal aid, are an urgent need in rural areas.

Imaginative programs of the War on Poverty have begun to make some improvements. The recent effort of the Department of Agriculture to provide for regional approaches to the attainment of such services should be implemented on an expanded scale.

A. Some random illustrations drawn from our experience can be duplicated from every rural area we know.

1) There is not one full-time employment office in the rural Black Belt counties of Alabama. You must go to Montgomery or Selma if you have the means of transportation and the cost thereof.

2) One Farmers Home Administration County Supervisor is responsible for Montgomery and Lowndes Counties, Alabama. He spends one half day a week in the Lowndes County seat; the balance in Montgomery County. This imbalance is not unusual.

3) A family in a Mississippi county needing advice and help from the

Farmers Home Administration must travel 15 miles (they have no phone) to discuss their needs and among the reasons given for refusing them a loan was the amount they owed on their car--their means of transportation to available services, food stores and medical care.

4) The inaccessibility of state employment offices in the state of Washington to rural Indians and the requirements of weekly visits to the office to remain eligible for unemployment insurance, makes this program virtually useless to many Indians. Also, because these offices are not accessible many Indians do not report. Therefore they are not counted statistically as unemployed. Thus federal programs, based on statistical rates of unemployment, are not made available to the area...not because the area does not qualify in terms of real unemployment, but because of erroneous statistics.

5) Florida is no better. A staff member writes: "The welfare office in Belle Glade is in a new building, three or four miles outside of Belle Glade, isolated from any population area. No one lives there, let alone any poor. Anyone without transportation must walk the three or four miles to even get there. The Okeechobee Labor Camp is two miles on the opposite side of Belle Glade. They give no cash assistance, only grocery orders. These are given at the decision of the individual case worker. Emergency hospital and medical care for indigents is also provided at the discretion of the department.

"There is a building at the city office in town where the social security people come once every two weeks to receive people needing help. A little over a year ago an effort was made to get the Welfare Department to put someone in that office in town once a week so that townspeople could come there on an appointed day. They refused to consider it. If

they needed help they could get to the office. A woman who had an operation and couldn't work and needed help for her family had to walk out there, got a grocery order for one week, and at the end of that week had to walk back to make a request for another week.

"Other examples are the indigent clinics operated by the Department of Welfare. In Belle Glade they are held at the hospital at noon every day, again isolated and a long walk for those who must go.

"The West Palm Beach clinic has recently been moved from the center of town which is incidentally near a poor area, out to 45th Street, north. People from Delray Beach, 20 miles south must attend the indigent clinic there. An indigent psychiatric clinic is operated in some buildings at the airport, another difficult place to get to.

"By contrast, the maternal health division of the Palm Beach County health department, with federal funds for the purpose, operates a number of excellent Maternal and Infant Welfare clinics in the midst of the areas served and they are swamped. There is a new one in Riviera Beach and one in Boynton Beach. This is good preventive health work, and the people respond because it is accessible. (Seven clinics weekly are held once a week in the different areas of need.)"

This same pattern of inaccessibility applies in Prince Edward County, Virginia and in Tulare County, California to our certain knowledge. We suspect it is a national pattern.

6) In a southern state, a young girl lost her eye because the nearest medical aid was 50 miles away and the cost so high, the family could not keep her there for treatment.

7) In Chester County, Pennsylvania an older man whose feet were amputated because of inadequate heat in his rural home must go monthly to

a central office that is open one-half day a month for his surplus food. Those who might help him are often working and unavailable.

8) From Tulare County, California, comes this report confirming the need for legal services. An agricultural laborer, currently employed pruning grapes at $1.40 an hour was arrested for drunk driving on January 14. He paid $55 for bail bond and appeared in justice court on January 25 for arraignment. A friend came to court with him to translate. This being a first offense the friend advised he needed no attorney and should plead guilty. The man did so and was fined $289 which he could not pay so he was sentenced to 50 days in the county jail. Conference with the judge and the sheriff could produce no moderation of the sentence, although it is usual to allow people to pay fines on time. The legal service association could not take the case because they are precluded from criminal matters. The public defender cannot enter the case because the judge did not assign it. The man's rights are presumed to have been protected because he was told he could have legal counsel if he wished.

Why do rural areas seem to get by-passed in terms of such services? We believe in part this is due to point No. 1 above in this testimony--the lack of active organized local leadership. If the Federal Government is serious about attacking the causes of rural poverty and migration to the cities by people ill-equipped to cope with the problems of urban life, major support should be given the development of rural community leadership and organization.

B. <u>What is needed</u>:

1) A dispersal of services and/or community service workers into

outlying areas (branch offices, community workers on a regular schedule, even visiting homes) is important.

The employment service needs to actually go to the people, especially to those who need encouragement after years of experiencing failure or rebuff. Employment services need to be more employee-oriented in getting employers to accept and work with employees who need special counseling or who may come from a different ethnic group.

Welfare services need to be more than grants, but also counseling, intensive working with the people in their home environment, not in an office. People have many family problems, but view the welfare worker as mainly a source of money.

Medical services needed include more home care.

Legal aid is universally needed. Legal aid programs should be strengthened by provision for licensing of legal aides who would not need to be admitted to the bar or have a college degree, but who would be required to have some legal training and mastery of certain knowledge.

In this connection, our experience with teacher aides, nurses' aides, health aides, and community aides has indicated that indigenous workers are often far more knowledgeable and wise in these areas of human relations than outsiders, and that the local people can be taught the necessary skills to operate effectively. These "sub-professional" jobs can provide a way for the poor to get into service jobs which are meaningful, which make a contribution to our society and provide a way out of poverty into leadership. Such "sub-professional" workers should have opportunity for further study and in-service training, so that they can

move on to even more responsible roles. We urge government at all levels and professional associations to review laws and regulations which might be changed to provide easier entry into the professions of poor people with the special social skills needed so much by our society at present.

2) Review or Appeal Boards, including the poor in their membership, should be established where poor people could have some recourse or means of appeal. Many local offices providing services are under the control of those with a stake in the status quo who sit in judgment on those applying for aid, a process so degrading as to destroy easily a person's belief in himself.

3) Mobile health, employment and welfare units on a regular weekly schedule are needed.

4) The urban orientation of most service agencies must be recognized and a conscious educational effort made to recognize and appreciate the needs and problems of unorganized, dispersed rural people.

5) Our Los Angeles staff suggest that there should be established in rural areas from which major migration to urban centers is known to occur, mobile referral centers to provide information and orientation to urban life to would-be migrants.

6) The experimental Tuskegee Institute Community Education Program (TICEP) at Tuskegee, Alabama should be studied and adapted for use elsewhere.

VI. Expanded, nationally uniform and equal coverage under social welfare laws would do much to break the back of rural poverty and stem the tide of migration to communities, jobs and states where benefits are more equitable and secure.

A. All forms of employment should be covered by social security and benefits should be increased to provide its beneficiaries with an income above the minimum poverty level. Farm workers today, whether tenant, migratory or settled, get no pensions, work at wages insufficient for daily needs, let alone savings. Yet present laws for coverage and the nature of their administration mean that this major rural poverty group are in large measure excluded from full benefits of social security.

The President's request for increased social security benefits and for the use of supplementary Federal funds provides an immediate opportunity for a strong effort to improve the coverage and administration of this vital tool for alleviating poverty without having the degrading means test attached. For rural people social security is most needed and least available. The farm worker is the most systematically cheated out of this benefit.

Some farmers in Florida, for example, collaborate with crew leaders to switch crews before the minimum number of days worked for one employer is accumulated by the workers. Other farm workers and crew leaders deduct the payments and pocket the deductions without even bothering to get the social security number of the worker.

From our Chester County, Pennsylvania program we can document the case of a mushroom grower who up to 1964 never withheld social security from his workers and offered the worker who protested a small pay increase as a substitute. Through the efforts of a local citizens committee, this grower now

covers all his workers. But alert citizen groups are not always at hand to protect the rights of all citizens.

In southern Florida we have ample evidence of evasion of even the limited social security coverage required. Men and women who had worked as much as 30 years in the migrant stream had either no recorded payments or figures below $10.00 for 15 years of work.

Specifically, we recommend:

1) The social security eligibility requirement that farm laborers work a specified number of days (20) for one employer or earn $150 from him be eliminated. Farmers who deduct social security payments from workers' salaries are penalized as was a Farm Workers Co-op in California initiated by the AFSC. The take home pay was less. In an area where pennies are of vital importance, workers selected jobs on the basis of immediate return.

2) Coverage of all workers, including sharecroppers, day hands, by this insurance if the employer has even one worker meeting a minimum requirement of hours worked.

3) The ultimate employer, i.e. in farm work the farmer or grower, not the labor contractor shall be responsible for deductions, record keeping, reporting, and employer payments. Many crew leaders are incapable of keeping the necessary records, they pay cash per basket from their pockets at the end of a row, and they have no permanent base where enforcement officers can find them.

4) More stringent enforcement of the law. Greater zeal is needed on the part of social security officials; for example, field inspections,

surprise visits to farming areas to check up on crew leaders and farmers to see that the law is being obeyed.

B. Coverage of farm workers under unemployment insurance should be mandatory. In a small two county area in Mississippi, all working members of fifteen (15) families lost their jobs after registering their children in the school of their choice--the previously all white school system. No other jobs could be found in spite of great effort. Two of the families with four and six children respectively were entitled to but not receiving ADC. They were near starvation when our staff discovered them. Only small weekly grants from a private fund kept these families alive and in the community where they were leaders. This story is typical of the tenant and sharecropper families of the South who are now being replaced by mechanical cotton pickers, etc. as well as excluded from jobs for racial reasons.

Construction workers in the North work seven or eight months of the year at good wages. During cold winter months when construction ceases they are eligible for unemployment insurance and do not have to exhaust their savings resulting from high employment and high wages. Nor do they have to become migrants in search of work.

Farm workers in Florida work seven or eight months at wages that allow them to live at a bare subsistence level. When summer comes and agricultural work ceases, they must get into a rickety bus, travel from state to state all summer in order to keep alive. One staff member writes: "If there is any group that needs unemployment insurance more than the farm worker, I am at a loss to know who it is." Unemployment insurance would enable the farm worker to remain in Florida for the four or five summer months, would aid him in establishing a permanent home and in the long run provide a far more

stable work force for the Florida farmer.

Our own Farm Labor Co-op experience is relevant. California has an optional unemployment insurance law. It is up to the employer. This Co-op, as employer, opted for insurance but the pay deductions required put the Co-op at such a competitive disadvantage with employers who did not carry unemployment insurance that the protection was dropped. The marginal existence of workers and the hourly pay concept makes voluntary reduction of wages for long term benefit very difficult.

C. Inclusion of farm workers of all kinds under the National Labor Relations Act should be a top priority. In a competitive society to deny the rights of collective bargaining to selected groups is an anomaly that society should no longer tolerate.

The anomaly of this situation is illustrated in Chester County, Pennsylvania where mushroom growing and cultivating is considered farm work and therefore not covered by NLRA, and compost making (an integral part of the mushroom industry) is classified as industrial work and therefore covered by NLRA. Many growers are engaged in both operations. J.B. had worked for one man for several years on the compost operation. He never received overtime pay. He finally complained to the NLRB and was told he was owed over $4,000 in overtime. He tried to collect. His employer said, "Take me to court," then fired him and evicted him from his house.

Most workers put in 60-70 hours a week to support their families. This grower now uses men for 40 hours in compost and then shifts them to the farm operation to avoid overtime. The right of collective bargaining would protect these workers. As individuals they are powerless. Other farm workers are even more helpless in securing their rights.

The argument of employers against coverage on the basis of the perishable nature of crops and harvest time needs seems questionable. As someone noted recently in testimony, there is nothing more perishable than an airline seat. Furthermore, unions in California have hundreds of collective bargaining contracts with canneries and other processors who can be struck at harvest time. Contracts which expire well in advance of harvest time leave ample time for contract negotiation.

D. We recommend that the whole public assistance policy be thoroughly reviewed and re-examined in the light of the goals of the President's War on Poverty; that federal contributions be increased and minimum national standards of eligibility, payment and administration be established pending the enactment of some form of income guarantee. Public assistance payments in many southern states bear no relation to needs and the nature of the ADC administration too often promotes the breakdown of families. In addition, the administration is often discriminatory; red tape and arbitrary decisions impose great hardships on already destitute families. Welfare offices are inaccessible to families with no public or private transportation.

We can document many and varied instances of the inequity and immorality of the present system. We will illustrate from only a few. We commend the Southern Regional Council's recent publication: "Public Assistance in the South" to the Commission for study.

The size of payments should meet minimum standards of need and at least be based on raising the family out of poverty. The situation of one family receiving ADC is a case in point. With six children and no other source of livelihood except an occasional day of cotton chopping at $3.00 per day this family received $31-35 per month. Simple multiplication shows that

even with 30 days work a year, the mother's maximum, her total income would be $510 per year.

Another family writes: "How do you buy food stamps when you don't have any money coming in?"

The red tape, the arbitrary nature of decisions are dramatically illustrated in the story of L.S. Mrs. S. is the legal guardian of five nieces and nephews. She is illiterate. For over a year since losing her job and being evicted, she has gone repeatedly the 15 or more miles to the welfare office for assistance, each time being told she needs additional documents to prove she is related to these children. First it was the children's birth certificates; then their parents' birth certificates and the father has vanished, then the grandparents' certificates, then incorrectly filled out forms. Only assistance from private funds and friends keeps her alive.

Another family was denied commodities because they had $500 in the bank (a loan from a friend to buy land on which to farm).

Payments and benefits should be on the basis of need; not tied to the whim or pleasure of an individual. For example, in some southern states a white man's signature is needed before commodities are made available. Often this signature is secured at the price of working, without pay, for the signer for an indeterminate period.

In Pennsylvania families too old or incapacitated to work drop out of the migrant farm labor stream. One year residence requirements denies them public assistance. Only an active citizens group, providing "charity" enables them to survive this period of ineligibility.

From California our staff reports the problems faced by Spanish-speaking

families, which form a high percentage of the recipient group in some areas, because many welfare personnel have limited ability to communicate with them.

These are but a few instances of the public assistance problem of rural people where no case worker comes to them, and payments are token.

E. Although some farm workers are now partially benefiting from inclusion in the minimum wage law (Fair Labor Standards Act as amended 1966) this is just a beginning. The total working force should be included and minimums should not vary according to occupation, though a period of upgrading for newly covered workers may be necessary.

Farm workers, who are covered, will be guaranteed a minimum of $1.00 an hour in 1967. The President has determined that any family of four earning less than $3,160 is in poverty. At $1.00 per hour a man would need to work 60.7 hours for 52 weeks to achieve the poverty ceiling. But farm work is seasonal and increasingly fewer men find full time work in agriculture. Statistics show that the average number of days worked by farm laborers across the country in 1965 was around 120. These families would have to work not 24 but 26 hour days to rise above the poverty level!

In the Mississippi Delta men and women go out to chop or pick cotton when there is work. Some whom we know found work three to four days a week for only seven weeks during 1966. They worked 13 hours and earned $3.00 to $3.50 a day. Obviously even a minimum of $2.00 per hour would not be enough.

There are three alternatives: (1) pay the worker a minimum of $2.00 an hour and guarantee him 200 eight-hour days of work; (2) pay the worker unemployment insurance; (3) devise a form of negative income tax or guarantee of income. Most workers we know prefer number (1).

VII. The experience of Indian tribes on reservations has both positive and negative lessons to teach concerning rural poverty. We have drawn examples from our experience with American Indians throughout this testimony. The special legal status of Indian tribes calls for separate attention here. We urge the Commission to heed such experience as tribes themselves and intertribal organizations may have to share, since they will be giving detailed testimony of particular importance.

The inalienable, trust status of Indian land and property and the unique historical status of Indian tribes as "dependent domestic nations" retaining a degree of residual sovereignty has been a major stumbling block in developing good relationships between Indians and non-Indians and has been a major factor behind the conditions of abject material poverty which exist on most Indian reservations today. On many reservations the Indian groups have retained a spiritual richness, self-confidence and pride in their identity which has compensated in large measure for the physical poverty in which they have had to live. On other reservations the paternalistic administration of services and the debilitating lack of authority for Indians to make decisions concerning their own property and community have drained the Indian community of its original self-confidence and independence, creating spiritual as well as material poverty.

There has been a constant temptation in Indian affairs to cut the Gordian knot of regulations and red tape which have demonstrably crippled Indian initiative and prevented Indian tribes from developing viable economies. We should bear in mind that so far each cure-all "solution of the Indian problem" which has been tried--the removal policy of the 1830's, the attack on tribalism by allotting land to individual Indians in the 1880's, and the termination policy of the 1950's--have resulted in loss of Indian land; in greater red tape and bookkeeping by the Bureau of Indian Affairs, increasing the cost to the government rather than

decreasing it; and in increased dependency of Indians on non-Indians. The policy of looking for the magic key which will force Indians to assimilate into non-Indian society and lose their separate cultural identity has not worked: neither the goals of the non-Indian majority (to solve the "Indian problem" and relieve the federal government of its special obligation to its Indian citizens) nor the goals of the Indian people (generally to live happy, fulfilled lives as they define happiness and fulfillment) have been achieved.

The experience of reservation Indians has been instructive in positive ways as well as negative. Reservation Indians constitute one of the few rural groups which have maintained a land base and which have retained societies based on utilization of their corporate land base. They have been inhibited unnecessarily in their use of their land base and in the exercise of local initiative within their reservation communities, since the Bureau of Indian Affairs has held the veto power over many major areas of community life, including the use of capital resources. Reservation self-government has been very limited, and tribal leadership is still in the process of trying to establish viable democratic forms of government over twenty years after the enactment of the Indian Reorganization Act, which made formal provision for limited local self-government.

What can be done in the local community dependent on the reservation land base when decisions are in the hands of local Indian citizens has been demonstrated by the accomplishments in a few short months of community action programs on Indian reservations. It is generally acknowledged that the most successful community action programs in the nation have been on Indian reservations, and Sargent Shriver has pointed out that local self-help and cooperation are among the basic values of most Indian groups, in spite of the fact that they have had little opportunity to exercise these values since the establishment of the reservation system.

In view of this experience the Bureau of Indian Affairs is to be highly commended for its new policy of delegating as much authority as possible to Indian Tribal Councils, of contracting with Tribal Councils whenever possible to provide community services rather than providing services directly as it has done traditionally, and of emphasizing community development and greatly enhanced educational opportunities. If reservation communities are allowed to exercise true self-determination and to plan and implement the programs they feel they need, while their independent land base is protected against further encroachment, great strides should be possible in overcoming the poverty which has been endemic on most Indian reservations for years. We hope the Bureau of Indian Affairs will be given sufficient appropriations by Congress to implement the reforms they are now planning.

Conclusion

In summary we would say that single uncoordinated pop shots at the problem of rural poverty may salve consciences but they leave the basic issues untouched.

The full integration of rural people into the economic life of this nation as equals with their urban and industrial counterparts in terms of rights and benefits is essential. Rural citizens should have the same opportunities and services as urban and industrial citizens. They should not be denied the resources and the freedom to live and work, how and where they will. Only then will forced migration be ended and the quality of both urban and rural areas raised.

In attacking poverty, there is still the underlying belief on the part of far too many people that people are poor because of their own inadequacies. So we design programs to remove these inadequacies. Our experience indicates that if we are to

have a great or good society we must so restructure our society and its institutions as to meet the needs and aspirations of people rather than continue to try and change people to fit the needs and capabilities of the institutions we have created.

# # # # # # # #

February 1967

WE PROPOSE THE ESTABLISHMENT OF A NEIGHBORHOOD CENTER
AT SECOND AND GARRETT STREETS S. E.
CHARLOTTESVILLE, VIRGINIA

The area to be served is the most wretched and dilapidated neighborhood in all Charlottesville and Albemarle County. It extends generally from Seventh Street S. W. on the West to Avon Street on the East and from the C&O tracks on the North to Raymond Road on the South (see attached map). Presently, a major part of the area is scheduled to be completely demolished by the Charlottesville-Albemarle Redevelopment and Housing Authority as part of the local urban renewal program. Renewal of the area has been stymied by the necessity of obtaining local approval, by referendum, for the site considered. At best, three or four years will elapse before a single resident of the Garett Street area is relocated.

In the midst of the controversy, the social and economic problems present in the area continue to exist and increase. According to a current survey of the area, conducted by the Charlottesville-Albemarle Community Action Organization (CACAO), sixty-two per cent of the 610 families living there are "poor" in terms of annual income specified in the OEO program. A portion of the other families are barely above the poverty line. Approximately 89% of the residents are Negroes. The Garrett Street Neighborhood Center will provide a base of operation for attacking the need, helplessness and hopelessness of the area to be served.

CACAO has organized a Garrett Street Neighborhood Association (GSNA). The first meeting was held on August 9, with 59 persons from the area attending. Mr. Marshall Allen was elected President of GSNA. His selection was mot fortunate because he is a natural community leader whom the people know, trust and follow. Discussions at this meeting repeatedly expressed the desire of the residents for some type of community center with a program for taking care of young children if at all possible. The component project described in this application is a direct outgrowth of these felt and expressed needs.

The Garrett Street Neighborhood Center will be developed on a "building block" basis, beginning with three essential activities. It has been deemed more important to undertake a few activities at first rather than to dissipate the energies of the CACAO, the Neighborhood Association and the Center's staff by attempting too many projects at once.

A prime activity of the Center will be its utilization as a <u>headquarters for the community</u>. The neighborhood association will hold its meeting there. Because the Center will be located within the neighborhood, residents will have easy access to it. Hopefully, the existence of the Center will be the impetus for its use for any meeting held in the area; that is, other community agencies may be induced to become active in the area with the Center as their point of contact with the residents. The welfare and health departments, childrens' service center, planned parenthood association, etc. will have the opportunity to offer extended coverage and more effective application of their programs relative to the residents of the area. Properly utilized, the Center can become the focal point of activity in the area.

The Center will function as a referral agency. Neighborhood aides will help pin-point the particular problems of families and individuals and direct them to existing programs and agencies in the Charlottesville area. At present, many residents are not availing themselves of services because they simply do not know where to go, who to see or what must be done to qualify for help. Further, they are alienated by the very programs which the general community has established for them. The maze of official papers and procedures confounds and scares them, resulting in underutilization of available help.

In most instances, it will be necessary to accompany residents to the various agencies to help residents present their situation and to explain requirements to be met by them. The Neighborhood Aide will in effect, be a liaison between the individual and the service agency.

That a referral service is needed and desired is substantiated by the daily phone calls and visits made to the office of the CACAO. It is located within walking distance of Garrett Street and residents have repeatedly come for information and assistance. Problems have ranged from the necessity of a child to have shoes in order to attend school to the need to place a mentally retarded teenager in a training institution. Although the CACAO staff has, when possible, directed such persons to applicable agencies it is obvious that the staff cannot do so on any appreciable scale.

In order to make the referral service operable, it is necessary to make personal contact with the residents and assess the needs. One form of such contact is the neighborhood association. But more complete contact is derived from an in-depth, house to house survey of the area. Such a survey has been conducted by CACAO. Volunteers attempted to visit each of the 323 families in the area. Interviews were held with more than half of the families and a re-canvass of the area will undoubtedly include even more. Sometimes the families were not home. In other instances, they were reluctant to answer questions but the word has spread that the surveys have the blessing of the neighborhood association. Now families are requesting to be interviewed -- a big step forward! The referral service will use the information from the surveys as their initial point of departure but will continue to use volunteers and community aides to uncover the needs of the residents. Procedures will be established to follow up the referral and continue assistance if needed.

The surveys have highlighted the need for a child development program, as first brought up in the neighborhood association meetings. The program will be conducted in the Center, five days a week for nine hours each day. Supervised activities and a nourishing lunch will be provided. It is anticipated that thirty children will participate. All children will be given a physical examination by a licensed physician to determine individual medical problems. Children with problems will then be referred to the Charlottesville-Albemarle Public Health Department.

The particular activities in which the children will engage, will be designed to stimulate their interest in learning and encourage the development of healthy, constructive concepts about themselves and their environment. Although the basic aim of the child development program will be to enlarge the scope of the children's experience, a secondary function will occur. Many mothers will be relieved of the necessity to provide care for

their children and will be able to secure employment.

In sum, the basic program of the Center will be composed of a referral service and a child development program, with use of the Center as a neighborhood headquarters. As these aspects of the program become operational, additional components will be added. Some possibilities under consideration are as follows:

A health station for health examinations and referral services. The goal here is to reduce the neighborhood's infant mortality rate and TB rate to acceptable proportions.

Improving home management skills through Saturday, cooking, serving and home care classes for mothers.

Legal aid for low income residents with installment plan problems and the like through periodic visits by a legal aid representative. (The Charlottesville-Albemarle Bar Association is now developing a legal aid service for the poor.)

A boy's club, girl scout troop or the like to give deprived boys and girls something interesting and constructive to keep them off the streets, to combat juvenile delinquency, to raise the level of their outlooks.

Classes to reach adult men and women to perform effectively at the sixth grade level in reading, arithmetic and use of English. This will enable such adults to pass tests like the General Aptitude Battery of the Virginia Employment Commission and thus open new job horizons for them.

Help for teen-agers who have dropped out of school to get back to the point where they can re-enter high school and finish their education.

Study tables where students from over-crowded or unheated homes can come in the evenings to do their homework.

Job training aimed at developing skills needed for job currently available (such as nurses' aides) and the communication skills required to get and hold jobs.

Improving the living conditions of the elderly through a foster grandparent's plan, a Golden Age Club or the like.

A savings club or credit union to help poor families get a little ahead.

A halfway house to keep a caring eye on people just back from the City Jail, Western State Hospital and similar institutions.

Summer enrichment modelled on the Trinity Project, for the neighborhood's school children.

Family counseling where a social worker or minister might advise troubled parents.

A family life program to provide parents, adolescents and newly married couples with some formal education in such matters as inter-personal relations, sex education, mental hygiene and home management.

A voluntary assistance program to enable families or church groups to sponsor some needy child or needy family and to contribute personally to the salvaging of that needy child or needy family.

The Center will be located in the west end of a building owned by Mr. Harvey Williams, at Second & Garrett Street S. E. This building was formerly used as a warehouse and office, and contains about 8,000 square feet which is considered too large for our use as a Neighborhood Center. However, Mr. Williams is willing to rent the CACAO only that part of the building which is required. The proposed arrangement is to partition off 2,920 square feet at the west end of the building. The space is heated, has electric lights and many wall apertures for windows to provide natural light, a good finished floor and two separate washrooms including toilet facilities. It will be necessary to install a small kitchen. Furniture, equipment, supplies and services which must be provided for the operation of the Center are itemized on CAP Form 23.

The Garrett Street Neighborhood Center will be supervised by a Center Director who will be directly responsible to the Community Action Organization's Board through the Organization's Executive Director. The Garrett Street Neighborhood Association will act as an Advisory Council in connection with the affairs of the proposed Center. The advice and recommendations of the Association will be given major weight by the Community Action Organization's Board in planning the activities of the Center. In this way, the community being served will have a continued voice in what their Center does and how it does it.

The initial staff of the Center will consist of the following:

The Center Director will be responsible for the supervision of all activities which are part of the program. He (she) will be instrumental in establishing the procedures for the referral service, and will act as the referral agent. All personnel at the Center will be responsible to him. It is anticipated that he may also work in the child development program in the initial phase.

Two Neighborhood Aides will assist the Director and be responsible for maintaining contact between the Center and the homes in the Garrett Street Neighborhood. The neighborhood aides will be recruited from the community to be served. After a training period, she will be concerned with much of the follow-up work of the referral service.

A Head Teacher will be responsible for the operation of the child development program and will be doing most of the teaching. She will undoubtedly be someone with a background in the teaching profession, particularly on the elementary level.

Eleven Pre-School Teachers Aides will assist the Head Teacher and enable more individual attention to be given to the children participating. One of these aides will be recruited from the neighborhood, and will be employed full time. The other aide(s) will be from the general community. Many women with a background in teaching have already offered their services to the proposed Center.

A School Child Teacher's Aide will be recruited for part-time work from the neighborhood. She will take care and supervise many children who may drop into the Center after school hours.

In addition, a janitor, cook and secretary-bookkeeper will be employed, the first two from the neighborhood. The secretary-bookkeeper, who will be CACAO's present secretary-bookkeeper, will devote an estimated 25 percent of her time to the Neighborhood Center's needs.

It is hoped that funding of this component program from OEO will be received by March 1, 1967. It will take approximately one-week to complete the necessary additions to the building to enable the Center to operate. At the present time, the Charlottesville-Albemarle Community Action Organization is recruiting the professional personnel for the Center. Volunteers are being organized and the Community Aide in the Organization's office is working with Mr. Marshall Allen, President of the Garrett Street Neighborhood Association to find the personnel to fill the paid positions to be filled from the neighborhood. The basic organization for the Center is set and it is anticipated that the Center will open on March 7, 1967.

The above sections of this WORK PROGRAM have indicated the involvement of the community in the initial planning of this Center. The Administration of the Center incorporates the active participation of the Neighborhood Association in supervising and planning future aspects of the program.

It is difficult at this time to indicate the exact nature of the evaluation of this Center. Suffice to say, that the success of the Center will be indicated by the extent to which it becomes involved in the daily life of the Garrett Street Neighborhood.

The Center's staff and the Neighborhood Association will meet every four months for the express purpose of evaluating the program and determining specific methods to enlarge the proportion of residents involved in the Center's activities. These discussions will be supplemented by the more frequent meetings of the GSNA's Advisory Council and the CACAO's Board.

Mr. Jay W. Worrall, Director
Charlottesville-Albemarle Community
Action Organization, Inc.

Charlottesville, Virginia 22901

Habitat: Flawed but Exciting Prefab Housing

Landmark at Expo Breaks All Rules of Construction

By ADA LOUISE HUXTABLE
Special to The New York Times

MONTREAL, April 29—One of the first things a visitor may see at Habitat, the dramatic housing demonstration that is the permanent symbol and landmark of Expo 67, is a mailman walking along the street. But there is a difference from the ordinary street.

The street is a skystreet and it is 10 stories in the air. That is just one small sign of the fact that everything is different about the handsome and controversial architectural experiment sponsored and paid for by the Canadian Government and built by a 28-year-old Israeli architect, Moshe Safdie.

It took a lot of negotiation with the city to get that mailman up in the air instead of on the ground. Negotiation is going on to have the utility streets under the skystreets—also up the air—treated as municipal utilities, as they are in ordinary underground installations of suburban developments.

Every Rule Is Broken

Just about every housing and building rule, precedent, practice, custom and convention is broken by Habitat. This includes design, engineering, construction, trade union operation and the way people live. There have been two results. One was snowballing costs and technical problems. The other is a significant and stunning exercise in experimental housing that is also the most important construction at Expo, where architectural excellence abounds.

What Habitat is, to the eye, is a Mediterranean cluster of pyramided and jutting boxes that form one-story and two-story houses so that the roof of one box makes the garden terrace of another. As the Montreal weather warms (they say there are two seasons—winter and July), the irregular, geometric mass will be softened by planting on all roof levels, centrally irrigated, and by masses of flowering shrubs on the ground.

But Habitat is much more than meets the eye. Each of these boxes is a prefabricated 80-ton, five-sided concrete unit—the roof is cast separately—manufactured and assembled on the site. Some elements, such as Fiberglas bathrooms, are factory-made and assembled in the boxes before they are hoisted into place.

Industrial Processes Used

The design is based on the idea that, in an age of perfected industrial techniques and critical housing shortages, there should be a housing product based on industrial, rather than handcraft processes.

What merely looks picturesque here is actually the variety that can stem from the combinations possible with a prefabricated, industrialized system. The importance of the concept for housing design and production cannot be overstated.

At Habitat, the staggered elements insure maximum privacy. Instead of a filing-case slab of apartments, each dwelling is a one-story or two-story house of two or more boxes, with three to four exposures. Each has its outdoor area.

Three cores are stacked around three elevated towers to a height of 12 floors. Plastic-covered pedestrian streets are on the 6th and 10th floor levels.

The New York Times (by Edward Hausner)

Habitat was designed and built by Moshe Safdie of Israel for the Canadian Government

In addition to aerial streets, there are aerial playgrounds.

For $700 a month for the duration of Expo, with rents reduced after that, 158 tenants (many are concerns rather than families, since units have been rented as corporate hospitality suites during the fair) can enjoy striking, water-surrounded views of Expo and Montreal, in one of the most attractive living experiences of our time. The structural system creates interior spaces of unusual amenity.

$11.5-Million Budgeted

Habitaet, should, of course, be standardized and inexpensive. That is the whole idea. The design is meant for assembly-line production on a large scale, with all of the skill, efficiency and economy that this implies.

As it stands, Habitat is one-sixth of its originally projected size and enormously expensive. It was planned as a $42-million project of 1,000 units. The budget was subsequently cut to $11.5-million.

It took $5-million just to develop the manufacturing plant and machinery.

With the balance, only 158 units could be built. What was meant to be mass produced is virtually an handcrafted sample, and costs have soared to more than I100,000 a unit.

Once the Federal and provincial governments gave the go-ahead and the site production was set up, Expos and Mr. Safdie's firm and the contractors put up Habitat in 10 months and 21 days from the first box to the last.

Working on Expo's schedule on a project that should have had at least two years of preliminary analysis and experiment, the job was done without proven production methods, without test drawing and without previously developed techniques. The on-site prefabrication was purely trial-and-error, as was the whole construction process.

Result Is an Experiment

A crane bought early on the basis of an assumed unit weight proved inadequate for the final size of the boxes and they had to be cast with separate ceilings. A preassembly process that should have been established with computerized precision was unrealizable because of snags in tight schedules. Full assembly on the ground became impossible.

"Fifty per cent of this could have been foreseen with enough time," says Mr. Safdie. "Fifty per cent could not have been foreseen even if Leonardo da Vinci were doing it."

The result is an experiment, not a final demonstration. The costs and errors are those of a prototype model. It is pointless to apply market values or conventional price tags.

The pertinent questions are what has been learned and what has been achieved. Habitat is striking architecture, but it is just as important that the prefabricated bathrooms, which cost $1,400 a unit to develop, are already being placed on the market by the manufacturer for $700.

Whatever happens, Habitat will go down in history as a flawed, but extremely important, 20th-century exercise in housing design. Montreal has an international landmark and eventually 158 urban families will live just a little bit better than some of the rest of us. Both the puzzle and the promise of the future is in this housing.

CROWDS SURPASS EXPO PREDICTION

Visitors in First Day Almost 3 Times Anticipated Total

By JAY WALZ
Special to The New York Times

MONTREAL, April 29 — The size of the crowds today indicated that attendance for Expo 67's firs weekend would soar over the one million mark, far above of oriignal estimates.

Civic pride and fine spring weather swelled the attendance today and yesterday, when Expo was opened to the public. The tally at the closing hour yesterday was $10,000, nearly three times the figure officially predicted.

Today, officials predicted an attendance of 40,000, or more than 700,000 for the first two days. By comparison, the New York World's Fair in April, 1964, drew only 92,646 visitors the first day, Wednesday, and 163,152 the second day.

"If the weather holds, we'll easily have our first one million visitors by mid-Sunday," said a public relations officer.

Prediction Is Revised

Earlier surveys had led officials to predict an attendance of 30 million over the six months of Expo's run. This estimate is now being revised to 35 million, or 40 million, with nearly 60 per cent of the visitors coming from The United States.

Meanwhile, the daily management of all fair business, including operations in the computerized control center were taken over by a 39-year-old French Canadian, Philippe de Gaspé Beauvien, now called the "mayor" of Expo. He accepted the "keys" to Expo yesterday from Col. Edward Churchill, the Canadian Army engineer who, as director of construction, had Expo ready to open on time.

Mr. Beaubien's concern, however, was with problems rather than accomplishments, with the little details that, as he puts it, "keep visitors happy." He worries about overcrowded pavilions, stalling "minirails," and lost children.

To see that all goes smoothly, Mr. Beaubien moved from the administration office he has occupied for four years as director of operations to a "war room" in the control headquarters in the middle of the fair grounds. Here, he is surrounded by all forms of electronic communications instruments, including walkie-talkie systems and closed-circuit television. There is a "panic button," which Mr. Beaubien hopes not to need. In case of emergency it would summon ambulances or police squads from Montreal.

"We know instantly if anything goes wrong in a pavilion, a restaurant, a shop or on one of the rides," he said. "Not only that—we have the means t

Demonstration Housing Unfettered by Tradition

Interior of Habitat Is Pleasing, Practical and Individual—Kitchens Are Restrained

By ENID NEMY
Special to The New York Times

MONTREAL, April 29 — The interior design of Habitat is as unfettered by tradition as that of its exterior. It has taken a position, and the result is apartments—the architect calls them houses—that are at once pleasing to the eye, practical and surprisingly individual.

The decorating is successful when there is no compromise between the old and the new, between excellence and mediocrity. The interiors are meant for modern, well-designed furniture and accessories. They do not tolerate the second-rate in current design, and they would lose their meaning filled with antiques.

The windows, clear sheets of glass almost flush with the walls, do not suffer valances, swags or draperies; the floors will not allow wall-to-wall broadloom. The walls are happier with Roy Lichtenstein or posters than they would be with Rembrandt.

The demands of this new concept in urban living have been more than adequately met in the apartments decorated by individual Canadian design and furniture concerns. They have unhappily, been less well served in the units decorated by a national women's magazine, Chatelaine.

Contrast Is Fortunate

For the visitor, however, the contrast is perhaps fortunate. It allows a comparison of the results that can be achieved with a far-reaching imagination and the banality that must emerge from stereotyped thinking.

The duplex apartments are particularly noteworthy. They consist of three connecting boxes, but the one-box units—living room, bedroom, kitchen and bath—contain many of the same features.

One of the most interesting details in the duplex units is the stairway that leads down from the entrance level. It changes direction at the halfway point and serves as a handsome, sculptural room divider for the living and dining area. It is an illustration of an essential part of the building plan that could have been used for its decorative value alone.

It points up, too, the singularly dreary aspect of most apartments now being built in New York and elsewhere: the living room that leads into a dining area and then into an L-shaped kitchen, all completely open.

In Habitat, the living and dining area does indeed lead to a kitchen. Here, the separation is achieved with a pass-through wall section with open doors at either end. The pass-through, sufficiently deep to use as a work area or a breakfast table, can be closed off with a good-looking sliding panel that could, for example, hide dirty dishes stacked after a meal.

Kitchens Are Restrained

It is in this area, as well, that another well-thought-out detail is evident. A translucent rectangle of glass above the pass-through affords light to both the kitchen and dining areas. There are concealed strips in the ceiling with adjustable beams that focus light in any part of the room. In many rooms there are electric outlets every six feet along the wall.

The kitchens in Habitat are a model of restraint and sophistication. Largely preassembled, as are the seamless Fiberglas bathrooms, they have Formica counters and laminated Formica refrigerator and stove doors in such color combinations as mustard and persimmon or blue and taupe.

There is a clean, uncluttered line with no visible hardware on the cupboards or the appliances. Stove hoods are built in and can be drawn forward when in use. The refrigerator-freezers introduce a major convenience: A button with a built-in air power unit that "floats" the appliance away from the wall for easy cleaning in the back and underneath.

Stained wood cupboards line the narrow passageway on both levels of many units and one wall of the master bedroom in some units. Although placed in corridors that would not normally be consideed wide enough for such purposes, they do not intrude physically or esthetically.

In some units the passageway ends with a stacked washer and dryer. In other units they are in a utility room or bathroom. The washer-dryer, too, "floats" out for easy loading. In most cases, the linen closet stands next to it.

Plans Allow Privacy

The floor plan of the many of the larger units allows for perhaps the most desirable of all features — privacy. The master bedroom is often on a different level from the living room and the children's area. The terraces that surround each apartment also afford a feeling of privacy and space.

The best furniture shown in the units carries through the feeling of the Habitat "box" design. Two Toronto-based design concerns have been particularly successful. One used white oak and the other used a linear polyethylene plastic that previously had had only industrial applications.

Alison Hymas, a 35-year-old designer with Webb, Zerafa, Menkies, expressed her concept with a series of natural form chairs that resemble carved cubes or organic sculptures. Everything from the low, wood-based beds to the simple coffee table is oak.

A team of 20 industrial designers from Dudas Kuypers Rowan, Limited, developed the molded plastic furniture used in another unit. In keeping with the designer's belief that "furniture should be a background for living and not the purpose for living," the pieces are box-like with rounded corners.

Habitat's triumph in interior design is in its feeling of privacy, spaciousness and identity. Its triumph in decorating is in the furniture that carries through the theme, the concept and the ideas that went into the structure itself. For mass housing, it illustrates that repetition need not be monotony.

Carpenters fight the prefab war

Battle rages over the installation of premachined doors at an Air Force base. If the union wins, the prefab industry may be forced into changing its operating methods

For some time, building craft unions have been setting up battle lines against prefabricated housing—the "instant housing" of entire factory-built homes or the use of mass-produced material or units designed for quicker, less expensive installation. For unions, the issue is on-site pay and jobs.

This week in southern Illinois, a test case at Scott Air Force Base continued deadlocked; union carpenters were demanding compensation for lost work time and pay on prefabricated doors, and the contractor was adamant against precedent-setting pay for work not actually to be done. It's a comparatively small dispute, but it has large implications: The whole prefabricated housing industry could be forced into some major operating adjustments if the union at the military base wins its point.

Open door. The case centers on some 300 premachined wooden doors that the Hoel Steffen Construction Co. bought last summer to install in two barracks it was building for the Corps of Engineers at Scott Air Force Base, southeast of St. Louis. The doors were purchased from a St. Louis company that employs carpenters represented by the Brotherhood of Carpenters, the union that is involved in the base dispute. They are, therefore, union-made doors. The contractor expected no trouble.

But trouble developed quickly. When the doors arrived at the site, carpenters working on the base project demanded that they be given the unloading job, and at the high craft rate of pay. Ordinarily, unloading is done at construction sites by laborers, in another union, at lower hourly wages. Carpenters, working under a no-strike clause in their contract, called in sick for 15 days. Then the company worked out a compromise to get the indisposed carpenters back on the job.

The Brotherhood of Carpenters' Local 433 has a blanket contract for carpentry work on the base project. Customarily, such a contract provides for handling specified materials and prefabricated equipment—and it specifies the circumstances under which such work will be done and the terms required for it. The Hoel Steffen contract did not mention the prefabricated doors; once unloaded, they became a second labor problem for the company.

Pay for lost work. Union carpenters said their contract called for the actual work on doors, not just the installation of doors. They protested that the prefabricated doors, although made by brother unionists, cost them work time and wages. So they demanded compensation for the lost hours.

Robert Hoel, president of the company, refused to bargain on the compensation issue. He said the demand by the union was unreasonable, and cited the blanket contract for "all carpentry work" on the Scott Air Force Base location.

Building crafts man the barricades at the battle of the barracks—for pay and jobs.

During the early stage of the quarrel, carpenters hung 254 of the 300 doors. The union meanwhile appealed to the National Labor Relations Board, contending the contractor was refusing to bargain in good faith. The NLRB upheld the Carpenters' position, saying that because the question of compensation for the prefabricated doors wasn't touched on specifically in the blanket agreement, it should be considered outside the contract and therefore subject to negotiations—with the union free to strike on the disputed issue.

Carpenters walked off the job at the base in November, and they have been off the job since. According to Bernard Mamet, attorney for the union: "This is a test case. We've accomplished our purpose in winning the right to strike whenever a situation like this arises—and now we've got to ride this out."

Test target. According to builders, Hoel Steffen is a carefully chosen target for a test of the union right to require negotiations—and potentially extra compensation—whenever materials or prefabricated equipment or building supplies not specified in a contract are used in construction.

Union carpenters are installing doors for other contractors on a number of other and larger projects in the area, receiving pay for little more than one hour a door instead of the four hours' pay they demand from Hoel Steffen. The St. Louis contractor employs fewer union craftsmen on the military base job, so the impact of the test case is much less than it would be elsewhere. But all contractors feel a precedent is being set at the Scott Air Force Base confrontation.

Robert Hoel calls the strike "unreasonable," and he says flatly, "If this goes on, and the NLRB decision holds up, trees will have to be grown on the construction site for the carpenters to use—the way it is, they are demanding that everything be done on the construction site."

Hoel says he will not give in, even

Bostitch helps pack round peg in a square hole.

Unusual package shapes are nothing new to Bostitch. Neither are packaging problems inside the container.

This manufacturer, for example, had a new vacuum cleaner system with a round shape. It had to fit his square shipping containers. And be protected.

Bostitch helped develop a rectangular corrugated shipping carton. A fitted interior arrangement of multiple-thickness wax-coated corrugated pads and angled corner pieces keeps the large appliance snugly in place.

Because the multiple thicknesses of waxed board could not be glued or taped, it took a Bostitch Model D30 pneumatic stapler to do the job. This stapler drives long-legged staples through all the sheets in each pad clinching them inside the board nearest the appliance. Because of this "blind clinch" there's no danger of scratching contents.

Bostitch makes hundreds of fasteners that handle the simplest or most complex assignments in an ever growing variety of applications. Your Bostitch man's advice is free. Just call THE MAN WITH THE FASTENING FACTS. He's in your phone book. Or, write to Bostitch, 203 Briggs Drive, East Greenwich, R.I. 02818.

Fasten it better and faster with

though he is being assessed $100 per day damages by the Corps of Engineers for failure to complete the $1,332,000 project on schedule. Hoel is suing the union for damages. Among other things, he complains that the doors were improperly cut at the factory and that the company already has paid the on-site carpenters for 1,272 hours of work to make the 254 doors already installed in the barracks fit properly.

Embarrassment. The southern Illinois dispute is proving an embarrassment for labor and management leaders in the St. Louis area, where union jurisdictional rivalries and reputed mob activity have received nationwide publicity. Concerned over the tarnished labor relations image in the area, they have been trying to shine it up by establishing effective labor-peace procedures.

Eugene E. Walla, president of a St. Louis group called LAMP (the Labor and Management Plan), has been trying to get the two sides in the Scott Air Force Base dispute together. Walla, who is president of International Brotherhood of Teamsters Local 682, also is seeking an agreement between St. Louis area contractors and craft unions that would require pre-job conferences to spell out specific policies on materials and prefabricated equipment and building supplies. Such a conference was held on the Scott Air Force Base project, but the subject of premachined, precut doors did not come up in the course of discussion.

Implications. In some major building areas, a dispute arising from such a situation might be settled through existing procedures—often by mediation and if necessary arbitration. But generally when a new material is introduced or unspecified prefabricated equipment is used, what happens depends on the union's voluntary acceptance or the contractor's willingness to make concessions to get labor-saving units installed.

The Hoel Steffen dispute is being watched nationally as an indication that craft unions might be toughening their stand. It may be that unless contracts can be written in all-embracing terms or made specific about what is to be done at what cost, the building trades will henceforth insist on compensation on a lost-work basis for handling modular units for prefabricated housing, structural steel assemblies, cabinets, or whatever.

Contractors fear they may be on the threshold of a "bogus work" labor policy—a reference to the printing industry requirement for type to be set and dumped when plates from outside the shop are used. They say they won't stand still for that. **End**

GREATER BALTIMORE CONFERENCE ON EQUAL OPPORTUNITY IN HOUSING

STATE OF MARYLAND / CITY OF BALTIMORE / NOVEMBER 24, 1964 / SHERATON-BELVEDERE HOTEL / BALTIMORE, MARYLAND

BEST COPY AVAILABLE

THE PURPOSE

of the Greater Baltimore Conference on Equal Opportunity in Housing is to bring together a cross section of business and community leadership for a frank and searching dialogue on the problems of segregated housing.

Attendance at the Conference is representative of many diverse groups: business, civic, religious, neighborhood, labor, trade, civil rights and public agencies. In meeting together today we hope to find new insights from this diversity and provide new leadership to establish equality of housing opportunity. We seek answers to the problems of race and housing within the context of viable growth of the economic, social and cultural fabric of the metropolis.

To all we extend a warm welcome and hope that you will find this Conference stimulating and productive.

PROGRAM

GREATER BALTIMORE CONFERENCE ON EQUAL OPPORTUNITY IN HOUSING

9:00/A.M. REGISTRATION _____ *Foyer, Grand Ballroom*

9:15/ CONFERENCE OPENING _____ *Conference Chairman*
HANS FROELICHER, JR.,
Honorary President, Citizens Planning and Housing Assoc.

GREETINGS _____ HON. DAVID L. LAWRENCE, *Chairman*
President's Committee on Equal Opportunity in Housing
HON. J. MILLARD TAWES, *Governor*

10:00/ KEYNOTE ADDRESS ____ HON. THEODORE R. McKELDIN, *Mayor*
"WHY WE NEED EQUAL OPPORTUNITY IN HOUSING"

10:30/ EXPLANATION OF THE WORKSHOP SESSIONS—
Conference Chairman

10:45/ MORNING WORKSHOPS

I THE ROLE OF GOVERNMENT __ *Red Room, 2nd Floor*

II THE MYTHS OF HOUSING INTEGRATION—
Terrace Room, Lobby Fl.

III COMMUNITY ATTITUDES—WHITE AND NEGRO—
Jubilee Room
Lobby Floor

IV HOUSING AND CIVIL RIGHTS: IS THERE A CORRELATION? _____ *Assembly Room, 12 Floor*

12:00/ WORKSHOPS RECESS

12:15/ LUNCHEON ..... *Grand Ballroom*
GOV. DAVID L. LAWRENCE, *Chairman*

1:15/ INTRODUCTION OF SPEAKER__JAMES W. ROUSE, *Chairman*
Greater Baltimore Committee

1:20/ SPEAKER ..... HON. NICHOLAS deB. KATZENBACH
Acting Attorney General

2:00/ AFTERNOON WORKSHOPS

The afternoon workshops are continuations of the morning sessions. In the morning a general background to specific problems will be presented; in the afternoon an attempt will be made to present possible solutions to these problems.

Participants and resource panelists will attend corresponding afternoon sessions.

I IMPLEMENTATION OF GOVERNMENTAL RESPONSIBILITIES

II EXPLODING THE MYTHS OF HOUSING INTEGRATION—A CHRONICLE OF EXPERIENCE

III COMMUNITY ATTITUDES—NEGRO AND WHITE: CAN WE CHANGE THEM?

IV THE IMPORTANCE OF FAIR HOUSING AND DEVELOPING ITS COMMUNITY ACCEPTANCE

4:15/ ADJOURNMENT OF AFTERNOON WORKSHOPS

4:30/ PLENARY SESSION

WORKSHOP REPORTS

SUMMARY AND CONCLUSION

THE GREATER PITTSBURGH CONFERENCE ON EQUAL OPPORTUNITY IN HOUSING

COMMONWEALTH OF PENNSYLVANIA / CITY OF PITTSBURGH / NOV. 30, 1965 / PITTSBURGH HILTON HOTEL

THE PURPOSE

This conference is a serious beginning effort to mobilize the Greater Pittsburgh community in seeking to assure every family the right to purchase or rent a home wherever they choose.

We have sought to involve a broad cross section of the Greater Pittsburgh community including representatives of many diverse groups: business, civic, religious, neighborhood, labor, trade, civil rights and public agencies. In meeting together today we hope to find new insights from this diversity and provide new leadership to establish equality of housing opportunity. We seek answers to the problems of race and housing within the context of viable growth of the economic, social and cultural fabric of the metropolis.

To all we extend a warm welcome and hope that you will find this conference stimulating and productive.

THE THEME: Matching Pittsburgh's Physical Renaissance with an Equally Dynamic Social Renaissance.

PROGRAM

GREATER PITTSBURGH HOUSING CONFERENCE

9:00 A.M. REGISTRATION ..... Ballroom Floor

INVOCATION ..... RABBI KENNETH BROMBERG,
Beth-El Congregation

9:30 A.M. OPENING SESSION ..... MRS. JAMES A. JORDON,
Conference Chairman

HONORABLE DAVID L. LAWRENCE,
Chairman, President's Committee on Equal Opportunity in Housing

HONORABLE JOHN K. TABOR,
Secretary of Commerce, Commonwealth of Pennsylvania

HONORABLE JOSEPH M. BARR,
Mayor, City of Pittsburgh

10:15 A.M. PRESENTATION OF BACKGROUND PAPERS .....
ARTHUR J. EDMUNDS,
Executive Director, Urban League of Pittsburgh

10:45 A.M. KEYNOTE ADDRESS ..... FERDINAND KRAMER,
President, Draper & Kramer, Chicago

11:05 A.M. PANEL DISCUSSION ..... Breaking up the Ghetto and Achieving Open Occupancy

MODERATOR:

THOMAS M. KERR, Attorney-at-Law; Member, South Hills Association for Racial Equality

PANELISTS:

RAY R. BARONE, President, Greater Pittsburgh Board of Realtors

BERNARD E. LOSHBOUGH, Executive Director, ACTION-Housing, Inc.

S. P. MARLAND, JR., Superintendent, Pittsburgh Public Schools

LOUIS MASON, JR., Executive Director, Mayor's Commission on Human Relations

B. T. McGRAW, Ass't to the Administrator for Intergroup Relations, Housing and Home Finance Agency, Washington, D.C.

MORRIS MILGRAM, President, Planned Communities, Inc., Philadelphia, Pennsylvania

MARGERY WARE, Executive Director, Neighbors, Inc., Washington, D.C.

JACK E. WOOD, JR., Associate Executive Director, National Committee Against Discrimination in Housing, New York, New York

12:15 P.M. LUNCHEON .....DONALD C. BURNHAM, Presiding President, Westinghouse Electric Corp.

INVOCATION .....REV. CHARLES H. FOGGIE.

GUEST SPEAKER .....RALPH McGILL, Publisher, Atlanta Constitution, Atlanta, Georgia

1:45 P.M. PANEL CONTINUATION

2:30 P.M. CONCURRENT WORKSHOPS ....Breaking up the Ghetto and Achieving Open Occupancy

1. What governmental policy and programs are required?
2. What demands are made on bankers, builders and brokers?
3. What responsibilities are placed on individuals, fair housing groups, and religious organizations?
4. What obligations are imposed on business and labor leadership?
5. What community action programs are required by voluntary agencies, organizations and institutions?

4:30 P.M. CONFERENCE SUMMARY .....JACK E. WOOD, JR.

5:00 P.M. RECEPTION (refreshments)

WORKSHOPS

I Breaking up the Ghetto and Achieving Open Occupancy:

WHAT GOVERNMENT POLICY AND PROGRAM ARE REQUIRED?

- How effectively are present fair housing laws being utilized and administered?
- What changes or improvements are needed?
- How can the role of Human Relations Commissions be enlarged and strengthened?
- What is the proper role of other governmental agencies and programs (Federal, State, and local) in achieving area-wide open occupancy and breaking the ghetto?
- What specific programs can the schools develop to speed residential and school desegregation?
- Should all governmental programs include in their criteria requirements for housing desegregation?
- What new approaches can be developed to meet the urgent need for low income housing throughout the metropolitan area?
- How can the effort of the various governmental jurisdictions best be coordinated and most effectively related to civic and private effort and involvement?
- What programs are needed to eliminate the flagrant housing abuses now existing in slums and ghettos?

BEST COPY AVAILABLE

II Breaking up the Ghetto and Achieving Open Occupancy:

WHAT DEMANDS ARE MADE ON BANKERS, BUILDERS AND BROKERS?

- What broad community responsibility falls upon the housing industry in its critical role in the supply of housing and the shaping of residential occupancy patterns? What are the ethical considerations involved? The governmental requirements?

- How can the industry serve in advancing the concept of open occupancy?

- What legitimate programs can and should it develop to help achieve the reality of open occupancy?

- What kinds of instructional and educational programs are needed between: Human Relations Commissions and the industry? The industry and its employees? The industry and the public-at-large? The industry and clients?

- What specific programs can be developed to merchandise desegregated housing to non-whites?

- What responsibilities does the industry have in helping stabilize interracial communities?

- What role can the major elements of the housing industry, individually and as a group, play in developing programs for increased housing supply?

- What mechanism is needed to coordinate efforts of the housing industry and to relate them to the governmental and civic work in the same area?

III Breaking up the Ghetto and Achieving Open Occupancy:

WHAT RESPONSIBILITIES ARE PLACED ON INDIVIDUALS, FAIR HOUSING GROUPS AND RELIGIOUS ORGANIZATIONS?

- What programs can be conducted to counteract prejudiced attitudes in the public-at-large?

- What more concrete programs can be formulated in individual communities which will result in acceptance of integrated living and welcoming of interracial residential patterns?

- How can the over-all community be alerted to the tremendous cost and explosive danger of the ghetto and motivated to affirmative and creative action to break it up?

- How best can the fair housing program be sustained? Is a planning and coordinating agency required? What mechanism is available to provide information and guidance for positively motivated whites as well as for non-white homeseekers?

- What role can be played in stimulating other groups and agencies (public and private) to contribute to the goal of breaking the ghetto and achieving open occupancy?

- What is the proper way to stimulate and participate in programs to enlarge and improve housing supply?

- What programs are needed to eliminate the flagrant housing abuses now existing in slums and ghettos?

IV Breaking up the Ghetto and Achieving Open Occupancy:

WHAT OBLIGATIONS ARE IMPOSED ON BUSINESS AND LABOR LEADERSHIP?

- How can their influencial and powerful leaders be alerted to the magnitude of the problem, its community-wide implications, and the need for full-scale and energetic action?
- What specific resources are available to business and labor to help resolve the problem? How can they best use these resources to motivate community action and to advance equal housing opportunities?
- What is the specific obligation resting both with companies and labor unions in helping employees and members obtain housing of their choice in communities of their choice?
- How can business real estate activities and holdings be managed to assist in achieving open occupancy patterns? What is the proper function of personnel departments in this regard?
- How can corporation plans for plant location and expansion be used to persuade communities to desegregate? Do management and labor have an obligation in assuring a community will furnish a truly open housing market?
- How can private business concerns contribute to and stimulate the supply of low income, non-segregated housing?
- What is the extent of participation that could be expected from labor in sponsoring and assisting developments of moderate and low income housing?

BEST COPY AVAILABLE

V Breaking up the Ghetto and Achieving Open Occupancy:

WHAT COMMUNITY ACTION PROGRAMS ARE REQUIRED BY VOLUNTARY AGENCIES, ORGANIZATIONS, AND INSTITUTIONS?

- How can the broadest number of such groups be enlisted in this effort?
- How can they sensitize the public-at-large to the human degradation of housing segregation and the cost and danger of the ghetto?
- How can they help explode the fearful myths surrounding integrated housing?
- How can they assist other agencies and groups in mounting and sustaining a broad educational program and in creating and implementing special action programs for community-wide desegregation?
- What specific activities can they carry out to inform non-whites of their rights and to encourage them to seek out and achieve equal housing opportunities?
- What can they do to assist in stabilizing interracial communities?
- Can they help stimulate and sponsor low and moderate income housing?

The American city should be a collection of communities where every member has a right to belong. It should be a place where every man feels safe on his streets and in the house of his friends. It should be a place where each individual's dignity and self-respect is strengthened by the respect and affection of his neighbors. It should be a place where each of us can find the satisfaction and warmth which comes only from being a member of the community of man. This is what man sought at the dawn of civilization. It is what we seek today.

—President Lyndon B. Johnson

A Thought to Remember

"I believe in an America where every family can live in a decent home in a decent neighborhood—where children can play in parks and playgrounds, not the streets of slums—where no home is unsafe or unsanitary—where a good doctor and a good hospital are neither too far away nor too expensive—and where the water is clean and the air is pure and the streets are safe at night."

—John F. Kennedy

Professor Roger F. Rupnow
Graduate Program in City Planning
Georgia Institute of Technology
Atlanta, Georgia 30332

Dear Professor Rupnow:

Attached is the proposed National Housing Policy For the United States, assigned for preparation by our group of the City Planning 605 class. = file (make folder)

This proposed Housing Policy is designed to give this nation broad guidance in its continued efforts toward the stated goal of providing every American a decent home in a suitable environment. The need for a national policy is evident when one surveys the bewildering multitude of uncoordinated, and often conflicting, housing programs that have arisen from trying to attack each small part of the housing problem on a piecemeal basis.

In preparation of this Housing Policy we have encountered, on a small scale, the immense difficulties that would be inherent in any attempt to formulate a statement of policy for a democratic nation of individuals within a federated system of government. People simply do not all see the housing problem in the same way, nor do they agree on the proper means to use in trying to solve the problem. However, the process of working out a firm consensus of agreement that is reasonably agreeable to all, has been a very worthwhile educational process for us. We firmly believe that the United States will likewise benefit if the formulation of a housing policy is undertaken at the national level.

Sincerely,

Myles Greene Smith

PREAMBLE

This Nation recognizes the availability of and access to housing as a necessary element of American life. It recognizes that provision of decent housing does not require merely:

- an adequate supply
- the development of a desirable neighborhood environment
- the satisfactory operation of economic forces, or
- the coordination of fragmented efforts to produce housing.

It is instead a more demanding task—the ability to develop and sustain the proper balancing of all these elements. Further, it is an ability to achieve a course of direction that will insure the realization of "a decent home in a suitable living environment for every American family."

Therefore, the Congress of the United States of America, adopts, with a responsibility to promulgate, the following statement of housing policy for the ultimate benefit of this Nation and its people.

THE NATIONAL HOUSING POLICY

In the Housing Act of 1949, the central goal of housing was "a decent home in a suitable living environment for every American family." The 1949 goal remains unchanged; but must be reexamined and redefined. "A decent home" is more than a structure for shelter. It is part of a broader American commitment of insuring an atmosphere for "life, liberty, and the pursuit of happiness"; an avowed promise of the American democracy. When this privilege ceases to exist for a significant segment of the population, the democracy is threatened and the condition (housing) becomes a national concern.

Therefore, this Nation is obliged to develop adequate dimensions of the goal..."a decent home." Basically, the formula for achieving the goal of decent shelter in the context of a broader commitment is to emphasize the development of every individual so he has the capabilities to fulfill his own needs. With the realization and mobilization of the individual's capabilities, attitudes and actions must be redeveloped to break through the constraints that have restricted the individual from exercising his privilege — implicitly promised in the American democracy — to select and obtain a home in a chosen environment.

The Individual

America has grown and has been sustained by strong individuals who work toward national goals by fulfilling their own needs within the confines of a national attitude. Accordingly, the Congress shall continuously examine the relationship of individuals to the total society. This statement of housing policy places renewed emphasis on the development of Americans able

to meet individual problems or needs with success. Specifically, this Nation embraces policies and programs that encourage the development of individuals with sufficient knowledge, economic stability, self confidence, and mental and physical health to exercise their responsibility to themselves, their families and their Nation. Housing is recognized as one of these important responsibilities. This government shall always assume the responsibility to insure its individual citizens of an opportunity to realize what the housing choices are, to encourage each person to make his own selection, and to help him proceed on his own initiative toward obtaining his desire.

The Attitudes and Actions

Congress shall develop, articulate and promulgate a framework of opportunity, of optimum dimensions, that insures and encourages:

- adequate supply of housing
- decent total living environment
- equal opportunity
- committed economy
- coordinated effort.

Adequate Supply

To provide each citizen with an opportunity to acquire a decent home, Congress shall promote the maintenance of the existing housing inventory and the development of an additional housing supply which will meet emerging housing needs.

While maintaining an adequate supply of housing, consideration shall be given to:

- ~~conservation of~~ conserving natural resources

- stimulating development and application of technological advances to produce the quality and quantity of housing for multi-faceted, ever-changing society, while remaining sensitive to individual desires

- providing a variety of housing environments and housing types in order that each citizen might exercise his option of selecting and owning his own home. renting

Total Environment

not Developments with environment

Housing is more than shelter within which an individual and his family reside. By its physical location and the activities that transpire around it, housing develops relationships between different families, their jobs, and their mental and physical health. Hence, housing choices necessarily involve consideration of housing developments and housing environments.

Congress assumes the responsibility of establishing patterns of development that will encourage a heterogeneous mixture of families and functions, and provide for orderly and economical growth.

To fulfill this responsibility, the national effort shall:

- provide incentives for projects planned to meet future environmental demands

- support innovative developments which entail financial risk, and which improve the total environment, the quality of housing, and expand the range of housing choices.

Equal Opportunity

The means to obtain a decent home and a suitable living environment shall be accessible to all. It shall be the policy of this Nation to remove any constraints on the equality of opportunity for every American (citizen) to acquire a decent home in a desirable living environment. out

no suggestions

Economy

Priority is placed on maintaining economic conditions that attract the conscious collaboration of all segments of society in the process of producing an adequate supply and an optimum range of housing choices. The Federal Government, through state and local governments and the private sector, shall seek to maintain desirable economic conditions where they exist and encourage the development of necessary economic conditions that do not exist.

In maintaining and developing desirable conditions, consideration shall be given to:

- Federal purveyance of special incentives to the private sector to counteract recognized deficiencies in the housing market
- the placement of the highest possible Federal economic priority on housing, consistent with the needs of the times regarding other National responsibilities, such as defense and the maintenance of a sound economy.

Coordination

The means for providing a choice of shelter and environments are so complex and diversified that they require coordination to avoid duplication or misappropriation of efforts.

The Federal government shall encourage the efforts of all sectors of the population to promote the mobilization of all available means to insure a total approach toward housing.

It shall be the responsibility of the Department of Housing and Urban Development to collect, develop and disseminate information on housing pertaining to what is to be done, what is being done, and how each individual can effectively operate in the total process.

Objectives to Guide Implementation of National Housing Policy

This section presents implementing objectives designed to provide interpretation of the policy as it shall be effectuated for the short term. These objectives shall not be considered part of the National Housing Policy. The objectives are subject to periodic review and revision due to changing national conditions.

A Decent Home

To provide a decent home for every American, in accordance with the National Housing Policy, the immediate housing objectives shall be:

1. To increase the nation's supply of decent housing, especially low-income housing, and to broaden the range and number of housing choices for all Americans.

2. To encourage creative design of housing, with emphasis on appearance, function and social flexibility.

3. To encourage research into methods of increasing the housing supply and lowering construction costs such as mortgage financing and improved construction techniques.

4. To encourage the wider use of rehabilitation of existing dwelling units in urban renewal activities to avoid reducing the housing stock.

5. To promote programs to develop adequate manpower, materials, and construction capabilities to supply the numbers of new housing units sought by national goals.

6. To encourage the adoption of statewide minimum housing standards for all states. These minimum housing standards shall include, among other things, consideration of the needs of children, the elderly, the handicapped,

large families, and single people in providing a safe and sanitary dwelling unit for all citizens.

7. To provide for a supply of temporary emergency housing, complete with utilities, for communities unable to cope with a major population influx.

8. To insure that no urban renewal project shall be approved unless it provides a net increase of low-income housing units. over what

9. To insure that all federal housing finance assistance programs to state and local governments and private enterprise are contingent upon the existence of an effective and enforceable open occupancy ordinance.

A Suitable Living Environment

To provide a suitable living environment for every American, in accordance with the national housing policy, the immediate housing objectives shall be:

1. To provide for the reservation of large tracts of land for future housing use by metropolitan areas in accordance with national, state, and regional land use plans.

2. To encourage the development of minimum neighborhood environmental standards applicable to all property.

3. To encourage, where appropriate, planned unit and new town development in accordance with national, state, and regional land use plans.

4. To provide for the dispersal of public housing projects throughout urban and suburban communities to avoid the concentration of public housing in any one neighborhood or locality.

5. To require comprehensive plans for urban and rural areas as a prerequisite for federal funds. The comprehensive plans shall include

recreation ?

transportation, open space, education, community facilities, utility, low cost housing, and urban redevelopment plans. In addition, the comprehensive plan shall provide for the prevention of air, water, and noise pollution.

Necessary Administrative Provisions

To implement the national housing objectives the administrative framework shall be organized: ?

1. To provide for effective evaluation of housing policies, objectives, and programs at the national level so that the housing legislation can help the nation reach the housing goal.

2. To provide for the consolidation of all housing assistance activities at the Federal level into a single agency under an assistant secretary within the Department of Housing and Urban Development.

3. To provide for uniform policies for relocation of all persons displaced by federally aided programs. These policies should include allowances at or above fair market value for displaced owner-occupants so that they may purchase a similar home at another location without capital loss, and adjusted payments to displaced tenants who must pay higher rents because of relocation.

4. To provide for a housing extension service for technical assistance to state and local governments in housing construction and finance, and community and neighborhood planning.

PERSPECTIVE OF THE HOUSING DILEMMA

(Chapter heading)

The housing condition in the United States has created different degrees of concern. The intensity of this concern will directly contribute to

the action taken to improve the housing condition. An underlying assumption of this study is that citizen concern should be focused on the constraints which created and continue to maintain the present housing condition, instead of just observing the physical condition of housing.

The Dimensions of the Problem - The Constraints

The problem of ~~an~~ inadequate ~~supply of~~ housing includes three constraints: are almost the same

1. The lack of directed national domestic objectives.
2. The inadequate development of the individual, and
3. The attitudes and actions of the nation which have prevented the development of a coordinated national objective.

The Constraint of Undirected National Domestic Objectives

Historically, the U. S. government has not been oriented toward comprehensive efforts of solving domestic problems. This situation has been created by two impediments to national action. First, the nation was conceived as a federated system in which the national government is responsible for foreign affairs and each state government is responsible for domestic conditions. Second, the Congress has traditionally followed the confining committee system. Under this system, little attention has been devoted to viewing national programs in perspective to determine the programs interrelationships.

Two factors stemming from traditional American philosophy have also deterred the national government from formulating a national housing policy. First, this nation began as an agrarian society populated by pioneers ~~who~~ each of whom strived to own his own plot of ground and dwelling. The country correspondingly developed a philosophy which has emphasized single family ownership of land and home,

regardless of whatever housing mix might be the optimum in terms of resource utilization or social effectiveness for all citizens. Second, this country is based on the principle of strong individualism, with survival and success of each individual dependent upon his own efforts and achievements. This has led to a socio-economic clash in the popular willingness to "give" housing to any segment of the population, and to distrust of government involvement in "competition" with free enterprise.

Regardless of these limitations of governmental structure and individual philosophical values, the condition of housing in the United States has become a problem of national proportion due to the apparent inability of the free enterprise market place to adequately supply housing and the unresponsiveness of the states to the situation. In acknowledgement of this fact, during the last thirty years or so there has been a rush to administer patchwork programs by the national government. However, at the same time, the Federal government has been weakest "...in carrying out what should be its most vital function: the synthesis, shaping, and supervision of the Nation's paramount goals and priorities." (23, p. 150) Only by establishing policy at the national level can a condition as prevalent as inadequate housing be solved with consistent, efficient, and related programming. The lack of such policy forms a definite constraint to effective action that itself forms part of the housing problem.

The Constraint of Inadequate Development of the Individual

American society, with its emphasis on the individual taking

care of his own needs and desires, will not adequately function unless there exists a framework which provides every individual the means to help himself.and the opportunity to choose according to his desires. Today a significant portion of the American people are not part of that framework. As a result, these people are particularly unable to provide for their own needs and desires regarding housing as well as other necessities. The solution lies not in giving these people the things they are not able to provide for themselves, such as housing, but in giving them the opportunity to provide for themselves. In other words, housing the nation's rural and urban poor, the disadvantaged, is but one element of a national condition which, in its totality, includes the conditions of social, economic, and physical growth of the entire populace.

The constraint of the inadequate development of the individual is made up of many factors. It includes the limits of mobility within the structure of our society. Disadvantaged people tend to remain disadvantaged because the tools for changing their opportunities are beyond their reach. The constraint also includes the tendency of society to super-impose on the entire population the values of the majority of the population, regardless of the needs of the individual. The individual is not exposed to a range of alternatives that include alternative to fit his needs.

The constraint of the inadequate development of the individual is a factor in many of the problems America faces today — not just housing. But the fact remains that the housing problem will be incapable of solution unless the United States realizes some measure of success in removing this constraint.

The Constraint of Attitudes and Actions

There are numerous visible attitudes and actions that work to constrain the national condition of housing. These attitudes and actions are examined in terms of the adequacy of supply, the total environment, the equality of opportunity, the economy and the organizational impediments which restrict effective action.

Adequacy of Supply. "The nation is heading toward a serious shortage of housing for the total population, unless production is sharply increased." (27) The President's National Commission on Urban Problems (Douglas Commission, 26), states that to meet America's housing needs, we must build at least 2.0 to 2.25 million housing units a year. Of these, at least 500,000 a year, exclusive of housing for the elderly, should house the poor and moderate income families who at present cost and incomes cannot afford to rent or buy decent, safe and sanitary housing.

Inefficient production of housing has been supported largely by the lack of adoption of new technological innovations. House building is still an archaic, craft-type art. Mass production of housing is still in its infancy. Do-it-yourself construction is difficult and inefficient.

Housing has remained inflexible in implementing the chosen life styles of occupants. With the great mobility of this society, housing is still tied by an umbilical cord to utilities (water, sewer, electrical, gas) and transportation (streets). The risks of buying and selling a home are not attuned to the mobility of society.

The adequacy of the supply is also influenced by shortages of the skilled labor required for construction, the availability of building materials required for dwelling, construction, and the availability of building sites.

The supply is also constrained by the capabilities of maintaining the existing supply. The capabilities of existing cities to service the demands of swelling units are limited. Tenants, landlords, and owner occupants are often not sufficiently interested in or capable of adequately maintaining their dwellings.

Total Environment. The suitability of housing as a meaningful place for family life is largely dependent upon the neighborhood surroundings in which the house exists. This constraint includes problems of the location and of the development of the land utilized for housing.

The location of housing development has been largely restricted to existing urban centers, [redacted]. Many of these areas are so large and complex that the utility of such development has reached the point of diminishing returns. Development has been allowed to sprawl outwardly at low concentration, unmercifully and inefficiently consuming our natural resources. New concentrated developments have not been promoted. Preservation and optimum utilization of the land has not been sought to a degree that will insure the continued use of rural land, open space and the streams, rivers and lakes of the country.

Segregated, homogeneous suburban areas of socio-economic ethnic, and racial concentration have been promoted, with employment centers located great distances from the area of residence. Homes

FHA

are built in concentration without adequate provision of shopping, education, health, religious, recreational, service and facilities to conduct home life in the style desired. Homes are not just cubicles for retiring after work, but the nucleum of the entire development of personal life.

Define first maybe

Equal Opportunity. Barriers to equal occupancy of the total housing inventory by all people have created pockets of extremely overcrowded, unsatisfactory housing in many localities within the country where actually there may exist enough decent housing, in total, for everyone. Such inefficient utilization of resources is inexcusable from the standpoint of physical waste, to say nothing of the social costs involved.

These barriers are artificial ones created by society to prevent persons of certain economic, ethnic, and racial backgrounds to live in certain neighborhoods. Sometimes governmental tools are misused to perpetuate these injustices, as when zoning ordinances specify different floor space minimums in various residential neighborhoods, thereby effectively segregating them economically.

Only when all people are free to choose their home from among the total supply will the most efficient and fair distribution of housing result.

The Economy. The constraint of the economic development of the people and the nation includes the national commitment to issues other than the personal needs of the nation's people.

Issues of defense, space exploration, trade, and foreign aid often take precedence over the needs of the individual. National

commitments limit the funds available for developing housing on a massive scale which might be required by adoption of a housing policy. All of these economic needs compete for a portion of the Gross National Product. Only through careful development of priorities can the optimum economic allocations be made to take care of the problems while not adversely affecting the nation's rate of growth, level of inflation, and degree of unemployment.

Development of housing is also constrained on another level by the individual's buying power. An imbalance exists on the percentage of total earnings spent on housing. Low income citizens are required to spend 25 to 30% or more of their earnings on shelter on a percentage basis considerably more than higher income citizen. Twelve per cent of America's families cannot afford standard housing at this rate. wording

Housing has been constrained by lack of profit incentives which would interest the investment of private capital in developing housing. Federal inducements to the construction industry and the manufacturer of materials have, in the past, been traditionally guided by the state of the economy, not by the need for housing. When the economy slumps, money is poured into these industries to stimulate the economy.

Organizational Impediments. Housing is constrained by both factionalism and lack of knowledge. Vested interests in labor unions, the construction material, industries, and financial institutions are protective of their stable positions. Local governments are strangled by building codes and zoning ordinances which further the protection of these vested interests.

Consumers lack knowledge about the nature of the problem they and the nation face. A large segment of society will not acknowledge the fact that inadequate housing for a sizable portion of society is a problem. This attitude precludes the conscious collaboration among the various segments into which the community is divided.

There are also organizational constraints on the abilities of governments at all levels to deal with a problem like housing. Administrative structures, overlapping geographical jurisdiction, and governmental power limitations all add to the difficulties of local governments in coping with most problems, including housing. State governments are almost as ineffectual.

The mitigation of these organizational constraints will require a realization on the part of the public of how disorganization is adding to all the nation's problems, including housing, and a demand for fairer and more efficient governmental systems to cope with such problems.

REVIEW OF HOUSING PROGRAMS AND POLICIES

Existing housing programs and policy statements are reviewed in this chapter. Of particular importance are housing and urban renewal programs in the United States, housing practices in Western Europe, and non-federal housing policy statements from various groups in the United States.

Housing and Urban Renewal Programs of the United States

The Social Security law, public assistance laws, economic opportunity laws, and housing laws are commonly classified as welfare legislation. The United States, on all three levels of government, has lagged behind the other [redacted] industrial nations of the world in the development of [redacted] Welfare legislation. It was not until the Great Depression of the 1930s that the national government was moved to enact any large scale welfare legislation.

The United States, in its early history, was an agricultural country with a rapidly expanding frontier. The rapidly growing population and abundance of opportunities in the early years established the American tradition of the "rugged individualist" who, through hard work, initiative, and thrift, could be expected to accumulate sufficient resources to provide for his economic security. (25, p. 3)

After 1870, however, the United States had become an industrialized nation. The national economy came to be [redacted] characterized by industrialization, specialization, and urbanization. Wage labor became increasingly important in the national economy, and independent farmers, artisans, and tradesmen became less important. Thus, a large

and growing segment of the population became dependent not only on their own efforts for economic security, but also on a continued flow of cash income. (25, p. 3)

The Great Depression of the 1930s dramatized the fact that many Americans had become dependent on factors beyond their individual control for economic security. The extreme hardship generated during the depression forced the Federal Government into the field of welfare legislation on a massive basis.

Today, two concepts of social welfare, residual and institutional, are present in the United States. The residual concept, more popular before the 1929 depression, states that social welfare institutions are used only when the normal structures of supply, the family and the market, break down. The residual concept follows traditional American ideology of individual responsibility, and does not reflect the radical social changes accompanying advances industrialization. In contrast, the institutional view sees social welfare services as normal functions of modern industrial society and is designed to aid individuals and groups to attain satisfying standards of life and health.

Historical Development of Legislation

The 1937 Housing Act is the base for subsequent Housing Programs in the United States. However, before the 1937 Act was passed, several key pieces of legislation were enacted.

Between 1932 and 1934 Congress, in several acts, created the Federal Home Loan Bank System, the Federal Savings and Loan Associations, and the Federal Savings and Loan Insurance Corporation. The purpose of these acts was to provide Federal money to banks and savings

and loan associations and to insure private deposits, thus stimulating private savings, so that banks and savings and loan institutions could finance more mortgages. As of December 31, 1966, 5,031 home financing institutions had received federal monies under these programs. The balance of outstanding advances totaled $1.9 billion. (22, p. 3-4)

In 1933, Congress passed the National Industrial Recovery Act. Title II of this Act created a Housing Division within the P.W.A. and authorized the use of Federal money to finance and build low-cost public housing. The main purpose of this Act, however, was to stimulate the construction industry and thus provide employment. (22, p. 55; 10, p. 337)

The Federal Housing Administration was created by the National Housing Act of 1934. The immediate objective of this Act, also, was to stimulate the construction through insuring home construction loans made by private institutions at low interest rates. A long range objective was to encourage higher building standards. Through 1966, FHA had insured loans for over 8.6 million homes, 1.2 million rental units, and 28 million home improvement loans. In all, FHA has written mortgage insurance of over $112 billion. (22, p. 9)

Housing Act of 1937. In 1937, Congress passed Public Law 75-412, the Housing Act of 1937. This act created the U. S. Housing Authority, originally in the Department of the Interior. It was established to provide loans and grants to local public housing agencies for low-rent housing and slum clearance. (22, p. 6)

The Housing Act of 1937 transformed public housing as an emergency function under the NIRA into a semi-permanent function. However, the emergency relief aspects of housing were still a part

of the program, as it was primarily intended to continue as a part of the employment stimulation programs which had preceeded it. (10, p. 338)

The major provision of P.L. 75-412, was [redacted] to permit Federal participation through financing in local public housing projects. Under this act, the Federal government bore the cost of site acquisition and project development, while project tenants would finance the operating expenses of the project through their rent.[5] The local authorities serve principally as administrators and managers. (13, p. 108)

The projects built under this act were to house "families of low income." The government sought to avoid going into competition with private enterprise. (13, p. 110)

In an effort to compromise between those who wanted to eliminate slums and those who wanted to provide decent low-rent housing, P.L. 75-412 tied low-rent housing to slum clearance through the "equivalent elimination agreement." This agreement provided for a clause in contracts with local agencies which stipulated that

> . ."elimination by demolition, condemnation, and effective closing, or the compulsory repair or improvement of unsafe or unsanitary dwellings situated in the locality or metropolitan area, be substantially equal in number to the number of newly constructed dwellings provided by the project." (13, p. 112)

By 1939, the national economy had recovered sufficiently to permit Congress to consider removing its work stimulation programs.

As a result, the U. S. Housing Authority did not receive Congressional appropriations in 1939. However, by 1940 threats of war had become real enough to worry Congress about critical housing shortages in many prime defense construction areas. The U. S. Housing Authority received appropriations to construct housing for defense workers under P.L. 76-671 in 1940. This law did not provide for low-rent housing, but for housing let at fair market rent with tenancy preference given to defense workers. (10, p. 339)

Housing Act of 1949. After WW II, Congress debated the low-rent housing question for over four years. The debate was settled in 1949 with the passage of P.L. 81-171, the Housing Act of 1949. Public Law 81-171 was essentially an extension and embellishment of the Housing Act of 1937. (10, p. 341)

The preamble of the 1949 act contains the nation's housing goal, "a decent house and a suitable living environment for every American family."

Title III of the 1949 act concerned low rent public housing. It authorized Federal contributions and loans for 810,000 units of low-rent public housing over a six year period. (22, p. 6)

One section of the 1949 act outlined the limits to which the Federal government would go to avoid competition with private enterprise housing. The act read in part that no contract could be entered into with the Federal government for annual contributions and loans "unless the (local) ...agency has demonstrated that a gap of at least 20 per centum...has been left between the upper rental limits for admission to the proposed low-rent housing and the lowest rents at which private enterprise unaided by public subsidy is providing...a substantial

supply of decent, safe, and sanitary housing." (13, p. 110; 22, p. 6)

Title I of the Housing Act of 1949 was concerned with urban redevelopment. The Housing Act of 1937 had combined slum clearance and public housing under one program. The "equivalent information agreement" was found to be too restrictive an approach to slum removal. Title I, therefore, put forth a broader and more flexible approach to slum removal. (22, p. 17)

The slum removal approach developed in Title I was basically a partnership between the Federal government, local government, and private enterprise. Local government was to acquire and clear slum or blighted areas, and then dispose of the land at fair market value to private enterprise for development. The Federal government committed itself to pay two-thirds of the loss incurred by the local government in this process. Local government was to pay the other one-third of the loss, but its contribution could be in non-cash form, such as site improvements in the project. (22, p. 18)

Title I limited urban renewal projects to areas either predominantly residential before development or after development, and thus sought to address itself to housing. (13, p. 150)

However, the construction of housing under P.L. 81-171 was severely curtailed by the outbreak of the Korean War. A presidential directive issued in 1950 limited construction to 50,000 units in the last six months of 1950 and 75,000 in fiscal 1951. Congress limited construction to 50,000 units for fiscal 1952 and kept appropriations to an average of 35,000 units per year until 1961. By 1954 only sixty-one projects had reached the execution stage, and only $105 million of the capital grants had been committed. (22, p. 18)

Housing Act of 1954. The Housing Act of 1954, P.L. 83-560, added sections 220 and 221 to Title III of the Housing Act. Section 220 provides FHA mortgage insurance for rehabilitation of rental housing and construction of new apartments in urban renewal areas. (22, p. 11)

Section 221 was added to provide more favorable terms for FHA mortgage insurance on low-cost housing for families displaced by urban renewal and other government action. This section filled the 20 per cent gap between the upper rental limits of low-rent housing and the lowest rents at which private enterprise unaided by public subsidy could provide. In 1961 this section was enlarged to apply to all low-and moderate-income families.

The Housing Act of 1954 broadened the slum clearance and redevelopment program of Title I. The 1954 act authorized Federal participation, on the 2/3-1/3 basis, in local efforts to prevent the spread of slums and blight through rehabilitation and conservation programs. (10, p. 18)

The 1954 act also created the "workable program" concept. This was a provision that Federal assistance to urban renewal projects would not be available unless the local agency prepared a workable program which had to meet several Federal standards. The workable program was a prerequisite for Federal assistance to low-rent housing and the new 220 and 221 programs. In addition, section 701 was added to the 1954 act, thus providing Federal matching grants to assist the financing of comprehensive planning.

Five million dollars was also authorized to finance 1/3 of the cost of testing and reporting new techniques for preventing and eliminating slums and blight. (22, p. 19)

Housing Act of 1956. Under P.L. 84-1020, Congress authorized the Public Housing Administration to assist in the financing and construction of new housing, or remodeling of existing low-rent public housing, for elderly families. (22, p. 7)

P.L. 84-1020 created the General Neighborhood Renewal Plans (GNRP). Under this act, the Housing Administration was authorized to advance monies to LPAs for the preparation of general neighborhood renewal plans of such a scope that urban renewal activities may be staged over ten years rather than as a single project. The advances were to be repaid out of funds for the first project in the area.

The 1954 act also provided for relocation payments of up to $100 for families and individuals, and $2,000 for businesses displaced from urban renewal areas. In 1959, these maximums were raised to $200 and $3,000.

Housing Act of 1959. The 1959 amendments to the Housing Act redefined Federal participation in community renewal programs. The Federal government was permitted to make grants to local governments for 2/3 of the cost of preparing community wide urban renewal plans. These plans were to include identification of slums and blighted areas, measurement of blight, estimation of resources needed to renew such areas, identification of potential project areas and types of action contemplated for them, and a schedule of urban renewal projects. (22, p. 19)

Housing Act of 1961. The Housing Act of 1961, P.L. 87-70, authorized the expenditure of the remaining balance of $336 million from the Housing Act of 1949. The public housing section of P.L. 87-70 also made new provisions for over-income tenants and the elderly. Formerly, public housing tenants had been required to leave the project when their income reached a certain level (see 20% clause, Act of 1949 above). The 1961 act permitted the over-income family to remain in the project at a rent related to its income until the local agency determined that the family could find decent housing at a suitable rent. The 20 per cent gap requirement was eliminated for elderly persons.

Standards for Federal participation in urban renewal projects were amended in 1961. In cities of 50,000 or less, the Federal share was revised upward from 2/3 of the cost to 3/4 of the cost. Participation in cities of over 50,000 was still limited to 2/3 of the net project cost. (22, p. 20)

Housing Act of 1964. Public law 88-560 expanded on the relocation payments authorized in 1956 to permit relocation adjustment payments to low-income and elderly persons and small business for costs incidental to displacement from urban renewal areas. Low-income and elderly families were authorized to receive adjustment payments, in addition to moving expenses, of up to $500 and small business were authorized payments up to $2,500. In addition, relocation payments were authorized in 1964 and 1965 for development programs other than urban renewal. (22, p. 18)

Housing and Urban Development Act of 1965. Public Law 89-117 renewed the Federal government's commitment to public low-rent housing. Congress authorized $188 million to be spent on public housing over the next four years. This money was to provide 60,000 additional public housing units. (22, p. 8)

The 1965 act provided for a new form of low-rent public housing. Under these provisions, a local housing agency may use up to ten per cent of the units in a privately owned structure for low-rent housing under a contract with the owner. Such a contract could have a term of from 1-3 years and may be renewable. In 1966 the limit was raised to five years.

The 1965 act also developed "turn Key" housing. Under this system a contractor who has a site, or an option on one, may propose to build housing on it for the local agency. This option is also applicable to rehabilitation.

A rent supplement program for low-income families who are elderly, handicapped, displaced by government action, occupants of substandard housing, or occupants of housing damaged by natural disaster was developed. Supplements are available for housing financed under FHA section 221(d)(3). The rent supplement payments represent the difference between the rent the eligible tenant can pay, based on a 25 per cent rent to income ratio, and the fair market rent of the unit. The fair market rent is established by FHA based on an amount sufficient to amortize the project plus project operation and maintenance.

Grants to aid localities in housing code enforcement were also contained in 1965 legislation. The Federal government may contribute

2/3 of the cost of planning and implimenting intensive code enforcement programs at the local level designed to prevent the spread of slums and blighted areas.

Legislation in 1965 also enabled the Federal government to participate in up to 2/3 of the cost (3/4 in designated urban renewal areas) of neighborhood facilities. Eligible projects are multi-purpose centers which provide health, recreational, welfare, social, or similar community services.

Title X of the National Housing Act was adopted in 1965 and enables the FHA to insure mortgages which finance land development for residential and related uses. In 1966 Title X was amended to include new towns. A mortgage can not exceed $25 million and the total amount of insurance outstanding at any one time is limited to $250 million. (22, p. 11-18)

Demonstration Cities and Metropolitan Development Act of 1966. In 1966, Congress passed P.L. 89-754, the Demonstration Cities and Metropolitan Development Act of 1966, now known as the Model Cities Act. This program represented a new approach to urban redevelopment. In addition to funds available for traditional urban renewal activities, cities may receive Federal financial assistance to plan, develop, and implement programs to revitalize entire slum areas through the coordinated use of all available Federal, State and local resources.

To qualify for funds under this act, local programs must be designed to approach the slum problems on both the physical and social levels; increase the low-and moderate-cost housing supply; attach social, educational, health, and employment problems; and "contribute to a well balanced city."

Also, the program requires immediate action, adequate resources to carry out the projects, fullest possible involvement of private enterprise, maximum feasible citizen participation, and consistency with an existing comprehensive plan. (22, p. 13)

Housing and Urban Development Act of 1968. The Housing Act of 1968, P.L. 90-448, introduced the Neighborhood Development Program. This program allowed cities to undertake urban renewal projects on a one year basis rather than over longer periods of time. This was undertaken to free Federal money from long-term commitments.

The 1968 act also introduced a requirement that the majority of housing units built in urban renewal areas developed for residential purposes be for low and moderate income families. The Secretary of HUD may authorize FHA to reduce mortgage interest rates on behalf of lower income families desiring to purchase or rent housing to as low as 1 per cent. Participating families may not have incomes that exceed 135 per cent of the limit set for local public housing.

In the 1968 act, Congress affirmed the national goal of "a decent home and a suitable living environment for every American family." Congress further stated that the fullest possible use of private enterprise should be made in Federal housing programs. (24, p. i)

Criticisms

The public housing and urban renewal programs in the United States have been criticized on many levels. This section will summarize some of the more important criticisms. It is important that any criticism point up the positive aspects of its subject as well

as the questionable aspects. Therefore, this criticism will start with the positive aspects of public housing and urban renewal.

The positive aspects of public housing under the Housing Act of 1937 and its successors can be very simply stated - as of 1966, 633,000 low-rent dwellings had been completed under the program. (22, p. 6) Without the public housing programs, these units would probably not have been built.

The positive aspects of urban renewal are manifold. These benefits will be simply listed here in the interest of brevity. The terseness of this listing should not lead the reader to believe that the benefits of urban renewal are unimportant, for they are not. Briefly, then, some of the benefits of urban renewal are:

1. It provides a multipurpose opportunity to correct the mistakes of the past including the correction of traffic problems, and the provision of playgrounds, open spaces, neighborhood amenities, and new housing.
2. In many cases, it has spurred local interest in the quality of civic development and has provided an impetus to civic and cultural improvements. For example, Lincoln Center in New York City was developed as an urban renewal project.
3. It has helped the expansion of universities and colleges, hospitals, and other public service institutions.
4. It has helped induce industry into some cities by allowing the city to assemble land for plant sites.

5. It has helped many cities rebuild their downtowns.

6. It has helped replace the high-rent housing stock of central cities, thus raising the tax base. | haven't most of these done this

7. It has encouraged the establishment of cooperative housing in the United States. (1, p. 155-177)

Housing and urban renewal programs and policy in the United States have been criticized by many groups and individuals. Some of the major criticisms are discussed below.

Socialized Housing. Much criticism of the housing and redevelopment programs has come from real estate groups, principally the National Association of Real Estate Boards. The major basis of criticism from real estate people is that these programs represent a move toward socialized housing in the United States. Another major criticism is that public housing is in competition with private housing - despite the 20% gap requirements. (7, p. 465)

Housing and Slum Clearance. The Housing Act of 1937 tied public housing to slum clearance. This attitude has continued through the development of our housing programs, and in fact, slum clearance has become dominant. Lawrence Friedman has criticized this provision in the 1937 Housing Act in two points. First, he notes that the "equivalent elimination agreement" prevented any possibility that public housing would become a vehicle for resettling some of the poor into the suburban fringe, thus reducing the economic segregation common to our cities or public housing would be built on the cleared land. Second, Mr. Friedman notes that this provision guaranteed that public housing would not result in any substantial increase in the housing stock. (13, p. 111-112)

Should be your criticism a critique of Friedman not his

20% Gap. Friedman has also criticized the "20% gap" requirement of the public housing laws. Friedman remarks that this provision "created a guarantee that there will always be a segment of the population for whom neither public housing nor private enterprise will provide housing." (13, p. 111)

Construction and Design. A third criticism offered by Friedman concerns the design of public housing. Housing legislation provides that the Federal government is allowed to support only projects without "elaborate or expensive design or materials," and which do not cost more than the "average construction cost of dwelling units currently produced by private enterprise in the locality." ~~(p. 15(5))~~ Friedman contends that "these limitations... virtually ensured that public housing would be minimum housing in looks and in life style; it would be physically better and safer than slums, but it would never grace the landscape and bring pleasure to the eye." (13, p. 113)

Residual Programs. Robert K. Brown and Charles Abrams point out that U. S. Housing programs are residual in nature. By this, they mean that builders, and not the people, are the direct beneficiaries of government action. This philosophy became fully recognizable in the Housing Act of 1949, even though it had been implied in the 1937 Housing Act which, they say, was designed primarily to provide employment, not housing. Abrams has said, for example, in regard to the 1949 act,

> "housing programs and community improvement were to be carried out to respect the private enterprise process. The entrepreneur was to be the main artery

through which federal slum clearance money and credit were thereafter to be channeled. General welfare in housing was to be served by entrepreneurial welfare. This applied both to FHA programs as well as to the new urban renewal program which the 1949 act authorized." (1, p. 75)

Abrams then goes on to say,

"If public welfare and private welfare were to find common sense in a common effort, it could be justified politically only if it also brought some dividends to the common man, i.e., the "people".....

The people, under the new formula, however, were now to be mostly the remainder men, the residual legatees after the direct beneficiaries had had theirs."

Even though a policy of subsidizing private enterprise may have had merit in the 1930s, when the entire economy was down, this policy has little validity today. Today, it is not private enterprise which needs subsidization, but those people which cannot afford to pay private enterprise the profit it requires. (13, p. 257)

what's the difference

The Predominantly Residential Clause. Even though the 1949 act attempted to bind urban redevelopment to residential construction, according to Lawrence Friedman, it has been unsuccessful in this attempt. Friedman notes the goal statement in the 1949 act and its obvious implications, but then cites section 110(c) of the act which limits project areas which were either "predominantly

residential" before development or "redeveloped for predominantly residential purposes." This clause has made it possible to tear down a slum and erect a totally non-residential use. Thus, "urban redevelopment was not a program to build houses, not a program for sheltering the urban poor..." "Nor did the clause in any way require the construction of low-cost housing." (13, p. 250-251)

Thus, a program that had begun as a source of public housing for the poor has become a program which can remove the poor's housing. (13, p. 157)

Abrams has documented the loss in the total housing stock because of urban renewal and other public works such as freeways, airports, and other enterprises. The net losses from one housing stock during the 1950-1956 period was more than 200,000 units per year. Between 1957-1959 it jumped to 475,000 per year. Almost half of this loss was due to urban renewal. (1, p. 43-44)

In an examination of the intent behind the Housing Act of 1949, Abrams found the underlying principal to be the elimination of slums and the provisions of decent housing. Public housing, he found, was to be an important part of the program. (1, p. 82)

However, reports Abrams, the urban renewal-public housing partnership has not been viable. Abrams attributes this to the involvement of private enterprise. When private enterprise is given control of the cleared slum land, construction of public housing is foregone in favor of more profitable undertakings.

> "Since the welfare of the building industry had won equal place with the people's welfare in the 1949 act, it seemed inevitable that sooner or later the interests of the lower-income families

would be forgotten. When the entrepreneurial and the general welfare are bracketed in the same legislation, it should not be surprising that the social purpose will be subordinated. It was." (1, p. 85)

Need for a Consistent Policy. Martin Myerson has noted the same inconsistency which Abrams has detailed. He points out that there is a basic inconsistency between the national housing goal and the legislation enacted to reach that goal. Even though the major aim of the policy was to improve the position of lower-income families, the legislation has had the effect of benefitting middle-income people. "Most gains have been for builders and mortgage lenders. As for urban renewal, it has often displaced the poor in favor of the rich." (6, p. 74)

Myerson finds other inconsistencies in U. S. housing law; among them a conflict between the FHA mortgage insurance program and urban renewal. While the FHA program has encouraged middle-income housing in the suburbs, urban renewal has a chief aim, as employed in many cities, of retaining middle-income families within the central city. (6, p. 70)

Myerson goes on to explain the inconsistencies in this way: "The truth is we have never tried nationally to sort out our housing purposes and arrive at a decision on whether we wanted housing policy to encourage home ownership in the suburbs, or to provide a stable market for downtown merchants, or revitalize a tax base for older cities, or provide employment, or help stabilize the economy, or provide decent quarters

for varied income groups, racial groups and family sizes and compositions, or increase the housing supply, or aid the middle-income family, or prop up the marginal home builders, or encourage mass production. There is evidence that we have tried to reach all of these purposes, but little evidence of a weighing of purposes, or an analysis of how well a particular activity achieved its desired effect, or whether one program erased the benefits of another..." (6, p. 75)

Summary of U. S. Housing and Urban Renewal Programs

The Federal government first entered the housing field in the 1930's through the creation of the Federal Home Loan Bank System and the Federal Savings and Loan Associations in 1932 and 1934, and FHA in 1934. The area of public housing was entered in 1933 with the National Industrial Recovery Act, and the Housing Act of 1937. These acts all had the primary purpose of creating employment through stimulation of the construction industry.

As far as public housing is concerned, the NIRA allowed the Federal government itself to construct public housing throughout the Nation. The 1937 Housing Act reduced the Federal government's participation to that of subsidizing local authorities in their efforts to construct public housing. The 1937 act also tied the creation of public housing to slum clearance through the "equal elimination agreement."

The Housing Act of 1949 separated public housing and slum clearance, or urban renewal, into two different fields and created the tri-partite partnership in housing and urban development of

Federal government, local government, and private enterprise, placing the actual responsibility for development on private enterprise. The 1949 act also declared the national housing policy to be the provision of "a decent home and a suitable living environment for every American family."

Basically, the same programs have been continued throughout the 1950's and 1960's with the programs becoming more flexible, through provisions for rehabilitation, for example; offering slightly more encouragement to local government and private enterprise; and offering slightly broader subsidies to low-income families.

The Model Cities Act of 1966 offered the latest approach to housing and urban development. Instead of concentrating solely on the physical aspects of housing and renewal, this program requires a multi-faceted approach including such additional areas as social welfare, education, health, employment, and crime.

Criticisms of the national housing programs range from the specific to the all-inclusive. Specific criticisms include the tying of public housing to slum clearance in the 1937 act, which reduced the possibility of enlarging the nation's housing stock; and the 20% gap requirement which excludes a specific portion of the population out of either public or private housing; and the design limitations put on public housing.

A broader criticism has been leveled at the dependence on private enterprise in the housing and urban renewal process. This dependence, some critics feel, has severely limited the degree which the programs serve the general welfare, because the welfare of private enterprise must be served first.

The most general criticism is that programs and policies, either stated or implied under housing legislation, are often contradictory, and in some cases conflicting. Some feel that our housing needs have not been well examined, our housing purposes have not been well thought out, and our existing housing programs have not been well evaluated.

Housing in Western Europe

The United States is not alone in having a housing problem. Most of the nations of the world are faced with some degree of housing shortage, with the newly developing countries having perhaps the most crucial housing dilemma. The countries of Western Europe, however, have housing problems which are most closely akin to those of the United States, and consequently, the attempts of these countries toward solving their problems provide the most valuable information for those who wish to develop a housing policy for the United States.

Early Governmental Involvement In Housing

In many European countries housing has long been viewed as an appropriate sphere for governmental action. During the nineteenth century some of these countries began to regard the provision of housing for the people as a social concern. Holland passed a Housing Act in 1901 that stated that housing was to be the subject of constant care and activity of both the national and local governments. (18, p. 1) The care provided for by this act extended to governmental funding of a considerable part of the financial burdens entailed in supervising and stimulating the housing supply. Likewise

in Britain, housing for the people has been a major concern of government policy for more than 50 years. (9, p. 1)

In certain countries of Europe, housing became, at an early stage, the concern of groups of people, but not a concern of the government until somewhat later. In Scandinavian countries cooperative housing has long been accepted. Housing cooperatives began to be formed in Sweden in the 1870's, but it was not until after World War I that the Swedish government assumed a major role in housing. (7, p. 519, 29, p. 62)

West Germany seems to have a history most comparable to that of the United States in regard to the reliance on private enterprise for provision of housing, and the minimization of governmental influence until the period between the World Wars. (29, p. 113)

The Post-War European Housing Problem

Like the United States, virtually all western European nations faced critical housing shortages following World War II. The most immediate cause was the war itself. In some countries major portions of the housing in existence at the beginning of the war was destroyed and much of that not destroyed was badly damaged. Lack of adequate maintenance of existing structures lead to obsolescense of many houses which were not directly damaged by the bombing. In addition, house building had virtually ceased during the war. (29, p. 1)

At the same time, most of the countries had experienced a large increase in population during the war, and this was generally accompanied by a sharp rise in marriage rates. Incomes rose shortly after the war, promoting a rise in the standard of living desired by Europeans. This lead to demand for new and better houses. Some

families who had doubled up in the war years, now sought private quarters. Large numbers of refugees entered some countries, particularly West Germany and The Netherlands, creating extra demand for housing. (7, p. 511)

Approaches Taken Toward Alleviating the Housing Problem

The worst effects of the immediate post-war housing shortage were attacked through governmental rationing and rent control in most European countries. (28, p. 65) Emphasis in the early post-war years was on repairing damaged buildings rather than on new construction. The collapse of the building industries during the war called for revitalization through governmental control and subsidy.

Space in urban areas that had been bombed out during the war was used for postwar housing, so land was relatively cheap at first. When this supply was diminished within a few years, European governments, still faced with serious housing shortages, sought increased legal powers for acquisition of land in urban areas, and they turned to new town planning as an aid to utilization of non-urbanized land for housing. (28)

European countries generally concentrated on trying to increase the supply of housing to a reasonable level before emphasizing the need to increase the desirability of the housing inventory. In other words, they sought to insure that there was enough decent housing for slum dwellers to move into before they began to tear down the slums. (3, p. 128; 19, pp. 17-18)

Volume of Housing Construction

As a result of the attacks made by European countries on their housing shortages, new housing construction has progressed at an impressive rate in most of the European countries since 1950. The highest level of production has taken place in the country that experienced the most serious war damage - West Germany. A total of 561,000 dwellings was completed in 1956, representing 11 new dwellings. for every 1000 inhabitants of West Germany. (7, p. 516)

The following table shows comparative rates of construction of dwelling units in several European countries for 1956. The corresponding figures for the United States are also shown for purposes of comparison. (29, p. 223; 7, p. 538)

DWELLING UNITS COMPLETED PER 1000
INHABITANTS, SELECTED NATIONS, 1956

Country	DU Per 1000 Person, 1956
United Kingdom	6.0
Sweden	7.9
Denmark	4.5
Norway	8.0
West Germany	11.0
The Netherlands	6.4
France	5.5
Belgium	4.8
Switzerland	7.9
United States	6.6

It is interesting to note that the recommendation of the President's National Commission on Urban Problems (Douglas Commission, 26) concerning new housing needs for the coming years in the United States, calls for 2.0 to 2.25 million housing units to be built each year. This would represent roughly 10 new units per 1000 individuals per

year - seemingly not an impossible figure for this nation in view of the fact that West Germany has exceeded that rate of construction in the past.

Financing Methods and Sponsoring Groups

Perhaps the most basic differences between the United States and Western European nations concerning housing are the methods of financing used and the types of entities which sponsor housing construction. In Sweden, for example, cooperative housing, sponsored by nation-wide non-profit associations of tenants, represented about 30 per cent of the entire housing construction in 1960. Approximately another 30 per cent of Sweden's housing that year was built by state and local housing authorities, while only 40 per cent of the housing construction was built by private enterprise. (7, p. 518) In contrast, cooperative housing is almost non-existent in the United States and state and local housing authorities only account for a small percentage of the total housing supply. The large majority of housing in the U. S. is built by private enterprise.

The following table gives a breakdown of dwelling units constructed by the type of investor, for selected nations for the years 1957 and 1960. (7, p. 537)

PERCENTAGE DISTRIBUTION OF DWELLING UNITS COMPLETED,
BY TYPE OF INVESTOR, 1957-1960,
SELECTED WESTERN EUROPEAN COUNTRIES

	1957	1960
United Kingdom:		
Local authorities	55.1%	42.2%
Other authorities	3.0	1.5
Private persons, unaided	41.9	56.3

PERCENTAGE DISTRIBUTION OF DWELLING UNITS COMPLETED,
BY TYPE OF INVESTOR, 1957-1960,
SELECTED WESTERN EUROPEAN COUNTRIES (con.)

	1957	1960
Sweden:		
State and local authorities	30.1%	31.1
Cooperatives	27.2	29.5
Private	42.7	39.4
Owner-occupiers	21.7	22.2
Others	21.0	17.2
Denmark:		
State and municipalities	7.8	4.8
Housing associations	48.7	27.5
Private persons	43.5	67.7
Aided	36.1	21.9
Unaided	7.4	45.8
West Germany:		
Public authorities	2.5	2.4
Housing cooperatives	29.5	26.1
Private	68.0	71.5
Individuals	60.4	63.9
Enterprises	7.6	7.6
The Netherlands:		
State	0.7	0.4
Municipalities	26.1	23.2
Housing associations	27.3	26.2
Private	45.9	50.2
France:		
State (reconstruction)	12.0	4.0
Public bodies (Low cost)	26.8	30.6
Private	61.2	65.4
Aided	53.2	55.1
Unaided	8.0	10.3
Belgium:		
State, local authorities	0.1	0.2
Semi-public bodies	13.9	14.1
Private	86.0	85.7
Aided	29.5	20.4
Unaided	56.5	65.3
Switzerland:		
Public bodies	2.1	2.6
Cooperatives	9.7	12.6
Private	88.2	84.8
Individuals	44.2	47.1
Others	44.0	37.7

This table shows that European countries differ as to the degree of governmental involvement in financing housing. Belgium, Switzerland and West Germany rely heavily on private rather than governmental financing, while nations such as the United Kingdom and The Netherlands lean the other direction.

Several Successful Housing Programs of Selected Countries

A review of all the different housing policies and programs of European countries is, of course, beyond the scope of this report. The following summary of several housing programs which have proved successful in certain nations is only presented to indicate the types of different approaches to the housing problem in Europe.

New Towns. The most spectacular of the post-war programs concerning housing in Europe, has been the building of new towns. The arguments in favor of new towns were simple. The large cities had grown too large, improved housing conditions within them could not be obtained except "...at unwarranted social and economic costs. Yet the need for more houses was not abated and further large-scale peripheral expansion could not be countenanced." (11, p. 69)

In several European countries it became an accepted fact that neither private enterprise nor local governmental machinery were capable of undertaking town building on the scale required. Consequently, new towns have been built by government sponsored and financed public corporations in England and several other countries. (9, p. 12)

The degree of success of these ventures is still being evaluated, but the application of some such programs to the situation in the United States may well be desirable in view of the tremendous

problems private enterprise is now experiencing in the nation in trying to produce new towns without government assistance.

Income Tax Subsidies. A key feature of West Germany's housing program is the use of income tax subsidies as a device to direct private investment into desired types of housing investment. Rapid amortization for Federal income tax purposes of private investments in low-income rental housing provides a degree of incentive for private investors to build that type of housing in West Germany. The same idea could be extended to help owner occupants unable to afford housing of acceptable standards without subsidy somewhat in the manner of the income tax purposes used by several of the states in the country. (It is interesting to note that the President's National Commission on Urban Problems (Douglas Commission, 26) rejected tax incentives to industry as a solution to the housing problem).

Housing Cooperatives. Sweden's nation-wide housing cooperatives carry on the business and trade of constructing and managing house property. They "do not trade for profit and can therefore provide accommodations at a reasonable cost." (16, p. 5) Units are made available to the members of the general public who enjoy the right of permanent occupancy at rents computed on a cost basis, or to cooperative shareholders of local housing societies who actually own collectively the dwelling complex they live in. The government encourages the cooperatives in various ways such as guaranteeing interest rates on loans.

Family Housing Subsidies. Sweden has also successfully utilized annual family housing allowances paid by the national government to needy families with two or more children. These direct

subsidies are based on a flat rate per family with additional increments for each child. Thirty per cent of all Swedish families with 2 or more children received such allowances in 1956. (29, p. 85) These direct housing subsidies are viewed as an alternative to public housing, which enable disadvantaged families greater choice and independence in obtaining homes for themselves.

Basic Lessons to Be Learned From Western Europe

In summary of this quick review of housing in Western Europe, it can be said that all of these nations share with America the problem of insufficient decent housing in suitable environments for all people. Each of these nations has attacked the problem in ways consistent with each societies' values, but all, to one degree or another, have acknowledged the responsibilities of the central government to help try to find a solution to the problem.

Analysis of Existing Housing Policy Statements

Existing housing policy statements are analyzed in this section of the chapter. The various statements are broken down into the five policy considerations or criteria developed for the housing policy presented in this report. Included are equal opportunity, total environment, economy, adequate supply, and coordination. By arranging each policy statement according to these categories, comparison and evaluation of the different statements is facilitated.

The American Institute of Planners

The A.I.P. has formulated a national housing policy statement with the two-fold objective of 1) establishing professional interest in the field of housing and 2) beginning work on such a statement for the Institute. Major emphasis of the Institute is placed on reconditioning existing programs originating at the Federal level.(5)

A breakdown of the institute's housing policy according to our criteria follows:

Equal Opportunity

- Implementation of open housing
- Analysis of urban renewal and relocation for this purpose
- Intermix development patterns

Total Environment

- Necessity of new towns and vacant urban land development
- Necessity of community facilities
- Diversify residential opportunities near work, recreation, shopping, etc.
- Improve environmental health -- physical, mental and social

Economics

Economy

- Encourage rent subsidies
- Encourage tax concessions
- Encourage low interest rate loans
- Encourage mortgage and development insurance

Adequate Supply

- Encourage Federal Government to set the pattern
- Adjust the role of private housing activity to fit the need
- Provide housing for all sectors; farm, elderly, emergency, etc.
- Expand and reshape the role of urban renewal in providing an adequate supply

Coordination

- Coordinate housing development and economic development programs
- Necessity of Federal government to take the dominant role

Atlanta, Georgia

The Housing Resources Committee of Atlanta was created to promote and accelerate the low-income Housing Program in Atlanta. Therefore, this committee's policy statement places primary emphasis on coordination between government and groups and individuals involved with housing. Secondary emphasis is on the environmental and economic aspects of such a program.

A break down of the committee's policy statement according to our housing policy criteria follows:

Equal Opportunity

- Promote and explain the new general housing act [redacted]

Total Environment

- Continue to aid efforts to eliminate social problems connected with housing

- Place housing near jobs and public facilities in the City of Atlanta and throughout the metropolitan area

- Assist in the stabilization of existing neighborhoods and encourage the construction of middle and upper income residential developments in the city of Atlanta

Economy

- Further involve the business community in the housing program

- Attempt to involve persons in the slums in the business side of demolition, rehabilitation or erecting new units

Supply

- Eliminate existing slums and provide housing as needed in the area for those who wish to remain there

- Continue efforts to promote innovative low-income housing construction in Atlanta

Coordination

- All bodies concerned with housing review the present and continuing needs for low-income housing

- Assist nonprofit groups and developers in their efforts to obtain land and construct housing

- Consider national and total legislation useful to the housing program

- Continue efforts to sell the need for low-income housing to the people in metropolitan Atlanta

The National Association of Housing and Redevelopment Officials

NAHRO has adopted a statement of goals to cover all areas of housing needs. The priority of this statement is aimed at developing an adequate housing supply. (20)

A breakdown of the association's policy according to our policy considerations follows:

Equal Opportunity

- Recognize the need to establish an environment so everyone has the opportunity to exercise his responsibilities

Total Environment

- Redefine the role of urban renewal in total community development

Economy

- Initiate programs to complement the processes and buttress the weaknesses of private housing--remain flexible

Adequate Supply

- Enforce housing codes to retain existing supply
- Recast programs to meet needs of low-income families

Urban Housing Committee

The President's Committee on Urban Housing was formed to explore ways in which private enterprise can build housing for the urban poor and how the nation can build and rebuild the city slum. With the above purpose in mind, the committee put primary emphasis on supply, equal opportunity, and economy in their policy statement. (27)

A break down of the committee's housing policy according to our policy criteria follows:

Equal Opportunity

- Decent housing is essential in helping lower-income families help themselves achieve self fulfillment in a free and democratic society

- Federal housing assistance is essential for millions of families unable to afford the market price of standard housing

Total Environment

- Eradication of urban blight, in itself, will not eliminate slums

Economy

- Public expenditures for decent housing for the nation's poor, like public expenditures for education and job training, are not so much expenditures as they are essential investments in the future of American society

- Private enterprise can best provide the talent and the major effort (if there are opportunities to earn reasonable profits and to function at maximum efficiency)

Adequate Supply

- Accelerate and increase production and rehabilitation of decent housing for the poor

- Urgent need to speed up and expand Federal programs for housing the urban poor

Coordination

- Attract the fullest private participation in developing, sponsoring and managing Federally subsidized housing

Washington, D. C.

The City Planning Office in Washington, D. C. has developed a suggested city-wide housing policy. The policy covers 20 points and is aimed primarily at providing an adequate supply. (4)

A break down of the policy statement according to the five policy categories follows:

Equal Opportunity

- Overcome the problem of income and race
- Open the suburbs
- Foster public actions that disperse Negro concentrations

Total Environment

- Provide new housing construction and public improvements
- Design new low income community within the city
- Inspect other measures that may be needed

Economy

- Develop timing to meet market conditions
- Provide rent supplementation

Adequate Supply

- Statement on residential clearance and rehabilitation under urban renewal
- Enforcement of codes
- Building low and moderate income housing
- Providing for expendability of housing
- Need for experimentation

Coordination

- Change Federal legislation
- Create greater public involvement
- Inform the community

ARTICLE XIII

"A" Medium Density Apartment District
(Adopted April 10, 1968)

"A" - Medium Density Apartment District

Section 1: Intent of District

a) The intent of this district shall be to provide standards for medium density apartment dwellings which will:

i) encourage high standards of apartment development, and a desirable living environment,

ii) encourage the provision of usable open and recreation areas, and

iii) be located in areas of intense development near such services as retail shopping, schools, and major thoroughfares and collector streets.

b) The regulations set forth in this Article, or set forth elsewhere in this Resolution when referred to in this Article, are regulations in the "A" - Medium Density Apartment Dwelling District (see Articles XIX, XX, and XII). An application for rezoning to "A" - Medium Density Apartment District shall be supported by a site plan for the proposed development.

Building permits shall be issued only for buildings and improvements subsequent to review and approval of plans for drainage, sewerage, driveways, and parking areas by the Department of Public Works.

Section 2: Use Regulations

A building or premises shall be used only for the following purposes:

1. Any use permitted in the R-1 Single-Family Swelling District (see Article VII, Section 2.)

2. Two-family dwelling.

3. Multiple dwelling.

4. Rooming house and boarding house.

5. Institutions of a religious, educational or philantropic nature, but not penal or mental institutions. (These uses are contigent upon compliance with Article XIX--Additional Use Regulations).

6. Hospital, except a criminal, mental or animal hospital. (These uses are contigent upon compliance with requirements of Article XIX-- Additional Use Regulations).

7. Private club, fraternity, sororities, and lodge except those whose principal activity is a service customarily carried on as a business. (These uses are contigent upon compliance with Article XIX-- Additional Use Regulations).

8. Accessory use or buildings, and uses customarily incidental to any of the above uses, including as follows:

   a) Single-family and Two-family Dwellings: Accessory buildings that are not a part of the main structure shall be located in the rear yard not less than ten (10) feet from the main building nor less than five (5) feet from any side or rear lot line.

   b) Multiple Family Dwelling: All accessory buildings shall be located in the rear yard and not nearer to any lot line than the distance prescribed for side and rear yards.

   c) Principal advertising signs provided that only one such sign containing not more than six (6) square feet in area shall be permitted for each development

or lot, and that all such signs shall be placed either on the building or at least thirty (30) feet from the street right-of-way.

d) Unenclosed recreational facilities, except swimming pools, may be placed within any required side or rear yard, provided that any such use shall not be permitted nearer to any lot line than twenty-five (25) feet.

e) Swimming pools may be located within the buildable area of any lot used for multiple-family dwelling purposed provided that no swimming pool may be placed nearer than twenty-five (25) feet to any rear or side lot line, nor nearer than forty (40) feet to any public street right-of-way line. Provided further that when located adjacent to a single-family residential district, such pools shall not be located within one hundred and fifty (150) feet thereof, except in cases when located so as to be screened from such single-family districts by a multiple-family dwelling greater in length by a minimum of twenty (20) feet to each side of such pools, the distance of one hundred and fifty (150) feet shall not be required. A fence of a minimum height of five (5) feet shall be provided around the perimeter of all swimming pools.

Section 3: Off-Street Parking Requirements

1. Location of Parking Spaces and Driveways:

   a) No off-street parking shall be permitted in any front yard, nor between any building and street right-of-way line.

   b) No off-street parking or driveways shall be located within ten (10) feet of any lot line.

   c) Driveways serving more than two (2) parking spaces shall provide an adequate turn-around space within the lot.

2. Parking Space Requirements:

   a) Single-family and two-family dwellings: Two (2) parking spaces for each dwelling unit.

b) Multiple-family dwellings: Two parking spaces for each dwelling unit.

c) Fraternities and Sororities: One (1) parking space for every three (3) beds contained in the structure.

d) Rooming house and boarding house: One (1) parking space for every two (2) beds contained in the structure.

e) Private club or lodge: One (1) parking space for every five (5) active members.

f) Hospitals or similar institutions: One (1) parking space for every four (4) beds, plus one (1) space for each staff or visiting doctor (based or the average number), plus one (1) space for every two (2) other employees.

g) Schools and public buildings: One (1) parking space for every ten (10) seats in the auditorium or similar place of public assembly.

h) Church, temple or other place of assembly: One (1) parking space for every eight (8) seats in the main auditorium or similar place of public assembly.

Section 4: Height Regulations

No building or structure shall exceed three (3) stories or forty-five feet in height.

Section 5: Area Regulations

1. Yard Requirements

a) Front Yard: There shall be a front yard having a depth of not less than forty (40) feet.

b) Side Yard: There shall be two side yards one on each side of the buildings or not less than twenty-five (25) feet. Where a side yard is along a side street, that side yard shall not be less than forty (40) feet in width.

c) Rear Yard: There shall be a rear yard having a depth of not less than twenty-five (25) feet.

d) Adjacent to Single-Family: Where property located adjacent to a single-family residential district is rezoned to "A" - Medium Density Apartment District, a buffer zone shall be created as defined in Article III, Section 1, Paragraph 7. This buffer zone shall provide a permanent fence, wall, or evergreen planting screen which will interrupt vision between adjoining properties. This screen shall be at least six (6) feet in height except that initially an evergreen planting screen may be less than six feet if plants are provided which will ultimately attain a height of six (6) feet. No improvements except required drainage and access facilities shall be permitted within this buffer area. Where adjacent to single-family zoning, the buffer and required building setbacks shall be as follows:

SIDE YARD		REAR YARD	
Buffer Width	Total Building Setback from Side Lot Line	Buffer Depth	Total Building Setback from Rear Lot Line
25 feet	50 feet	50 feet	100 feet

Property within such buffer areas may be included within the lot area for density and lot coverage purposes.

2. Lot Area Per Family

Every dwelling shall be located on a lot having a public street frontage of not less than two hundred (200) feet and shall contain the following lot area:

TYPE OF DWELLING	LOT AREA
i) Single-Family	18,000 square feet
ii) Two-Family	18,000 square feet
iii) Multiple Family	3,110 sq. ft. per family unit (14 units per acre)

3. Lot Coverage

Not more than forty (40) percent of any lot may be covered with buildings, structures, parking or driveways, provided, however, that unenclosed and uncovered recreation areas and swimming pools need not be computed as lot coverage.

Section 6: Residential Floor Area Regulations

1. Each single-family dwelling shall have a minimum floor area of eleven hundred (1100) square feet.

2. Each two-family dwelling shall have a minimum floor area of eight hundred (800) square feet.

3. Each multiple-family dwelling, other than efficiency or studio apartments, shall have aminimum floor area of seven hundred (700) square feet.

4. Each efficiency or studio apartment shall have a minimum floor area of four hundred and fifty (450) square feet.

Section 7: Screening Garbage and Storage Areas

All exterior garbage, incinerators, or other outside storage areas shall be screened by a solid enclosure of not less than four (4) feet in height.

Section 8: Open Space Requirements

1. Open space requirements for a multiple dwelling or more than one multiple dwelling when placed on the same lot, parcel or tract shall be as follows:

   a) The minimum distance between the sides of the same building measured perpendicularly or the side of another building shall not be less than two (2) times the side yard requirement (or 50 feet).

b) The minimum distance between the side having the least dimension of a building and the side having the least dimension of another building shall not be less than forty (40) feet.

c) The distances prescribed above shall control, except that the minimum distances between such buildings and any projections thereto, when so arranged shall be as follows:

Front to Front	Fifty (50) feet
Front to Rear	Sixty (60) feet
Rear to Rear	Fifty (50) feet
Front to Rear to Side	Forty (40) feet
All Other Arrangements:	Thirty (30) feet

RURAL HOUSING ALLIANCE

International Self-Help Housing • Low Income Rural Housing

Suite 903 Dupont Circle Building, 1346 Connecticut Avenue, N.W., Washington, D.C. 20036

Phone (202) 659-1680

KEY FEATURES OF PUBLIC HOUSING PROGRAM

* It requires administration by a housing authority, which is an agency of local government.

* Except for the utilization of leased housing, all public housing programs require a currently approved Workable Program for Community Improvement.

* Long-term acquisition costs (debt service) of the program are fully subsidized by the federal government; current operating costs are largely borne by the tenants, with some indirect subsidy from local government and, in certain circumstances, additional subsidy from the federal government.

* The maximum income limit for admission to public housing must be at least 20% below the income level necessary to get adequate housing on the private market.

* Public housing can be single-family detached or semi-detached, or any variety of multi-family units; it can be on contiguous or scattered sites; and it can be acquired by the local authority through construction, purchase, or leasing.

* Where an adequate supply of acceptable housing exists, the leased housing program can provide the most immediate response to low-income housing needs.

* Eventual ownership of their homes is possible for some tenants of public housing.

GLOSSARY OF TERMS

Annual Contributions Contract - Agreement under which the federal government commits itself to make annual payments of a certain size to a local authority with respect to a given public housing project.

Contract of Sale - Formal agreement under which a local authority commits itself to purchase from a developer certain specified units at an agreed price, and the federal government indicates its readiness to cover the costs through its Annual Contributions.

Cooperation Agreement - Agreement between the local authority and local government (city or town or county) under which the government gives tax exempt status to the authority and its property and agrees to provide such municipal services as police and fire protection, trash removal, etc.; and the authority agrees to make payments to local government in lieu of taxes (usually at a level of 10% of the rents collected, excluding utilities and maintenance.)

Debt Service - Regular payments for principal and interest on borrowed money.

Housing Assistance Administration (HAA) - The agency within the Department of Housing and Urban Development which administers the federal government's programs in connection with public housing.

Housing Assistance Office (HAO) - The regional office of the Housing Assistance Administration (located in the same six cities as the regional offices of the Department of Housing and Urban Development).

HUD - The Department of Housing and Urban Development.

Letter of Intent - Official indication from a local authority to a developer of the authority's readiness to purchase housing from the developer in accordance with the developer's proposal.

Local Housing Authority (LHA) - The public agency set up by state or local government under state law to operate publicly-owned housing for low income people. (Though these have close and continuing relations with the federal Housing Assistance Administration, they remain local agencies.)

Median - Occupying the middle position. Not to be confused, in statistics, with the arithmetic average or mean. (For the array of numbers 2,3,4,7, and 9, the median would be 4, while the mean would be 5.)

Preliminary Loan Contract - Agreement between the Housing Assistance Administration and a local authority by which HAA agrees to loan the LHA money for such things as market surveys, architectural work, and other preliminaries to the construction of a project.

Program Reservation - Action by the Housing Assistance Administration 'earmarking' the necessary amount of its authorized funds to meet the requirements of a specific project on which it has received and approved an application. This 'reserves' those funds for that project, subject to the further fulfillment of all requirements.

Turnkey - Traditionally the term for completed housing, ready for the buyer to "turn the key" and enter. In the public hous gram, used to refer to programs providing a more prominent role to the private sector, as in Turnkey I where the local authority buys completed housing from a private developer, and Turnkey II where the authority 'buys' management of the units from a private agency.

Workable Program - Technically, the 'Workable Program for Community Improvement.' It represents the community's commitment to programs, such as orderly land use and planning, building and zoning code enforcement, relocation of displaced residents, provision of community facilities, etc., together constituting a coherent and comprehensive plan of action. A Workable Program which is feasible and which meets approved standards is required as a condition for certain forms of federal aid in the fields of housing and urban development.

Housing Starts, Public and Private, 1946-1967

PUBLIC HOUSING

Public housing is the oldest, and until recently was the only, national program in the United States in the field of low income housing. Moreover, public housing itself is not yet middle-aged, dating back only to the New Deal period. Prior to that time, those who could not afford decent housing (or any housing) on the private market were either ignored or left to such facilities as might be provided by private charity or by such local institutions as the county poorhouse. With the New Deal's official recognition that poverty might be -- at least in part -- a result of social and institutional rather than purely personal inadequacies, the United States committed itself as a nation to provide decent housing at rents they could afford to those at the lower end of the income scale.

The basic legislative authority for the program is the United States Housing Act of 1937, as amended. This initial legislation reflects a political decision of key importance to the program: the decision that while it would be essentially a federally financed program, it would be locally operated. Thus, while federal funds underwrite the program's major costs, local housing authorities provide and operate public housing, issuing their own bonds, hiring their own staff, etc. The federal agency established in 1937 to make loans and contributions to the local agencies was the U. S. Housing Authority. Ten years later, when the Housing and Home Finance Agency was set up, the Authority became the Public Housing Administration. With the creation of the Department of Housing and Urban Development in 1965, the functions of the Public Housing Administration were vested in the Secretary and are administered through the Housing Assistance Administration (HAA).

Local Housing Authorities are established under state laws as autonomous public-corporate entities. Their form will vary, but probably the most common is a five-member commission, appointed by the local governing body (town or city council or county commission, for example), or executive (such as the mayor), and serving without pay. As of the end of 1967, there were 2,156 local housing authorities operating in 2,913 localities. ("Operating" means at least having reserved funds with the Housing Assistance Administration for a proposed project.) To put these statistics in perspective, two others are required. Half of these authorities had less than 100 units each in their programs, and only 14% of them had as many as 500 units each. Moreover, 95% of the localities served by local housing authorities had populations (in 1960) of less than 100,000.

The quantity of housing provided under the program has also been a good deal less than spectacular. As of mid-1968, there were 704,594 units of low-rent public housing under management in the United States. (And 12% of these were units specifically designed for the elderly, a form of public housing that has been less politically vulnerable than the rest of the program.) To put into perspective this figure on the net production of the program over more than three decades, it should be noted that the Housing Act of 1949 called for 810,000 units over a six year period. In fairness, it should be noted that completions during the first half of the 1960's were almost twice the number of completions in the last half of the 1950's, and that HAA claims a record 74,859 units added between September, 1967 and September, 1968.

Functions of the LHA

As has been noted, the Local Housing Authority is an agency of local government. In addition to authorizing its establishment in the first place, local government generally appoints the membership of the Authority and must give specific approval to all program applications which the Authority makes to HUD's Housing Assistance Administration. Moreover, participation in most aspects of public housing requires the locality to prepare and secure HUD approval of a Workable Program for Community Improvement. (Elements of a Workable Program include plans for adoption or improvement of building codes; provision of a master plan covering land uses, thoroughfares, and other community facilities; neighborhood analyses; review of community administrative organization and of financing plans for community improvement; plans for housing of families displaced by government activity; and provision for citizen participation in urban renewal and similar programs.) The only types of public housing programs for which the federal government will provide assistance in the absence of a currently approved Workable Program are leased housing and the purchase of leased housing for resale to the tenants. (It should be noted that there is federal assistance available to local communities which want to prepare a Workable Program. It is clear, however, that some communities have utilized the Workable Program requirement -- by means of noncompliance -- as a way of excluding public housing in particular and low income housing in general.)

The Housing Assistance Administration, through its regional offices, will furnish advice and technical assistance to a locality in forming a local housing authority, as well as in the subsequent preparation of an application for a low-rent housing program. (HAA has regional offices in New York, Philadelphia, Atlanta, Chicago, Fort Worth, San Francisco, and Puerto Rico.)

The basic functions of the local authority include the following: determine the need for low-rent public housing; prepare a specific plan or plans to meet that need; enter into an agreement of cooperation with the local governing body (under which the governing body agrees to provide the usual municipal services and the LHA agrees to make payments in lieu of taxes); secure the actual housing -- either by construction, rehabilitation, purchase (Turnkey), or lease; finance the capital costs of the project through long-term bonds (which are actually repaid from the assistance contributions from the federal government); and manage the housing.

In preparing its plans to meet the need for low-rent public housing, the local authority must establish income eligibility limits and rent schedules. These will vary from locality to locality and according to size of family and character of the housing.

To make certain that public housing does not compete with private rental housing and is instead confined to those who can't afford decent housing on the private market, the law requires a 20% gap. That is to say, the top income which a family can have and still be admitted into public housing must be at least 20% lower than the income a family of that size would need to pay the lowest rents at which "a substantial supply of decent, safe, and sanitary housing" is being provided by private sources ("unaided by public subsidy"). The following list of admission limits for a family of five in various urban localities illustrates the range of income eligibility.

Birmingham, Ala. -	$ 3,800	Newark, N.J. -	$ 4,740
Los Angeles, Calif. -	5,400	New York, N.Y. -	7,476
Washington, D.C. -	4,100	Philadelphia, Pa. -	4,000
Chicago, Ill. -	6,600	Austin, Tex. -	4,400
Boston, Mass. -	5,900	Milwaukee, Wis. -	5,150
Detroit, Mich. -	5,400		

In addition to setting income limits for initial admission to public housing, the local authority establishes a second set of income limits, related to continued occupancy. In other words, a family may be admitted to public housing and then enjoy a subsequent rise in income. Even if its higher income is above the maximum allowed for admission, it can continue to occupy public housing until its income continues to rise to a level above the second set of limits -- that determining continued occupancy. This latter limit is supposed to be set so that a family with income above it can, by making a reasonable effort, obtain suitable private housing it can afford.

For the country as a whole, the average, non-elderly family occupying public housing in mid-1967 had a median income of $3,447. (The comparable figure for elderly families was $1,563). The median rent for non-elderly families in public housing was $58 a month (and for elderly families it was $36 a month).

While the Local Authority handles the design and construction of public housing, the law does specify maximum costs for the actual dwelling units and equipment. In specific cases, the Secretary can authorize costs somewhat higher than the normal maximum, and this is frequently required. In Fiscal 1967, the average cost, nationwide, was $15,618 per unit, including $2,734 for site acquisition and development. (Site costs in recent years have averaged nearly a fifth of the total per unit costs.)

Financing

Financial assistance to local housing authorities comes in three basic forms. The first is a preliminary loan contract between the Housing Assistance Administration and the local authority. This may be secured after approval of the initial application and is designed to provide the funds for project planning -- architectural work, market surveys, site selection, and the like. These preliminary advances are limited to a maximum of $150 per unit. Once planning is completed, assuming that construction or rehabilitation is being used to provide the housing, HAA is authorized to make construction loans to the authority, up to 90% of the total development cost of the project. These advances are repaid when the authority subsequently sells its own long-term housing bonds on the private market. The most important form of federal assistance is the annual contributions which constitute the security for those long-term bonds.

Under the annual contributions contracts which HAA enters into with the local authorities, the federal government agrees for each approved project to make payments sufficient to retire the capital cost over a 40-year period. It is this commitment on the part of the federal government which makes it possible for the local authority to sell its long-term bonds. Moreover, with these annual contributions covering the debt service costs, the rents set by the authority need only be sufficient to pay operating expenses and make payments in lieu of taxes to local government. In effect, then federal funds pay for the acquisition of the housing and the eligible tenants pay only the expenses of the operation and management of the housing. And, for some eligible tenants, federal contributions permit rents at an even lower level. To make possible the admission to public housing of unusually low income families, elderly families, families displaced by urban renewal or public housing, and larger families (four or more children), additional federal contributions are authorized of up to $120 a year for each unit occupied by such families.

Finally, any relocation costs (payments to individuals, families and business concerns displaced by the project) can be included in the development costs of the project. As a result, these payments are also federally financed.

Developing a Project

Once a local housing authority has been established, the steps involved in the development of an individual project include the following.

Execution of a Cooperation Agreement with the local governing body -- One aspect of this is to make clear local support and an indirect local contribution to the project. The indirect contribution is in the form of tax exemption. While the authority agrees to payments in lieu of taxes -- generally at the rate of 10% of "shelter rents" (i.e., excluding utilities and maintenance) -- it is not anticipated that these payments will be as large as the local taxes on the property would be if it were privately owned. In fact, the 1954 amendments to the U. S. Housing Act require that this indirect contribution by local government be equal to at least 20% of the federal contribution. In other words, the difference between what the housing authority pays "in lieu" of taxes and what a private owner of the same housing would have to pay in local taxes, must be one-fifth as large as the annual federal contribution.

Application to HAA for Program Reservation -- The basic application (or applications if more than one locality is involved), indicates the number of units planned, the preliminary loan desired, and the expected amount of annual contributions being sought for the project. Supporting data for the application include: census data on population and housing, including changes in local housing since the last census; data on existing and proposed "aided housing," including rent supplement housing, below-market-interest financed housing, and the state and locally aided housing; expected relocation needs, if any; data on local employment; and details on the proposed program, including time schedules. Approval of this application means issuance by HAA of a Program Reservation, indicating its intent, subject to the further fulfillment of all requirements, to provide a preliminary loan and/or enter into a contributions contract.

Submission by the community of a Workable Program if one is not currently in "certified" status -- While a Program Reservation can be secured prior to certification or recertification of a Workable Program, no Preliminary Loan Contract or Annual Contributions Contract (for other than leased housing), can be entered into by HAA in the absence of one. It should be noted that the Workable Program must be for the locality in which the project units will be located.

Execution of Preliminary Loan Contract -- As has been noted, these loans provide planning funds and the next steps are generally to select a site (and get tentative HAA approval), execute an architect's contract, and prepare the development program.

Execution of Annual Contributions Contract -- Once this has been signed, the authority can acquire the land, have the final

plans and specifications prepared, and invite bids on the construction contract. While the federal government will furnish loans (at the current rates of interest being paid by the government itself) for construction work, most authorities soon find it financially advantageous to sell short-term "Temporary Notes" secured by the government's commitment to make construction advances as needed. Then, as the project nears completion, the authority generally sells its long-term bonds, secured by the Annual Contributions Contract. Proceeds from these bonds are used to retire the Temporary Notes and repay all federal advances.

With the completion of construction, the renting of the units to eligible applicants begins and the project enters the management phase.

Leased Housing

The foregoing scenario assumes that the housing involved is new construction, or at least being rehabilitated. Since 1965 local housing authorities can also provide housing by leasing existing units from their owners and renting them to eligible tenants. Where this alternative is to be used, there are important variations from the above procedure.

In the leasing program, several alternatives are possible. The local authority may lease from the owner and sub-lease to eligible tenants, or it may merely enter into a contract with the owner guaranteeing rental payments at a certain level, and allow for eligible tenants to enter into their own lease with the owner. The "owner" need not actually hold title to the housing, but may be a non-profit or other sponsor acting as an intermediary or broker. Moreover, the contract between the authority and the owner or his agent may provide for the latter's selection of individual tenants (though the authority must, of course, find them eligible for occupancy).

Similarly, various rental arrangements are possible, ranging from one in which the LHA collects the tenant's share of the rent, combines its contribution and pays the whole amount to the landlord; to one where the reverse is done, the LHA paying its share to the tenant and having him make the full payment to the owner. In the leased housing program, the annual contribution from the Housing Assistance Administration pays the difference between the tenant's share (usually 20-25% of income), and the full rent due to the owner. It also provides reimbursement to the authority for its expenses in conducting surveys, listings, and inspections in connection with the program. While the owner is responsible for major repairs, the LHA handles routine maintenance and other management aspects. This somewhat reduces the LHA's expenses in connection with the unit, and, since the housing remains in private ownership the community does not make any indirect contribution in the form of tax exemption.

From the owner's standpoint, the arrangement guarantees him no-vacancy occupancy on a long-term basis (up to twenty years). This is so attractive that many are prepared to build new rental units

specifically for the leasing program.

For leased housing, neither a Workable Program nor a cooperation agreement with the local governing authority is required. It is necessary, however, to secure local government approval of the application for leased housing assistance. The application form used for leased housing also calls for some additional information: data on vacancy rates in private housing, details on the housing available for leasing, estimates of operating expenses and of utility costs under the proposed leasing program, and a demonstration of the proposal's financial feasibility.

The usual process by which a leasing program is initiated is for the local authority to survey the rental market in its area, since a leasing proposal will not be approved if it appears that it will put a strain on the total housing supply. Owners of existing housing are invited to make their units available, the offered units are inspected, and proposed leasing agreements negotiated. No Program Reservation or Preliminary Loan is required and once the application is approved by HAA, an Annual Contributions Contract can be executed and the leasing and occupancy proceed.

At the end of September, 1968, 27,479 units of leased public housing were available for occupancy and Annual Contributions Contracts had been executed for another 23,139 units.

Turnkey I

Another option provided to local authorities is the "Turnkey" approach -- the purchase of completed housing as a package. In utilizing this method, the local authority has a relationship with the builder similar to that of an individual who contracts to purchase a custom-built house. Under it, once a Program Reservation has been obtained, the local authority does not need to select a site, hire an architect, and prepare project plans. Instead, working closely with the regional office of HAA, the authority prepares invitations to developers setting forth the location, related facilities, and other aspects of the project being contemplated. On the basis of this, prospective developers can submit their proposals indicating the site which they can provide and a general description of the buildings, as well as a price for the package (itemized by such categories as site, site improvements, dwelling construction and equipment, non-dwelling construction, and architectural and engineering services).

With HUD's assistance and approval, the local authority selects from the proposals submitted, advises the successful developer (or developers) and final proposal data can be developed in a three-way conference of local authority representatives, HUD staff, and the developer and his staff. In working with the developer on final plans and through actual construction, the authority makes use of its own appraisers, cost estimators, and inspecting architect. When the developer has his final proposal, with plans and other data, ready, and agreement has been reached on sales price (subject to

receipt of the independent appraisals and cost estimates and to execution by HUD of an Annual Contributions Contract), these can receive regional approval. The independent cost estimates can then be secured and when national HUD approval has been obtained, and with it a Contributions Contract for the project, the local authority can issue a Letter of Intent. Once the working drawings have been prepared and approved, updated cost estimates are secured and reviewed, and an actual Contract of Sale can be executed by the local authority, the developer, and HUD. The final phase of construction then follows.

The Turnkey approach need not be limited to new construction. The Philadelphia Housing Authority began several years ago a program of acquisition and rehabilitation of existing substandard homes. Initiated under traditional processes, with the Authority taking bids for the rehabilitation work, etc., the program was changed to Turnkey in 1967. Developers were urged to acquire the properties independently, rehabilitate them, and then sell them to the Authority at a previously agreed upon price. The new process has been working so well that the Authority anticipates bringing under management over a two year period some 3,300 units which had been expected to take three years in process. (Costs are also said to be substantially below those for new high-rise construction.)

It is HUD's contention, based on initial experience with the Turnkey process, that construction costs can be reduced 10-15% below the traditional process, and construction time cut by as much as two or three years. The then Assistant Secretary for Renewal and Housing Assistance, Don Hummel, told a November, 1968, audience that "the conventional [public] housing program was consuming 41 months between application and construction," but that giving emphasis to the Turnkey process made it "possible to cut the time from application to delivery to 33 weeks and on the accelerated Turnkey process to 17 weeks."

At the end of September, 1968, there were under management some 5,463 new units constructed and another 2,665 units rehabilitated under Turnkey I acquisition procedures. Another 13,197 units were under construction and another 357 being rehabilitated under Turnkey.

Turnkey II and III

In a further effort to link public housing with the private sector, HUD and HAA have added programs authorizing private management of public housing (Turnkey II) and eventual sale of some public housing units to the tenants themselves, thus moving such units out of the public sector completely (Turnkey III).

The first of these is quite simple in its basic approach. It authorizes local housing authorities to contract all or part of the management responsibilities in connection with their units to private agencies. Such a contract might well be combined with a Turnkey I project (i.e., the developer not only contracts to build the units for the local authority, but also to manage them

upon completion), but it need not be. The management contract might cover units built in the traditional way by the LHA itself, or it might cover Turnkey I units but be with a management entity different from the builder. It is possible that the management contract can be given an organization made up of or representing the tenants themselves, and where this is not the case, tenant "involvement" in the management process is clearly called for by HAA's Guidelines on the program.

Although HAA encourages delegation of "the maximum feasible amount" of responsibility to the contractor, or "broker", actual contract arrangements "may vary widely, depending on the circumstances of each case, the wishes of Local Authorities, and the willingness of brokers to assume responsibility for certain functions."

There is one exception to this generalization. Since civil rights regulations require tenant selection on a community-wide basis, the LHA must retain this responsibility unless the broker is to manage the entire low-rent program in the community.

More dramatic than private management is the homeownership option provided by Turnkey III. While a local authority which contemplates use of the program should consult with its regional Housing Assistance Office regarding a detailed program for its own situation, the following will indicate the way in which the pilot program has been formulated. The units involved, whether built by the LHA or purchased (and, under the 1968 Act, leased housing can also be purchased for the purpose of inclusion under Turnkey III), are financed on a 25-year basis, rather than the usual 40-year term, and a pro-rata share of this capital debt is assigned to each unit. The capital is secured through the sale of securities by the LHA, as usual, and the debt service on these is guaranteed (and covered) by the Annual Contributions from HAA. Selected as occupants of these units (and prospective homebuyers), are tenants who in addition to otherwise qualifying for public housing occupancy, desire to work and invest in homeownership and are willing and able to do the maintenance and repair work involved in the program. They must also have incomes high enough to make the minimum payments required under the program.

Under a lease-purchase agreement with the Authority, the occupant family makes monthly payments at least equivalent to 20% of its income, less an allowance for any utilities which it may be paying for directly. As a minimum, this monthly payment must also be sufficient to cover three basic items: monthly operating expense for the Authority (including its administrative costs, utilities not paid directly by tenants, insurance premiums and payments in-lieu of taxes, maintenance costs for any community facilities in the development, and provisions for an operating reserve); a non-routine maintenance reserve for the unit (for such long-term items as exterior painting, major repairs, replacement of range or refrigerator, etc.); and routine maintenance costs. Under the program, the actual responsibility for and work on routine maintenance is to be the occupant's, so that this last item will normally be credited to a Homebuyer's Ownership Reserve. (Should the occupant

fail to do the required routine maintenance, the authority may pay to have it done and deduct the cost from this Ownership Reserve.)

Should the 20%-of-income payment required as a minimum be large enough to exceed the three basic items indicated, that excess is utilized by the Authority to reduce the government subsidy involved, either through greater in-lieu-of-taxes payments to local government or through reduction of the Annual Contributions received from HAA on the unit. On the other hand, should the family have the desire and the ability to pay more than 20% of income, any of that excess not required for the three basic items would be credited to the Homebuyers Ownership Reserve. (Such voluntary additional payments can be made either periodically or in lump sum form.) Also, in addition to carrying out routine maintenance, occupant families may, by agreement with the Authority, perform some non-routine maintenance and have its Ownership Reserve credited with the value of that work.

As the family builds up an Ownership Reserve (and it is required to accumulate a minimum of $200 in that Reserve during the initial two years and to keep adding to it subsequently at least to a level of $350), the remaining indebtedness on the unit is being reduced by the Annual Contributions from HAA. When the Reserve has gotten large enough (and the remaining indebtedness small enough), so that the Reserve will cover the indebtedness plus necessary closing costs, the family applies the Reserve and purchases the unit. In cases where family income has risen sufficiently, even prior to this time, so that the remaining indebtedness on the unit could be paid off via some alternative financing arrangement -- either unsubsidized or subsidized to a less extent than under the normal Turnkey III process -- the family will be required to complete purchase of the unit with that alternative financing, assuming that the financing is actually available.

The foregoing indicates the essentials of the Turnkey III program. It has a number of other features, including the role of a Homebuyers Association (made up of all the prospective homebuyers and participating with the Authority in formulating the detailed rules, etc.), and procedures for precluding the purchasing family from reaping any capital gain as a result of re-sale where that gain would stem from the government subsidization of the initial financing. But, assuming normal operation of the process, the occupant family would become a homeowner at some point within the twenty-five year period, and the unit would thus move out of the status of tax-exempt public property into the status of an ordinary, privately-owned home.

Turnkey III and Self-Help

As indicated, "self-help" in the sense of routine maintenance and some non-routine maintenance is contemplated in the normal Turnkey III program. Even before inauguration of Turnkey III in 1967, however, self-help in the construction of the housing had been utilized on Indian reservations, with the resultant equity being combined with subsequent maintenance work to lead to ownership when the indebtedness on the units had been paid off. In these programs,

the tribal councils either acted as, or established, the local housing authority; the participant families were able to provide their own lots (thus furnishing an initial equity in the unit); and the Bureau of Indian Affairs provided for the required technical assistance (primarily construction supervision). Repayment of the remaining capital costs of the housing was guaranteed by HAA's Annual Contributions, as in other public housing programs.

HUD has indicated, as early as 1966, that it sees no reason why a similar program, utilizing self-help either in construction of the housing or in rehabilitation of existing housing, could not be extended to areas outside of Indian reservations. To date, however, no actual use of self-help in construction or rehabilitation, with the resultant equity leading to eventual ownership by the occupants of public housing, is known of -- aside from the Bureau of Indian Affairs's "Mutual Help Housing."

Operating details for this broader application of self-help to Turnkey would have to be worked out, but it could presumably work as follows. A non-profit sponsor might serve as the Turnkey I developer, but with the added feature of using the self-help labor of the prospective tenants. When the completed units were sold to the local authority, that portion of the acquisition price which represented the self-help labor component could be credited to the Homebuyer's Ownership Reserves of the self-helper tenants. Inclusion of Turnkey II in the process might be attained by having management of the units be done by the non-profit sponsor and/or a tenants' organization. Additional equity build-up, and a consequent hastening of the time of ownership, would be possible through self-help maintenance by the tenants (as in the Gulfport program summarized above).

O E O Grantees and Public Housing

While the basic responsibility for public housing remains with local government and its local housing authorities, there are ways in which other groups and agencies can relate to the program -- especially now that there is increased emphasis on involving the private sector. The following are illustrative of possible activities for a group or agency, such as an OEO grantee, working with lower income people:

1) Encourage the establishment of a local housing authority in a community where there is a need, and a potential for one. Press for more equitable and imaginative policies on the part of existing LHA's, including greater utilization of the available Turnkey programs.

2) Assist an existing local authority by carrying on a general educational program in the community regarding public housing.

3) Organize, or encourage the formation of tenant organizations, with the ultimate goal of involving them in management of the units, through Turnkey II or otherwise.

4) Where appropriate, encourage both the local authority and private landlords to explore the possibilities of the leasing program.

5) Form or encourage the formation of a non-profit entity which might serve as the "broker" in a leased housing operation.

6) Encourage formation of a non-profit entity which might build or rehabilitate housing either for sale to or lease by the LHA.

STATISTICAL APPENDIX

The summary tables which follow are largely self-explanatory. The first, which indicates construction during the successive five-year periods of the program, makes it clear that output follows commitment. Thus, the production of war defense housing during the five-year period 1941-5 was substantially greater than all low income production throughout the thirty year period. Table 2 gives yearly figures for the most recent seven-year period. Among other things, it highlights the emphasis given to housing for the elderly in recent years.

Tables 3 and 4 attempt to put into perspective the statistics on the number and size of Local Housing Authorities. It is worth noting in Table 3, for example, that Regions I and II account for only 16% of the LHA's, but for 38% of the units under management. Conversely, Regions III and IV account jointly for 60% of the LHA's, but only 36% of the units. Table 5 charts the growing cost of public housing dwelling units.

Tables 6 and 7 provide a profile, by race, income and family status, of the occupants of public housing. More than half of the units are in nonwhite occupancy and nearly 30% are occupied by elderly families and individuals. (Less than half of these -- 12% of the total -- are especially designed for elderly occupancy, though.) All but 15% of the occupants had incomes of less than $5,000 a year, with 46% of them falling below $2,500. (Some 52% of white occupants were in this lowest income group, compared with 41% of the nonwhite occupants.) As Table 7 indicates, the income distribution pattern varies regionally, with 22% of the occupants in the North falling in the $5,000 and above category, but only 4% of those in the South.

Table 8 represents an effort to relate public housing occupancy to the general nonfarm population in the equivalent income groups. Thus, 17 out of every 1,000 nonfarm families with incomes of less than $9,000 occupy public housing, and 10 out of every 1,000 individuals with incomes below $9,000 live in public housing. For nonwhite families, the ratio is dramatically larger, with almost 10% of the nonwhite, nonfarm families with incomes of between $2,500 and $5,000 a year found in public housing. For white families in the same income category, the comparable percentage is 1 1/2.

Public Housing Construction, Five Year Periods, 1936-1965

TABLE 1

PUBLIC HOUSING UNITS COMPLETED IN THE UNITED STATES,

BY FIVE YEAR PERIODS, 1936 - 1965

Period	Total	Low Rent	Other[a]
1936-40	60,907	60,907	--
1941-45	847,205	126,882	720,323
1946-50	274,888	5,541	269,347
1951-55[b]	207,596	191,910	15,686
1956-60[c]	76,318	76,318	--
1961-65[d]	132,331	132,331	--

[a] War and defense housing and veterans' re-use housing.

[b] A level of 675,000 units was initially authorized for this five-year period under the Housing Act of 1949; later reduced to 390,000 units by the Acts of 1952, 1953, and 1954.

[c] A level of 152,000 units was authorized during this period, under the Acts of 1955, 1956, and 1959.

[d] A level of 137,000 units was authorized during this period, under the Acts of 1961 and 1964.

Public Housing Production, Annually, 1961-1967

TABLE 2

"NET PRODUCTION" OF PUBLIC HOUSING IN THE UNITED STATES,

ANNUALLY, 1961 - 1967

Year	Net Increase in Units: Total	Net Increase in Units: Elderly Only	Elderly as % of Total
1961	51,049	2,339	5%
1962[a]	27,312	4,465	16%
1963[a]	25,601	7,150	28%
1964[a]	24,581	7,915	32%
1965[b]	29,017	13,155	45%
1966[c]	31,001	16,060	52%
1967[c]	37,348	17,434	47%
Under management, mid-1968	704,594	83,390	12%

Data refer to units under management and available for occupancy; including acquisitions under Turnkey and leased housing programs.

[a] Act of 1961 renewed the authority for additional units remaining under the Act of 1949 -- estimated at 100,000 units.

[b] The Act of 1964 authorized an additional 37,500 units.

[c] The Act of 1965 authorized an additional 60,000 units each year.

TABLE 8

RATIO OF PUBLIC HOUSING OCCUPANCY TO NONFARM POPULATION,

FOR FAMILIES AND INDIVIDUALS, BY RACE AND INCOME, 1966

	Number of public housing occupancies per 1,000 of nonfarm population*			
	Under $2,500	$2,500 - $4,999	$5,000 and over**	Total**
All families & individuals:	25	23	5	15
White families & individuals:	15	11	2	8
Nonwhite families & individuals:	69	81	35	63
All families:	36	30	5	17
White families:	19	15	2	8
Nonwhite families:	97	99	39	77
All individuals:	17	3	1	10
White individuals:	13	2	***	8
Nonwhite individuals:	36	11	3	27

* To illustrate: There were an estimated 6,229,000 white families and 1,419,000 nonwhite families with incomes between $2,500 and $5,000 in 1966; and there were 90,500 white families and 141,100 nonwhite families in that same income range occupying public housing; so that an estimated 15 of every 1,000 white nonfarm families and 99 of every 1,000 nonwhite nonfarm families (in that income group) were living in public housing.

** Ratio is to nonfarm population with incomes under $9,000, although a few occupants of public housing may have incomes somewhat above that level.

***Less than ½.

Phone (202) 659-1680

KEY FEATURES OF PUBLIC HOUSING PROGRAM

* It requires administration by a housing authority, which is an agency of local government.

* Except for the utilization of leased housing, all public housing programs require a currently approved Workable Program for Community Improvement.

* Long-term acquisition costs (debt service) of the program are fully subsidized by the federal government; current operating costs are largely borne by the tenants, with some indirect subsidy from local government and, in certain circumstances, additional subsidy from the federal government.

* The maximum income limit for admission to public housing must be at least 20% below the income level necessary to get adequate housing on the private market.

* Public housing can be single-family detached or semi-detached, or any variety of multi-family units; it can be on contiguous or scattered sites; and it can be acquired by the local authority through construction, purchase, or leasing.

* Where an adequate supply of acceptable housing exists, the leased housing program can provide the most immediate response to low-income housing needs.

* Eventual ownership of their homes is possible for some tenants of public housing.

GLOSSARY OF TERMS

Annual Contributions Contract - Agreement under which the federal government commits itself to make annual payments of a certain size to a local authority with respect to a given public housing project.

Contract of Sale - Formal agreement under which a local authority commits itself to purchase from a developer certain specified units at an agreed price, and the federal government indicates its readiness to cover the costs through its Annual Contributions.

Cooperation Agreement - Agreement between the local authority and local government (city or town or county) under which the government gives tax exempt status to the authority and its property and agrees to provide such municipal services as police and fire protection, trash removal, etc.; and the authority agrees to make payments to local government in lieu of taxes (usually at a level of 10% of the rents collected, excluding utilities and maintenance.)

Debt Service - Regular payments for principal and interest on borrowed money.

Housing Assistance Administration (HAA) - The agency within the Department of Housing and Urban Development which administers the federal government's programs in connection with public housing.

Housing Assistance Office (HAO) - The regional office of the Housing Assistance Administration (located in the same six cities as the regional offices of the Department of Housing and Urban Development).

HUD - The Department of Housing and Urban Development.

Letter of Intent - Official indication from a local authority to a developer of the authority's readiness to purchase housing from the developer in accordance with the developer's proposal.

Local Housing Authority (LHA) - The public agency set up by state or local government under state law to operate publicly-owned housing for low income people. (Though these have close and continuing relations with the federal Housing Assistance Administration, they remain local agencies.)

Median - Occupying the middle position. Not to be confused, in statistics, with the arithmetic average or mean. (For the array of numbers 2,3,4,7, and 9, the median would be 4, while the mean would be 5.)

Preliminary Loan Contract - Agreement between the Housing Assistance Administration and a local authority by which HAA agrees to loan the LHA money for such things as market surveys, architectural work, and other preliminaries to the construction of a project.

Program Reservation - Action by the Housing Assistance Administration 'earmarking' the necessary amount of its authorized funds to meet the requirements of a specific project on which it has received and approved an application. This 'reserves' those funds for that project, subject to the further fulfillment of all requirements.

Turnkey - Traditionally the term for completed housing, ready for the buyer to "turn the key" and enter. In the public hous gram, used to refer to programs providing a more prominent role to the private sector, as in Turnkey I where the local authority buys completed housing from a private developer, and Turnkey II where the authority 'buys' management of the units from a private agency.

Workable Program - Technically, the 'Workable Program for Community Improvement.' It represents the community's commitment to programs, such as orderly land use and planning, building and zoning code enforcement, relocation of displaced residents, provision of community facilities, etc., together constituting a coherent and comprehensive plan of action. A Workable Program which is feasible and which meets approved standards is required as a condition for certain forms of federal aid in the fields of housing and urban development.

Housing Starts, Public and Private, 1946-1967

PUBLIC HOUSING

Public housing is the oldest, and until recently was the only, national program in the United States in the field of low income housing. Moreover, public housing itself is not yet middle-aged, dating back only to the New Deal period. Prior to that time, those who could not afford decent housing (or any housing) on the private market were either ignored or left to such facilities as might be provided by private charity or by such local institutions as the county poorhouse. With the New Deal's official recognition that poverty might be -- at least in part -- a result of social and institutional rather than purely personal inadequacies, the United States committed itself as a nation to provide decent housing at rents they could afford to those at the lower end of the income scale.

The basic legislative authority for the program is the United States Housing Act of 1937, as amended. This initial legislation reflects a political decision of key importance to the program: the decision that while it would be essentially a federally financed program, it would be locally operated. Thus, while federal funds underwrite the program's major costs, local housing authorities provide and operate public housing, issuing their own bonds, hiring their own staff, etc. The federal agency established in 1937 to make loans and contributions to the local agencies was the U. S. Housing Authority. Ten years later, when the Housing and Home Finance Agency was set up, the Authority became the Public Housing Administration. With the creation of the Department of Housing and Urban Development in 1965, the functions of the Public Housing Administration were vested in the Secretary and are administered through the Housing Assistance Administration (HAA).

Local Housing Authorities are established under state laws as autonomous public-corporate entities. Their form will vary, but probably the most common is a five-member commission, appointed by the local governing body (town or city council or county commission, for example), or executive (such as the mayor), and serving without pay. As of the end of 1967, there were 2,156 local housing authorities operating in 2,913 localities. ("Operating" means at least having reserved funds with the Housing Assistance Administration for a proposed project.) To put these statistics in perspective, two others are required. Half of these authorities had less than 100 units each in their programs, and only 14% of them had as many as 500 units each. Moreover, 95% of the localities served by local housing authorities had populations (in 1960) of less than 100,000.

The quantity of housing provided under the program has also been a good deal less than spectacular. As of mid-1968, there were 704,594 units of low-rent public housing under management in the United States. (And 12% of these were units specifically designed for the elderly, a form of public housing that has been less politically vulnerable than the rest of the program.) To put into perspective this figure on the net production of the program over more than three decades, it should be noted that the Housing Act of 1949 called for 810,000 units over a six year period. In fairness, it should be noted that completions during the first half of the 1960's were almost twice the number of completions in the last half of the 1950's, and that HAA claims a record 74,859 units added between September, 1967 and September, 1968.

Functions of the LHA

As has been noted, the Local Housing Authority is an agency of local government. In addition to authorizing its establishment in the first place, local government generally appoints the membership of the Authority and must give specific approval to all program applications which the Authority makes to HUD's Housing Assistance Administration. Moreover, participation in most aspects of public housing requires the locality to prepare and secure HUD approval of a Workable Program for Community Improvement. (Elements of a Workable Program include plans for adoption or improvement of building codes; provision of a master plan covering land uses, thoroughfares, and other community facilities; neighborhood analyses; review of community administrative organization and of financing plans for community improvement; plans for housing of families displaced by government activity; and provision for citizen participation in urban renewal and similar programs.) The only types of public housing programs for which the federal government will provide assistance in the absence of a currently approved Workable Program are leased housing and the purchase of leased housing for resale to the tenants. (It should be noted that there is federal assistance available to local communities which want to prepare a Workable Program. It is clear, however, that some communities have utilized the Workable Program requirement -- by means of noncompliance -- as a way of excluding public housing in particular and low income housing in general.)

The Housing Assistance Administration, through its regional offices, will furnish advice and technical assistance to a locality in forming a local housing authority, as well as in the subsequent preparation of an application for a low-rent housing program. (HAA has regional offices in New York, Philadelphia, Atlanta, Chicago, Fort Worth, San Francisco, and Puerto Rico.)

The basic functions of the local authority include the following: determine the need for low-rent public housing; prepare a specific plan or plans to meet that need; enter into an agreement of cooperation with the local governing body (under which the governing body agrees to provide the usual municipal services and the LHA agrees to make payments in lieu of taxes); secure the actual housing -- either by construction, rehabilitation, purchase (Turnkey), or lease; finance the capital costs of the project through long-term bonds (which are actually repaid from the assistance contributions from the federal government); and manage the housing.

In preparing its plans to meet the need for low-rent public housing, the local authority must establish income eligibility limits and rent schedules. These will vary from locality to locality and according to size of family and character of the housing.

To make certain that public housing does not compete with private rental housing and is instead confined to those who can't afford decent housing on the private market, the law requires a 20% gap. That is to say, the top income which a family can have and still be admitted into public housing must be at least 20% lower than the income a family of that size would need to pay the lowest rents at which "a substantial supply of decent, safe, and sanitary housing" is being provided by private sources ("unaided by public subsidy"). The following list of admission limits for a family of five in various urban localities illustrates the range of income eligibility.

Birmingham, Ala. -	$ 3,800	Newark, N.J. -	$ 4,740
Los Angeles, Calif. -	5,400	New York, N.Y. -	7,476
Washington, D.C. -	4,100	Philadelphia, Pa. -	4,000
Chicago, Ill. -	6,600	Austin, Tex. -	4,400
Boston, Mass. -	5,900	Milwaukee, Wis. -	5,150
Detroit, Mich. -	5,400		

In addition to setting income limits for initial admission to public housing, the local authority establishes a second set of income limits, related to continued occupancy. In other words, a family may be admitted to public housing and then enjoy a subsequent rise in income. Even if its higher income is above the maximum allowed for admission, it can continue to occupy public housing until its income continues to rise to a level above the second set of limits -- that determining continued occupancy. This latter limit is supposed to be set so that a family with income above it can, by making a reasonable effort, obtain suitable private housing it can afford.

For the country as a whole, the average, non-elderly family occupying public housing in mid-1967 had a median income of $3,447. (The comparable figure for elderly families was $1,563). The median rent for non-elderly families in public housing was $58 a month (and for elderly families it was $36 a month).

While the Local Authority handles the design and construction of public housing, the law does specify maximum costs for the actual dwelling units and equipment. In specific cases, the Secretary can authorize costs somewhat higher than the normal maximum, and this is frequently required. In Fiscal 1967, the average cost, nationwide, was $15,618 per unit, including $2,734 for site acquisition and development. (Site costs in recent years have averaged nearly a fifth of the total per unit costs.)

Financing

Financial assistance to local housing authorities comes in three basic forms. The first is a preliminary loan contract between the Housing Assistance Administration and the local authority. This may be secured after approval of the initial application and is designed to provide the funds for project planning -- architectural work, market surveys, site selection, and the like. These preliminary advances are limited to a maximum of $150 per unit. Once planning is completed, assuming that construction or rehabilitation is being used to provide the housing, HAA is authorized to make construction loans to the authority, up to 90% of the total development cost of the project. These advances are repaid when the authority subsequently sells its own long-term housing bonds on the private market. The most important form of federal assistance is the annual contributions which constitute the security for those long-term bonds.

Under the annual contributions contracts which HAA enters into with the local authorities, the federal government agrees for each approved project to make payments sufficient to retire the capital cost over a 40-year period. It is this commitment on the part of the federal government which makes it possible for the local authority to sell its long-term bonds. Moreover, with these annual contributions covering the debt service costs, the rents set by the authority need only be sufficient to pay operating expenses and make payments in lieu of taxes to local government. In effect, then federal funds pay for the acquisition of the housing and the eligible tenants pay only the expenses of the operation and management of the housing. And, for some eligible tenants, federal contributions permit rents at an even lower level. To make possible the admission to public housing of unusually low income families, elderly families, families displaced by urban renewal or public housing, and larger families (four or more children), additional federal contributions are authorized of up to $120 a year for each unit occupied by such families.

Finally, any relocation costs (payments to individuals, families and business concerns displaced by the project) can be included in the development costs of the project. As a result, these payments are also federally financed.

Developing a Project

Once a local housing authority has been established, the steps involved in the development of an individual project include the following.

Execution of a Cooperation Agreement with the local governing body -- One aspect of this is to make clear local support and an indirect local contribution to the project. The indirect contribution is in the form of tax exemption. While the authority agrees to payments in lieu of taxes -- generally at the rate of 10% of "shelter rents" (i.e., excluding utilities and maintenance) -- it is not anticipated that these payments will be as large as the local taxes on the property would be if it were privately owned. In fact, the 1954 amendments to the U. S. Housing Act require that this indirect contribution by local government be equal to at least 20% of the federal contribution. In other words, the difference between what the housing authority pays "in lieu" of taxes and what a private owner of the same housing would have to pay in local taxes, must be one-fifth as large as the annual federal contribution.

Application to HAA for Program Reservation -- The basic application (or applications if more than one locality is involved), indicates the number of units planned, the preliminary loan desired, and the expected amount of annual contributions being sought for the project. Supporting data for the application include: census data on population and housing, including changes in local housing since the last census; data on existing and proposed "aided housing," including rent supplement housing, below-market-interest financed housing, and the state and locally aided housing; expected relocation needs, if any; data on local employment; and details on the proposed program, including time schedules. Approval of this application means issuance by HAA of a Program Reservation, indicating its intent, subject to the further fulfillment of all requirements, to provide a preliminary loan and/or enter into a contributions contract.

Submission by the community of a Workable Program if one is not currently in "certified" status -- While a Program Reservation can be secured prior to certification or recertification of a Workable Program, no Preliminary Loan Contract or Annual Contributions Contract (for other than leased housing), can be entered into by HAA in the absence of one. It should be noted that the Workable Program must be for the locality in which the project units will be located.

Execution of Preliminary Loan Contract -- As has been noted, these loans provide planning funds and the next steps are generally to select a site (and get tentative HAA approval), execute an architect's contract, and prepare the development program.

Execution of Annual Contributions Contract -- Once this has been signed, the authority can acquire the land, have the final

plans and specifications prepared, and invite bids on the construction contract. While the federal government will furnish loans (at the current rates of interest being paid by the government itself) for construction work, most authorities soon find it financially advantageous to sell short-term "Temporary Notes" secured by the government's commitment to make construction advances as needed. Then, as the project nears completion, the authority generally sells its long-term bonds, secured by the Annual Contributions Contract. Proceeds from these bonds are used to retire the Temporary Notes and repay all federal advances.

With the completion of construction, the renting of the units to eligible applicants begins and the project enters the management phase.

Leased Housing

The foregoing scenario assumes that the housing involved is new construction, or at least being rehabilitated. Since 1965 local housing authorities can also provide housing by leasing existing units from their owners and renting them to eligible tenants. Where this alternative is to be used, there are important variations from the above procedure.

In the leasing program, several alternatives are possible. The local authority may lease from the owner and sub-lease to eligible tenants, or it may merely enter into a contract with the owner guaranteeing rental payments at a certain level, and allow for eligible tenants to enter into their own lease with the owner. The "owner" need not actually hold title to the housing, but may be a non-profit or other sponsor acting as an intermediary or broker. Moreover, the contract between the authority and the owner or his agent may provide for the latter's selection of individual tenants (though the authority must, of course, find them eligible for occupancy).

Similarly, various rental arrangements are possible, ranging from one in which the LHA collects the tenant's share of the rent, combines its contribution and pays the whole amount to the landlord; to one where the reverse is done, the LHA paying its share to the tenant and having him make the full payment to the owner. In the leased housing program, the annual contribution from the Housing Assistance Administration pays the difference between the tenant's share (usually 20-25% of income), and the full rent due to the owner. It also provides reimbursement to the authority for its expenses in conducting surveys, listings, and inspections in connection with the program. While the owner is responsible for major repairs, the LHA handles routine maintenance and other management aspects. This somewhat reduces the LHA's expenses in connection with the unit, and, since the housing remains in private ownership the community does not make any indirect contribution in the form of tax exemption.

From the owner's standpoint, the arrangement guarantees him no-vacancy occupancy on a long-term basis (up to twenty years). This is so attractive that many are prepared to build new rental units

specifically for the leasing program.

For leased housing, neither a Workable Program nor a cooperation agreement with the local governing authority is required. It is necessary, however, to secure local government approval of the application for leased housing assistance. The application form used for leased housing also calls for some additional information: data on vacancy rates in private housing, details on the housing available for leasing, estimates of operating expenses and of utility costs under the proposed leasing program, and a demonstration of the proposal's financial feasibility.

The usual process by which a leasing program is initiated is for the local authority to survey the rental market in its area, since a leasing proposal will not be approved if it appears that it will put a strain on the total housing supply. Owners of existing housing are invited to make their units available, the offered units are inspected, and proposed leasing agreements negotiated. No Program Reservation or Preliminary Loan is required and once the application is approved by HAA, an Annual Contributions Contract can be executed and the leasing and occupancy proceed.

At the end of September, 1968, 27,479 units of leased public housing were available for occupancy and Annual Contributions Contracts had been executed for another 23,139 units.

Turnkey I

Another option provided to local authorities is the "Turnkey" approach -- the purchase of completed housing as a package. In utilizing this method, the local authority has a relationship with the builder similar to that of an individual who contracts to purchase a custom-built house. Under it, once a Program Reservation has been obtained, the local authority does not need to select a site, hire an architect, and prepare project plans. Instead, working closely with the regional office of HAA, the authority prepares invitations to developers setting forth the location, related facilities, and other aspects of the project being contemplated. On the basis of this, prospective developers can submit their proposals indicating the site which they can provide and a general description of the buildings, as well as a price for the package (itemized by such categories as site, site improvements, dwelling construction and equipment, non-dwelling construction, and architectural and engineering services).

With HUD's assistance and approval, the local authority selects from the proposals submitted, advises the successful developer (or developers) and final proposal data can be developed in a three-way conference of local authority representatives, HUD staff, and the developer and his staff. In working with the developer on final plans and through actual construction, the authority makes use of its own appraisers, cost estimators, and inspecting architect. When the developer has his final proposal, with plans and other data, ready, and agreement has been reached on sales price (subject to

receipt of the independent appraisals and cost estimates and to execution by HUD of an Annual Contributions Contract), these can receive regional approval. The independent cost estimates can then be secured and when national HUD approval has been obtained, and with it a Contributions Contract for the project, the local authority can issue a Letter of Intent. Once the working drawings have been prepared and approved, updated cost estimates are secured and reviewed, and an actual Contract of Sale can be executed by the local authority, the developer, and HUD. The final phase of construction then follows.

The Turnkey approach need not be limited to new construction. The Philadelphia Housing Authority began several years ago a program of acquisition and rehabilitation of existing substandard homes. Initiated under traditional processes, with the Authority taking bids for the rehabilitation work, etc., the program was changed to Turnkey in 1967. Developers were urged to acquire the properties independently, rehabilitate them, and then sell them to the Authority at a previously agreed upon price. The new process has been working so well that the Authority anticipates bringing under management over a two year period some 3,300 units which had been expected to take three years in process. (Costs are also said to be substantially below those for new high-rise construction.)

It is HUD's contention, based on initial experience with the Turnkey process, that construction costs can be reduced 10-15% below the traditional process, and construction time cut by as much as two or three years. The then Assistant Secretary for Renewal and Housing Assistance, Don Hummel, told a November, 1968, audience that "the conventional [public] housing program was consuming 41 months between application and construction," but that giving emphasis to the Turnkey process made it "possible to cut the time from application to delivery to 33 weeks and on the accelerated Turnkey process to 17 weeks."

At the end of September, 1968, there were under management some 5,463 new units constructed and another 2,665 units rehabilitated under Turnkey I acquisition procedures. Another 13,197 units were under construction and another 357 being rehabilitated under Turnkey.

Turnkey II and III

In a further effort to link public housing with the private sector, HUD and HAA have added programs authorizing private management of public housing (Turnkey II) and eventual sale of some public housing units to the tenants themselves, thus moving such units out of the public sector completely (Turnkey III).

The first of these is quite simple in its basic approach. It authorizes local housing authorities to contract all or part of the management responsibilities in connection with their units to private agencies. Such a contract might well be combined with a Turnkey I project (i.e., the developer not only contracts to build the units for the local authority, but also to manage them

upon completion), but it need not be. The management contract might cover units built in the traditional way by the LHA itself, or it might cover Turnkey I units but be with a management entity different from the builder. It is possible that the management contract can be given an organization made up of or representing the tenants themselves, and where this is not the case, tenant "involvement" in the management process is clearly called for by HAA's Guidelines on the program.

Although HAA encourages delegation of "the maximum feasible amount" of responsibility to the contractor, or "broker", actual contract arrangements "may vary widely, depending on the circumstances of each case, the wishes of Local Authorities, and the willingness of brokers to assume responsibility for certain functions."

There is one exception to this generalization. Since civil rights regulations require tenant selection on a community-wide basis, the LHA must retain this responsibility unless the broker is to manage the entire low-rent program in the community.

More dramatic than private management is the homeownership option provided by Turnkey III. While a local authority which contemplates use of the program should consult with its regional Housing Assistance Office regarding a detailed program for its own situation, the following will indicate the way in which the pilot program has been formulated. The units involved, whether built by the LHA or purchased (and, under the 1968 Act, leased housing can also be purchased for the purpose of inclusion under Turnkey III), are financed on a 25-year basis, rather than the usual 40-year term, and a pro-rata share of this capital debt is assigned to each unit. The capital is secured through the sale of securities by the LHA, as usual, and the debt service on these is guaranteed (and covered) by the Annual Contributions from HAA. Selected as occupants of these units (and prospective homebuyers), are tenants who in addition to otherwise qualifying for public housing occupancy, desire to work and invest in homeownership and are willing and able to do the maintenance and repair work involved in the program. They must also have incomes high enough to make the minimum payments required under the program.

Under a lease-purchase agreement with the Authority, the occupant family makes monthly payments at least equivalent to 20% of its income, less an allowance for any utilities which it may be paying for directly. As a minimum, this monthly payment must also be sufficient to cover three basic items: monthly operating expense for the Authority (including its administrative costs, utilities not paid directly by tenants, insurance premiums and payments in-lieu of taxes, maintenance costs for any community facilities in the development, and provisions for an operating reserve); a non-routine maintenance reserve for the unit (for such long-term items as exterior painting, major repairs, replacement of range or refrigerator, etc.); and routine maintenance costs. Under the program, the actual responsibility for and work on routine maintenance is to be the occupant's, so that this last item will normally be credited to a Homebuyer's Ownership Reserve. (Should the occupant

fail to do the required routine maintenance, the authority may pay to have it done and deduct the cost from this Ownership Reserve.)

Should the 20%-of-income payment required as a minimum be large enough to exceed the three basic items indicated, that excess is utilized by the Authority to reduce the government subsidy involved, either through greater in-lieu-of-taxes payments to local government or through reduction of the Annual Contributions received from HAA on the unit. On the other hand, should the family have the desire and the ability to pay more than 20% of income, any of that excess not required for the three basic items would be credited to the Homebuyers Ownership Reserve. (Such voluntary additional payments can be made either periodically or in lump sum form.) Also, in addition to carrying out routine maintenance, occupant families may, by agreement with the Authority, perform some non-routine maintenance and have its Ownership Reserve credited with the value of that work.

As the family builds up an Ownership Reserve (and it is required to accumulate a minimum of $200 in that Reserve during the initial two years and to keep adding to it subsequently at least to a level of $350), the remaining indebtedness on the unit is being reduced by the Annual Contributions from HAA. When the Reserve has gotten large enough (and the remaining indebtedness small enough), so that the Reserve will cover the indebtedness plus necessary closing costs, the family applies the Reserve and purchases the unit. In cases where family income has risen sufficiently, even prior to this time, so that the remaining indebtedness on the unit could be paid off via some alternative financing arrangement -- either unsubsidized or subsidized to a less extent than under the normal Turnkey III process -- the family will be required to complete purchase of the unit with that alternative financing, assuming that the financing is actually available.

The foregoing indicates the essentials of the Turnkey III program. It has a number of other features, including the role of a Homebuyers Association (made up of all the prospective homebuyers and participating with the Authority in formulating the detailed rules, etc.), and procedures for precluding the purchasing family from reaping any capital gain as a result of re-sale where that gain would stem from the government subsidization of the initial financing. But, assuming normal operation of the process, the occupant family would become a homeowner at some point within the twenty-five year period, and the unit would thus move out of the status of tax-exempt public property into the status of an ordinary, privately-owned home.

Turnkey III and Self-Help

As indicated, "self-help" in the sense of routine maintenance and some non-routine maintenance is contemplated in the normal Turnkey III program. Even before inauguration of Turnkey III in 1967, however, self-help in the construction of the housing had been utilized on Indian reservations, with the resultant equity being combined with subsequent maintenance work to lead to ownership when the indebtedness on the units had been paid off. In these programs,

the tribal councils either acted as, or established, the local housing authority; the participant families were able to provide their own lots (thus furnishing an initial equity in the unit); and the Bureau of Indian Affairs provided for the required technical assistance (primarily construction supervision). Repayment of the remaining capital costs of the housing was guaranteed by HAA's Annual Contributions, as in other public housing programs.

HUD has indicated, as early as 1966, that it sees no reason why a similar program, utilizing self-help either in construction of the housing or in rehabilitation of existing housing, could not be extended to areas outside of Indian reservations. To date, however, no actual use of self-help in construction or rehabilitation, with the resultant equity leading to eventual ownership by the occupants of public housing, is known of -- aside from the Bureau of Indian Affairs's "Mutual Help Housing."

Operating details for this broader application of self-help to Turnkey would have to be worked out, but it could presumably work as follows. A non-profit sponsor might serve as the Turnkey I developer, but with the added feature of using the self-help labor of the prospective tenants. When the completed units were sold to the local authority, that portion of the acquisition price which represented the self-help labor component could be credited to the Homebuyer's Ownership Reserves of the self-helper tenants. Inclusion of Turnkey II in the process might be attained by having management of the units be done by the non-profit sponsor and/or a tenants' organization. Additional equity build-up, and a consequent hastening of the time of ownership, would be possible through self-help maintenance by the tenants (as in the Gulfport program summarized above).

O E O Grantees and Public Housing

While the basic responsibility for public housing remains with local government and its local housing authorities, there are ways in which other groups and agencies can relate to the program -- especially now that there is increased emphasis on involving the private sector. The following are illustrative of possible activities for a group or agency, such as an OEO grantee, working with lower income people:

1) Encourage the establishment of a local housing authority in a community where there is a need, and a potential for one. Press for more equitable and imaginative policies on the part of existing LHA's, including greater utilization of the available Turnkey programs.

2) Assist an existing local authority by carrying on a general educational program in the community regarding public housing.

3) Organize, or encourage the formation of tenant organizations, with the ultimate goal of involving them in management of the units, through Turnkey II or otherwise.

4) Where appropriate, encourage both the local authority and private landlords to explore the possibilities of the leasing program.

5) Form or encourage the formation of a non-profit entity which might serve as the "broker" in a leased housing operation.

6) Encourage formation of a non-profit entity which might build or rehabilitate housing either for sale to or lease by the LHA.

STATISTICAL APPENDIX

The summary tables which follow are largely self-explanatory. The first, which indicates construction during the successive five-year periods of the program, makes it clear that output follows commitment. Thus, the production of war defense housing during the five-year period 1941-5 was substantially greater than all low income production throughout the thirty year period. Table 2 gives yearly figures for the most recent seven-year period. Among other things, it highlights the emphasis given to housing for the elderly in recent years.

Tables 3 and 4 attempt to put into perspective the statistics on the number and size of Local Housing Authorities. It is worth noting in Table 3, for example, that Regions I and II account for only 16% of the LHA's, but for 38% of the units under management. Conversely, Regions III and IV account jointly for 60% of the LHA's, but only 36% of the units. Table 5 charts the growing cost of public housing dwelling units.

Tables 6 and 7 provide a profile, by race, income and family status, of the occupants of public housing. More than half of the units are in nonwhite occupancy and nearly 30% are occupied by elderly families and individuals. (Less than half of these -- 12% of the total -- are especially designed for elderly occupancy, though.) All but 15% of the occupants had incomes of less than $5,000 a year, with 46% of them falling below $2,500. (Some 52% of white occupants were in this lowest income group, compared with 41% of the nonwhite occupants.) As Table 7 indicates, the income distribution pattern varies regionally, with 22% of the occupants in the North falling in the $5,000 and above category, but only 4% of those in the South.

Table 8 represents an effort to relate public housing occupancy to the general nonfarm population in the equivalent income groups. Thus, 17 out of every 1,000 nonfarm families with incomes of less than $9,000 occupy public housing, and 10 out of every 1,000 individuals with incomes below $9,000 live in public housing. For nonwhite families, the ratio is dramatically larger, with almost 10% of the nonwhite, nonfarm families with incomes of between $2,500 and $5,000 a year found in public housing. For white families in the same income category, the comparable percentage is 1 1/2.

Public Housing Construction, Five Year Periods, 1936-1965

TABLE 1

PUBLIC HOUSING UNITS COMPLETED IN THE UNITED STATES,

BY FIVE YEAR PERIODS, 1936 - 1965

Period	Total	Low Rent	Other[a]
1936-40	60,907	60,907	--
1941-45	847,205	126,882	720,323
1946-50	274,888	5,541	269,347
1951-55[b]	207,596	191,910	15,686
1956-60[c]	76,318	76,318	--
1961-65[d]	132,331	132,331	--

[a] War and defense housing and veterans' re-use housing.

[b] A level of 675,000 units was initially authorized for this five-year period under the Housing Act of 1949; later reduced to 390,000 units by the Acts of 1952, 1953, and 1954.

[c] A level of 152,000 units was authorized during this period, under the Acts of 1955, 1956, and 1959.

[d] A level of 137,000 units was authorized during this period, under the Acts of 1961 and 1964.

Public Housing Production, Annually, 1961-1967

TABLE 2

"NET PRODUCTION" OF PUBLIC HOUSING IN THE UNITED STATES,

ANNUALLY, 1961 - 1967

Year	Net Increase in Units: Total	Net Increase in Units: Elderly Only	Elderly as % of Total
1961	51,049	2,339	5%
1962[a]	27,312	4,465	16%
1963[a]	25,601	7,150	28%
1964[a]	24,581	7,915	32%
1965[b]	29,017	13,155	45%
1966[c]	31,001	16,060	52%
1967[c]	37,348	17,434	47%
Under management, mid-1968	704,594	83,390	12%

Data refer to units under management and available for occupancy; including acquisitions under Turnkey and leased housing programs.

[a] Act of 1961 renewed the authority for additional units remaining under the Act of 1949 -- estimated at 100,000 units.

[b] The Act of 1964 authorized an additional 37,500 units.

[c] The Act of 1965 authorized an additional 60,000 units each year.

TABLE 8

RATIO OF PUBLIC HOUSING OCCUPANCY TO NONFARM POPULATION,

FOR FAMILIES AND INDIVIDUALS, BY RACE AND INCOME, 1966

	Number of public housing occupancies per 1,000 of nonfarm population*			
	Under $2,500	$2,500 - $4,999	$5,000 and over**	Total**
All families & individuals:	25	23	5	15
White families & individuals:	15	11	2	8
Nonwhite families & individuals:	69	81	35	63
All families:	36	30	5	17
White families:	19	15	2	8
Nonwhite families:	97	99	39	77
All individuals:	17	3	1	10
White individuals:	13	2	***	8
Nonwhite individuals:	36	11	3	27

* To illustrate: There were an estimated 6,229,000 white families and 1,419,000 nonwhite families with incomes between $2,500 and $5,000 in 1966; and there were 90,500 white families and 141,100 nonwhite families in that same income range occupying public housing; so that an estimated 15 of every 1,000 white nonfarm families and 99 of every 1,000 nonwhite nonfarm families (in that income group) were living in public housing.

** Ratio is to nonfarm population with incomes under $9,000, although a few occupants of public housing may have incomes somewhat above that level.

***Less than ½.

LOW-RENT PUBLIC HOUSING PROGRAM
(CONVENTIONAL, TURNKEY, LEASED)

By
John B. Sams
Department of Housing and Urban Development
Atlanta, Georgia

(Recorded at Reidsville, N. C., ~~April 21~~, 1970)
updated 11-18-70

I certainly appreciate this opportunity to speak to such a fine group of people this morning. I have been asked to talk about one of our programs. I say "one of our programs" because HUD actually administers 73 different programs. Quite a few of them are handled through our FHA - and when I say "FHA", by the way, it's Federal Housing Administration rather than Farmers Home Administration. We have a Federal Housing Administration State Insuring Office at Greensboro. Quite a few of our programs are handled through that FHA office; however, the rest of them are handled through the regional office in Atlanta, Georgia. We have quite a few housing programs, most of them under the Federal Housing Administration, which has been a part of the Department of Housing and Urban Development since HUD was created.

Then we also have the low-rent public housing program, which I have been asked to talk about this morning. Ed Baxter, our regional administrator in Atlanta, was sorry that he could not be with us today, but he is on another program down in Raleigh at the annual meeting of the Carolinas Council of Housing and Development Officials.

The program I have been asked to speak on is not a new program, but we do have some new techniques that can be used in providing decent homes for families of low income. Low-rent public housing was actually conceived during the Depression back in Franklin D. Roosevelt's days, not only to provide decent homes for underprivileged families but also to stimulate

the economy, which was sagging at that time, with a building program.

Without the low-rent public housing program, there would be many families that would never know what it's like to live in decent, safe and sanitary housing. That is the purpose of the public housing program. Ever since the Housing Act of 1937 and every admendment to that housing act, our stated aim has been to get every American family into a decent, safe and sanitary home.

Back in ~~1933 and 1935~~ 1934 and 1935 the first low-rent public housing units were built, owned and operated by the Federal Government. Then came the Housing Act of 1937, which permitted local ownership and operation. When I say "local ownership and operation", I mean "owned by housing authorities created under your state law." Under the 1937 Housing Act, each state had to pass what we speak of as "enabling legislation" in order for localities to organize housing authorities to provide low-rent public housing for their low-income citizens. So housing authorities are organized under your state law, and our Department can administer the low-rent public housing program only through a housing authority legally constituted under your North Carolina State enabling legislation.

Now in North Carolina, under your law, any city with over 500 population can have a housing authority. This used to be 5000 pupulation up until 1961, so you were restricted as to the number of cities that could have housing authorities. But in 1961 the legislature reduced that population count from 5000 to 500. So as it stands right now, any city or town, any incorporated area with over 500 population, can have a housing authority.

Any county in the state, regardless of population, can have a housing authority. Up until the last session of the legislature here in North Carolina, a county had to have over 60,000 population in order to have a housing authority. In the last session, the law was changed so that any county can now have a housing authority, regardless of population count.

Any two or more counties can go together and form a regional housing authority.

We have several regional housing authorities in the state, one of them dating way back to 1950. The first one created was the Eastern Carolina Regional Housing Authority. Pete Winfrey is the executive director of that authority and it covers 10 counties. Back then, when that authority was created, when counties had to have a 60,000 population to have a housing authority, any group of counties that went together at that time to form a regional housing authority had to have an aggregated total of over 60,000 population. As you see, the purpose back then in having the regional housing authorities was to enable the smaller counties to have public housing.

Now a city or town housing authority consists of a five-man board of commissioners. They are appointed by the mayor. County housing authorities consist of a five-man board of commissioners appointed by the county commissioners. Your regional housing authorities consist of one board member from each county involved and one member appointed by the governor if there is an even number of counties involved. If there is an odd number of counties, the governor does not appoint a member. But if there is an even number of counties in any regional housing authority, then the governor appoints an additional member to serve on the board so that they won't wind up with a tie when they vote on anything.

In the case of city, town or county housing authorities, the commissioners are initially appointed for staggered terms by the mayor or the county commission. One is appointed for one year; one for two years; one, three; one, four; and one, five. And then, as those terms expire, the commissioners are reappointed - or a new member is appointed - for a five-year term. So you can see that this keeps one term expiring each year. And I think originally it was designed, perhaps, to keep local politics out. With a new mayor coming in - or new county commissioners - it would take three years for a new administration to get a majority on the board. Of course, this is no

longer important because at the last session of your state legislature, in 1969, the law was changed to permit the city or county administration to abolish housing authorities and put them, as well as urban renewal agencies, directly under the city.

In the case of regional housing authorities, all the commissioners are appointed for a five-year term initially. One comes from each county, so there is no need to stagger their terms to have one expiring each year. They are all appointed for a five-year term initially and reappointed - or a new member is appointed - for a five-year term.

Now in all cases when a commissioner resigns or dies, a new member is appointed to fill his unexpired term. This keeps terms expiring on a regular basis. It is really interesting for you to know that these commissioners serve without pay. They serve as a civic duty. They employ an executive director who administers the program (he's the top-salaried man), and he employs the necessary staff to administer the program.

The Low-Rent Public Housing Program is one that does not require matching funds from the city or the county - no matching funds. Most of our programs, as you probably know, require matching funds. The public body usually has to come up with one-third, and may be required to provide one-half. Public housing is one program that does not require matching funds in any degree. Now there might be some small cost involved to a city if, for instance, they have to run the water or sewer line down to a location where the housing is to be built. But as far as funds being necessary from the city or county for the planning or construction of public housing, it is just not required. HUD advances the money for preliminary planning the project. This is up to $400 per unit. If a housing authority builds 100 units, our initial advance to them for planning purposes is $400 per unit, or $40,000. Then we advance the funds for the

development and construction of the project. The housing authority then sells tax-exempt bonds - housing authority bonds, which are tax exempt, and repays us the entire amount that we have advanced. These bonds are generally sold by the time the project is completed, if the bond market is favorable. They sell these bonds and repay us the money we have advanced. Now HUD guarantees the repayment of these bonds, principal and interest, over a 40-year amortization period. This is why we stay in the picture. With our guarantee over a 40-year period that principal and interest are going to be paid, the authority is able to sell the bonds at a more favorable interest rate and also ~~to~~ get the long 40-year amortization period. ~~This is the extent of our subsidy for low-rent public housing.~~ Each authority has to always take in sufficient rental income to pay all of their operating expenses. Our guarantee is that these bonds will be paid off, principal and interest, each year as they mature.

The housing authority is a non-profit corporation. They will be wiped clean at the end of each fiscal year; and if they exactly break even, it means that over that 40-year period we would, in effect, pay the entire cost of the planning, development and construction of the low-rent public housing units.

In a location where you do not have a housing authority, your role would be to stimulate the organization of one. Under your North Carolina State law it requires a petition by at least 25 residents. This petition is filed with the city or county clerk, as the case may be, setting forth that there is a need for low-rent public housing in the city or county. Then the city or county clerk schedules a public hearing; he has to give at least a 10-day prior notice of such public hearing.

After this public hearing, if it is decided by the city council or the county commissioners that there is, in fact, a need for low-rent public housing, then they get on with the business of appointing the commissioners for the housing authority.

We have a package of forms in Atlanta that will assist the city or county in their organization of a housing authority. It includes all the necessary forms, etc., blank copies of formats to record minutes of meetings, organization transcript, by-laws, cooperation agreement, which I will talk a little about later, etc. We've got those forms in a package and will be happy to send them to any locality or county that is interested in organizing a housing authority.

pkg of forms to assist local officials in forming housing authorities

The first step after the creation of a housing authority is for the authority to enter into a cooperation agreement with the city or county, wherein the city or county agrees to provide the same services to residents of public housing as they provide for any other families in the community. The housing authority agrees to make payment in lieu of taxes to the ~~city or county~~ local governing body equal to 10 percent of shelter rental income, but not to exceed what ad valorem taxes would normally be. Now, contrary to what a lot of people believe and say about public housing being a burden to the taxpayers, ~~that~~ IT is just not so THAT they don't pay any taxes. It's true that housing authorities are exempt from ad valorem taxes. But under this cooperation agreement with the ~~city or county,~~ local governing body, they agree to make a payment in lieu of taxes. We call it ~~pilot~~ PILOT (payment-in-lieu-of-taxes), ~~which is 10 percent of shelter rental income~~. Now when I use the term "shelter rent," that means the amount remaining after the value of utilities or the cost of utilities have been subtracted from rental income. In other words, this means that if an authority takes in an annual rental income of $30,000 and the utilities, which are generally furnished by housing authorities, run $5000 for that year, then that leaves $25,000 shelter rent. Ten percent of this is the amount that goes to the city or county.

Now, the second step after the organization of an authority and after the execution of the cooperation agreement wherein the city also specifies

the maximum number of units the housing authority may build, is for the authority to file an application with HUD for a specified number of units.

After we receive the application asking for a specific number of units, the economic and market analysis division which we have will send someone to help the housing authority conduct a survey in the locality, to help determine just how many units are actually needed to begin with. After this survey has been conducted, then we issue what we speak of as a program reservation for a specific number of units. Now the housing authority might ask for 300 units; but after we help conduct a survey in the locality, it might be determined that a hundred units would be sufficient, to begin with, to see how the program goes. We definitely don't want to overbuild public housing in any locality. We would much rather underbuild. We would much rather an authority had a waiting list than have units sitting vacant.

When public housing units sit vacant, you get a lot of criticism from your real estate people and other citizens. So we like to underbuild rather than overbuild in any community.

Now, at the time that the application is filed with Housing Assistance Administration (I mention Housing Assistance Administration instead of HUD, and I guess I had better explain that under HUD, just as we have the Federal Housing Administration, we have the Housing Assistance Administration. This is going to be changed very shortly in our new organization, which the Secretary has under way. But right now it's the Housing Assistance Administration, and they administer the low-rent public housing program)- at the time the application is filed with the Housing Assistance Administration, the housing authority designates how they intend to provide this low-rent public housing.

There are three different methods that are being used now. For some 28 to 30 years, the only method we knew was what we call now the "conventional" method. But for the last couple of years we've had two other methods which we speak of as Turnkey methods and Section 23, Leased Housing. So, in filing the application, the housing authority designates which one of these techniques they are going to use to provide the actual buildings.

Let's suppose that the housing authority was going to provide this low-rent public housing under the conventional method. Once a program reservation for a given number of units has been issued, it is necessary to enter into a preliminary loan contract with our ~~department~~ agency. This preliminary contract provides up to $400 per unit for the initial planning of the project. Now, once they get this preliminary loan money, the housing authority is in a position to employ a director and an architect; and together they package a development program. Then this development program comes into Atlanta for our approval.

This development program details what the overall cost of these units is going to be. It has to be pretty much in detail. The architects these days are real helpful in helping to put the development program together. Once we approve that, then we enter into an annual contributions contract with the local housing authority. And it is under this contract that we are obligated for the 40-year period to pay off the bonds each year.

Now the monies under the annual contributions contract that we advance cover the total development and construction cost up to 100 percent, if necessary. Out of the first advance loan that we make to a housing authority under the annual contributions contract, they pay us back what we have advanced under the preliminary loan contract so that we have just the one loan outstanding. I might say here that in planning low-rent public housing projects, or developments, you can include space for community purposes.

They also include management and maintenance space. The size of the community space and management-and-maintenance space is geared to the number of units that are going to be built by the housing authority.

After we approve the plans and specifications that are developed under this annual contributions contract, then the local housing authority advertises for bids. And they have to award the construction contract to the low bidder. We have to approve the contract award. I might mention that, generally, while units are still under construction, the housing authority sells housing authority bonds and repays us all of the funds that we have advanced. Then when the units are completed, they enter what we refer to as the management and occupancy phase of operation.

Now the method that I have just discussed is the conventional method of providing low-rent public housing; that is where a housing authority employs an architect for the entire process.

You've heard the term "Turnkey", or maybe you've heard "Turnkey I", "Turnkey II", and "Turnkey III." These are new techniques that can be used in building low-rent public housing. They were designed to involve private enterprise more fully in the low-rent public housing field. Now, using Turnkey I, the housing authority follows the same procedures up to the point where they get the program reservation of units. Instead of employing an architect, they advertise for proposals from builders and/or developers. If they are going to build, say, a hundred units, they advertise for proposals for someone to build them. Turnkey is exactly what the term implies. It is just as it is when you or I find a lot and employ a contractor to build us a home; when he completes the home and gives us the keys, then we write him a check, or our loan company does, and then we take possession of the property. Under the Turnkey method the housing is owned by the housing authority, but they don't buy it until it

is completed, and we don't put up any money to the builder until that time. Then we write them a check for the full amount. Here again, we are obligated for 40 years to pay off the housing authority bonds just as if they had built under the conventional method.

Turnkey is a little different from the conventional method in that the housing authority does not have to accept the low proposal; they can select the best proposal that is within the monies allotted for the number of units in the project. Turnkey II is nothing but Turnkey I, but when the housing authority buys the project, they lease it back to private enterprise for them to manage as low-rent public housing. Now we do not have any of that in our region at this time. I think there is an experimental program going on up in New England somewhere. But there is none in our region at this time.

Turnkey III (now called HOPLIF - Homeownership Program for Low-Income Families) ~~is probably the best program we have ever had under public housing~~ is our newest program, and the second project under ~~Turnkey III~~ HOPLIF in the nation is being completed now in Raleigh. Some of these units are already occupied. You've got a few more under development and/or construction in Winston-Salem, Charlotte, Wilmington, and perhaps other places in North Carolina. The first one was down in Gulfport, Mississippi, also in our region, which was an experimental project originally. The ~~Turnkey III~~ HOPLIF project is handled the same way as Turnkey I, as far as the housing authority is concerned. The basic difference is that all the units under ~~Turnkey III~~ HOPLIF are built in individual homes rather in duplexes or multi-unit buildings. The reason for this is that under ~~Turnkey III~~ HOPLIF, the units are designed for eventual ownership by the residents. They lease them with an option to buy.

Actually, I could talk for a couple of hours on ~~Turnkey III~~ HOPLIF, so I'd just better hit the highlights. Under that program, while the units are under construction, the potential homeowners or occupants are being selected; and

they go through intensive schooling. They are schooled in better housekeeping practices, money management, food preparation, routine maintenance upkeep, etc., so that they will, in fact, be potential home owners. If they don't take part in these training schools, they are not permitted to move in. They've got to attend these training sessions, etc.

I'll use Raleigh for an example: Raleigh found it necessary to establish a minimum income limit there that would produce at least a $55 gross rent. Now gross rent means the value of the shelter plus the value of all utilities. In ~~Turnkey III~~ HOPLIF the utilities are purchased individually by each occupant directly from the utility company. And your North Carolina State law says that any family living in low-rent public housing with fewer than three minors in the family must pay no less than 20 percent of the net family income for rent; and with three or more minors in the family, they have to pay no less than one-sixth of their net family income for rent. This rent-income ratio includes all utilities, so we come up with the term "gross rent", which is the value of the shelter plus the value of all utilities. So if the housing authority does not furnish utilities, then they allow the tenants a monetary difference between gross rent and what we speak of as "contract rent." In Raleigh the estimate of the average cost for utilities per month is $20. Of a $55 gross rent, the family pays the housing authority only $35. The other $20 he retains to buy all of his utilities. So the housing authority, then, gets $35. Under Turnkey III the tenant performs all routine maintenance, like replacing window panes, screen wire, washers in the faucets, etc.; and for doing his own routine maintenance in Raleigh, he is allowed $14 per unit per month. He still has to pay the $35 rent to the housing authority, but $14 of it goes into an escrow account, so he builds up $14 a month in this account, which would be his down payment when he is able to buy the house. The other

$21 is what it costs to operate the housing in Raleigh. This covers administrative overhead, carrying the necessary insurance, making the payment in lieu of taxes, establishing a reserve to replace the major items of equipment, etc. But it takes approximately $21 per unit per month to operate on.

Now, in the case of Gulfport, Mississippi, and in Raleigh, they employed a large corporation to help in the selection of potential home owners and in the training of these low-income families. ~~They had to pay $85,000 each for this service~~. This training cost became a part of the development cost of the project. As I understand it now, at North Carolina State University - and I see some of the gentlemen sitting here who are working on this program, I believe - they are going to come up with a program which provides these services, etc., to housing authorities, that are going to cost less, hopefully, than what they have had to pay to this large corporation.

That briefly covers Turnkey I and Turnkey III (now HOPLIF) but to actually go into the details of ~~Turnkey III~~ the homeownership program would take a couple of hours; so I just wanted to hit the high spots.

I want to talk a little bit about leased housing, which is still another technique or method that can be used to provide low-rent public housing.

Under the leased housing program, also, we have three different methods which can be used. Originally, when Section 23 of the Housing Act permitted housing authorities to lease housing rather than build it or buy it, they could not have leased housing in any locality unless that locality had more than a 3-percent vacancy rate in their standard private housing. We soon found that condition did not exist in very many localities, so it was changed to permit housing authorities to negotiate with owners of substandard housing that could be brought up to standard. Under the leased housing program, housing authorities are only permitted to lease standard housing. So housing authorities were

permitted to give letters of intent to owners of rental property, which stated, in so many words, "If you will bring it up to standard, we will lease it from you for the economic rent." And there again, they would turn around and lease it - sublease it - to families of low income. I believe this method is the best part of the leased housing program, because you can kill two birds with one stone. You eliminate a unit of substandard housing and create a unit of standard housing in one fell swoop.

The housing authority could work closely with the code enforcement program in your locality. The building inspector could go by one day and slap a sign on the property saying, "Vacate it or bring it up to standard" or vice versa, "Bring it up to standard or vacate it." The housing authority can come along that same day and say, "Bring it up to standard and we'll lease it from you for the economic rent." The property owner might have been just getting, say, $40 a month for it as substandard housing, but as standard housing the economic rent might be $100. The housing authority could pay $100 when he brings it up to standard and then turns around and subleases it to a low-income family for perhaps the same $40. Generally speaking, it was envisioned that the owner of substandard rental property with a letter of intent could go to a lending institution and borrow the money to bring his property up to standard. The difference he gets in rent for it as standard housing from the housing authority would be more than enough to pay off what he has to borrow. Then you've got a good standard home instead of a substandard home.

The third method of providing leased housing is new construction. This was right popular at first because housing authorities were permitted to obligate themselves for 20 years. When they got a leased housing program, they would ~~advertise~~ ask for proposals from investors or developers for so many units. In other words, "If you will build us a hundred units, we will lease

the property for a period of 20 years." That period got cut to a maximum term of 10 years - I think possibly to help fight inflation. But ~~since~~ when the leasing period, or term, was cut to 10 years, it ~~hasn't~~ didn't make it really feasible for investors to get into a program like that when they can be guaranteed only a 10-year rental agreement. The 20-year period has since been reinstated. And then the high interest rates at this time, ~~it~~ have discouraged building to lease to housing authorities. ~~We are in hopes that very shortly we will be permitted to go back to the 20-year leasing term. And, Hopefully, interest rates will come down one of these days before long.~~

Under the leased housing program, the property owner still pays full taxes because he, and not the housing authority, owns the apartments. Therefore, he pays full taxes. There is no cooperation agreement required for leased housing programs, but the city or county does have to endorse the housing authority getting into that type program. There is also no 20-percent gap requirement for the leased housing program.

All the way back to the Housing Act of 1937, the Federal law provided that the highest rents that could be charged at admission in low-rent public housing had to be at least 20 percent lower than available standard housing rentals on the private market. We speak of this as the 20 percent gap requirement; and this is designed to insure that public housing will never be in competition with standard private housing. I generally make this point even through there may be some real estate people here. Public housing is never in competition with standard private housing. But right from the original Housing Act of 1937, the aim of which is a decent, safe and sanitary home for every family, we have been in direct competition with owners of substandard rental property. In fact, we are in business to put them out of business, so that everyone can eventually have a ~~fine~~ decent home or apartment.

Under the North Carolina law, after your low-rent public housing units are completed (I have mentioned already that a certain rent-income ratio is required), families with less than three minors have to pay no less than 20 percent of their net family income for rent and families with three or ~~four~~ MORE minors have to pay no less than one-sixth of their net family income. We have to approve their rent schedules, primarily to insure the solvency of the project. In other words, it's got to take in sufficient rental income to pay all of the operational expenses. So we approve the rent schedule, which establishes a minimum rent and sometimes a maximum rent. We also have to approve the income limits for admission and continued occupancy established for housing authorities. This is how we control the 20 percent gap required under Federal law. In other words, income limits are set by the size of the family. Generally speaking, a single person in North Carolina can make about $3000 and still be eligible for public housing. And from these income limits, when you apply your rent-income ratio, you can see that we can control the 20 percent gap and make sure that the highest rent that can be charged at the admission of a family would be at least 20 percent below private rents. Here again a survey is made in the locality to determine what the income limits should be.

We also have to approve the operating budget each year to make sure that the housing authority is going to remain solvent. In this operating budget they forecast what the rental income is and what the operating expenses are going to be. If there is no net income at the end of each year, the Government, through HUD, would wind up paying the entire cost of planning, developing and constructing the project. At the end of each fiscal year, if there is any net income, the housing authority contributes that much towards paying off the bonds. If the annual debt service payment is, say, $40,000 a

year and the housing authority should have $10,000 in net income, they would pay $10,000 to the fiscal agents and we would pay the other $30,000. So you can see that a housing authority is wiped clean at the end of each fiscal year except for some operating reserve that they are permitted.

There has to be a minimum rent in public housing, below which no one can be housed, in order to insure the solvency of the project. A lot of folks say, "Well, this family has no income. Why can't they be housed at no rent?" Well, the fact remains that he has to have income to clothe and feed themselves and they have to be able to pay at least the established minimum rent. I'll give you an example of why we have to have a minimum rent. If the housing authority had to average $40 a month per unit to cover operating costs and they did not have an established MINIMUM rent, if they took in somebody at no rent, then they would have to take in a family at an $80 rent to maintain an average rent of $40. A minimum rent, such as we are now advocating, should be no more than $10 a month below what their average rent has to be. If they need $40 to operate on, we would suggest a minimum rent of no less than $30. This still means that for every $30 renter they had, there would have to be a $50 renter to offset. We've got to have a rental average sufficient to cover the average operating cost in order to stay in business.

I believe I have about used up my time, so I'd better bring this to a close. I believe we are supposed to leave a little time for questions. I will be glad to try to answer any questions any of you may have at this time.

Making Public Housing a Good Neighbor

W-S-J 2/14/72

By I. D. Robbins

In the mid-fifties, during a crisis of management in the New York City Housing Authority, Mayor Wagner called on the late William Reid, who had rescued numerous agencies during his long career in city government, to pull the authority together. Mr. Reid hired Madison Jones, housing secretary in the national office of the NAACP, to be the authority's Director of Intergroup Relations.

The two men believed that the so-called "color blind" policy of the authority was creating slum conditions, preventing blacks and Spanish-speaking people from entering the main stream of community life. Instead, they favored "balanced" black-white housing projects, and the civic leadership of the city supported them. Integration was the progressive approach in those days.

But the new policy did not succeed. Due to the growth of the black and Puerto Rican population, their large numbers within the poverty bracket and the effect of the "tipping" phenomenon (a higher ratio of blacks than is acceptable to white residents) in causing whites to vacate, low-cost housing tenancy in New York City has increasingly become black and Puerto Rican.

Denials aside, this is probably at the heart of the uprising in Forest Hills, Queens, where a white, middle-class, largely Jewish community is using militant methods to resist public housing.

The Forest Hills issue also involves the size of the project. Poor people have problems: lots of poor people in one project have lots of problems. Big projects are a big problem. To put it another way, three problem families in a 100-family apartment house can be tolerated; 30 problem families in a 1,000-family development require a special police detail.

From this understanding came, early in Mayor John V. Lindsay's administration, two answers, "vest pocket" housing and "scatter-site" housing. This means not too many problem families in one place; not such a big project as to create a new segregated slum. Hundreds of small sites in the city were suitable for up to 200 families and it was hoped that integration could be achieved with a minimum of resistance.

Unfortunately the bureaucrats and politicians were unable to adapt to new programs. It became just as hard, and on a unit basis much more expensive, for the agencies to process a 100-apartment project as to process one of 1,000 apartments. There was just as much legal work, proportionately higher architectural and engineering costs, as many public hearings and as much frustration and aggravation.

Lack of Leadership

Strong municipal leadership might have put together as many as 20 small apartment buildings of one basic design on scattered sites, obtained approval for them as one project from the state or federal government and various city bodies and bid and let them as one contract. But this was not done.

Ideally, the poor should be encouraged to live like the not-so-poor, without excessive supervision. But if public housing is to be huge concentrations of problem families as well as of poor people's problems, it becomes necessary to saturate the big projects with costly non-housing services.

In recent years, public housing authorities have been beset with a fashionable social attitude that affects their ability to manage property and maintain standards. Often, otherwise quite moderate persons in the civic leadership (who don't, however, have to live alongside of anti-social neighbors) insist that housing authorities must not reject families even if such families are known to cause harm to their neighbors. As a result it is hard to screen out tenants who are likely to be a source of difficulty or evict them once they are in. Some housing authorities today are giant social-work agencies, not suppliers of shelter. The New York City Housing Authority has 1,585 police officers on its payroll and provides free counseling, child care and recreational and other social services.

The forced acceptance of the community's dropouts has probably hurt public housing's reputation. And those who insist that housing authorities be all-encompassing welfare agencies are often the very ones who complain about the institutional character of public housing.

If the pendulum has swung too far in the direction of aiding the problem families, redefining "problem families" might help. It should mean those who impose harmfully on their neighbors, including those who steal, engage in prostitution, commercial gambling or other vice; commit acts of vandalism or permit their children to commit them without voluntary payment for damages or, in general, grossly offend reasonable standards for living in an apartment house. A good test would be what neighbors themselves are willing to tolerate (not what outsiders think is acceptable conduct).

The Problem Family

Families with problems, as opposed to problem families, need not be proscribed, for they do not necessarily inflict their problems on their neighbors. Thus, a well ordered family of a mother and even several children without resident father is no menace, whereas a regular family with a drug addict son who steals from neighbors may be intolerable.

Skillful screening of applicants may be only half the battle. The other half is the ability to evict. Unfortunately, today many New York City judges will not permit eviction no matter how aberrant the behavior of tenants.

There are many large, low cost, public housing projects in middle-class New York City communities today that do not have neighborhood problems. One of the best examples is Marlboro Houses, a New York state subsidized project in Brooklyn. It contains 1,765 apartments, more than twice as many as the Forest Hills project, and its residents are regarded as good neighbors.

Marlboro Houses was built in 1958, when community resistance had not yet become the pattern. When construction was almost complete, the Housing Authority invited area residents to visit the project and treated them in a warm, hospitable manner. Of the original tenants of this low-income development, 93% were white, reflecting the eagerness of eligible neighborhood residents under favorable conditions to avail themselves of public housing. Thirteen years later the project is 80% white, an approximation of the white ratio in the city.

The Marlboro experience seems to suggest that there is adequate discretionary power built into the Housing Authority's tenant selection methods to produce and maintain a workable mix in even a very large project. It also means that if Simeon Golar, the chairman of the New York City Housing Authority, wants to fulfill his promise to make Forest Hills a model of a good-neighbor setup, he can probably do it. He can favorably involve the neighborhood by taking a significant portion of the tenants from the area. These could easily be found among the senior-citizen hardship cases. While it would be unthinkable to discriminate against blacks and Puerto Ricans, it would be easy to concentrate on stable families without regard to their color or ethnic background. This would not offend black and Puerto Rican tenants who are desperate to escape from the slums and who don't want dope peddlers and addicts as neighbors any more than whites do.

Governmental Displacement

About 15,000 New York City families are now on the list of those to be displaced by governmental action. Next to former site tenants, these families have the highest priority for public housing. With more than 160,000 apartments under the direct control of the Housing Authority and additional thousands under the control of the city's Housing and Development Administration, these displacees could be distributed widely and not used to fill up new projects as they are completed.

To assuage the powerful interest in social experiments and rehabilitation, consideration should, perhaps, be given to housing "problem" families in separate projects and saturating those projects with professionally administered social services rather than seeding such families without special aid among more normal families.

A small federally subsidized development of 250 families, also in Brooklyn, is indicative of what can be done to avoid the Forest Hills kind of problems. This development, named after William Reid, was built in 1969 in a partly middle-class black community of homeowners. Fifty per cent of its original tenants were black, almost all former area residents. As a small project it has no need for full-time authority police, nor does it have the typical Housing Authority complement of managers and assistants. It has blended nicely into the neighborhood. If there are problems, no one can say they are related to public housing which, based on this example, is regarded in the community as just another, better, cleaner, safer place to live.

Only the costs and the frustrations of the bureaucratic process stand in the way of building many such small, conventional developments, or better yet, converting hundreds of acres of abandoned tenements to family sized row houses and duplexes, 30 to an acre, costing half the price of high-rise buildings and operated without the typical public housing bureaucracy. Under such conditions low-income families could develop pride in their neighborhoods and New York could again believe the future of slum families is not hopeless.

The Forest Hills community attitude may not be right or nice, but it challenges us. Can we not, without discrimination and without concessions to the vigilante spirit, do a better job of bringing about enough better and fairer housing?

Mr. Robbins is a trustee and past president of the City Club of New York.

: Many in U.S. ew Blame Nixon

affected them to any great degree are in upper-income groups. For example, Daniel Lewis, vice president of Chesapeake Corp. of Virginia, says the guidelines haven't "trounced on my income" despite the fact that he got less last year through profit-sharing (because profits were lower; profit sharing isn't covered by guidelines).

"If I wanted something, none of the guidelines would have deterred me," Mr. Lewis says. He adds, however, that "the effect of the controls means that I can't substantially change my pattern of life." He intends, he says, to keep his family's living standards "status quo," for the duration of the controls.

When the controls will be removed isn't known—except, perhaps, in the highest political circles. About half (50.1%) of the Trendex group said they believed controls would be ended before the November elections. However, the same percentage of respondents said they weren't in favor of setting a deadline for the termination.

Mr. Yates & Miss Brown

Journal interviewees have differing opinions on the deadline subject. "I don't think a deadline is fair, but I do feel the controls should be lifted soon," says Ralph J. Yates, a 56-year-old registered Democrat who owns his own automotive supply company in Austin, Texas. Mr. Yates, who says he often votes Republican, adds that controls were "the right thing at the right time." He sums up: "You're damned right that Nixon slowed inflation down."

Amanda Brown, however, says "it would be advisable" for the President to remove controls prior to Election Day. "I think it would be advisable to take them off and see what the reaction would be," says Miss Brown, a 28-year-old account executive with an Atlanta public relations firm. "He (Mr. Nixon) ought to let people's wages go up and let that be a stimulus to the economy."

Like many other Americans, Miss Brown says the controls "have had virtually no impact whatsoever" on her personal life. She adds, however, that she thinks the President "was right in attempting to control our economic explosion, mainly inflation. I think the economy needed a settling-down period, and these controls have given some stability to the dollar and to our whole economic system."

Miss Brown describes herself politically as "an independent. I get involved with individuals, not parties." She says she hasn't yet decided how she'll vote in November. And, of course, she isn't alone. In the Trendex survey, for example, 25.4% of the respondents said they didn't know how they'd vote in this year's presidential election, and an additional 5.4% said their vote would depend on who is running.

Most Trendex respondents, however, said they'd already made up their minds. In this group, the largest number—29.3%—said they planned to vote for the Democratic candidate; 24.7% opted for the Republicans; 9.2% said "other"; and 1.1% said they didn't plan to vote at all.

(In the Trendex survey, 46.7% of the respondents said they generally considered themselves Democrats; 29.7% said they generally considered themselves Republicans. In the last presidential election, however, 34.3% said they voted Democratic, and 36.2% voted Republican.)

Coca-Cola Develops Less-Expensive Way To Train Employes

* * *

System, Also Used for Bottlers, Doesn't Require Instructors; Video Cassettes Key Item

By a WALL STREET JOURNAL *Staff Reporter*

ATLANTA—Coca-Cola Co. said it has developed a new and less expensive way to train employes and bottlers. The system doesn't require any instructors, and the student can learn at any speed he wants.

The system consists of color television receivers, color video cassettes, audio cassette "response" devices and individual workbooks. The video cassettes have a variety of programs, ranging from lessons on how to purify water to instructions on how to prepare a sales presentation to Coca-Cola dealers, a Coca-Cola spokesman said.

The system "will represent an investment of approximately $2 million in 1972 by the company and Coca-Cola bottlers," the spokesman said. It is expected to be installed and in use in about 200 locations in the U.S. by year-end. The system was developed "with the cooperation of Sterling Institute, Teletronics International and Sony Corp. of America," he added.

"We believe that implementation of this system will result not only in significant savings in training costs, but also significant increases in productivity and employe morale," J. Paul Austin, chairman, said. Exact figures on estimated savings weren't immediately available.

General Capital Unit, Two Officers Accused Of Antitrust Violations

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON—General Capital Corp. said criminal antitrust proceedings have been filed against its subsidiary and two officers of the subsidiary.

Garry F. Connell Jr., General Capital president and chairman, said the grand jury of the circuit court of Rock County, Wis., indicted Cenco Piping Corp., Janesville, Wis., a division of General Capital's General Energy Systems Corp. subsidiary, for allegedly conspiring to violate Wisconsin antitrust laws in connection with bidding practices and restraint of competition.

Mr. Connell said that also named in the indictment were Edward A. McGavock, General Energy Systems president, and Michael Karp, president of Cenco Piping, as well as five other individuals, eight other mechanical engineering firms and the Southern Wisconsin Plumbing and Heating Association.

The indictment alleges the antitrust conspiracy began in 1962 and existed through Nov. 10, 1971, Mr. Connell said. He added that General Capital is investigating the situation to determine what action to take. Maximum penalty under the indictment is $5,000 or imprisonment for five years, Mr. Connell said.

states are also talking about joint assaults on credit bureaus, mobile home park operators, and nursing homes.

The meeting was called by the antitrust committee of the National Assn. of Attorneys General. It is a longstanding committee, but its new chairman, Virginia's attorney general, Andrew P. Miller, is breathing new life into it. "A far larger number of states are developing competence in this field," Miller says. He is making the group into a device that will enable antitrusters in one state to draw on investigation results and courtroom techniques tried elsewhere.

The surge in state antitrust activity stems from at least three sources:

- The political popularity of consumerism.
- The personal drive of a crew of young lawyers now working for state attorneys general.
- The lucrative recovery possible for state treasuries when the antitrusters can show that, as purchasers of goods, states have been forced to overpay because of conspiracy among sellers. (A Michigan assistant attorney general, Maxine Virtue, told the meeting that over the past 12 years her staff has collected at least $500,000 a year and often as much as $1-million through antitrust damage suits.)

Michigan has recovered millions through antitrust damage suits

The suits. Such damage suits are brought in federal court, usually as class actions. Currently the states are aiming for a Feb. 13 trial on their efforts to force all U. S. auto makers to recall older cars now on the road and fit them out with antismog devices. They also have pending a case against car manufacturers that charges that abolition of fleet discounts raised the cost of police cruisers by as much as $1,000. And they have brought actions against drug makers, concrete pipe producers, makers of wall board, and asphalt producers.

Beyond the federal actions, the state antitrusters are reaping benefits by dusting off some old state laws. In New Hampshire, for instance, Assistant Attorney General Howard B. Myers is preparing to attack arrangements, common in the Granite State, under which retailers divide up a rural district and refuse to sell to customers who live in another merchant's territory. And Pennsylvania is putting together a case against the oil companies that lease stations on its turnpike. The lease says they are to sell at competitive prices, but Assistant Attorney General Peter Brown says that gas pump prices are usually 4¢ per gallon above those of surrounding areas. ■

URBAN AFFAIRS

Housing - Fed

A threat to dump public housing

Earlier this year the St. Louis Housing Authority ordered the dynamiting of part of the enormous Pruett-Igoe complex to scale down the size of the project. Last week, the authority voted unanimously to dump Pruett-Igoe, the rest of the city's public housing, and some 25,000 residents into the lap of the federal government. Whether or not the authority follows through on its threat, which some Washington officials decry as a pressure tactic, its action dramatically underscores a growing financial crisis gripping public housing in the nation's big cities.

According to the National Assn. of Housing & Redevelopment Officials, an organization of some 2,000 housing authorities operating projects with 1-million units, "five major authorities face imminent bankruptcy and 20 more will be insolvent by the end of the year." Cities with the worst difficulties, says the association, are Chicago, Cleveland, Detroit, Kansas City, Minneapolis, Newark, New Orleans, New York, Philadelphia, San Francisco, Washington, and St. Louis.

"In another year," the association goes on, "one-fourth of all public housing—40 authorities managing 250,000 units—will be unable to pay their bills." Under these circumstances, it will not be surprising to find other housing authorities starting to emulate the action of St. Louis.

Case of nerves. Reinforcing the nervousness of local housing officials is the knowledge that the Nixon Administration is planning to impose a ceiling on the subsidies that Washington pays for the cost of operating public housing projects. These operating costs have been met by rental revenues for decades, but in 1969 Congress put a limit on how much housing authorities could charge tenants and ordered the Housing & Urban Development Dept. to subsidize any deficits between costs and revenue from rents. Such deficits have soared to $320-million in fiscal 1973, and housing officials are now worried about how much they will receive in subsidies from the Administration.

This year, for the first time, the Office of Management & Budget and HUD are working on a formula "to insure an equitable distribution of funds." In prior years, subsidies were negotiated between HUD and individual housing authorities, but some public housing people fear that the Administration plans to turn back their financial problems into the laps of local officials. Under one plan, federal officials reportedly would tell local housing people that if allocated funds failed to meet public housing expenses, they would be required to make up the difference from such other federal grants as revenue-sharing or model cities funds. And cities have other plans for this money.

The housing officials find new fuel for their worries in the fact that Congress has already had to raise operating subsidies once this year. And total spending for public housing has risen dramatically in recent years, from only $370-million in fiscal 1969 to a current $1.4-billion. ■

The blasting of Pruett-Igoe: one solution in a period of imminent bankruptcy.

11.25.72

building institution that will encourage Americans "to amount to something." However, we must wait and see who is to be kept lean and hungry, who is to get the cottage cheese and who the cake. It's evidently cake for the military, since Mr. Nixon says that "in terms of the hardware of defense, in terms of the military personnel in defense, the cuts that can be made are certainly minimal." And we guess it's cake with frosting for General Motors and Standard Oil of New Jersey; there's no suggestion they're too bloated. Nevertheless, if the President can arrange jobs for the 3,340,000 Americans who are looking for work and can't find it, he can help them become self-reliant and "carry their share of the load."

If he persuades the industrial polluters to clean up, they also will have "a new feeling of responsibility." And while it's risky, cholesterol-wise, the President could put more on the plates of the 5,303,000 families whose incomes are below the poverty line, and thereby "reinstill some of the faith that has been lost in the sixties."

Open Land Or Open Housing?

Housing – Gen

Last year, the outlying farm county of Loudoun, Va., just outside the Washington, DC area, refused to allow the Levitt Corporation to build a 4200-unit housing complex, though the county leaders admitted that it was one of the finest plans they'd seen. Howard County, Md., the site of the new town of Columbia, said no when the Marriott Corporation proposed to build a Disneyesque recreation center there. A candidate for chairman of the Fairfax County, Va., Board of Supervisors took out newspaper ads headlined, "I simply won't allow big developers to go on getting rich at taxpayers' expense." The ad blamed increased property taxes on too-rapid development and said, "It's about time we controlled growth in Fairfax County." She was the only Democrat to win in that county. In neighboring Arlington, Va., the independent candidate for the county board characterized his Republican opponent as a tool of the real estate developers. The independent's campaign stressed, "We must control growth before it controls us." He won.

Voters in Colorado turned down more money for the 1976 Winter Olympics partly because of the new development the games would bring. Their allies in Oregon are more blunt: "Save Oregon for the Oregonians," their bumper sticker reads. A *New York Times* headline says, "Sewers in Rockland [NY] Are Fought As Harbingers of Urbanization." The major opponents of the sewers, usually thought of as aids to ecology, were a conservation group. San Franciscans put the future of high-rise buildings on the ballot and lost, but a recent decision of the California Supreme Court requires state and local governments to make complete environmental impact statements on any private construction projects that may have a "significant" effect on the environment. The city fathers of Toronto, Canada are questioning the need for some high-rise apartment buildings, which were found to cost more in services than they contributed in taxes.

The conflict between environmentalists and developers has become commonplace. What's new is the impending clash between ecologists and civil rights activists who want to build low-income housing. Previously the same "liberals" who could be counted on to oppose a highway because it would destroy a park could be counted on in the fight for open housing for low-income families. What happens, though, when the housing advocates want to put a federal housing project on a park site?

Aileen Hernandez of the National Committee Against Discrimination in Housing, told the House Civil Rights Oversight Subcommittee last year of "the misuse of legitimate ecological concerns by some groups opposed to the development of low and moderate income housing and housing for racial and ethnic minorities. Increasingly, housing programs are being challenged by ecologically-oriented groups in concert with old-style racial bigots." She cited environmental groups as the prime movers behind building moratoriums in California. Ecological activists were responsible, she said, for an ordinance in Contra Costa County, California, requiring a 500-square foot green area for each new building unit—"a provision which will substantially increase the cost of multiple unit housing and virtually foreclose the possibility of low to moderate cost construction."

One of the most interesting examples of the ecology/housing conflict came last May in a decision of the New York Court of Appeals, the state's highest tribunal, involving the town of Ramapo, a rapidly growing suburb north of New York City and west of the Hudson. Ramapo decided that all multi-family residential development had to receive a special permit before construction could begin. The permit would be granted only if the development had five essential facilities or services: sanitary sewers, run-off water drainage, parks and recreation facilities, roads and firehouses. The town developed a comprehensive plan that programmed these improvements over an 18-year period. If a developer could not meet the requirements, he would have to wait, perhaps as long as 18 years, or he could install them himself. The system was challenged by a property owner seeking to develop his land, and the local builders association. A lower court upheld the ordinance; an intermediate appeals court overturned it; then the court of appeals reaffirmed the

New Rep Housing Gen

validity of the ordinance. A majority of the court found that the Ramapo ordinance, contrary to the charges of the builders and civil rights activists, was not exclusionary. Ramapo, it said, "asks not that it be left alone, but only that it be allowed to prevent the kind of deterioration that has transformed well-ordered and thriving residential communities into blighted ghettos." Far from being exclusionary, the Ramapo system seeks, through sequential development and timed growth, "to provide a balanced cohesive community dedicated to the efficient use of land." The lawyer who drafted the Ramapo ordinance, Professor Robert H. Freilich, now of the University of Missouri-Kansas City Law School, has defended it by noting that Ramapo is still growing at a faster rate than the rest of the state. He stresses the extensive planning involved and notes that Ramapo is the first suburban town in New York to voluntarily develop integrated low-rent public housing—over the objection of thousands of citizens, some of them, no doubt, in the ecology wing.

Some of the arguments against the Ramapo decision were made in Judge Breitel's dissent. The requirements in the town ordinance reflect "a parochial stance" and show no regard for the ordinance's "impact on the region or the state, especially if it becomes a valid model" for other towns. With American society at "a critical crossroads," he said, a single community cannot isolate itself for a whole generation. "Ramapo would preserve its nature, delightful as that may be, but the supervening question is whether it alone may decide this or whether it must be decided by the larger community" of the state.

The Ramapo decision will continue to be debated, as will the issue of open land versus open housing.

THE PUBLIC HOUSING DILEMMA

Rising Land Costs Quenched Zeal

First of three articles.

By INGRID JEWELL

Post-Gazette Washington Correspondent

WASHINGTON, Aug. 22—In 1937, Congress legislated a public housing program to try to eliminate slums.

In 1967 riots occur across the nation, a major cause of which probably is the entrapment of poor families in slum housing.

"Public housing has been a failure," Mayor Joseph M. Barr of Pittsburgh broadcast on a nationwide television hookup, despite Pittsburgh's 9,200 occupied units, and a lot more in the pipeline.

"We are strangled by Washington red tape," laments Alfred L. Tronzo, Pittsburgh Housing Authority head.

"Public housing has not been 100 per cent successful," suggests Rep. William S. Moorhead, D., Pittsburgh, politely to Housing Secretary Robert C. Weaver.

But Weaver shoots back, "neither has it been a 100 per cent failure, as its enemies would have you believe."

The Census Bureau is so unkind as to suggest the number of substandard dwellings remains about constant, deterioration keeping pace with construction. Negroes in the riot cities tell pollsters about rats.

Edward W. Brooke, Massachusetts' Negro U.S. senator, blames public housing's slowness for the riots.

So what has the Public Housing Administration, now rechristened the Housing Assistance Administration, been doing for 30 years?

It has, for one thing, produced 654,118 dwelling units which are now under management. And it had, for another, cleared many acres of slums before the 1949 Housing Act created a special agency for that purpose: the Urban Renewal Administration.

But perhaps most important, the old Public Housing Administration has served as a lying-in hospital for the births of social consciousness and responsibility for low-cost urban shelter.

It has changed greatly, in the 30 years —and quite obviously it needs further changing now.

It started out in the big Depression to substitute good housing for bad, and, as an important by-product, to produce construction jobs. The 1937 pattern, amended, is still the Public Housing Law.

Local housing authorities build low-rent accomodations, operate and maintain them out of the below-commercial rentals, and pay off the long-term bonded indebtedness with federal subsidies. Rents are scaled to tenants' ability to

(Cont'd on Page 7, Column 1)

(Continued from Page 1)

pay. And at least one unit of slum housing must be demolished for every unit of public housing built.

At first the new dwellings were multi-family apartment buildings — walk-ups, and hence seldom higher than three stories. Families with children were given preference. Usually there was a playground in the capacious back yard then available at moderate land costs.

But land costs rose; and then came the high-rise apartment houses with elevators. they were still designed for families with children. Not ideal, the housing authorities admitted. But land costs were mounting, waste land was disappearing from the market, and a high-rise gave more house for the buck.

Row Houses Stressed

Today housing authority directors are agreed children should live in row houses, whenever possible; in low, walk-up apartments when necessary.

Thomas W. Fletcher, the new head of the Housing Assistance Administration in the Federal Department of Housing, is trying to undo some of the mistakes of the older high-rise family buildings by encouraging local authorities to convert apartments on alternate floors to play rooms. By walking up or down one floor, a child would have play space.

Congress has been groping its way ahead. It used public housing to shelter defense workers in World War II. It became aware of the acute need of elderly and the physically handicapped for low-rent accommodations, and authorized their inclusion as tenants.

The local housing authorities, pressed for sites, opposed by neighborhood groups who fear depreciation of real estate prices if public housing comes to their area, have taken on "housing for the elderly" with relief. High-rise apartments are the cheapest to build. And old folks like elevator buildings. What the authorities save on building high-rise apartments for the elderly, they can spend on row houses for families.

Dilworth Took Lead

About 1958 Philadelphia's Mayor Richardson Dilworth persuaded Congress to permit local public housing authorities to buy old buildings, either single-family or multi-family, and rehabilitate them for low-rent public housing.

Dilworth thought there would be social as well as financial advantages to this method. It was not a good idea, he felt, to concentrate families which, for one reason or another, were impoverished, where they were in effect segregated from the more successful part of the population.

After that innovation came such new ideas as rent supplements (administered by FHA) where the federal government pays part of the rent of a poor family living in privately-owned housing. Subsidized interest rates were authorized to permit non-profit organizations to build housing for low-rent tenants. And finally, "turnkey," where private builders contract with the public housing authorities to construct the sort of housing required on sites owned by the builders. The buildings are sold to the authorities after they are completed. Because the builders can acquire land with less delay than public agencies, housing is usually obtained more quickly this way.

The federal policy is moving in the direction of private enterprise. The President's most recent suggestion would carry "turnkey" one step farther, and permit private business to manage public housing as well as build it. The federal government would audit and subsidize.

A related development is Congress approval of loans and grants to low-income owners or of slum property, or deteriorating property, to rehabilitate it and so benefit the neighborhood and stabilize the population. This relatively new program has channeled 23 such grants into Pittsburgh for a total of $32,278.

'Stabilizing' Opposed

"Stabilizing" the population, that is, enabling people to continue to live where they have been living, is not accepted enthusiastically by some civil rights organizations. They say stabilization promotes segregation. They much prefer open housing, so Negro families can live wherever they choose within the limits of their pocketbooks.

The public housing officials are all for open housing legislation. But they point out many people want to stay where their friends are, and their churches, and their pet activities.

Tronzo's troubles in Pittsburgh include sniping by some civil rights organizations. The anti-poverty workers are after him because he wants to build another high-rise apartment for the elderly on the edge of an all-Negro neighborhood. The anti-poverty people say this would intensify the "ghetto." Tronzo replies that old Negroes, like old everybody else, prefer to live in neighborhoods they know. But the project is held up by this controversy.

Tomorrow—Public housing must make adjustments.

8-24-67 (2.)

The Public Housing Dilemma

'Development' Costs Creating Resistance

(Second of three articles)

By INGRID JEWELL

Post-Gazette Washington Correspondent

WASHINGTON, Aug. 23 — Public Housing, in its 30 years of life, has had to adjust to many changes.

Sites have been increasingly hard to find.

The type of families housed has changed in some cities from the temporarily impoverished, middle-class tenants of the Depression to the chronically-impoverished, poorly-educated migrants displaced from southern agriculture.

And building costs have sky-rocketed.

In the 1937 law, and in each amendment since, Congress has set a maximum cost per room for public housing. The 1965 amendment, under which the agency now operates, sets $2,400 per room as the national ceiling, for family units; $3,500 per room for housing for the elderly where such special features as non-skid floors run up the cost. The law also permits a $750 additional payment in "high cost areas," of which Pittsburgh is one. Most big northern cities where labor is unionized, are high cost areas.

These per-room ceilings are the only dollar ceilings Congress stipulates. The law plainly says these ceilings apply to "construction and equipment, excluding costs of land, demolition and non-dwelling facilities." Bathrooms are not counted as rooms.

So in Pittsburgh, the congressional ceiling for a living room, bed room, kitchen and bath apartment would be

(Cont'd on Page 15, Column 1)

(Continued from Page 1)

three times the sum of $2,400 and $750, or $12,450.

Administratively, the housing agency has established "total development cost" ceilings, which vary from city to city. In Pittsburgh $20,000 is currently the total development cost ceiling for public housing units, regardless of their size and regardless of whether they are in high-rise apartments where little land is needed, or in row houses where a lot of land is needed. The agency insists that this total development ceiling shall include land development, even if that involves demolition and replatting, and installation of utilities and streets.

Pittsburgh is not the hardest hit city. Newark, N. J., where building costs are even higher than in Pittsburgh, has a total development cost ceiling of $17,500 for conventional family units. These ceilings, being administratively set, appear to vary at the whim of the regional public housing director.

Unfairness Seen

Thomas W. Fletcher, the new agency head in Washington, sees the unfairness of this.

"If they can come down here and make a case, they can have more money," he says.

But the agency men fear the wrath of Congress. To a congressman from a non-union area, or from a rural area, $20,000 sounds like a lot of money to spend on each apartment in a multi-apartment project, even if street paving is included.

Ernest Bohn, the Cleveland Housing Authority head, who authored the Ohio state housing law several years before the Federal law was enacted, has much sympathy for the housing agency in Washington.

"They have to have a cost limitation," Bohn says, "else the program would run away." But he thinks housing authorities should have considerable autonomy, and if land development is very costly, the local men should be allowed a suitable escalation.

"Twenty thousand dollars is a good place to start," he says.

Tronzo Agrees

Bohn and Alfred J. Tronzo, of the Pittsburgh Housing Authority, are agreed on one needed amendment to the law: The Housing Assistance Administration should be allowed the same privilege to "write-down" land costs as the Urban Renewal Administration enjoys.

The law permits URA to spend whatever is necessary on acquiring property, demolishing the old buildings, replatting, bringing in utilities, laying out streets.

When URA sells the redeveloped land to a new private user, usually the sale price is less than the redevelopment cost. But URA is permitted to sell at a loss, which is called "write-down." The Federal government's subsidy to URA takes the form of paying two-thirds of this loss. The other third is paid locally.

If the Housing Administration were allowed to take a "write-down" in cases of particularly expensive land acquisition costs, there would be no problem keeping inside a $20,000 ceiling, Tronzo and Bohn agree.

Fletcher, still very new at the job, working hard and anxious to experiment where his superiors and Congress will permit, has suggested that the URA could expeditiously serve as land provider for the Housing Assistance Administration. Then the project would benefit from URA's privilege of "write-downs" and from HAA's debt service subsidy. But he hasn't got the plan cleared yet.

Tronzo does not want this arrangement. He prefers to acquire his own land. He says URA is a suitable instrument for acquiring large areas of land. But public housing, as Tronzo sees it, should be free to acquire small blocks of land, to erect a few row houses here and there in the city. HAA can do this more efficiently than can URA, he thinks.

The Pittsburgh Housing Authority director also wants a change in regulations which would permit him to enter into 10-year leases of private property to be converted into public housing. The regulations now permit only five-year leases with an option for another five years.

Tronzo says owners of suitable property often balk at a five-year initial period. He thinks he could obtain much more privately-owned public housing if leases could be written initially for 10 years.

* * *

TOMORROW — Effect of building trades wage rates on public housing.

8-25-67 (3.)

The Public Housing Dilemma

High Building Trades Wages Braked Thrust

(Third of three articles)

By INGRID JEWELL

Post-Gazette Washington Correspondent

WASHINGTON, Aug. 24 — Soaring wage rates in the building trades are the principal cause of the slow-down in public housing construction, the directors in Detroit, Cleveland, Pittsburgh and Newark are agreed.

And this applies whether the housing authorities do their own building, or use the turnkey method where private contractors do the building to government specification, on land owned by the contractors, and sell it to the authority when it is completed.

The $20,000 total development cost per unit now allowed Pittsburgh's Housing Authority, administratively, by the Public Housing Administration's successor, Housing Assistance Administration, would have been ample in 1959, adequate in the early '60's.

Pittsburgh's carpenters worked for a base rate of $3.675 an hour in 1959; for $5.075 starting in 1965; and $5.50 today, and will go to $5.65 an hour on Dec. 1. This will be an increase of 52.38 per cent since 1959, not including generous fringe benefits.

Plumbers in Pittsburgh received a base pay of $4 an hour in 1959, now get $5.615, a 40.38 per cent increase exclusive of fringe benefits. Electricians received $4.35 in 1959, get $5.40 now plus fringe benefits which are 18.5 per cent better than in 1959. They also play a cute game with contractors, refusing to accept employment for less than six

(Cont'd on Page 9, Column 1)

(Continued from Page 1)

days, the sixth day being paid at double time.

Painters got $3.45 (brush) or $3.70 (spray) in 1959, now get $4.95 or $5.20 and their fringe benefits have improved 3.5 per cent.

Bricklayers got $3.975 in 1959, now get $5.85, a 47.17 sweetening—and their fringe benefits have improved 10 per cent.

There is a 33 per cent differential between union and non-union rates, on an average, in the building trades in the Pittsburgh area. But these housing projects, being federally-subsidized, must pay the "prevailing wage" in the community, which in Pittsburgh is the union scale.

Detroit Wage Rates

In Detroit, where inadequate housing has been listed as one of the major causes of rioting, the rates now are: carpenters, $5.06; plumbers, $5.25; electricians $5.40; painters $5.70; and bricklayers, $5.44, all plus generous fringe benefits.

In Cleveland, where riots occurred last year, new rates are to go into effect Nov. 1. They are scheduled to be: carpenters, $5.72 plus 58 cents fringe; plumbers $5.89 plus 32 cents fringe; electricians $5.93 plus 33 cents fringe; painters $5.21 plus 41 cents fringe; and bricklayers $5.66 plus 50 cents fringe.

In Newark the current rates are: carpenters $6.73; plumbers $6.71; electricians $7.24; painters $5.85; and bricklayers $6.20.

Unions, to qualify for employment on these federally-subsidized housing projects, must open their membership to Negroes. There is great reluctance to do this on the part of some unions; and the result is a hold-up of building in a few places.

In Cleveland the electricians and certain electrical contractors are being prosecuted by the U. S. Department of Justice for failure to include Negroes on jobs federally-subsidized.

Detroit and Newark have had serious riots this summer; Cleveland had her share last summer.

Public Units Spared

For whatever reason, damage to public housing property has been minimal although in each case the rioting occurred close to such property.

In Detroit, where there are 8,180 units under management, two commercial stores located within the limits of a project, were burned for a loss of $30,000, all covered by insurance.

In the projects themselves, broken windows, totaling about $200, also covered by insurance.

Mark Herley, assistant director of the Detroit Housing Commission, recalls that the elderly residents of one project actually established a line of "guards" around their cherished domicile to protect it from the young rioters.

Herley thinks "good social programs" conducted in the housing projects helped to save them. The Detroit projects have nursery schools, tenant councils, a measles immuniation program, dental clinics.

A few days after the rioting subsided, a "Tot and Teen Fashion Show" was put on in one of the projects. A department store furnished the clothing. The motto of the occasion was "Be Cool When You Go Back to School." Herley says it is probable that some residents of the dwellings participated in the disorders; but for the most part the tenants wanted no part of the disturbance.

'Tenants Stayed Home'

In Cleveland last year, rioting occurred close to public housing, but damage was slight.

In Newark this summer, Joseph Sivolella, assistant executive director of the Housing and Urban Renewal Agency reports the first riot started in a police station across the street from a housing project. But there was no damage to that building. The riots went on for five days. But there was less vandalism against public housing in the five days than occurs over a normal weekend, Sivolella says. He thinks "the tenants stayed at home."

Newark has 10,737 units under management in 17 locations, five of them in riot areas. It would like to lease 500 more but has not found landlords interested.

The Housing Department in Washington has decreed the total development cost in Newark shall be $17,500 per family unit: $250 more for housing for the elderly. This is lower than Pittsburgh's ceilings, though labor costs are higher in Newark.

Of course Newark can't build and redevelop sites for those totals. So Newark, like Detroit and Pittsburgh, wants changes in the law and the administrative procedure. Only Ernest Bohn in Cleveland is fairly content with the legislative status quo, and even he would like a little more local autonomy.

Perhaps coincidentally, Detroit's public housing program is much less dynamic than Pittsburgh's. This is certainly no fault of Herley's but stems from the city's abnormal preoccupation with the horseless carriage.

Detroit Freeways Cited

Detroit's great love is freeways. They writhe their relentless ways across the city in all directions. Their construction causes demolition of much housing, and so the public housing officials are called in to relocate the displaced persons.

Detroit has used urban renewal assistance to provide the rights-of-way for the freeways; and UR likewise has provided sites for several of the public housing projects.

But Detroit is still housing a majority of its families with children in high-rise apartments.

In the early 1950's, Detroit built 19 high-rise apartments, usually with two bedrooms. Now there is crying need for units for large families, with four or five bedrooms. But Herley can't build row houses or garden type apartments for the $20,000 allowed him for these types. He is allowed $17,000 ceiling on high rise apartments.

Three senior citizens' projects are held up because they can't be built under that ceiling.

Herley wants Congress to tell the Housing Department to separate building costs from land development costs. He says UR is as slow as HAA. Detroit is using the leasing method to obtain needed unit. The city can't find sites, so has been unable to interest any contractor in the turnkey approach.

Herley thinks blanket approval of sites in advance would hurry things up. He picked six sites last year, but all fell through because the neighborhoods objected.

Rehabilitation of individual old houses for rental by HAA, which has worked so well in Philadelphia with its sturdy old brick structures, has not been undertaken in Newark because there the deteriorated houses are usually frame.

Neither has Newark been able to make turnkey work yet.

Rent Schedule Hit

Sivolella says the rent schedule required by HAA is outmoded.

"We have to turn down some applicants because they are too poor," he says.

He thinks a fixed ceiling for room costs, for the whole nation, is nonsense, even with the $750 differential permitted to high cost area.

Bohn in Cleveland, with 7500 units under management, and 2,500 more in the planning stage, says the weak spot in the public housing program is what to do with the elderly when they become physically unable to care for themselves in the apartments HAA builds.

"Congress should allow us to build nursing homes for such people," Bohn says.

"It is sad to see an old person, who has been used to living in a new apartment at below commercial rent, suddenly unable to continue living there because of his physical debility. His small income won't pay for nursing home service."

The late Frank Buchanan of McKeesport was a principal architect of the 1949 Housing Act, which called for 810,000 public housing units to be built over six years. The publichousing program still falls far short of that goal.

LAND PEOPLE & POLICY

gordon edwards

GENERAL ELECTRIC, NAHB and the SIERRA CLUB . . .

Sound like strange bedfellows? Well, Gordon Edwards, far-ranging academician and professional planner, doesn't think so. In this 159-page hard-hitting book, *Land, People and Policy,* Edwards declares that the political recruiting campaign needed to implement a workable land assembly program for the United States should include big business, contractors, conservationists, and everyone else with an interest in our land resources. Or to use his words, "everyone from the National Association of Home Builders to the Sierra Club."

He analyzes several large-scale land-acquisition programs already common in Western European countries, Sweden having begun such a program at the beginning of the Twentieth century.

"It should be recognized," Edwards admits, "that, though priority must be given to the problems of the ghetto and the poor, it is essential to find ways to deal with the broad spectrum of urban development.

> *"If we fail to adopt programs which look to the future, a victory in the war on poverty will mean only that many people will win the opportunity to live a materialy better life, but still within an inefficient and unattractive urban environment."*

In his book, Edwards alluded to General Electric's 1966 plan to help solve the problems of urban America by building a "new town" for a population of 100,000. But in 1969 GE sadly announced that it was dropping the program because of difficulties in assembling the necessary acreage without paying exhorbitant prices brought on by land speculators sensing a windfall.

Edwards' proposal for a National Land Commission, outlined in this book, would help solve such stumbling blocks to orderly development with a minimum of government interference. He advocates a practical and realistic method of using governmental powers of eminent domain, combined with private capital and managerial skills, to help solve today's urban crisis, conserve our shrinking resources and build a better urban America.

His well-documented book should constitute a standard reference work for builders, economists, students, real estate men, planners, zoning commissions, developers, conservationists, policy-makers and anyone with an interest in bringing order out of the present chaos involved with assembling large tracts of land.

910346-14-3 *(hard cover)* & 910346-15-1 *(paperback)*

LAND, PEOPLE AND POLICY by Gordon Edwards — Released in mid-1969, this 159-page book by an experienced professional planner examines the complexities of the urban land situation which faces our burgeoning metropolitan areas. Both hard cover and paperback editions available. Single copy price—$5.00 and $3.00 (See order blank.)

BOOKS BY CHANDLER - DAVIS

Standard Book Numbers (SBN)

"The Planner's Portfolio"

Citizen's Guide Series

910346-21-6 *THE CITIZEN'S GUIDE TO URBAN RENEWAL by Lindbloom and Farrah — Revised 1968 edition of a popular 1962 book authored by Van Huyck and Hornung. Its 192 pages incorporate changes in the Federal urban renewal program, up to and including the 1968 Housing Act. Single copy price ... $2.50.

910346-27-5 *THE CITIZEN'S GUIDE TO ZONING by Herbert H. Smith — Published in 1965, this 182-page book is still popular. It talks directly to the citizen interested in seeing that his community keeps pace with today's rapid urban, suburban and rural development. Single copy price ... $2.25.

910346-25-9 *THE CITIZEN'S GUIDE TO PLANNING by Herbert H. Smith — Now in its fifth printing, this guidebook with its 106 pages is widely used as "required reading" for individuals and groups in community decision-making. Single copy price ... $2.00.

Technical Guide Series

910346-17-8 *NEIGHBORHOOD ANALYSES by Morton Farrah — First in a scheduled series of handbooks for professional planners. Intended primarily for neophytes and field workers, this 78-page manual will also serve a useful purpose in any professional library allied to the planning field. Published in 1969, it incorporates all applicable provisions of the 1968 Housing Act. Single copy price ... $1.50.

Textbooks and Professional References

910346-23-2 THE TECHNIQUES OF URBAN ECONOMIC ANALYSIS, edited by Ralph W. Pfouts — A 400-page compilation of leading articles on economic base theory applications in the field of planning. First published in 1960; now in its third printing. Single copy price ... $3.50.

910346-19-4 MUNICIPAL COSTS AND REVENUES, by Isard and Coughlin. Widely acknowledged as a reference work in the analysis of costs and revenues resulting from community growth. One hundred twelve pages. Originally sponsored jointly by Federal Reserve Bank of Boston and American Institute of Planners. Single copy price ... $3.00.

87212-131-3 PUBLIC REGULATION OF THE RELIGIOUS USE OF LAND by James E. Curry — (Published by the Michie Company — distributed by Chandler-Davis.) A useful 429-page manual of law, enhanced by its reference tables and index which provide ready reference to church zoning cases, religious denominations, states and municipalities. Legal jargon is avoided without sacrificing depth of analysis. Single copy price (hard cover) ... $12.50.

INFORMATION BULLETIN NO. 1

What Are "The Public Lands"?

Bureau of Land Management • U.S. DEPARTMENT OF THE INTERIOR

I know about national forests and national parks, things like that, but then I hear about "the public lands." What are those?

Of course, any land owned by local, State, or Federal Government is public land—national forests, national parks, State forests, even the neutral zone in the middle of a city's boulevard. But when we speak of the public lands, we mean chiefly that part of the original public lands of the United States still under Federal ownership which has not been set aside for uses such as national forests and parks. Larger than all other Federal lands combined, they cover some 453 million acres—about one-fifth the land area of the United States.

Where are these lands located?

Mostly in 11 Western States and Alaska, with small acreages in the Midwest and Southwest. About 175 million acres are in the West and 278 million acres in Alaska. The following table gives the breakdown by States as of June 30, 1967:

State	*Public land acreage*
Alabama	1, 158
Alaska	278, 142, 341
Arizona	12, 925, 990
Arkansas	2, 367
California	15, 222, 261
Colorado	8, 459, 470
Florida	1, 842
Idaho	12, 172, 725
Kansas	1, 515
Louisiana	3, 900
Michigan	4, 133
Minnesota	41, 749
Mississippi	1, 614
Montana	8, 226, 377
Nebraska	7, 923
Nevada	47, 957, 820
New Mexico	13, 440, 297
North Dakota	75, 969
Oklahoma	9, 609
Oregon	15, 668, 266
South Dakota	278, 206
Utah	22, 983, 922
Washington	273, 748
Wyoming	16, 681, 025
Total	452, 584, 227

What kind of lands are they?

Those in the West range from the flat terrain of the low desert country to deep, multicolored canyons and towering buttes and mountains. The gamut of cover runs from cacti to sagebrush and pinon pine to majestic redwoods and Douglas fir of the Pacific Northwest. Together, they offer some of the most dramatically sweeping vistas of the untamed West. The lands of Alaska are mostly timber or tundra, but also include mountains and swamps, even desert areas.

Watersheds of the public lands are the source for a large portion of the West's water supply. Mostly arid or semiarid, very little acreage is suitable for farming; but they have great value for livestock grazing, mineral development, timber, wildlife, and outdoor recreation. They also include many areas of scientific value. Most lands are distant from population centers, and many are not accessible by all-weather roads.

Who is responsible for managing these lands?

The Bureau of Land Management, an agency of the Department of the Interior. This Bureau was formed in 1946 out of the General Land Office (which dates back to 1812) and the Grazing Service (formed in 1934).

How have these lands been managed in the past?

Until the 1930's, they were not really managed. Most people looked upon these lands simply as acreage not yet settled by the growing population—a temporary "storehouse of land" which would soon be needed by settlers. Thus, administration was largely limited to surveying, processing of mining claims and land transfers by the General Land Office. In 1934, after it was generally recognized that little of the remaining lands were suitable for independent farm units, Congress set up the Grazing Service expressly to manage those lands which could produce forage for livestock. Range management continued as the main job after the Bureau of Land Management was formed, although some attention was given to other values.

How will these lands be managed in the future?

For many uses. This includes domestic livestock grazing, fish and game, industrial development, mineral production, outdoor recreation, and watershed protection. Under the Classification and Multiple-Use Act of 1964, BLM is helping to meet some of the modern-day recreation needs of America's rising population, for example. Access roads will be constructed and sanitation and protection facilities will be provided in many areas.

What does this management job involve?

Briefly, the Bureau's job includes:

1. Timber and forage management:
2. Watershed protection;
3. Public land leases and sales;
4. Custodianship and maintenance of basic public land records;
5. Mining and mineral leasing, including the Outer Continental Shelf;
6. Public land boundary surveys;
7. Preservation and improvement of wildlife habitat; and
8. Development of facilities to serve the general public.
9. Preservation and restoration of natural beauty on the public lands.

What revenues are collected by BLM?

An average of more than $200 million a year during the past 10 years. One important source was oil leases and royalties on the Outer Continental Shelf, known as "offshore lands." Other major sources included mineral leases and permits, sales of timber and grazing leases. This is about six times the amount BLM spent during that period. The following table shows receipts and appropriations since 1958:

Year	Receipts	Appropriations
1957	$112, 059, 358	$23, 776, 153
1958	127, 384, 728	30, 800, 141
1959	136, 720, 871	31, 102, 597
1960	371, 067, 867	36, 193, 788
1961	159, 246, 157	40, 555, 827
1962	173, 517, 502	43, 329, 735
1963	530, 692, 660	60, 655, 589
1964	199, 051, 586	62, 056, 629
1965	234, 360, 884	73, 465, 733
1966	433, 749, 012	82, 415, 350
1967	821, 504, 386	82, 412, 319
Total	3,187,295,653	548, 987, 708

Are public lands still being sold?

Yes; certain lands are transferred from Federal ownership each year under various laws. For instance, in 1967, nearly 438 tracts totaling 61,386 acres were sold at public auction. Since the United States became a nation, more than 1 billion acres have been transferred for State grants, military land bounties, railroad grants, homesteads, and various other purposes.

Is it still possible to homestead?

Homesteading, for all intents and purposes, is a thing of the past. Though the law is still on the books, nearly all the land which could be farmed economically has already passed into private ownership. Most of the remaining land is too dry, rough, or otherwise unsuitable for cultivation.

Land law's fine print trips up developers

New federal act was aimed at some sharp practices in interstate land sales. But developers say it actually goes far beyond that, gives wide power to HUD

A new law, designed to end shoddy practices in interstate land sales by some foreign and domestic developers, now appears to have caught the entire land industry in its net as well.

Regulations governing the interstate land sales provisions of the 1968 housing act were released March 29 by the Housing & Urban Development Dept., which must administer the new law. The regulations took many developers by surprise. They're much tougher than anyone expected and they involve many developers who thought they were exempt. Now developers must rush to comply with the May 28 filing deadline or halt interstate sales.

Developers large and small are affected. For Boise Cascade Corp., which has land ventures in 10 states and builds homes in five, it means more paperwork and extra costs. "It won't affect us in any major way," says William Agee, vice-president, "but you get one more layer of people to deal with. It slows down the process."

The law covers developers selling, through the mail or across state lines, "any lot in any subdivision of 50 or more lots offered as part of a common promotional plan." It requires them to register with HUD, pay a fee, and give the buyer a printed property report containing at least 19 items of information specified by HUD. The requirement covers sales not only of residential land, but also of five acres or less for commercial or industrial use. Developers say it will give HUD powers comparable to those exercised by the Securities & Exchange Commission over securities, effectively requiring registration of most land sales throughout the country. (The industry also must comply with requirements of over 30 state bureaus.)

"Nobody appreciates the coverage of this act," warns M. J. Blustein, president of Appalachian Corp., a developer of second-home sites in the Washington-Baltimore area. "This thing will be a thousand times bigger than Congress intended it to be."

Land developers subject to the act—and this now means virtually everyone—must send in their minimum $250 fee and registration forms between Apr. 28 and May 28 to keep their interstate and mail-order sales programs going. After May 28, they must get HUD approval to continue. This means HUD's new Office of Land Registration—which has only 10 staff people to handle the load—must review everything. Meanwhile, developers who failed to file before the deadline must halt these sales.

Sleeper clause. Senator J. William Fulbright (D-Ark.), alerted by a constituent to the act's far-reaching provisions, attached an amendment to the original version reported by the Senate Banking & Currency Committee. The amendment specifically exempted developers from the registration requirement if the buyer or his wife personally inspected the property, and if it was "free and clear of all liens, encumbrances, and adverse claims."

That last phrase was the sleeper. Fulbright wanted to insure that buyers wouldn't unknowingly purchase land with such encumbrances as state-owned flood easements, which could prevent any building on the property. But the conference committee on the act went further: It specified that covenants to set aside land for parks, streets, and other purposes would not force the developer to register with HUD.

With these assurances that the act wasn't pointed at them, many developers whose sales were mostly of the "on-site" variety supported the legislation, feeling it would undercut the unprincipled operators who were giving the industry a bad name. Many even testified in favor of its passage.

HUD's interpretation. HUD's lawyers saw things differently, however. They interpreted that "liens, encumbrances, and adverse claims" passage to include such things as "beneficial" covenants—the type of restrictions usually considered essential to preserve the quality of a development.

Developers squawked. Fulbright, sensing that the intent of his amendment would be nullified, tried to ward off such an interpretation. But HUD's final regulations make these covenants "encumbrances" within the meaning of the act. At this point, it probably would require corrective legislation to overturn HUD's strict ruling. Neither Fulbright nor the Nixon Administration plans any such effort at present, though developer protests could change that.

Florida calm. Florida's major land developers—most of whom sell interstate and are thus subject to the new law, even without the "covenants" interpretation—don't seem much disturbed by it, probably because Florida

Dear Mr. Campbell:

Thank you for your tip on Mr. Leon Hall as a possible person to work with us on our conference on public school finance to be held at Clark College in late September or early October. Please find enclosed a list of names of other participants in the conference. We believe we have accumulated a very fine slate of experts.

We would like very much for you to come to the conference because as an educational device it may be without parallel for this part of the country. I will get in touch with you when our dates for the conference are definite.

Sincerely,

James C. Mays

FOR IMMEDIATE RELEASE

Conference On Public School Finance
To Be Held at Clark

The future of public school finance will be the subject of a fall conference sponsored by the Southern Center for Studies in Public Policy, a social action and monitoring organization situated at Clark College in Atlanta. The conference is planned for October 13 and 14 at the Atlanta Marriott Inn and on the Clark College campus.

The agenda for the conference calls for three sessions dealing with: (1) the legal and social manifestations of school finance, (2) the Georgia school finance system: how it operates; should it be challenged and (3) alternatives to the present school finance.

This conference will bring together experts from different parts of the country (including Georgia) to explore and explain the complex subject of school finance. Speakers will include Mr. John Callahan with the Advisory Committee on Intergovermental Relations, Washington, D. C.; Dr. Bill Wilkin, Political Science Department, Georgia State University; Mr. John Silard, Washington, D. C. Attorney; Dr. Arthur Schreiber, Department of Economics,

Georgia State University; Ms. Cynthia Brown, The Washington Research Project, Washington, D. C.; Mr. Howard Atherton of Marietta; Rep. Robert H. Farrar, Chairman of the Georgia House Education Committee and Mr. Leon Hall of Atlanta's Southern Regional Council.

In light of the many cases currently being brought in 45 different states challenging the current methods of school financing, this conference provides a timely analysis of the subject and allows participation by both professional educators and the general public.

The conference on public school finance opens on Friday, October 13, with registration from 4-6 p.m. at the Atlanta Marriott Inn. At 6 p.m. a banquet is scheduled at the Marriott, followed by the keynote address by John Silard a prominent Washington attorney. The Conference resumes Saturday, October 14, at 9 a.m. with seminars in Kresge Hall on the Clark College campus. Registration fee for the conference and banquet is $10.00 per person. For reservations and information call Mr. James Mays at 522-8770.

Public School Finance Conf.

THE SOUTHERN CENTER FOR STUDIES IN PUBLIC POLICY

CLARK COLLEGE • 240 CHESTNUT STREET, S.W.
ATLANTA, GEORGIA 30314 • 404-522-8770

October 2, 1972

Dear Friend:

The Southern Center for Studies in Public Policy will be the host of a Seminar/Conference on Public School Finance. Although Clark is an institution of higher learning, we believe that it is extremely important that persons involved in any phase of education in America begin to understand what is going on on the primary and secondary levels of education in regard to school finance.

In 1971 a case was brought in the state of California challenging the method through which California taxed and paid for her schools. The plaintiffs argued that the rich would always have better schools because the method of taxing always provided more money for rich-area schools. The California Supreme Court agreed, saying that the taxing system resulted in wealth discrimination and therefore the California school finance system must be changed.

Today no less than 45 states are bringing cases similar to the California case (Serrano v. Priest). Georgia is currently involved in three or four of these challenges requiring that monies for public schools be more equitably distributed. On Thursday, October 12, 1972, one day before our Conference begins, the United States Supreme Court will hear the appeal of Rodrigues v. San Antonio Independent School District, which is the Texas equivalent of Serrano v. Priest. How this case will be decided is uncertain, but however it is decided all Americans will be affected.

With this in mind we have drawn together renowned experts from Georgia and from the nation's capital to labor over this question of public school finance and hopefully to educate each of us to the problems associated with public school finance.

The Conference will be held over a day and a half beginning Friday evening and running all day Saturday, October 13th and 14th. We believe that it will be one of the very important events of the '72 - '73 school-year.

If you plan to attend the dinner on Friday evening, October 13th, please inform us by calling 522-8770.

Sincerely,

James C. Mays

James Mays, Asst. Director

SEMINAR/CONFERENCE ON PUBLIC SCHOOL FINANCE

PURPOSE:

This conference is designed to explore a relatively little-known area-public school finance. Recent developments dealing with this vague and evasive area have been brought about through the legal process in the form of court cases charging wealth discrimination in school finance, a violation, some higher courts are saying, of the equal protection clause of the Fourteenth Amendment to the Constitution of the United States.

Because so few people really understand the real implications of this movement to insure equality in the methods of public school finance, we see this conference as an educating process rather than a decision-making process. In other words, rather than placing major emphases on policy making or strategy, the conference is intended primarily to educate, to make it understood what the impact of these highly important cases in school finance discrimination will be to all segments of our populace.

FORMAT:

The conference will consist of a short series of presentations on different areas of school finance, preceded by a key note address on the national scope of the school finance problem. The series of presentations will deal with a historical view of discriminatory school finance followed by a concentrated look at Georgia's problem.

SEMINAR/CONFERENCE ON PUBLIC SCHOOL FINANCE

TENTATIVE AGENDA:

First Day

4-6 p.m. - Registration

6-8 p.m. - Dinner: Speech - The purpose and goals of the seminar/conference

Second Day

9 a.m. - 12 noon - Meeting:

1. Legal and social manifestations of school finance (Serrano and its progeny)

2. The Georgia school finance system: How it operates; should it be challenged.

3. Alternatives to the present school finance system

1-4 p.m. - Meeting:

1. Discussion of the school finance system in Georgia with special emphases on the Atlanta metropolitan school system (Panel)

2. What steps, if any, should be taken?

Vol. 2, No. 15: Aug. 16, 1971

Suit challenges HEW policies

The Nixon Administration's performance in enforcing school desegregation laws--a performance that has been characterized as "halting" and "confused" by its most charitable critics and "racist" by the more acerbic--is now facing a serious challenge in federal court. The prestigious Washington law firm of Rauh and Silard, in behalf of 31 student- and two taxpayer-clients, filed suit last fall against Elliott L. Richardson, secretary of Health, Education and Welfare, and J. Stanley Pottinger, director of HEW's Office for Civil Rights. The HEW officials moved for dismissal of the suit, but Judge John Pratt of the U. S. District Court for the District of Columbia denied that motion two months ago, and depositions are now being taken from Pottinger and other OCR officials.

In their complaint against the government, the plaintiffs charge that HEW and its civil rights branch have defaulted on their obligation to enforce Title VI of the Civil Rights Act of 1964. HEW, they assert, is still providing financial assistance to school systems and colleges that continue to segregate and discriminate on the basis of race, even though the Civil Rights Act expressly prohibits assistance to such schools. The plaintiffs include public school students from Mississippi, Louisiana, Tennessee, Arkansas and Virginia, and two taxpayers: Maurice Finkelstein of Bethesda, Md., and Virginia DeC. Frank of Washington. The suit is a class action in behalf of the plaintiffs "and others similarly situated."

Elliott C. Lichtman, the plaintiffs' attorney, had seven meetings with Pottinger and his staff in June and July to gather information for the case, and more meetings will be held later this month. Lichtman said he has encountered resistance to some of his requests for information, and indicated that he will ask Judge Pratt to order the government to cooperate fully. When he has finished taking the depositions, Lichtman said, he will ask for a summary judgment against HEW, based on the accumulated evidence.

In a 28-page "amended complaint for declaratory and other relief," Lichtman cited a long list of public school systems, public colleges and universities, and state departments of education which continue to receive federal funds while discriminating against black students. The complaint on higher education named 10 public black colleges located in communities where public white colleges

Black candidates imperiled

Over 250 black candidates are running for political office in Mississippi's November elections. The black candidacies were made possible by the Voting Rights Act of 1965, under which black registration in the state leaped from less than 20,000 in 1964 to about 275,000 in 1970. But the black candidacies are imperiled, black leaders and civil rights activists say, because the U. S. Department of Justice has been doing a less than enthusiastic job of enforcing the Voting Rights Act.

Blacks cite these three instances of Justice Department inaction: permitting counties to require voters to re-register without obtaining prior clearance, as is required by the act; failing to oppose the so-called "open primary law," which was clearly aimed at the gubernatorial campaign of the black candidate, Charles Evers; and failure to oppose re-districting plans, which discriminate against black candidates. For an examination of the charges, and the response of a Justice Department official, see Jack White's article inside this issue. * * *

Unprecedented Indian unity

On August 26, leaders from 11 of the country's largest and most influential Indian organizations--in a display of unanimity unprecedented in the history of the organizations--sent a letter to President Nixon informing him that, "at this point, the confidence that Indian people have placed in your administration is shaken...".

The leaders said recent events within the Bureau of Indian Affairs have sparked fears among their people that the President has no intention of implementing the new Indian policy he enunciated on July 8, 1970--a policy strongly supported by tribal leaders and Indian activists.

"We believed you," the letter said, "when you told us about a new era of Indian SELF-DETERMINATION... But we ask how your pledge to decisively break with the past and create 'conditions for a new era in which the Indian future is determined by Indian acts and Indian decisions' squares with the following events:

Black Caucus names staff

The Black Congressional Caucus has opened the offices (415 Second St. N. E., Washington, D. C.), named a staff and is gearing up for a campaign designed to increase black participation in the national political process. The Caucus's recently appointed staff director, Howard T. Robinson, told RRIC that the staff's role would be to "flush out the facts and help to provide local elected officials with the information they need." Along with this supportive and consultative role, Robinson said, the staff would attempt to provide "profiles of the electorate" in the various states, with a view toward showing blacks "how to plug into the system where there are opportunities to do so."

Along with Robinson, 45, four other black staff members are now on board. Their salaries and the work of the Caucus are financed from the over $100,000 raised at a June 18 fund-raising soiree in the nation's capitol. Robinson brings an extensive background in international relations and labor relations to his new job, which began officially on Aug. 1. Immediately before becoming staff director, he was labor attache in the U. S. embassy in Tokyo. He has previously served as a staff member of the International Confederation of Free Trade Unions, an international representative of the International Union of Electrical, Radio and Machine Workers, and a lecturer at the Weslyan Center for Advanced Studies. * * *

GI's protest military racism

A group of 236 black, white, Chicano and Indian GI's--all of them members of the 173rd Airborne Brigade that recently returned from Vietnam--have signed an open letter to Defense Secretary Melvin Laird accusing the armed forces of racial discrimination. The GI's tried to present the letter to Laird earlier this month when the Defense Secretary visited Fort Campbell on the Tennessee-Kentucky border to welcome their brigade home from Southeast Asia. But Gen. William Birdsong, the commander at Fort Campbell where the 173rd is now stationed, refused to allow the GI's to make the presentation. The GIs' letter asserted that "throughout our time in the service we've seen minority group GI's discriminated against. In Vietnam that's been evidenced by higher casualty rates. Other times it takes the form of slower

Price-freeze and the black economy

The 90-day freeze on wages and prices has not had much effect--good or bad--on black businesses, but it has adversely affected black workers. This is the consensus of views offered by black businessmen and economists contacted by RRIC.

"Since most black businesses are very small--and there's no machinery set up to enforce price increases--the price freeze wouldn't have had much effect on them," said Robert S. Browne, director of the Black Economic Research Center in Harlem. Browne also teaches economics at Fairleigh-Dickinson University in Teaneck, N. J.

But for black workers, Browne said, the impact of the wage freeze has been profound. "It freezes us in our unfortunate position," he said. Black workers, only a fraction of whom belong to unions, were paid significantly less than their white counterparts. "If there were inequities before," Browne said, "those inequities still exist."

Browne's views were underscored by those of Bayard Rustin, executive director of the A. Phillip Randolph Institute, of New York City. "Great numbers of black workers are working in unorganized industries and doing service jobs where there is no organization," Rustin said in a telephone interview. "Those who are organized in the black community earn 50 per cent more than unorganized blacks, because they have an organization and structure to defend their rights." Organized labor, particularly AFL-CIO president George Meany, has been vigorous in fighting for wage increases in Phase II of President Nixon's "new economic policy," he said, and will help share post-freeze policies. Unorganized black workers have no one to speak for them.

Another effect of the wage freeze, Rustin said, was to freeze the social structure. "It has frozen the belief that upward mobility is possible," he said, "and in the long run this may be more important."

"Wages have been frozen and strikes outlawed, which automatically freezes black workers' wages at their present sub-white standard," editorialized the Black Scholar magazine, in its October issue. "...American big business, however,

Abernathy, Jackson and SCLC

"How long will Mr. (Jesse) Jackson and his rapidly growing Operation Breadbasket continue in what some of his followers call a 'tail-wagging-the-dog' relationship with its near static parent group, the Southern Christian Leadership Conference (SCLC)?" That, said New York Times news analyst Thomas A. Johnson last month, is a key question that should be answered within the next year. Johnson also reported that in a speech to the third annual Black Expo in Chicago, "the voluble Mr. Jackson often praised a long list of 'black giants', [but] he did not mention the name of the Rev. Ralph David Abernathy, Dr. King's successor and Mr. Jackson's superior in the S.C.L.C."

Jackson's omission, and Johnson's assumption that SCLC is "near static" are not isolated occurrences. And that, apparently, has not been lost on Abernathy himself. Speaking in Mississippi early this month during the closing days of that state's election campaign, Abernathy told an approving audience that "there are some mean and vicious people around this country who are saying that SCLC is dying. But they gonna have to eat their words tomorrow (election day) because we gonna do our thing in Mississippi." What Abernathy seemed to be saying was that a strong black voter turnout in Mississippi would be proof positive that his organization is still strong. But the turnout did not prove to be that strong, and there was considerable question, in any case, about SCLC's causal connection to the result. Local black leaders in Sunflower and Bolivar Counties, where SCLC concentrated much of its effort, said the campaign effort was locally organized and that SCLC's role was decidedly secondary. "We appreciated SCLC's help," said Eddie Lucas, campaign manager for Mrs. Fannie Lou Hammer, a candidate for state senate. "But for the most part, they just helped with legwork and printing of campaign literature."

But one thing Dr. Abernathy did demonstrate in Mississippi was that his charisma with Southern black audiences may be unsurpassed. In a series of speeches condemning the white power structure in Mississippi, Sen. James Eastland in particular, along with President Nixon and Vice President Agnew, Abernathy was mobbed time and again by wildly cheering black crowds.

Imperiale and New Jersey politics

The election of Newark white militant Anthony Imperiale to the New Jersey General Assembly has thrown the state legislative body into a tizzy. Nobody, it seems, wants to be associated with the new state assemblyman, even though both the Democrats, who have 40 General Assembly seats, and the Republicans, who have 39, could use his vote. Imperiale is the lone independent Assemblyman. By custom, it takes 41 votes in the 80-seat legislative body to "organize," that is, name the speaker of the Assembly and the chairmen of committees. By getting Imperiale's vote, the Democrats would be able to "organize" the Assembly for the first time in a long period. The Republicans, if they got Imperiale's vote, would be able to tie things up indefinitely.

The catch for the Republicans is that Gov. William Cahill has announced that his party wants no part of the likes of Imperiale. And for the Democrats, the catch is that the six black legislators have threatened to hold out their votes--and perhaps even vote with the Republicans--if their party attempts a "deal" with Imperiale, who heads the North Ward Citizens Council in Newark.

George C. Richardson of Newark, the Democratic assistant minority leader in the present Assembly, told the Reporter that the matter would probably be resolved by the "county leaders," the "bosses" who traditionally control state politics in New Jersey. They recently held a pow-wow in Hot Springs. Richardson, one of the organizers of a potentially potent black legislative caucus in the Assembly, said the likely resolution of the conflict would be an agreement between the Republicans and the Democrats, giving the latter the designation of the "majority" party, and the authority to name the speaker. In addition, the chairmanships of legislative committees would probably be evenly divided between the two parties. * * *

Tennessee housing hearing Postponed

The Tennessee State Advisory Committee to the U. S. Commission on Civil Rights has had to re-schedule a hearing to be held on housing in Nashville. CCR sources attributed the delay to an administrative regulation, but sources outside the agency blamed pressure from persons opposing the hearings. The open-session meeting of the state committee, originally set in Nashville for Dec. 3-4, was postponed until Jan. 28-29. A CCR spokesman in Atlanta, Andrew Lipscomb, says the delay was "due to administrative reasons." A CCR regulation requires all participants in an open-session meeting to be contacted personally prior to the meeting date. It was the Washington CCR office's decision that this regulation had not been satisfied.

The Tennessee State Advisory Committee chairman, Rev. Samuel B. Kyles of Memphis, said the month-and-a-half postponement would not necessarily help the meeting. He further stated that he was not in favor of the postponement if it were a question of avoiding embarrassment of people on the Advisory Committee who might have political or personal interests in projects being studied. One housing complex owned by the Nashville Catholic Diocesan Properties Incorporated has had numerous complaints of mismanagement by dissident occupants and these were investigated by CCR staff members preparing the hearing. Among the Advisory Committee members are Bishop Joseph Durick and Attorney George Barrett. Barrett has served as the legal advisor for the corporation, and a former associate in his law firm. I. T. Creswell, Jr., is now assistant staff director, Office of Community Programs, for CCR in Washington.

The open-session meeting will concentrate on fair housing projects and tenants' rights in the Nashville/Davidson County area, dealing particularly with the rights of residents in public housing and FHA-financed housing developments. A similar meeting was held by the state committee in 1966 and recommendations were made regarding the enactment of federal housing legislation, the expansion of housing programs of the federal government, implementation of code enforcement of slumlord property, increased federal aid for families displaced by highways or urban renewal, the withholding of additional federal funds to the Nashville Housing Authority until a plan for dispersal of public housing was developed, the enactment of a state law pro-

FAMILY INCOME VERSUS THE NUMBER OF ELEMENTARY STUDENTS PER HOUSEHOLD

1B3 - Census tracts

THE NUMBER OF ELEMENTARY STUDENTS PER HOUSEHOLD FOR WHITES AND BLACKS BY INCOME FOR CENSUS TRACTS

INCOME (1960 Dollars)	ELEMENTARY STUDENTS PER HOUSEHOLD	
	WHITE	BLACK
2000 - 2999	-	.75
3000 - 3999	.63	.59
4000 - 4999	.43	.71
5000 - 5999	.37	.73
6000 - 6999	.33	.43
7000 - 7999	.34	.40
8000 - 8999	.42	-
over 9000	.44	-

The average elementary students per household for whites was obtained from 83 white census tracts located mainly in Atlanta but including some tracts from Chicago, Boston, Birmingham, and Nashville. White tracts are those in which over 95% of the people are white.

The average elementary students per household for blacks was obtained from 57 census tracts in Atlanta, Chicago and Memphis. A black census tract was taken to be one with more than 90% black residents.

No attempt was made to factor out the affect of age because it was difficult enough to find a significant number of tracts with black and white incomes in the same range. The affect of family age on students per household is somewhat canceled by averaging. The affect of the relation between family age and income is not canceled.

THE ROLE OF URBAN PLANNING IN THE RESIDENTIAL INTEGRATION OF MIDDLE-CLASS NEGROES AND WHITES (Thesis Abstract and Bibliography)

Lewis Bolan, Graduate Student, Department of Urban Planning,
University of Illinois

OBJECTIVES

To determine (1) the factors which allow and encourage middle class Negroes living in ghettos and wanting to move out to achieve better housing, schools, and recreational facilities, to move into built-up areas with older housing or into new housing developments such as urban renewal projects, sub-divisions, and private projects; (2) the factors which prevent integrated neighborhoods from becoming all Negro areas; (3) the role of urban planning in these factors.

METHOD

The study was based on published literature.

CONCLUSIONS

Urban planning has little effect on social interaction, but can affect physical proximity which creates greater chances for social interaction.

Urban planning can do little to affect the factors that encourage or allow Negroes to move into built-up areas. These factors are:

The proximity of the neighborhood to Negro neighborhoods.

The socio-economic status of the Negroes wishing to move. Negroes with a high economic status have a greater chance of being accepted.

Growing undesirability of the neighborhood to white people because of unsuitability of the housing, changed accessibility, crime rates, tax rates and assessments, quality of schools as perceived by the parents, quality of city maintenance, quality and quantity of community facilities, zoning and subdivision changes, real estate activity, mortgage availability, liberalism of the residents and presence of Fair Housing legislation.

ERIC HILL ASSOCIATES
planning consultants

Urban planning can affect several of the factors that encourage or allow Negroes to move into new housing areas. These factors are:

Location. Negroes will more likely move into and be accepted in a new, isolated community; in an existing interracial area; or in a fringe area between an all-white and an all-Negro area. Urban planning can affect the location of new housing developments.

Size of the development. The larger the development the more likely Negroes will move into and be accepted in a new community. Urban planning can affect the size of new developments.

The kind of promotion given the new development. Negroes and whites have to be appealed to separately and on different bases.

Design and price of housing. White people will buy a house in an integrated neighborhood regardless of their racial attitudes if the house is much cheaper and much nicer relative to other houses on the market. Urban planning can affect the design and price of the housing in a new development.

Racial quotas. White people will buy houses in a community if they are given assurance in the form of a quota system that the area will not become all Negro.

Community action, especially government action to encourage or discourage integrated housing projects. Urban planning can recommend actions.

Urban planning can recommend Fair Housing legislation.

Spacial distribution of Negroes. If Negroes are clustered within the community, the white people tend to accept them more readily.

Availability of financing. Urban planning can advise private investors, the Federal Housing Administration and the Veteran's Administration.

Urban planning can affect some of the factors that can keep an integrated area from becoming all Negro. The factors are:

Distance from an existing Negro neighborhood.

The Negro housing market in the whole metropolitan area.

Attitudes and practices of real estate brokers, mortgage lenders and property appraisers.

Mortgage availability.

Amount of rental property available in the area. The greater the amount the less likely white people will move out because they are less involved financially.

Length of residence of the white people. The longer they have lived in an area the more reluctant they are to move.

Spacial distribution of Negroes.

Presence of major institutions. Urban planning can have some effect by encouraging institutions to stay in certain areas.

Attractiveness of the area and the housing relative to other housing possibilities is a factor which urban planning can affect.

Benign quotas. Urban planning can only advise that these be set up and that local organizations be formed to attract whites.

Fair Housing legislation.

The tipping point in the ratio of Negroes and whites which, when reached, will cause white people to move. Urban planning can try to convince property holders that the area will not be allowed to become all Negro.

CHARACTERISTICS OF A " PLANNING PROBLEM "
IN NEIGHBORHOODS UNDERGOING RACIAL CHANGE

In order to be considered a " planning problem " within the scope of this thesis , all of the following components must be present.

1. It must bear on more than a token number of people.
2. It must be detrimental in some way.
3. It must be shown to haveevolved from racial change.
4. It must have a demonstrable affect on land use, transportation, housing, health, crime, employment, economic impact,education, or recreation.

For example, the decay of social restraints in a neighborhood undergoing racial change would not be considered to be a planning problem unless it could be demonstrated to be related to an increased crime rate.

Economics:

1. Bankers blacklisting the area. No money available for homeimprovement loans or new businesses.

PRELIMINARY LIST OF POSSIBLE PLANNING PROBLEMS IN RESIDENTIAL AREAS THAT HAVE UNDERGONE RACIAL CHANGE

The following is a preliminary list of possible planning problems in neighborhoods that have undergone racial change. The purpose of developing this preliminary list is to facilitate discussions in interviews. The purpose of the interviews is to develop a refined list of possible problems. These problems will then be investigated in Atlanta's transition areas.

This preliminary list is not suggested to be all inclusive or even accurate. It is anticipated that through numerous interviews, possible problems will be added, deleted and modified. Furthermore, the investigation of Atlanta's transition areas may reveal that some of the anticipated problems are non-existent and some problems exist that were not anticipated.

Rec'd 3-23-70

TRANSPORTATION

1. The problem of a disparity of mass transit needs and mass transit service, caused by an increased need by new black residents over departed white residents.

2. The problem of overcrowded facilities caused by concentrated work destinations of new black residents in relation to the dispersed work destinations of departed white residents.

Before Transition

After Transition

LAND USE - ZONING

1. The problem of a lack of political representation of new black residents in zoning matters.

2. The problem of a cessation of white commercial development with no successive black commercial development, leaving a growing neighborhood population inadequately served by commercial facilities.

3. The problem of disorderly black commercial development by numerous businessmen, no one of which has the resources to develop a shopping center to accomodate the market demand.

PUBLIC SAFETY

1. The problem of an increased crime rate during the years of transtition, due to a change from one set of social contrainsts to another.

2. A decline in community-police relations, due to a rapid change of residents.

RECREATION AND CULTURE

1. The problem of maintaining continuity and community support for youth activities, such as the Little League and the Boy Scouts, in an area with a rapidly changing population.

EDUCATION

1. The problem of overcrowded school facilities due to a larger and younger population after transition.

2. The problem of operating schools with rapidly changing student bodies.

3. The problem of a decay in parent-~~student~~ teacher relations due to a large number of new parents and perhaps teachers.

HOUSING

1. The problem of overcrowded dwelling units resulting from large or extended black families, replacing smaller white families.

2. The problem of transition causing a decline in black demand for newly constructed housing, and hence reducing the possibility of this housing being developed.

ECONOMIC IMPACT

1. The problem of retail facilities adapting to a different market, possibly with different buying habits and a lower per capita spendable income.

2. The problem of an upward readjustment in the proportion of income spent on housing by new black residents.

THESIS SUBJECT AND APPROACH

The following is a general approach to the development of a thesis to be entitiled " The Planning Problems in Neighborhoods that Have Undergone Racial Change ".

During this century black Americans have been migrating from the rural South to the cities of the nation. This has resulted in some residential areas undergoing complete racial change from white to black. In many of these areas the change , or transition, has occurred in a period of only a few years.

Although this migration has slowed down in recent years, it is likely that transition will continue to occur. The employment opportunities and incomes of blacks will continue to increase, enabling them to obtain new and better housing. Some of this housing may be in areas that are already black , some may be new housing in areas that are presently undeveloped (hence neither black nor white) and some will likely be in areas that are white. Discounting any immediate affect of fair housing legislation and any possible change in the practices of real estate agents, but based on the previous reactions of white residents, it appears that racial transition of residential areas will continue to occur in the near future.

Much has been written about the racial transition of residential areas. These works have included attempts to explain the fear and behavior of whites, the unethical practices of some real estate agents, and the affect of racial transition on property values. However, little has been written about the hard problems that arise from the mass exodus and influx of people over a short period of time. These problems involve housing, land use, transportation, and other fields which are of concern to city planners.

PAGE PARTIALLY ILLEGIBLE

The purpose of this thesis is to determine the planning problems associated with racial transition in residential areas. The end result will be a series of carefully documented and evaluated planning problems that can be demonstrated to have evolved from racial transition. This information should be of value to city planning departments which are concerned with neighborhoods undergoing racial change.

The approach to achieving this purpose will involve three phases, including a preliminary preparation phase, an investigation of Atlanta transition areas, and an evaluative phase.

The preliminary phase is necessary in order to lay a foundation for the investigation of the Atlanta transition areas. The result of this phase will be a design for the investigation. This phase consists of four segments, (1) the development of a workable definition of a " planning problem in neighborhoods which have undergone change", (2) the development of a series of possible planning problems, (3) an analysis of the effort and expected return from the investigation of each possible problem, with a decision as to which will be investigated, and (4) a determination of the areas in Atlanta which have undergone racial transition and which appear to be good laboratories in which to conduct investigations.

The workable definition of planning problem in transition areas will consist of a set of criteria which must be satisfied in order for a situation to qualify under the definition. These criteria are necessary in order separate problems from non-problems, planning problems from other problems, and racial transition problems from other problems.

Although the development of these criteria is necessary to the approach of the study, it is of little direct value in structuring the investigation of the Atlanta transition areas. A more powerful basis is needed in order to provide structure and direction to this investigation. This basis will be the development of a series of possible problems, defined in such a way that they will indicate what to look for in the transition areas. The method of developing this basis will be a literature search and interviews with planners and other people familiar with racial transition.

See above

Having developed this list of possible problems it will be necessary to examine each possible problem in terms of the time and effort that should be assigned to each in relation to the likely importance of the results of the investigation. This is required to provide for an efficient use of energy and to prevent the study from being stalled.

The final segment of the preparation phase will be to determine what areas in Atlanta should be investigated. The value of the results of this thesis, as well as the efficiency and accuracy of the investigation, will depend on knowing exactly where, when, and how much racial change occurred. Hence it will be necessary to

determine geographical areas which have estimates of population by race for periods of time which are shorter than the common transition period of four or five years.

With this preliminary phase of the study completed it will be possible to undertake an intelligent, structured investigation of the planning problems in Atlanta's transition areas. The refined list of possible problems will provide a good starting point and should keep the investigation from becomming unwieldy. If anticipated possible problems prove under investigation not to be problems they will be discarded. If unanticipated possible problems arise from the investigation of anticipated problems, they will be considered for inclusion for investigation under the criteria of a planning problem in transition areas.

This second phase of the study should yield a series of well documented planning problems in Atlanta's transition areas. The cause of each problem will be explored, assumming that transition is a general cause and some aspect of transition is a more basic cause. The bearing of each problem on the criteria of a planning problem will be established. Each problem will be examined to determine its relative importance to other problems. A seemingly unimportant problem may be related to several other problems and hence take on added significance.

Part of the second phase will be to determine the likelyhood that each problem is common to most transition areas , and not unique to one area. In part this determination will be facilitated by conducted investigations in at least six Atlanta areas.

It will also be possible to check with city planning departments in other cities to check professional opinions as to whether certain well defined problems in Atlanta might exist in those cities.

The final phase of the study will be to evaluate the problems determined by the investigation. It is outside the scope of this thesis to offer solutions to the problems that are outlined. However, after considering the findings of the investigation it should be possible to arrive at some conclusions on the causes, importance and interrelationships of the planning problems in neighborhoods that have undergone racial change.

CRITERIA OF A PLANNING PROBLEM IN NEIGHBORHOODS WHICH HAVE UNDERGONE RACIAL TRANSITION

PROBLEM CRITERIA

There must be some social, economic or physical hardship or an unresonable impedance in the commonly held personal goals of people.

TRANSITION CRITERIA

There must be some direct relation to the change or the process of change in a neighborhood from nearly all white residents to nearly all black residents.

PLANNING CRITERIA

1. There must be some bearing on those areas which are usually considered to be within the realm of planning, including land use/ zoning , transportation, housing, health, public safety, employment, economic impact, education or recreation.

2. There must be more of a bearing on community factors than individual factors or the summation of individual factors. For example, a community may need a school and providing it is within the realm of planning. Students may need an education but providing that is within the realm of professional educators.

procedures to insure open housing? what is relationship

CHAPTER IV
GUIDELINES

The previous Chapters have discussed the causes of racial transition and some of the problems that can develop when transition occurs. This Chapter presents guidelines for planning to provide for the needs of racially changing neighborhoods. These guidelines include a recommended planning process and the ADOPTION inclusion of this process ~~into the~~ AS A functions IN city planning commissions or departments. Recommended programs are outlined to slow down the speed of racial transition and to stabilize racially integrated neighborhoods.

Planning Process for Racially Changing Neighborhoods

Planning to provide for the needs of racially changing neighborhoods is complicated by several factors ~~which are~~ unpredictable. These include where, when and how fast racial transition will occur and how the needs of the population will change.

Planning to provide for the needs of racially changing neighborhoods must be based on current information and oriented towards immediate-action programs. This planning must also be coordinated and consistent with the over-all city planning process. Figure __ shows a planning process for racially changing neighborhoods that might be effective in avoiding or solving problems arising from racial transition.

This process is designed to enable the benefits of planning to be provided in a current situation subject to uncertain events and rapid change. The process leads to neighborhood contigency plans to be implemented when surveillance of the population reveals that a neighborhood has undergone " penetration ". The contigency plans are based on an inventory of white neighborhoods , an estimate of black housing demand , coordination with existing development plans and a determination of community goals and available resources.

Population Surveillance

A key element in a planning process to deal with the problems of racially changing neighborhoods is a program of population surveillance. This program should be designed to yield an accurate estimate of the racial composition of each neighborhood in a city. Emphasis should be placed on closely monitoring population change in racially mixed neighborhoods and in white neighborhoods in proximity to mixed or predominately black neighborhoods.

Black Housing Demand

Planning in general is usually concerned with estimating and projecting some ~~basic factor~~ parameter upon which plans are based. Transportation planners estimate and predict trips and school planners estimate and project pupils. Likewise , planning to deal with the problems of racially changing neighborhoods requires an estimate and projection of black housing demand , which is a basic factor behind racially changing neighborhoods.

Estimating black housing demand is difficult because demand is complex and subject to error in measurement. It invovles determining the need for ~~different~~ housing as well as the ability and desire of black citizens to comit economic resources to fulfill this need. It is also necessary to estimate the demand exerted by new black migration to a city and the formation of new families. ~~such family phase changes as marriages~~.

PROPOSED PLANNING PROCESS FOR RACIALLY CHANGING NEIGHBORHOODS

be very spphisticated or extremely accurate. But should be of sufficient tolerance to indicate whether sufficient black housing demand demand exists for a certain white neighborhood ot undergo complete racial transition. 180

A short projection of black housing demand into the near future would also be useful in planning for the needs of racially changing neighborhoods. This projection could be based on a consideratio of the rate at which black housing demand appears to be rising and and the rate at which the demand is being fulfilled , either through racial transition or other means. Plans for urban renewal and highways should also be ~~consulted~~ reviewed because any displacement of black residents will result in black housing demand .

" Ripe White Neighborhoods "

A determination of those white neighborhoods that might become subject to racial change is useful in anticipating the possible problems of racial change as well as developing an estimate of the current housing situation in relation to black housing demand..

Theoretically any white neighborhood in a city might be subject to racial change and transition. Practically certain neighborhoods have the type of housing for which a significant amount of black housing demand exists and are located in such a manner as to be likely candidates for racial change and transition.

Neighborhoods on the verge of racial transition might exhibit ~~easily detectable indications~~ INDICATORS such as a decline in real estate transactions due to falling white demand in anticipation that the neighborhood will soon become integrated.

A survey of attitudes among the white residents of possible " ripe neighborhoods " might be useful in anticipating the likeness of complete transition and the speed of transition if the neighborhood does become racially mixed.

Ofcourse discretion must be used to insure that this determination of " ripe neighborhoods " is not misinterpreted as a designation of neighborhoods in which racial change will occur.

Estimate of Possible Problems

Each " ripe " neighborhood should be studied to determine the problems that might evolve from racial change or transition.

Of course these possibke problems can not be determined in detail , but through an examination of black housing demand AND the characteristics of the white neighborhood it should be possible to develop some useful information.

For example it should be possible to determine whether racial transition of a certain neighborhood will necessitate a new school.

In another case it might become evident that black housing demand could absorb only a portion of the housing in a certain middle class "ripe" neighborhood. This indicates that if the neighborhood undergoes complete transition some of the new residents very likely can not afford the housing they obtained. This could lead to subdividing of dwelling units and a general decline in the quality of the neighborhood.

~~This type of information is valuable in developing contigency plans for each neighborhood that might be subject to racial transition. In the examples given , the contingency plan would call for immediate action to provide an additional school and for a strong program of neighborhood stabilization to maintain its~~

Neighborhood Contingency Plan

The purpose of developing neighborhood contigency plans is to be prepared with some immediate action programs that can be implemented when a neighborhood undergoes " penetration ". Without such contingency plans and an accompanying program of population surveillance a neighborhood may be well into rapid racial transition before there is time to prevent serious problems from developing. Contigency plans should be designed to prevent a panic situation and the intensification of problems due to rapid racial transition , in conjunction with some of the preliminary planning to provide for the changing needs of the population brought about by racial change.

A contigency plan should be based on a study of black housing demand and the possible problems that were establihed . A contigency plan could take the form of several programs , including perhaps some of the following examples;

1. A program to involve white and black citizens in planning to provide for the needs of a neighborhood that is becomming " integrated ".

2. A program to insure a slow rate of racial transition or to ~~encourage~~ encourage stabilization of newly integrated neighborhoods.

3. A program ~~for the construction of~~ to construct a new school.

4. A program of increased housing code enforcement.

The contingency plan for a neighborhood must be coordinated with the plans developed for a city through the comprehensive planning process. Therefore if the contigency plan includes a program to provide a new school there must be some flexibility in the city school plan, in case the contigency plan is implemented. The contigency plan must also be consistent with the community

Continuing Process

A periodic update of contingency plans is necessary because of the changing situation as neighborhoods undergo racial change or as black housing demand changes.

Organizing to Effectuate the Planning Process for Racially Changing Neighborhoods

Obviously a process of little value if there is no way to use it. One possible method of effedtuating a planning process for racially changing neighborhoods is to incorporate a new operating dividion into a city's planning department or division , similar to athe land use control division.

Figure ___ shows one of many different organizational structures for planning commisiions. A division for neighborhood stabilization or " contigency planning " might be installed so as to bear on both the capital program on general plans and programming.

Typical Programs in Contingency Plans

While each neighborhood contingency plan should be based on the best estimate of a particular situation , certain programs will needed in most contingency plans. These include programs to slow the rate of racial transition , to stabilize racially changing neighborhoods and to affect some of the city-wide factors which undermine the purpose of the contingency plan.

Slowing the Rate of Racial Transition

If the rate of racial transition is slow the problems evolving from transition may be less severe and there will be more time to plan for the changing needs of the residents. For example, transition might result in the need for a new school but if the need develops in ten years rather than in two years there is an opportunity to plan for providing the school when the need materializes.

A program to slow the rate of racial transition , incorporated into a neighborhood contigency plan , might be designed so as to organize a neighborhood to deal with those neighborhood factors that influence the rate of transition. The factors , as shown in Figure ___ of Chapter II are the " ripeness " of the neighborhood, the new black residents , the white residents who leave and those white citizens who refuse to move into a racially changing neighborhood.

Neighborhood Organization

Most of the neighborhoods which have undergone rapid racial change and then experienced a slowing of change had active citizines organization established for the purpose of creating stable integrated neighborhoods. Any program to slow the rate of racial transition in a neighborhood would probably need such an organization.

" Ripeness "

A neighborhood's " ripeness " for racial transition is dependent on proximity to existing black neighborhoods and the relation of the type of housing in the neighborhood to the type

of black housing demand. Both of these elements are not readily subject to manipulation.

Some efforts have been made to reduce proximity by isolating " ripe " white neighborhoods from black neighborhoods, by such methods as closing streets connecting ~~area~~ neighborhoods. Generally where this has been done the purpose was not to slow transition but to prevent any black citizens from moving into the white neighborhood. However since these isolating tactics have not usually been sucessful in excluding black citizens it is unlikely they could be successful in slowing down the rate of racial transition.

Sometimes after a neighborhood starts to undergo racial transition there is an attempt to modify the type of housing in the neighborhood to match some predominate type of black housing demand. Usually this is subdividing of single family dwelling units into multi-family. This element in the rate of racial transition is certainly subject to manipulation and control. City permits for such conversions can be denied and surveillance of the neighborhood can be maintained to detect and rectify illegal conversions.

New Black Residents

The new black residents of a transition neighborhood result from black housing demand which is a factor external to the neighborhood. However the relation of the socio-economic status of the new black residents to the status of the white residents is internal to the neighborhood and is a factor that can affect the rate of racial transition.

According to McEntire in Residente and Race the departure of white residents is further stimulated if the black residents are not of equal or higher socio-economic status.

While this factor may not be subject to manipulation , in those cases where the black residents are of equal or higher status it should be possible to make the white residents aware of the situation.

Departing White Residents

Once transition starts each departing white family is usually replaced by a black family, therefor the rate at which whites depart is almost synonomous with the rate of racial transition. Slowing the rate at which white residents depart is crucial to slowing racial transition.

Any attempt to slow the rate of depating white white residents should be made early in the transition period , before panic develops or before many white residents have decided to move away.

Perhaps the greatest stimulate of panic in a transitional neighborhood are real estate brokers who solicite sales from white homeowners by suggesting that the neighborhood is becomming predominately Negro. This practice is illegal but the law is easily circumvented by not alluding to race directly but sill conveying the idea. A possible measure to prevent this practice is state legislation to prohibit all real estate solicitations is designated newly integrated neighborhoods.

Another panic associated factor is the prospect of declining property values. White homeowners acting in fear that values will decline flood the market by placing many houses on the market,

hence fulfilling the prophesy that prices will decline. A program of education of the white homeowners might be helpful. Another possible measure is a government program of carefully administered price supports in designated neighborhoods. This would again require state legislative action but it might provide the assurance needed to avoid panic selling.

Explanation needed

Ofcourse there is no assurance that the measures which might successfully avoid a painic in one neighborhood might stimulate a panic in another. For example the designation of a neighborhood for prohibition of real estate solicitations and housing price supports might arrose an otherwise apathetic neighborhood which is unconeerned about new black neighborhs.

Lack of White Residents Moving Into the Neighborhood.

The lack of white residents moving into a transition neighborhood is a factor in the rate of transition. Obviously if some of the white residents who move out are replaced by new white residents the rate of transition will be slower. Several measures might be taken to encourage white housing demand in neighborhoods in the early stages of racial transition.

Apparantly any effort to stimulate white housing demand should be made while the percentage of black residents is low. According to Eleanor Wolfe there is a " willingness to enter " percentage of black residents above which most whites will refuse to move into a neighborhood. Ofcourse there is little way of determining what this percentage might be in any particular neighborhood and wheter the " willingness to enter percentage " can be modified.

A 1960 study by Rapkin and Grigsby of white residents who moved into racially mixed neighborhoods shows that most of the whites were motivated by the convenience of the neighborhood, proximity to business or employment, proximity to family and friends or the suitability of the particular house. Hence any effort to stimulate white demand in racially changing neighborhoods might stress these factors and perhaps others such as the quality of schools serving the neighborhood.

One factor that eliminates potential white housing demand is the practice by real estate brokers of not showing listings to white customers in racially changing neighborhoods. A recent study by shows that many real estate brokers assume white clients are not interested in such housing. While this practice is not exactly racial discrimination it is certainly a marketing practice based on race. Any attempt to modify this practice would probably require the voluntary cooperation of realtors.

City-wide ~~Factors~~ Program

The causes of racial transition are city-wide and therefore efforts to slow down the rate of transition or stabilize one neighborhood must also bear on these causes. It is also important to remember that stabilizing a transitional neighborhood deprives black residents of an opportunity to obtain housing in that neighborhood and therefore alternative housing opportunities must be provided.

The city-wide causes of racial transition are shown in Figure 2 of Chapter II. These include rising black housing demand,

a deterrence preventing black citizens from obtaining generally available housing , and the lack of new housing built in areas not subject to this deterrence.

Rising Black Housing Demand

Rising black housing demand is a city-wide cause of racial transition of white neighborhoods and may well be a nation-wide cause considering the migration trends of black Americans to large cities. This demand is sometimes a healthy sign of increasing black incomes or the formation of new families. But it may also be a reflection of the growing inadequacy of housing occupied by black residents.

One particular cause of black housing demand which bears heavily on neighborhoods undergoing racial transition is that created artificially through the removal of black occupied housing for expressways or urban renewel. The impact of this demand can be large and materializes quickly.

Any program to slow the rate of racial transition in one or more neighborhoods of a city should involve surveillance of projects which might artificially stimulate black housing demand and place more pressure on racially changing neighborhoods. If a project is shown to have a likely impact on efforts to slow transition modifications in the project should be proposed.

Deterrence

If black citizens are deterred from obtaining generally available housing throughout a city , rising black housing demand may focus on those neighborhoods which are opening up to black residents. In order to slow the rate of racial transition in a

it is desirable to avoid the focusing of rising black housing demand on the area. This requires a city-wide effort to elimate discrimination in the sale and rental of housing and to encourage black citizens to take advantage of declining discrimination.

Racial discrimination in the sale and rental of housing is illegal under Federal law and under Fair Housing Legislation of several States and cities. The 1960 Civil Rights Act , along with the 1964 Supreme Court case of Jones vs. Alfred H. Mayer Company, based on the Civil Rights Act of 1866 , clealy show such discrimination to be illegal.

The effectiveness of this recently established Federal Law in eliminating discrimination and in relieving pressure from transition neighborhoods is unproven.

There are some measures that a city might take to increase the possibility of effectively eliminating housing discrimination. For example building permits and subdivision applications could be approved subject to a legally binding pledge of compliance with Federal anti-discrimination laws. Hence any violation would be in effect a breach of contract and could be expidited quicker than proceedings based on a violation of Federal law. Real Estate brokers liscened by theState could be subject to similar provisions.

Encouraging black residents to take advantage of reduced discrimination may be more difficult than elimnating discrimination. There may be a variety of reasons why black citizens may not choose to move into neighborhoods from which they have been excluded. Positive action to assist black residents wishing to exercise their

right to live where they choose has been taken by such organization as the American Friends Service Committee. The purpose of such organizations is generally to (1) help financially able black families locate available housing in white neighborhoods , (2) to present facts to such black families that will allay their fears, (3) To encourage and assist white neighborhood groups in welcoming new black neighborhors and (4) to insure that such newly integrated neighborhoods will not become subject to racial transition.

Such organizations might be especially effective in slowing the rate of racial transition in affected neighborhoods if they concentrate on developing alternatives for black potential homebuyers. A concentrated effort could be made to introduce black residents in neighborhoods of similar housing quality and general desirability as neighborhoods undergoing racial transition. The cooperation of all realters would be vital to such an effort.

Lack of New Housing in Areas Open to Black Citizens

If a substancial amount of new housing were available in areas of a city normally open to black citizens some of the black housing demand might be diverted from transitional neighborhoods. But such areas of a city are normally contiguous to existing black neighborhoods. These neighborhoods are usually centrally located in the developed section of a city where there is little land available for housing development , even if some developer were interested in such projects.

Generally Available Housing

One factor which enables racial transition is the existence of generally available housing , but not to black citizens , to which fleeing white residents can move to from transition neighborhoods. Any shortage of such housing might slow the rate of racial transition. But an attempt to limit housing to slow transition is not feasible and would merely aggrevate the housing shortage existing in most cities.

Of course one method to limit the availability of such housing to fleeing whites is to effectively encourage black citizens to obtain such housing. Such an effor would act against the speed of racial transition of a neighborhood in two ways; (1) by relieving and dispersing black housing demand and (2) by limiting the supply of available housing to which whites can flee but also not aggrevating the housing shortage.

Stabilization Program

If the rate of racial transition becomes negligable the neighborhood stabilizes. The problems that develop in a stabilized integrated neighborhood , due to racial change , might be less severe or not actually develop because the needs of the residents would change less than if transition were complete.

Allof the measures that can be taken to slow racial transition are applicable to efforts to stabilize a neighborhood. On measure, maintaining white housing demand , is desirable for slowing transition but is absolutely essential crucial for stabilization. Since white residents will continue to leave a neighborhood after it stabilizes , for such natural reasons as job changes , family phase changes and income changes , maintaining white demand is essential. If these white residents are not,on the average, replaced by an equivalent number of white residents the neighborhood will slowly undergo transition.

Even after a neighborhood stabilizes it may be subject to future reoccurances of rapid transition . Housing demand may change and a stabilized neighborhood may again become " ripe " for transition.

Efforts to establish so-called " benogn quotas " in stabilized neighborhoods have been attempted in several neighborhoods and housing developments. Such efforts are generally stiffled by serious problems, including the fact that they are illegal. Problems include deciding what the quata percentages should be , who should decide what the percentages should be , who enforces the quoatas and by what means,

Quotas may also be merely superficial to the actual problems in maintaining stabilization. For example in Fairview Connecticut a system of benign quotas was established by a citizens group of white and black residents. The problem was still maintaining white demand and the group was taken to court for discriminating against

RAPID TRANSIT PROGRESS

METROPOLITAN ATLANTA RAPID TRANSIT AUTHORITY

"MARTA REPORTS TO THE PEOPLE IT SERVES . . ."

DECEMBER 1966
VOL. 1, NO. 3

PBTB, MARTA DIRECTORS MEET IN ATLANTA

Eight members of the board of directors (Board of Control) of Parsons-Brinckerhoff Tudor-Bechtel, engineering consultants to the Metropolitan Atlanta Rapid Transit Authority, met in Atlanta with the MARTA board of directors December 5. Both boards of directors received a briefing on the status of development of the Atlanta rapid transit system.

Members of PBTB attending were W. S. Douglas, Senior Partner, Parsons Brinckerhoff, Quade and Douglas; M. Den Hartog, Partner, Parsons Brinckerhoff, Lord & Den Hartog; W. O. Salter, Vice President, PBQ&D, and director of the MARTA project; J. R. Kiely, Senior Vice President, Bechtel Corporation; John P. Buehler, Vice President, Bechtel Corporation; Louis Riggs, President, Tudor Engineering Corporation; Stan Froid, Vice President, Tudor Engineering Corporation; and W. A. Bugge, Project Director, PBTB.

The PBTB board members attended the December board meeting of MARTA directors, then entertained MARTA directors at a dinner meeting where the system was discussed in further detail.

John Coil, PBTB Resident Manager in Atlanta, escorted the PBTB directors on tours of the various lines under consideration for the Atlanta system, including the railroad "gulch" area downtown, where Transit Center will be located.

The Atlanta PBTB staff showed aerial photographs of the area, and discussed various alignments of the system lines. Several proposals for subway locations and levels were outlined.

Phil Hammer, of Hammer, Greene, Siler Associates, discussed several methods of financing the first two phases of the Atlanta System. Under the basic plan, predicated on maximum federal and state aid, local funds of approximately $100 million would be required for the two principal lines to be constructed for about $310 million. If the local part is received through 30-year revenue bonds, the maximum tax cost would be about two mills in Fulton County where assessments are lowest, and less in the other governments participating in MARTA.

Ray O'Neil, PBTB Deputy Resident Manager explains route alignments on aerial mosaic map.

RAPID TRANSIT SYSTEM DEVELOPMENT SCHEDULE

The above chart and the map on the opposite page outline some of the work being done and plans for the future development of the rapid transit system in Metropolitan Atlanta.

The chart shows a "working schedule" rather than a precise timetable, and is subject to change. On the North-South line, "Preliminary Engineering (702)" is financed with a loan under Section 702 of the U. S. Housing Act of 1954. "Preliminary Engineering (Sec. 9)" anticipates approval of an application under Section 9 of the Mass Transportation Act of 1966 for $369,333. These funds will also provide for planning to extend East-West line on each end to I-285 perimeter expressway.

The beginning of "Acquisition of Right-of-way and detailed design" of the North-South line is based on the prospect of state funds and additional federal funds. With the passage of Constitutional Amendment 14 in the November General Election, the state can now appropriate funds to assist in rapid transit development. If the new General Assembly approves such an appropriation, application will then be made for four times the amount in federal funds. If such funds become available, purchasing of right-of-way and drafting of detailed designs could begin after July 1, 1967. Initial work would likely begin on Transit Center in downtown Atlanta, where the North-South and East-West lines will cross.

On the map on the opposite page, the lines of the original 1962 plan are in black; the green lines show alternate lines being considered. Final lines will be determined in 1967.

MARTA ACTION

In the December meeting, the MARTA Board of Directors re-elected present officers to another one-year term. Richard H. Rich will continue to serve as MARTA Chairman, and Roy A. Blount as Vice Chairman.

The board also approved the budget for 1966. Total income and unappropriated surplus are expected to be $810,871.98; total expenses will be $764,448.00; a surplus of $46,423.98 is anticipated.

The income anticipates approval of a pending application for a federal grant under Section 9 of the Mass Transportation Act of 1966. The application is for $369,333, of which $276,000 would be spent in 1967, and $93,333 in 1968. The local support from Atlanta and Fulton, DeKalb, Clayton, and Gwinnett counties remains the same as 1966—$300,000 on a pro rata basis.

The 1967 budget will provide funds for completion of the preliminary engineering on the North-South line; for most of the preliminary engineering on the East-West line; additional work on the North-South line; Rapid Transit Corridor Impact Study; a study of the impact of the proposed system on the Atlanta Transit System; and other work.

RAPID TRANSIT BRIEFS

A study committee of the Georgia House of Representatives has been briefed on the status of rapid transit in Atlanta. On December 9, MARTA General Manager Henry L. Stuart and Rep. Jack Ethridge, legal counsel for the Authority, appeared before the State of Local Governments Study Committee.

Rep. Ethridge pointed out that rapid transit is going to benefit residents of many counties outside the area encompassed by the Authority itself. He stated that, in several nearby counties, more than half the people who have jobs are employed in Atlanta, and could be expected to drive to the nearest rapid transit station to "park and ride."

Stuart discussed the system itself, its cost, and methods of financing the work. He noted that through 1966, local governments had spent $790,000 from local funds on the project, and $730,000 in federal funds. He said that while the state has not been able to participate financially in the project, passage of Amendment 14 in November will now allow the state to take part. He stated that he is "encouraged" in his belief that the next budget will include an allocation for rapid transit.

Saving New York from strangling

That's the job of the new Metropolitan Transportation Authority, which has been given the money to coordinate and rationalize all methods of moving people

Triborough Bridge tolls are among the revenues the new transportation agency expects to use for such purposes as maintaining New York City's 20¢ fare.

Getting around in greater New York has been at best a problem and at worst a calamity that has inspired cartoonists to some of their funniest efforts. If New Yorkers couldn't solve their transportation problems, at least they could laugh at them.

But in the future, getting around should be considerably less frustrating—if the new Metropolitan Transportation Authority lives up to expectations. MTA is a superagency, the first of its scope in the nation, designed to pull together and integrate all kinds of transportation for an entire region.

New York Governor Nelson A. Rockefeller says MTA is unique. "For the first time in the history of the state or of the country, we have a master plan . . . to get maximum efficiency in the movement of people at the lowest cost to the taxpayer."

The new agency has extensive powers to unify mass transportation facilities in New York City and seven neighboring upstate and Long Island counties. It has a broad charter to coordinate the movement—on land, water, and in the air—of 4-million people daily into the central business district. It has a capital construction program of over $1-billion already financed. That gives MTA both a man-sized job and the muscle it needs to get it done.

The setup. MTA started life last week with 50,000 employees and $600-million in annual revenues—acquired by absorbing the New York City Transit Authority and the Triborough Bridge & Tunnel Authority, along with the Long Island RR acquired by a predecessor agency. Already, MTA rivals in importance the region's other transport superagency, the 40-year-old, bi-state Port of New York Authority.

The two agencies are intended to cooperate rather than compete, although both operate highway, rail, and aviation facilities. "Our jurisdictions do not overlap," says Dr. William J. Ronan, former secretary to Governor Rockefeller, who is chairman of the new agency and a New

What New York's new transportation empire would offer

York appointee to the PA board.

MTA operations will inevitably be closely watched by other cities. If only because of their size and complexity, they will set patterns to be pondered in other areas.

Toll surpluses. One possible trendsetter is the proposal to marry the heavy deficits of the subways to the large profits from bridges and tunnels. Using highway tolls for general transit purposes is a device that has been regarded with notable distaste by Triborough's long-time chairman, Robert Moses. But it is a solution to transit financing problems that has won increasing favor among city planners.

Legislation establishing the MTA as the successor to the Metropolitan Commuter Transportation Authority (created in 1965 to acquire the Long Island RR) and giving the agency the power, as of Mar. 1, to absorb both the Transit Authority and Triborough was passed last year by the New York legislature. Later, Triborough bondholders sued to prevent the takeover. An out-of-court settlement last month removed this last obstacle to unification of the agencies.

The settlement forbids MTA to use Triborough surpluses until Triborough's bonds are either paid off or amended. However, if two-thirds of the bondholders consent to removal of this stipulation in exchange for an increase in interest rates, MTA will be free to use the surplus funds as it sees fit. The agency expects to get this bondholder consent, which will firmly establish the principle of using auto tolls for mass transit.

Cooperation. Although MTA's jurisdiction is limited to the 12 counties in the metropolitan area that lie within New York State, the agency has worked closely with Connecticut authorities to keep New Haven commuter service operating and may someday work out a similar program with New Jersey.

Like most conglomerate business giants, which in many ways it resembles, MTA consists of a headquarters staff and a group of semi-autonomous operating divisions.

MTA sees the headquarters function as management, not operations. It makes policy decisions but gives responsibility for carrying them out to its components.

The organization would be swamped by its own complexity, Ronan says, if it tried to merge physically all of its diverse elements. In labor relations, Ronan points out, the different components have entirely different problems. The Long Island RR deals with 20-odd craft brotherhoods, usually negotiates as part of an industrywide team, and is under jurisdiction of the federal Railway Labor Act. The Transit Authority, on the other hand, has an industrial union, is under state jurisdiction, and its workers are covered by city civil service. Triborough has different labor problems.

'Holding company.' MTA's immediate predecessor, MCTA, which has been running the LIRR since 1965, was, as Ronan puts it "a holding company running a railroad."

This set the basic pattern for the new agency. When MCTA acquired the railroad, the agency's board, with its own staff, took responsibility for fitting the railroad into a total metropolitan transportation plan.

MTA and MCTA have operated the Long Island without raising fares. But if a fare increase were necessary, MTA has a privilege denied to private lines: It could raise fares on its own initiative, without consulting either the state Public Service Commission or the Interstate Commerce Commission.

LIRR is now seeking increases of 7¢ to 10¢ a ride, partly because of failure to collect community assessments for station maintenance. But MTA still holds that capital improvements need public funds and can't be met from fare box rev-

The most important T-Square in your new plant plans

This T-Square covers the great interstate and local highway system your trucks use to reach almost 80 million consumers who live in and around the two great "Super-Cities." (One "Super-City" stretches from Boston through New York to Washington; the other extends from Pittsburgh to Chicago.)

This high-speed highway system includes the New Jersey and Pennsylvania Turnpikes, the Garden State Parkway, and Interstate Routes 78, 79, 80 and 287. They provide swift access to these two "Super" markets.

GPU Site Service specialists have compiled information on over 800 industrial sites and buildings in our service areas of New Jersey and Pennsylvania. It's available Free. All inquiries held in strictest confidence. Call 212 WH3-5600, or send the coupon.

enues. MTA wants to hold fares down, Ronan says, "particularly since we want to attract new riders while we're modernizing."

Two-phase plan. Last week, two days before MCTA became MTA, Ronan presented Rockefeller with a $2.9-billion modernization plan, in two phases. The first phase, consisting of high-priority projects, would cost $1.6-billion. Its projects would be "fully committed within five years, and totally completed within 10 years." Funds would come from the $2.5-billion bond issue approved by the state's voters last November, from city funds matching state money 25%-75%, from existing authorities, and from federal aid. Phase two, an extension of the phase one projects, would cost $1.3-billion, at 1968 prices.

For its money, MTA and the region will get major new subway and commuter railroad construction—the first in 30 years. It will also get a spur of the LIRR to John F. Kennedy International Airport. The modernization program of the LIRR will be completed, with 350 new 100-mph cars, additional electrification, and new stations. The Staten Island Rapid Transit would be completely renovated, as would the commuter service of the New Haven, the Penn Central service in New York State, and the New York portions of the Erie Lackawanna. These projects would probably require transfer of ownership—state law prohibits using public funds for the benefit of private corporations. The railroads would then provide operation under a service contract.

Midtown center. In east midtown Manhattan at 48th St., a new transportation center would coordinate existing and new subways with a new LIRR terminal and a midtown people-distribution system of conveyors or guided cars, to be added in phase two. The transportation center would be a midtown terminal for Kennedy airport. Travelers could check in, deposit baggage, and be carried by rail in 20 minutes to the airport.

What has happened on the LIRR, under MCTA, is a good indicator of what is likely to happen to other agencies under MTA. MCTA brought a new approach to rail transit. "We asked ourselves as a board of laymen," Ronan says, "what railroad service should be to be attractive to the passengers of tomorrow. The decision was that running times would need to be cut in half for which we needed entirely new designs.

"We told a team of designers what we wanted," Ronan says, "and they

American tragedy.

Right now, at least 55% of insured American homes are underinsured. So when fire strikes – or storm, explosion or lawsuit – the result is often financial disaster.

Tragically, many victims think the insurance they purchased five or ten years ago will fully protect them today. They've forgotten how fast today's property values have climbed.

If you're playing a role in this tragedy, talk with your Phoenix agent about Green Light insurance coverage that provides payments on a new-for-old basis. He'll make sure your home is adequately insured – and probably save you money, too. You can budget your premiums with the Phoenix Monthly Payment Plan. Your Phoenix agent is listed in the Yellow Pages. Or write us.

A new product clearinghouse for major American firms since 1954.

came up with it." (Critics of the Transit Authority's present extensive subway carbuilding program have contended that cars are "new" in name only, and that they perpetuate design mistakes made 60 years ago.)

New cars. What MCTA wanted for Long Island was an air conditioned car that would accelerate faster than a subway car, would cruise at 100 mph, and would load and unload quickly through subway type doors. Two hundred seventy cars are being built to this design, with delivery of the first 14 scheduled for September. MTA is also looking for light-weight, self-propelled cars for use on non-electrified lines. "It doesn't do any good to have 100-mph trains," Ronan says, "if they get stuck behind 50-mph trains for most of their trip."

MTA's responsibilities extend beyond transit. It is negotiating to buy Republic Airport at Farmingdale, Long Island. This will then be leased to an operator. "General aviation airports are both necessary for modern business," Ronan says, "and essential to the economy of the region."

Congestion. If all general aviation could be induced to use airports like Republic or its counterparts scheduled to be provided in Westchester and Rockland counties, congestion at commercial airports would be greatly reduced. To make general aviation facilities more attractive, MTA is looking into new developments in helicopters and short and vertical take-off and landing craft that would be able to operate in the prime unused airspace of the metropolitan area—altitudes under 3,000 ft. Using landing pads or short runways built over city waterways, these planes could serve downtown areas from both commercial and general aviation airports.

Ronan thinks travel time from the general airport would have to be about the same as a trip from Laguardia to midtown by cab—about 20 minutes except in rush hours.

Republic will be a pilot project for another of MTA's interests: integrated transportation centers. In addition to expanded air operations, it will integrate feeder buses and mammoth parking lots with improved LIRR service. When the LIRR modernization program is completed five years from now, travelers who arrive at Republic in private planes, private autos, or buses will be able to choose from a 20-minute flight or a 30-minute train ride to get to midtown Manhattan.

"That's what MTA is all about," Ronan says: "integrated transportation for the region." **End**

Pulse of the Public

Realtors Have Responsibility

ATLANTA — Several weeks ago the full force of how not to handle racial housing problems was impressed on me. A long time resident of the Cascade Heights area gave me a tour through this beautiful tree-shaded area of nice homes and well kept lawns, completely marred by "For Sale" signs, in clashing colors, in front of at least every third residence.

Letters should be limited to 200 words. They are subject to standard editing.

The next day a former officer of the Atlanta Real Estate Board spoke at a civic luncheon club meeting and, in describing the importance of location in choosing a home, he singled out by name the Cascade Heights section as an area where no real estate should now be bought.

Thus, this prominent real estate man, before an audience of influential business leaders, publicly wrote off, as expendable and not worthy of our consideration, an entire section of Atlanta. He also wrote off the efforts of Southwest Atlantans for Progress. His specialized training should have made him recognize that inherent in this particular area is a great opportunity for his profession to help resolve its problems into a balanced neighborhood.

I can easily understand the problems the Atlanta Real Estate Board has in controlling the actions of its members and others. But it certainly should discourage statements such as was made to this civic club. It would seem to me also that it should publicly disavow blockbusting and that it has a public responsibility to do so by whatever means it can.

Through these actions along with an active campaign of public statements and education dedicated to helping the Cascade Heights area the Atlanta Real Estate Board can be the leader, as it should be, and perform a great public service.

Panic Selling Stings Someone

Atl Const

5-26-67

Lessons important to all Americans are being taught in the wooded, landscaped neighborhood of higher-priced homes in Southwest Atlanta called Cascade Heights. One of the lessons is: How not to get stung in selling or buying a house.

Negroes of education and income levels comparable to those of the middle class white residents are buying homes in Cascade Heights and some of the white people are running.

But others are staying. They are unable to see much point in vacating a convenient neighborhood in which they want to go on living, anchored as it is by the southwest section's stable economic base which is bound to grow, simply because of the color of a neighbor who has earned the same station in life as the whites can afford, and who therefore can't be much different from them.

Yet some real estate men of both races are practicing a subtle incitement of race panic for profit. Ever-so-delicately, letters suggest to white homeowners that their neighbors are selling out and that the honest-John writer is just the agent to find them a buyer, too, while there's still time.

If the white homeowner panics into his palm, and asks the agent to save him with a fast sale, it is possible for the agent to play on his fears, get him to list his house for less than it's worth, and fast-sell a whole lot of such houses with fat commissions on sheer volume.

Or, if he's a crook, it is not impossible for him to devise under-the-table deals to sell higher to an unwary Negro than the frantic white seller knows and pocket a really big profit, derived from white fear and Negro foolishness.

Negro buyers may be getting stung worse than white sellers on the whole, according to Mrs. Xernona Clayton, the able and attractive official of the American Friends Service Committee, one of those working with Southwest Atlantans for Progress (SWAP) in its effort to keep the calm view. "It's not all the agents' fault," she said. "It takes a buyer to make a sale."

Unwary Negro buyers are fair game for agents of both races who tell white homeowners they can sell for big profits if they move now. Some do, and it is the Negro buyer who pays through the nose to put the profit in blockbusting for those agents who split the take with the white sellers.

Somebody loses, and only the agent gets rich, when an artificial climate is deliberately stimulated as some agents are stimulating it in Cascade Heights. But reason and community interest as well as self-interest are getting into the picture now, among white homeowners and prospective Negro buyers alike.

Whites who won't run and Negroes who don't rush can't be hurt as others have been. And the stabilization of a good neighborhood can replace the enrichment of a few agents. In his "Property Values and Race," prepared for the national Commission on Race and Housing, Dr. Luigi Laurenti analyzed 9,900 sales prices over a span of 12 years in neighborhoods of three cities where nonwhites bought homes in previously all-white areas, and found that in 85 per cent of the cases the values of the properties had either showed upward movement or remained stable.

'. . . A Hint Here! A Threat There! Man, We Can Make a Killing off These Neighborhoods!'

CLOSING THE GAPS

By

Xernona Clayton

Mrs. Clayton is Housing Director
for the Atlanta Community Relations
Program of the American Friends
Service Committee

We, as a society, are faced with numerous gaps--I will mention a few:

1) There is an economic gap.

2) There is an educational gap (cultural).

3) There is a housing gap.

Let us deal with these with a few specifics. Here are a few facts about the nature of the economic problem affecting Negroes and we can readily understand where and why the gap. Two out of three Negro families earn less than $4,000 a year. Negroes account for 10% of the labor force, 20% of total unemployment and 30% of long-term unemployment.

The great improvement in the Negro's economic position relative to that of the white population began in World War II, when a shortage of labor opened up a great many jobs that previously had been barred to Negroes, but these opportunities diminished with the slowdown of economic growth after the close of the war. The figures have fluctuated somewhat from year to year but since the war, there has been no net improvement in the Negro's relative position vis-a-vis the white's.

Because of custom or lack of past training or outright prejudice, Negroes do not obtain the same scale of jobs as do whites. However, we must admit there have been successful strides.

Winning the right to eat in restaurants or lunch counters for people who are unable to buy the hamburger; or winning the fight to register at hotels for people who are unable to pay the cost of the room is relatively meaningless.

Until the economic gap between the races is closed, we will continue to have the double standard of living and an ever-present degree of hopelessness.

Business has an obvious stake in resolving the problem, for while it cannot function in the harmful climate of conflict, tension and discord, it can see in the Negro population a whole reservoir of potential producers and consumers.

The educational gap is one that demands endless attention and is so serious that requirements for bridging that gap involve the energizing of all human resources.

The gaps exist for often it is discovered that one area finds it convenient to shift the point of the problem beyond its realm of responsibility.

The businessman will say the problem is education--the educator may say the problem is housing--the real estate man says it is economics (the ability to pay).

This produces the "vicious circle." The hiring of Negroes is not sufficient. Our society must see that Negro citizens receive an education and also obtain decent and adequate housing. To ignore the facts is to be naive. All of the gaps must be closed in order to have effective intervention.

Overcrowded schools, gerrymandering, deficient curriculum, minimum standards and other tactics have been the basic sources from which educational imbalance evolves. Some of these conditions are slowly being eliminated but they have existed and we simply cannot ignore the past because the past exists in the present. The scales of justice have been so heavily weighted against the Negro that he cannot now be balanced merely by adding equal weights.

A human being who has been undernourished, one who has not had enough vitamins, cannot be made equal to a well-nourished human being by being given, suddenly, an equal amount of food. He must be built up for a brief period before he can compete with another individual of well-nourished stamina--so it is with education. An individual who is the victim of unequal, deficient, sub-standard educational environment must be trained and elevated to the normal, acceptable level of beginning before he takes the steps of competition.

If he is educationally anemic then he needs an educational blood transfusion before he is permitted to swim in the sea of competition, alongside the well and the healthy, the enlightened and the informed. Brief periods of unequal inputs will restore balance on the bridge that spans the gaps of education.

The gap in housing is so wide that it is practically depressing to realize the energy required to deal with the decrease of such.

No problem is more agonizing to most people than squaring their moral values with the practicality of everyday living. Certainly no aspect of this problem has caused more agony than the surge toward desegregated housing in America. Good people of strong ethical and moral persuasions suddenly find that the values they have always thought were part of their soul's inner fabric don't really protect them from the panic that rises when Negroes first move into their neighborhoods or their block.

There's a story told about the white man who was watching the moving van back into the driveway across the street. He said, "It's all very well for you to talk about morality and Americanism and freedom and all that stuff but those Negroes are moving across the street from me and this is no time for those darn ethics."

Well, the fact is that what is ethical is moral and that which is moral is practical. However, too often fear and emotion drown out reason.

Racial integration of community life is inevitable in America. Much of America's future destiny depends on the manner in which this integration comes about.

Today, there is good evidence that desegregated housing is a trend that is gathering strength at all levels in our society.

But there is a great need for facts, for further leadership, and for action that will help smooth the transition and remove it from the arena of public controversy. When more state and local governments have made integrated housing a part of basic law, the issue of segregation will lose much of its emotional and fearful content.

We have a community organization in the Southwest section of Atlanta in which both Negro and white citizens work together to carry forward educational programs to inform the residents of the community about the nature of discrimination in housing and what can be done to combat it.

This area, also known as the Cascade-Sewell-West Manor community, with its beautiful and attractive homes, has an air of graciousness and spaciousness. This naturally attracts people who are looking for decent and adequate living.

The members of the community got together and formed a loosely structured organization called SWAP (South West Atlantans for Progress) for the purpose of creating concrete programs--imaginative in concept and broad in scope--to meet the changing needs.

The members of this community refuse to believe that this community would follow some traditional patterns of downgrade or decline just because of the Negro inmigration. They know that property values decrease only if panic is engendered. It is the hope of SWAP that the neighbors can maintain a stable, interracial community of high standards.

The future of any city depends on the composition of its people--the greatest asset of a city is its people. We feel that Atlanta needs to work toward the retention of those citizens who contribute to the welfare and add to the resources of its city and these contributions are made by both white and Negro citizens.

The future of Atlanta depends very much on the presence of both white and Negro residents and it cannot afford to maintain racially separated communities--neither financially or morally.

The editor of the Atlanta Constitution, Eugene Patterson, wrote, "the citizens of SWAP are serving as examples to all of us by refusing to run--by recognizing that good people (Negro and white) can live side by side in a good neighborhood. Theirs are the property values that are not being hurt; they have refused to panic."

Open Occupancy legislation will help to solve many of the problems cities face in the housing area. We recognize very well that legislation won't change morals but it does create the climate that makes it conducive to change. An open housing law would remove the mental sanctuary whites feel exist on the other side of town.

As long as whites feel and know there is another community to which they can flee and be guaranteed non-intrusion of Negroes, then they will continue to run. The gaps of flight must be closed.

There must ben an effective plan that will prevent whites from having places to which to run.

There was a white woman who joined a demonstration against segregation in her New Jersey town. Upon facing the TV news cameras and in the midst of the newscaster's question, she unexpectedly burst into tears before millions of viewers. "I did it for my children," she sobbed, "I tell them everyday they're growing up in a democracy. How could I have faced them if I hadn't done it? This is my belief....this is my conviction."

The world today suffers not only from a lack of rugged convictions but also from our timidity in expressing those convictions we do have. We often find ourselves afflicted with moral laryngitis.

We need to ask ourselves whether we as individuals, are displaying moral courage equal to the needs of home and neighborhood, where our influence counts. Hardly a day passes without opportunity to stand up and be counted on some issue of importance. Moral courage has rewards that timidity can never imagine. Like a shot of adrenalin, it floods the spirit with vitality. Courage is contagious. When a brave man takes a stand, the spines of others are often stiffened. Commitment to great causes makes great men.

All of our gaps exist because of racial segregation. Our America is not the real democracy, yet. We have not yet become one nation indivisible. We have not yet won liberty and justice for all.

Segregation still prevails but we are working hard to eliminate it. Segregation is a social evil--it is an affront to human dignity. It is an assault upon the human soul, a rape of the human personality.

Morality, law and common human decency all demand that the gaps--through which there are escapes--be closed and closed now.

Our country was built on moral, political and religious values--we must retain these values. What is done to a minority hurts the majority--what is done for the minority helps the majority. What is done today or tomorrow fulfills the American promise made to ourselves and to each succeeding generation.

QUESTIONS AND ANSWERS ON REGULATIONS PERTAINING TO BUYING AND SELLING REAL ESTATE IN ATLANTA

1. Q. Is it against the law to sell or refuse to sell property to someone because of race or religion?

   A. If you own property, you are free to sell it or not to sell it to anyone. If a Real Estate Agent has agreed to list certain property for sale, then he must transmit to the owner any bona fide offer which he receives for the property regardless of any personal characteristic of the potential buyer.

2. Q. What is a bona fide offer?

   A. A bona fide offer is a signed contract and payment of "earnest money".

3. Q. May an agent refuse to show property to an individual because of his race, or religion?

   A. Only if the owner is not willing to have him do so.

4. Q. Are there provisions in the Agent's license or professional ethnics which would prohibit him from selling property to a Negro in a predominately white neighborhood?

   A. The Atlanta Real Estate Board's statement of policy, which is the same as the National Association of Real Estate Boards, states that "each realtor should feel completely free to enter into a broker-client relationship with persons of any race, creed, or ethnic group." Both groups oppose "open occupancy" legislation, which they consider to be an attempt to deprive property owners of the right to dispose of their property as they see fit (as covered in question #1). The Empire Realty Board is a member of the National Association of Real Estate Brokers which favors "open occupancy" legislation.

5. Q. What is the Atlanta Real Estate Board?

   A. The Atlanta Real Estate Board is an Association of Realtors affiliated with the Georgia Association of Real Estate Boards and the National Association of Real Estate Boards. All members of the Atlanta Real Estate Board happen to be white.

6. Q. What is the Empire Realty Board?

   A. The Empire Realty Board is an Association of Negro Real Estate Agents, affiliated with the National Association of Real Estate Brokers. There are no racial restrictions on membership.

7. Q. Are there any laws or regulations of the City which set aside certain parts of town for Negroes?

   A. No. There are no legal restrictions pertaining to the sale of property concerning race.

8. Q. Are "Restrictive Covenants" in deeds valid?

   A. No. Provisions of any deed to restrict sale of the property to a certain racial or religious group are no longer valid.

9. Q. Are Real Estate Agents licensed?

   A. Yes, by the Georgia Real Estate Commission. A licensed agent should be able to present a card identifying himself as such.

10. Q. Must a person be licensed to purchase real estate for "investment"?

    A. A person need not be a real estate agent to purchase property which he may resell.

11. Q. Is it necessary to deal through an agent?

    A. Any person is free to sell property to another person without going through an agent, although an experienced agent may be able to render valuable service to an owner in the sale of his property by answering technical questions on financing, taxes, insurance, title clearance and many other complicated points.

12. Q. What protection does a citizen have from harassment from real estate agents?

    A. If a licensed agent engages in harassment, (for example, if an agent continues to contact you after he has been told your house is not for sale; if he telephones after he has been asked not to) or falsifies information or spread rumors, this should be reported immediately to the Georgia Real Estate Commission, 522-6100, or State Capitol, they prefer complaints in writing. The Commission has no control over persons who buy property for their own investment purposes.

13. Q. Do property values go down when Negroes move in?

    A. Property values reflect the supply and demand of the Real Estate Market. In many parts of Atlanta where Negroes and Whites live together, property values have remained the same or have gone up.

14. Q. Will the Housing Code be enforced when Negroes move into a neighborhood or will more than the legal number of families, etc., be allowed to move in?

    A. The City, intends to enforce the Housing Code in all parts of the City, and any infractions should be reported to the Code Enforcement Office, Room 1401, telephone 522-4463, Ext. 283, City Hall; or to the Community Relations Commission, 522-4463, Ext. 433, or 434.

Mouland: I cannot attend. Are you interested? Paul

FAIR PLAY IN HOUSING

Who's My Neighbor?

BY ALGERNON D. BLACK

PUBLIC AFFAIRS PAMPHLET No. 396

IN VIEW OF the rising concern among both Negroes and whites over the effects of segregation in housing on education, health, and economic and cultural opportunities, the Public Affairs Committee has asked Algernon D. Black, a noted authority in the field, to revise and update his pamphlet which was originally published under the title *Who's My Neighbor?*. Since its contents are so relevant today, the revision is being included as a new title in the Committee's current series in the hope that it will be widely read and studied.

FAIR PLAY IN HOUSING

Who's My Neighbor?

BY ALGERNON D. BLACK

Mr. Black is a Leader of the Ethical Culture Societies in America. He is Chairman of the Board of Directors of the National Committee Against Discrimination in Housing and Founder of the Encampment for Citizenship. For years he has broadcast interpretations of ethical issues in the news. . . . Illustrations by Dick Shelton.

IN A CHICAGO suburb a colored family moved into a white neighborhood. Threatening phone calls, broken windows, and mob violence followed.

In a development in Pennsylvania a Negro engineer purchased a house because he had a friend who lived there and because it was near his place of employment. On the day the family started to move in, a crowd of about 200 adults and teen-agers gathered. They jeered, threw stones, broke windows, and injured some of the police who intervened.

In New Jersey a real estate broker was told that if he wished to remain in business he had better not show houses to colored people.

In California promoters of a New Town openly declared that they will exclude non-white families from their community.

In a suburb of New York City a woman in an all-white neighborhood needed to sell her house. She wanted to put it on the open market, to make it available to one of the Negro doctors, lawyers, and ministers she knew through her community service

work. She decided to invite her neighbors in one evening to talk it over. She prepared coffee and cake. Everything started out in a friendly, neighborly spirit. When she told them her plan, the air chilled. "You are robbing us of our money," said one. "Why not live the way God meant us to — whites with whites and colored with colored?" said another. "I thought you cared about your neighbors," someone else said. "I thought we were friends." They walked out without accepting refreshments or saying "Goodnight."

In almost every city and suburb the move-in or possible move-in of colored families has brought resistance from a certain number of the white residents of the area.

other cases

An application for rental of an apartment was accepted by a young man in the renting office. The applicant's wife appeared to sign the contract and make the first payment. Seeing that the family was colored, the agent refused to complete the rental contract. Neither landlord nor renting agent yielded to appeals from the colored family — or their many friends and local church and temple committees in the neighborhood. A picket line was formed in front of the landlord's place of business. Immediately he gave orders to admit the colored family. Since then, integration has taken place in this suburb without conflict or white flight and the neighborhood remains stable and prosperous.

In Teaneck, New Jersey, white homeowners put up signs, "Not for Sale," thus expressing their firm intent to remain in the community with their new colored neighbors. In Syracuse, New York, Washington, D. C., and Baltimore, Maryland, "Neighbors, Inc." and "Good Neighbor" committees have been hard at work to bring about fair renting and selling practices in the housing market, along with stability of neighborhood development.

In Wisconsin, Jacob Sinaiko, and in Pennsylvania and New Jersey, Morris Milgram — both active private builders — have operated their housing projects on the principle of "open occupancy" and non-discrimination. Their houses have sold profitably. Good neighborliness has become both good human relations and good business.

In more than a thousand communities homeowners have formed "Good Neighbor" and "Fair Housing" groups to bring about freedom of residence regardless of creed or national origin or color. Religious leaders and members of all faiths have been an important part of this grass roots effort to bring about a change in the pattern of discrimination and segregation in housing in the United States. In 17 states and more than 60 municipalities and local neighborhood communities, laws have been adopted against discrimination in housing.

THE PATTERN

What is the pattern across America? And who sets it? Is it the builders and real estate industry or the homeowners?

"No, I can't show you the house. We don't sell to Negroes."

"Sorry, mister, the house is gone. Yes, I know I said it was available when you phoned. But it's just been sold."

"We can show you houses in this section. Glad to. No, we don't show houses across Main Street. Why don't you stay with your own kind? You'll be happier."

"No, we can't let you have a mortgage. If it were for property on this side of town, we might consider it."

"Look, lady. I have no prejudice. This bank has no prejudice. We are a business. We give the people what they want. Most people believe that there should be white neighborhoods and colored neighborhoods."

These statements and many studies confirm the fact that many communities across the nation are actually zoned according to race or religion or national origin. Real estate brokers and developers and banks have marked off some streets for colored and some for white, some districts for Italians or Polish Catholics and others for native-born Protestants, some areas for Mexican- or Puerto Rican- or Indian-Americans and other areas for Orientals. Zoning of this kind is not done by government or law.

The method often used in the past was to write a restrictive covenant into the deed for the property. But whether zoning is by written agreements (which are no longer enforceable by the courts) or by oral "gentlemen's agreement," the practice of discrimination is still widespread. It has been based upon the assumption that this is the way Americans want to live — that white and colored people do not want to live together in the same neighborhoods or streets or developments. It has been based upon the belief that any change in this basic pattern of separation will mean deterioration of property values and of neighborhood life.

But regardless of the reason or the method, the resultant housing segregation is responsible for the ghettos that have blighted life in our cities. Housing segregation results in segregated schools, segregated churches and recreational facilities. It limits economic opportunity for millions of Negroes and other minorities. The ghettos are overcrowded, deteriorated, rat infested, and lack the social services and the fire and police protection of more favored neighborhoods. In turn, the need for more services, and the forcing out of profitable business, add to the taxpayers' burdens.

the real estate industry

The problem is particularly difficult because racial separation has been written into the principles of real estate boards and into their manuals of property appraisal and business policy. Many people still believe that this is the only sound and safe method of operation. An individual owner or builder or real estate agent who operated according to a different policy would feel the intense disapproval of the housing leaders of his community. The broker or builder or developer who has strong moral convictions for an "open occupancy" policy may pay a heavy price if he attempts to live by his principles. In many communities he may be forced out of the real estate board. He may find himself boycotted by his colleagues and unable to do business in the community. He may be ostracized socially and financially. He may even be forced to leave town. Thus, the pressure to conformity is often strong

enough to overcome whatever impulse an individual might have to adopt a policy of non-discrimination in the housing market.

There are individuals and firms in the real estate field who have broken the pattern in recent years. Some have done so out of religious or democratic convictions. Others have felt that sound business required non-discrimination. They have held that capacity to pay, credit standing, and character references were the important measures of a good homeowner or tenant. Many of them have profited by changing their policies.

But most members of this important industry still operate according to the dominant practices, and many are generating pressure against open housing. They believe they are in accord with the wishes of the vast majority of the people who sell or lease and rent housing and regard these practices as sound business. Some hold that if people outgrew their prejudices and were ready to live in mixed communities, the housing industry would have no reason to segregate. They may readily agree that we should judge every man as an individual on his own merit but in practice they still deny equal opportunity in the housing market.

government officials and agencies

So effective is this practice of the real estate industry that federal and state and local government officials and agencies have in many instances accepted racial segregation as the pattern of their own operation. Similarly, housing agencies have often helped to strengthen the pattern of segregation. Especially has this been true of some of the municipal housing authorities and some of the governmental appraisal and financing agencies. Directives to housing officials and staff workers have assumed this to be the practice.

In recent years the federal government has had to play an important part in the housing market. Besides public housing for the lowest income families, many governmental devices have been developed to bring about more private building. Public assistance to private developers has included tax exemptions, write-down in

the land price, as well as insurance of mortgages (F.H.A. and Veteran's housing) and urban renewal and rehabilitation programs.

In his book, *The City Is the Frontier,* Charles Abrams writes: "One reason for the widespread suburban bias against Negroes is that for fifteen years, government housing programs and Negro exclusion proceeded apace. From 1935 to 1950, the federal government insisted upon discriminatory practices as a prerequisite to government housing aid. The Federal Housing Administration's official manuals cautioned against 'infiltration of inharmonious racial and national groups,' 'a lower class of inhabitants,' or the 'presence of incompatible racial elements' in the new neighborhoods." The author says further, "Zoning was advocated as a device for exclusion, and the use was urged of a racial covenant (prepared by F.H.A. itself) with a space left blank for the prohibited races and religions, to be filled in by the builder as occasion required. The Home Loan Bank System — the federal agency which regulates savings and loan associations — urged similar practices."

Only as citizens and civic agencies and political leaders have begun to question the government's policy and as civil rights organizations have opposed discrimination and segregation, have public officials begun to re-examine their policies and practices. The principle that public funds and public authority must not be discriminatory has been the basis for court cases and antidiscriminatory legislation.

Increasing numbers of citizens are pressing for two actions which will help rid the nation of segregation in housing. One is the extension of the Executive Order, issued in November, 1962, by President Kennedy, to eliminate discrimination in housing aided by federal authority and federal funds. The other is the enactment by Congress of a civil rights law prohibiting discrimination in the sale and rental of housing thus extending the fair-housing and open occupancy principle to all citizens in all states.

With the nationwide and worldwide pressures for desegregation, political candidates, public officials, and housing administrators

have become more sensitive to the problems of the social effects and social costs of segregation.

The housing pattern in the nation can be affected vitally by the practices of the housing industry and the policies and planning of the government. But in the final analysis the outcome depends upon the local community and the attitudes and behavior of the people in their day-to-day relationships.

homeowners

Wide differences of opinion exist among homeowners. Almost all are concerned with the value of their property and are interested in the upkeep of the neighborhood. Some are concerned with social status and prestige. Others consider the safety of their children and the quality of the schools paramount. There are those who sincerely believe that these values can best be served by keeping out people of different religion and color and race. They believe they have the right to discriminate in selecting their neighbors.

There are also people who feel strongly that all Americans should have equality of opportunity and that this applies to buying or renting a house. They hold that every family is equally entitled to compete for a home according to its credit standing and character references. They believe that people should respect differences of religion and race and color and national origin. They are against prejudging people by their skin color. Some are ready to work against discrimination and "restricted neighborhood" policies. They are eager to welcome new neighbors who will bring about a mixed and balanced and stable community life. They hold that this is the only way to live up to the teachings of the great religions, the principles of the Declaration of Independence, and the fundamental law of the Constitution.

We owe it to ourselves not to make snap judgments. For our own sakes, we ought to ask ourselves some straight questions: What do we fear when a colored family — or a family of any minority group — moves into our neighborhood? Let's get our objections out into the open and see if our fears are justified.

PROPERTY VALUES

"Our home is our biggest investment. We saved for it. We invested our life savings. We have taken on a mortgage obligation. We have put a great deal of labor and love into making it a good home for our family. And we know that the value of our investment depends somewhat on our neighbors, who they are, how they live, and how they keep up their houses. The value of our house depends on the value of property in the neighborhood. If the neighborhood goes down, all the property in the neighborhood will be worthless.

"What will happen to property values if Negroes move into the community? Will our house go down in price?"

What are the facts?

The facts are: *First,* that the price of property depends on the law of supply and demand, and since housing supply is more inflexible than most commodities, the important factor is usually the nature of the demand. *Second,* every scientific study, whether by public officials or housing experts or real estate appraisers, shows that because a few members of a minority group move into a neighborhood property values do not necessarily go down. The property values will either go down, remain stable, or go up depending on the other forces at work in the neighborhood.

values unstable

Property values can go down: *If* the houses are decrepit and unattractive; *if* they are overcrowded; *if* the neighborhood has been neglected by the homeowners and the city departments; *if* there are new developments in other sections with improved housing, modern design, and higher social prestige; or *if* the area has been affected adversely by shifts of traffic or locations of commercial or industrial activities. All these factors can make housing and a neighborhood less desirable. When the demand for housing decreases or homeowners and tenants are eager to find better housing and neighborhoods elsewhere, then the property values can go down. This can and does happen apart from the race or color

or nationality of those who then find it possible to come into the neighborhood. If values go down it is not the result of the move-in of non-white families. The fact is that they were now able to move in because the values went down.

panic selling

One sure way to drive property values down is for homeowners to believe that the arrival of a colored family will cause a deterioration in the price of their homes. If they believe this, and if they panic and rush to the real estate broker and put up "For Sale" signs, their own acts will drive property prices down. If they try to outdo each other in selling quickly, the price decline will be sure and swift.

Such panic selling is often caused and intensified by rumors which spread because of ignorance and fear and prejudice. Sometimes it is stimulated by those who stand to profit from commissions by buying up homes at low prices and reselling them at handsome profits. There are even real estate brokers — fortunately very few — who actually bring in a colored family and then spread the word that owners should sell because "values are bound to go down." Such operators are known as "blockbusters." The white owner, if his fears are intensified, may join his neighbors in a headlong rush to unload his house on the market thus creating the very fall in property values that the bigoted owner or real estate agent had predicted.

values stable

Property values depend far more on the behavior of white homeowners than on the move-in of a colored family. Studies by various authorities make it clear that *if* the physical character of the housing and grounds is maintained; *if* the population pressure and demand for housing is sustained; *if* the city services provide for cleanliness, care of streets and roads, garbage and sewage disposal, fire and police protection; *if* the schools and recreational facilities are kept up and improved, then the housing and

the neighborhood will be in demand. If the owners decide to remain where they are and decide not to sell, and if they are ready to accept their new neighbors, then their property will have the support of a stable market. Racial diversity can actually result in the positive enrichment of the entire community. Even where there may be disturbance and conflict, the community will stabilize surely and quickly.

KEEPING UP THE PROPERTY

Do colored families maintain, improve, or neglect the property they rent or purchase?

Many white people picture colored people as slum dwellers, as people who inevitably live in inferior housing or make the housing inferior. They tend to think that the colored families who move into a neighborhood will destroy the houses they occupy and will make the whole area unpleasant to live in.

Now, throughout the nation most Negroes have lower incomes than whites. Most colored people have suffered from inferior educational and employment opportunities and from lower living standards than the white population. Prejudice, discrimination, and inequality of opportunity have shut them off from an equal share of the country's wealth. Most have had to live in poorer housing and in poorer neighborhoods than whites, have been herded into segregated areas, and have been neglected and deprived in these areas. Social scientists agree that slums are caused by poverty, overcrowding, inferior maintenance, and neglect — not racial or religious or nationality factors. People tend to confuse cause and effect. Colored families do not cause slums. They are able to rent or purchase housing only after neighborhood deterioration has begun. Then they are blamed for creating the slum conditions which are the inevitable result of unchecked deterioration.

Despite prejudice and discrimination, many colored people have made progress in education and employment and are ready to pay for and eager to enjoy higher standards of housing and

neighborhood life. Census studies make this quite clear, and in all fields other than housing, much is being done to attract the Negro consumer.

studies of mixed neighborhoods

As early as 1944 the National Association of Real Estate Boards stated: "Realtors with experience in Negro housing reported to the Association that if his property is in good repair when he obtains it, he [the Negro home buyer] takes care of it after he buys it. As a tenant, he takes as good care of such premises as other tenants of his economic class."

A study of mixed neighborhoods in Kansas City, Missouri, shows that colored families who have moved into white neighborhoods have "pleasantly shattered" the stereotype that many whites have of the Negro community. They have improved the overall physical appearance of the area. A family's interest in taking care of a home is not determined by the family's color. Any family that buys and moves into a better house in a better neighborhood or suburb, usually has the education and income level and aspiration that indicate that they have an interest in keeping up their property as much as any other family. Also, as the first colored family to move into a white area, they are likely to be influenced by the community standards and desire to contribute to better group relations. Their purchase of the house is a heavy investment made with great sacrifice. They have as much at stake in their investment as their white neighbors, if not more.

Studies in California and Minnesota, in Indiana and Missouri, New Jersey and New York, reveal that colored families maintain their property in much the same way as the other people in the neighborhood, and that they are as interested as all other American families in "keeping up with the Joneses." In fact, they often outdo white families in their care of house, lawns, walks, and fences, in planting flowers, and in improving their property.

In Teaneck, New Jersey, a report on 500 homes, one-fifth of which are occupied by Negro residents, indicates that the Negroes

have made repairs on properties which the former white occupants had neglected, and at least a dozen Negro-owned homes show such solid improvements as new garages and concrete pathways, retaining walls to prevent erosion, new landscaping, and basements that have been converted into finished playrooms.

A number of additional studies could be cited showing that minority group families have kept up their property as well as or better than the old-time residents. These include: Concord Park, Pennsylvania (an interracial development of 139 homes in the $15,000-$18,000 class); Windermere Place, St. Louis (a street of large and comfortable homes); Queensview Houses (a nonprofit cooperative in Queens, New York); Parkway Village, New York (an interracial development primarily for United Nations personnel); and a wealthy suburban community in Pennsylvania. The Philadelphia Human Relations Commission states: "Our most important evidence that Negro homeowners keep their property well is right here in Germantown. We can think of many blocks where Negro homeowners have kept their properties far better than the previous white owners." Two developments which had long resisted the admission of colored families could be added: Stuyvesant Town, the housing complex built by the Metropolitan Life Insurance Company in New York, and Levittown, Long Island, a vast development for homeowners. Both yielded to the growing sentiment among owners and tenants and the public, and there is no suggestion from any source that the colored families that moved in have failed to meet the regular standards of property maintenance.

FINANCIAL STABILITY

One question that some homeowners ask is: Will colored families be able to pay for their homes and maintain their mortgage obligations? Or will they fail and endanger the property and the community? Will banks and finance companies refuse money to an area where colored families move in?

the mortgage companies

The best answer is that banks and mortgage companies which have lent money to colored families who have bought homes have found them to be good credit risks. The president of one of Philadelphia's largest mortgage companies has written, "Over the years a great segment of the Negro population has obtained the respect of lenders, simply and quietly, by paying their bills when due. Actually there is no difference in our delinquency records between white and Negro loans and we take pride in our below-average mortgage delinquency record."

The National Association of Real Estate Boards reports: "Realtors with experience in Negro housing reported to the Association that, as a class, the Negro home buyer meets his payments faithfully — often more faithfully than other race groups in the same economic level."

the banks

Earl B. Schwulst, President of the Bowery Savings Bank, the world's largest savings bank, wrote as follows:

> "Over the years the rate of delinquency on mortgage loans and the day-to-day problems of collection have naturally fluctuated to some degree with the change in economic conditions. To my knowledge, there has been no greater rate of delinquency, nor have the problems of collection been greater, with respect to mortgaged properties occupied interracially or by minority groups, than with respect to properties occupied by whites.
>
> "In brief, it is my firm conviction that the soundness of any mortgage loan depends upon the condition and value of the property, its location, and the credit of the borrower, and that the color or ethnic origin of the borrower is irrelevant."

As for the availability of mortgage money, it is significant that, despite the integration of colored families in many developments and in urban and suburban areas which were formerly restricted,

mortgage money has not been lacking even in those areas where integration has taken place in housing that is privately owned and privately financed.

OPEN OCCUPANCY RENTALS

James H. Scheuer, owner and manager of substantial residential properties in New York, Washington, D.C., and other sections of the country and member of the Real Estate Board of New York, had this to say when he testified in support of antidiscrimination housing legislation before the general welfare committee of the New York City Council.

> "Private-enterprise sponsors of the much discussed Title I redevelopment housing are investing millions of dollars with the confidence that this housing, which by law must be integrated, will be successful. In various parts of the city middle-income housing projects enjoying Government assistance have adopted the non-discrimination policies required by present law with evident success. When an open occupancy rental has been tried, it has been successful, even in those projects whose sponsors openly rejected the possibility of successful integration only a few years ago. I might add that in many private apartment houses and in many neighborhoods, Negro and white families have been living side by side for decades."

Referring to the successful integration of colored families at Queensview and Kingsview, Mr. Scheuer said: "Some very hard-headed and practical New York businessmen are investing millions of dollars of cash equities in these projects which they know must be integrated, upon what I believe is their correct assumption that such projects, built to high design standards, will rent well and will be profitable."

In a growing number of instances private low- to moderate-income rental housing, provided under government-insured financing, is being tenanted by white and non-white families.

THE FEAR OF INUNDATION

"I am troubled about inundation," a typical property-owner declared. "If one colored family moves into an area, if they're the right kind of people, if they do good work and have good incomes and meet their obligations and act as good neighbors should, I see no objection and no difficulty. But the trouble is that when members of a minority group move in, whether it be colored or Catholic or Jewish or Puerto Rican or any other, what we get is inundation. They keep coming. The trickle becomes a river, and the river becomes a flood. All this talk about diversity and a balanced community, about people of different backgrounds being good neighbors, is utopian. What worries me is, will the whole neighborhood or the entire development become flooded with colored people? How do I know my family won't end up as the only white family in the neighborhood?"

This is a difficult question. But there are several things to keep in mind. *First,* it is well to remember, as we have already pointed out, that if the vast majority of white residents behave rationally and keep their homes, the neighborhood cannot change radically. It is panic exodus that invites the flood. If residents resist pressures and stand firm against fear-creating rumors, and if they act in the spirit of homeowners in Philadelphia and Teaneck who put up signs in their windows, "This House is Not for Sale," inundation cannot happen.

Second, the truth is that there aren't a great many colored families and members of other minority groups with enough income to move into better housing. Many people wish that more Negro families were able and desirous of helping to bring about healthy balanced democratic community life.

Even if all new housing were available on a non-discriminatory basis, relatively few Negroes would be able to take advantage of the opportunity even under liberal government financing. And even if a larger number of families were in a financial position to purchase homes in better neighborhoods and suburban communities, a number of factors would keep them from doing so.

In addition to limited funds, many colored families do not wish to spend too much on housing. In their budgets there are often heavy obligations for health, education, and recreation. These make it necessary to limit expenditure for a private home.

Despite the Chicago demonstrations organized by Martin Luther King which led to an agreement with real estate interests regarding open housing, the fact remains that many Negroes do not wish to move into white areas. Many do not wish to live where they are not wanted or where at best they might be merely tolerated. There are some who have a psychological barrier to moving away from their own kind and breaking the race barrier among whites, and others who compensate with their own natural and understandable Negro race pride and have no desire what-

ever to live among people who have rejected and deprived their people of opportunities and membership in the larger community as equals. But the factor which plays a most important part is the reluctance of Negro parents to be the first family to move in or pioneer at the expense of their children. They hesitate to expose their children to rejection or hostility or any experiences which might impair their sense of their own worth.

Finally, the flow of minority families to any one area depends in part on what other areas are open. The more the walls of prejudice and discrimination give way to open occupancy and the more colored families and members of other groups who have been walled in are free to live where they wish and where they can afford good housing, the less likelihood that there will be inundation in any one neighborhood. This is the hope of the future: a wider dispersion of people made possible by an adequate supply of housing for low- and middle-income families, by fair housing laws, and by fair housing practices for all.

THE EFFECT ON CHILDREN

Some homeowners will say, "It isn't property values that bother me. My real worry is our children. I have no prejudice against people who are colored or different in national origin or religion. But isn't it true that colored children have less ability than whites and will pull down the educational standards of the schools in the neighborhood?"

What is an honest answer to this question?

It is true that most colored children have been deprived of an equal educational opportunity with whites. Also, they have been made to feel that even if they study hard they still can't compete for jobs strictly on the basis of ability. For this reason many colored children have suffered from lack of motivation to study or stay in school. It makes it all the more remarkable that so many colored children and youth *have* been able to finish grade school and go on to high school and college.

Given the benefit of sympathetic teachers and proper educational planning, the Negro child who is admitted to a good school and is accepted by his fellow students will not pull the school down scholastically. He may be just the child who has the ambition and drive to better himself. He may even challenge and prod the white child to move ahead academically, artistically, and athletically. It is important to remember that many immigrant groups had very little schooling and yet their children and their grandchildren came to value education and went on to high school, college, to medical or law school.

educational standards

Negro high-school students have made remarkable scholastic progress in Washington, D.C., since the schools there were integrated. Reported to be "far below normal" in achievement tests shortly after being placed in formerly all-white schools, twelfth grade Negroes a year later were ranking well in comparison with white students. At the end of the same one-year period, tenth grade pupils recorded gains of up to four years in arithmetic and reading. Such progress was attributed to "excellent teachers" and to help from the students' homes. There is no reason why similar progress should not be made wherever children come from neglected areas to better schools and to improved neighborhoods.

Intelligence and talent are not limited to any one group. Colored families who have the ability and desire to improve their way of life by moving into better housing and who are willing to make sacrifices for it, are usually as well endowed as the white families of the area. Indeed, the very fact that they have achieved higher incomes despite discrimination, is evidence that their children are likely to be above average in background and incentives.

If the schools of the community are sound, they will test and grade each child according to his ability, and they will do so regardless of color or creed or national origin. Special problems due to differences of ability or previous educational training can

be dealt with according to the needs of each child without pulling down the standards of education of all. The colored family which has taken the trouble to move into a predominantly white neighborhood is likely to have done so largely because it desires better educational opportunities and health standards for its children. If the previous schooling was inferior because of segregation and neglect, this family will be the first to cooperate in giving support to better education for its own and other people's children.

moral standards

Some parents say, "I have only one concern. It is the safety of the life and moral standards of my children. Won't colored children pull down the standards and bring about delinquency and violence?"

Delinquency, narcotics, immorality, and violence are not confined to any one group, racial or national or religious. It is true that children of the segregated and deprived part of the population may have special reason to turn against society's standards and strike out against persons and property. Delinquency tends to be higher in slums where housing conditions, overcrowding, and lack of privacy strain family relations and where the lack of good schools and decent neighborhood upkeep are generally demoralizing. But delinquency and crime know no block or street boundaries. Among middle class and suburban upper class families, academic dishonesty, dropouts, vandalism, narcotics, and lawlessness are not unknown. Children, whether colored or white, can be the victims of the delinquent acts of others and they can be drawn into delinquent activity themselves. The best defense lies in prevention through sound moral standards in the family, good parent-child relations, and the support of good schools, churches, and community forces. Constructive human relations and fair play develop best when children grow up in a community where people of all kinds respect each other and act as good neighbors. Where adults fail in this, the children can hardly be expected to be good friends and neighbors in the classroom and

on the sports field. The failures of adults to be good neighbors in dealing with the moral problems of the common life should not be used as a justification for racial discrimination and exclusion in American communities.

the fear of intermarriage

Deeper than the concern with property values and inundation is the fear that the presence of a colored family in the community may lead to interracial marriages. It is the same thought that lies behind resistance to school desegregation. Some parents ask

questions such as: "If our children live next to children of other races or religions or nationalities, will they not become playmates and affectionate friends? And if they grow up together will they not end by marrying one another?"

How can we deal with this issue frankly and realistically? Most people have a feeling of kinship with their own group and want their children to marry "their own kind." No one can quarrel with this. Parents who have pride in their national origin or color or religious ancestry and who treasure traditional values in the life of their people usually want their children to have the same pride and identification. Moreover, young people generally are attracted to and drawn to marriage with their own kind or those who are like themselves in nationality, color, and religion.

some facts

It is important to note that although American life in the past has thrown many different kinds of people together, the amount of racial intermarriage has not been excessive. And despite the recent increase in contacts between youth of different backgrounds in schools and colleges, in business firms and factories, in sports and recreation, the increase in intermarriage has been limited to a large extent to interreligious marriages. It has not substantially increased the number of interracial marriages. Indeed, recent studies reveal that in the struggle for racial equality and civil rights, the desire for intermarriage is last on the list of demands and aspirations of minority groups.

Whatever the facts and whatever the actual or potential increase of interracial marriages, this can hardly be a justification for the denial of equal opportunity according to ability to pay in the housing market. Those who have strong feelings against intermarriage must find other ways of educating and guiding their youth in their social contacts and in making their choice of marriage partners. But it is only fair to point out that whatever the objections and whatever the special problems of intermarriage, there is no scientific evidence that it is either unsound or evil.

SOCIAL STATUS AND PRESTIGE

Some homeowners feel that the presence of any minority group lowers the social standing of the community.

This, of course, is not true. In every group there are people of outstanding talent and culture and social prestige. They do not detract, rather they add status and prestige to their community, wherever they live. The Negro who holds a high position in the government, or the refugee with an accent who makes a unique contribution in the arts or sciences — these may bring great cultural and spiritual riches to a community. The quality of a community and the status and prestige of its families rest not on ancestry or color. They rest on the quality of persons, on the dignity and values of home life, and on the aspirations of those who live there.

too many risks and sacrifices?

Finally, the homeowner may summarize the issues of mixed housing by saying: "I am impressed by the facts and viewpoints that have been brought to bear on the arguments against the entry of families of minority groups. But in every case there seems to be a risk.

"Our property values *could* go way down. Colored families *might* not all be equally careful of property upkeep. There *could* be an inundation unless the white families remain. My children *might* be hurt by the lowering of school standards, and they *might* be affected by delinquency, and they *might* be among those rare cases drawn into intermarriage. All these things that I fear are still possibilities. And when you say it depends on the homeowners and it depends on me, I ask: Why should I have to carry the risk and make the effort and the sacrifice to try to help mixed housing succeed? Let others carry the burden. If all the problems we now have are the result of past neglects, why should *we* have to face the issue and bear the brunt of the transition?"

What answer can we make?

THE CHOICE BEFORE US

We can do nothing, and hope that no minority family tries or is able to move into our neighborhood.

We can put our property up for sale as soon as a colored family moves in.

We can fight the entry of colored families by joining with others and using every device to keep colored families out.

But we can take a different course. We can defend our values, our homes and neighborhoods by recognizing the fact that we live in a world where differences are inescapable. We can welcome differences. This is the way of life consistent with the best in religious and democratic thinking. It is possible — indeed, it is fairly certain — that a community which bases its policies and relationships on heterogeneity will offer more security for persons and neighborhood life (and property values too) than one which tries vainly to base its life on limiting its people to those of the same kind. A community of different backgrounds, talents, and viewpoints will be far more interesting and enriching than one which is characterized by sameness and conformity.

With this basic approach in mind, the homeowner can undertake to play a constructive democratic role.

First, he can make up his mind where he stands. He can make it his business to get the facts, think out the issues, and decide what he thinks is just and realistic and constructive for himself and others.

Second, he can call together his friends and those he has reason to believe are democratic and courageous people.

Together they may decide on the following steps:

- Agree not to fight against the moving in of a colored family and make it clear that they will not offer their houses for sale or leave the community. They may circulate "Good Neighbor" pledges. They may launch a program to get people to "stay put" and put up "Not for Sale" signs on their property.
- Form a delegation to visit real estate brokers, appropriate government agencies, the real estate board, and the banks to

declare their readiness to support freedom of choice in housing on the part of minority families and their desire to cooperate on a program of community stability.

- Participate in hearings on Urban Renewal and community planning to assure that there is constructive use of various types of housing in order to promote freedom of residence and fair housing practices in ways which will eliminate discrimination and segregation.
- Initiate an educational program of tolerance, goodwill, and fair play in the press and on radio and television. They can schedule speakers at the schools, churches, and other agencies.
- Organize a Good Neighbor Committee or Fair Housing Council representing leadership people from a cross-section of the religious, educational, civic groups which make up the community. This committee can welcome new neighbors. It can deal with rumors, untruths, and half truths, and offset any efforts by those who would start trouble or violence.
- Join or work with the organizations listed on page 27 in their struggle for fair play in housing.
- Bring about through person-to-person relations with new and old neighbors a positive respect for differences and thus help create the climate of trust and humanity which is essential to democratic society and a better life for all.

Housing La.

AN UN-BIASED LOOK AT "OPEN HOUSING"

Don't Let A Basic American Freedom Go Down the Drain

This urgent message is directed towards every citizen—white, colored, or Oriental—who owns or rents any kind of real property . . . a home which he occupies himself, a residence rented to others, an apartment house or duplex, a business place, even a vacant lot.

At this precise moment, the House of Representatives in Washington, D. C. is debating a so-called "open housing" amendment to the pending civil rights bill. An identical measure has already cleared the Senate.

If enacted by the House and signed by President Johnson, this new law will forever destroy the basic American right of allowing property owners to rent or dispose of their properties as they see fit. This means that the Federal Government could force you to rent or sell to a person not of your choice. If you insisted on not renting or selling, you could be brought before Federal enforcement agencies or the Federal courts.

Forgetting the race issue, suppose you own, but don't occupy, a neat little double cottage. The mortgage is paid and you and your wife have invested considerable money fixing it up prior to offering it for rent.

Along comes some family with a half-dozen undisciplined, highly destructive children. They have just been evicted by another landlord for making a shambles of his house and now they're primed and ready to use your sparkling clean place for their own private version of Vietnam. You advise them, as diplomatically as possible, that you do not want them for tenants.

In the meantime, they find out that you and they are of different religious beliefs, and they charge you with violating the open housing act by discriminating against them because of religion. However justifiable your reasons, you could be required to assert those reasons before a Federal Agency, *at your own expense.*

Far fetched?? Not at all.

You're in serious trouble and you got there simply because—either innocently or unconsciously—you tried to uphold what you thought was your traditional American freedom of choice.

We are in favor of everybody being able to obtain decent housing, but not at the expense of taking away from any American his basic right of freedom of choice. This is the essence of private property ownership.

As property owners ourselves, we are anxious to know how, in the name of a free country, can any legislation such as this be seriously considered.

We think this question is being asked by Americans everywhere and that it must be put squarely before the people we have elected to serve as our spokesmen in the Congress.

If you agree, then you should take immediate action to see that "forced housing" (which is what it really is) doesn't become the law.

Send a telegram to Hale Boggs or Eddie Hebert or whomever else is the U. S. Representative from your Congressional District, supporting the fight against this dangerous and unconstitutional legislation.

In addition to a wire, fill in the form printed at the bottom of this page, put it in a stamped envelope, address it to your Congressman, and send it to him without delay.

Chances are, he's waiting to hear from you.

State Realtor Assails Housing Legislation

DD-T

3-15-68

BILOXI—The new proposed open housing bill before Congress drew fire from the president of the Mississippi Association of Realtors today.

Moody Grishman of Biloxi, said Mississippi's Realtors find this proposal "amazingly discriminatory" and "utterly reprehensible."

"A so - called 'compromise measure' presented this week provides for rank discrimination against property owners of the nation," Grishman said.

"Under the guise of ending discrimination of minority groups, it would force the most most distasteful discrimination against all family-owned dwellings," he said.

The measure provides for penalities which could be levied against property owners if any disgruntled person is inclined to bring suit, he said.

Effective in three stages, according to the proposed legislation, the first stage would be aimed at alleged discrimination in the sale or rental of federally owned or assisted housing. The second, which would become effective Dec. 31, 1968, would cover multi-unit housing, or apartments. The third stage, to become effective Jan. 1, 1970 would ban freedom of choice of owners of single-family houses they occupied and sold through real estate brokers.

If a complainant chose to bring suit, he would do so in federal court and could collect so-called "actual damages", lawyers fees and costs up to $1,000 in punitive damages, Grishman said.

"As I see it, this opens the door to a law suit by any person who proposed to purchase residential property if he failed to be able to consummate the purchase. Whether he won his case or not, it would involve lengthy and costly litigation on the part of the property owner and broker," Grishman said.

Area Group to Discuss Housing Bill with Boggs

Hardie and Eason Report Protest Started

Executive committees of the Real Estate Board of New Orleans Inc. and the Jefferson Board of Realtors Inc. plan to meet Saturday morning with U.S. Rep. Hale Boggs to discuss the proposed "open housing" amendment to the civil rights bill.

J. Keith Hardie and Angus Eason, presidents of the two organizations, said Thursday the National Association of Real Estates Boards has launched a nationwide protest against the amendment.

The campaign said, "If this meausre is enacted by the House in its present form and endorsed by President (Lyndon B.) Johnson, it will forever destroy the basic American right of allowing property owners to rent or dispose of their properties as they see fit.

"This means that the federal government could force you to rent or sell to a person not of your choice. If you insist on not renting or selling, you could be brought before federal enforcement agencies or the federal courts."

Hardie and Eason underlined the fact that realtors "are in favor of everybody being able to obtain decent housing, but not at the expense of taking away from any American the basic right of freedom of choice.

"Next to our right to breathe the free air," the joint statement went on, "this is our most basic and most cherished American freedom."

The realtors predicted that Congress will be "deluged" with messages from property owners protesting the proposed legislation.

"The public has got to wake up and take notice that this bill goes far beyond the race issue," they continued. "The damages it will inflict will apply to people of all colors and creeds and will far offset whatever advances it achieves toward housing integration.

"It is nothing more than a brazen attempt at taking away another basic American freedom."

Fed

Open Housing Bill Under Attack Here

3-19-68

By TOM WALKER
Atlanta Journal Real Estate Editor

The president of the Atlanta Real Estate Board has called on citizens of the Atlanta area to contact their congressmen and urge that they oppose the section of the Civil Rights Bill open housing now pending in the U.S. House of Representatives.

J. Marion Crain, a Haas & Dodd executive, said the bill, if passed, would deny to the home seller "his traditional freedom of choice in contracting for the sale or rental of his property to whomever he chooses."

The Senate last week approved the Civil Rights Bill by a 71-20 vote and sent it to the House. A portion of the bill outlaws discrimination in the sale and rental of 70 per cent of the nation's housing.

In earlier testimony before the House, Dallas Realtor Lyn E. Davis, president of the National Association of Real Estate Boards, charged that the bill discriminates against the Realtors and real estate brokers and also "against the home owner himself."

IN ATLANTA, Mr. Crain said the bill "ostensibly" excludes the owner of a single-family home from provisions of the legislation.

"But after Dec. 31, 1969," Mr. Crain said the right to decide to whom to sell or rent will be "drastically curtailed, and the government can force an unwilling owner to dispose of the house to someone not of his choice if he uses the facilities of any real estate broker or salesman, or, on his own, he indicates in an advertisement a preference on the basis of race, religion, color or national origin."

"A complainant may appeal for pressure by the secretary of the Department of Housing and Urban Development or may bring suit in federal court which may award punitive damages against the owner up to $1,000 and court costs," Mr. Crain said.

He said Atlanta Realtors are joining with other members of the National Association of Real Estate Boards throughout the nation in urging people to contact their congressmen to vote against the bill.

IN A PREPARED statement, Mr. Crain said the legislation "will not only set back race relations, but strip owners of professional aid in the largest and most complicated transaction in the lives of most of them."

Johnson Administration supporters said an "open housing" law is one means of making housing available to Negroes and other minority groups. It has been argued that making racial discrimination in the sale of housing illegal would be one avenue of solving the nation's social problems.

In his congressional testimony, Mr. Davis said that Realtors and other brokers would probably feel some financial squeeze if the bill becomes law, but added that this is not the reason why he opposes it.

"Our stand is on the right of the individual homeowner to sell his property as he wishes," he said. "Our principal reason for our opposition is the eroding of the rights of individuals to own real property and buy and sell it as they see fit."

REAL ESTATE UNIT HITS OPEN HOUSING

Birmingham citizens have been urged to join a nationwide campaign to defeat open housing legislation now before the U. S. House of Representatives.

Roy Bragg, president of the Birmingham Real Estate Board, said, "Basically, the bill denies the home seller, who insists on his traditional freedom of choice in contracting for the sale or rental of his property to whomever he chooses, the use of professional help he needs from a broker to get the best possible price in the quickest time."

"The bill excludes the home owner of a single-family house from provisions of the legislation, permitting him to continue to decide, without governmental coercion to whom he will sell or rent, his personal property.

"But after Dec. 31, 1969, this right is drastically curtailed, and the government can force an unwilling owner to dispose of the house to someone not of his choice if he uses the facilities of any real estate broker or salesman, or on his own, he indicates in an advertisement a preference on the basis of race, color, religion, or national origin."

Bragg said local real estate brokers are urging all citizens to contact their congressmen to vote against this legislation, which, he said, "will not only set back race relations but strip owners of professional aid in the largest and most complicated transaction in the lives of most of them."

Bragg said all but one referendum on the question of forced housing have been rejected, most by resounding totals.

Limit Housing Subsidies to Low Income Says NAREB

A spokesman for the National Association of Real Estate Boards has affirmed the association's approval of home ownership interest subsidies for families of low incomes but declared that it would be a mistake to divert limited federal funds for the shelter costs of families of moderate income rather than those of low income.

Fred C. Tucker Jr., Indianapolis, chairman of the retailers' Washington committee of NAREB, outlined to the House Banking and Currency Subcommittee on Housing several proposals designed to focus federal attention where it is needed most in the field of housing.

"Our nation's economic resources are insufficient, particularly at this time, to divert them to subsidize housing for an income group that has manifested an ability to provide adequate shelter without subsidy," Tucker said. "Over 90 per cent of the nation's families in the $5,000-$8,000 income range live in standard housing—families that receive no assistance from the federal government."

NAREB's proposals in regard to the Housing and Urban Development Act of 1968, now in committee discussions, were summarized by Tucker as follows:

1. Endorsement of the concept of interest subsidies for low-income families, as outlined in Title I of the bill. Housing provided would be privately sponsored and financed, and the government's role would be limited to subsidizing the difference between 20 per cent of a family's income and the total monthly costs.

2. A proposed amendment to a section of the bill which would permit the use of existing dwellings without restriction. "We feel that present limitations in the bill preventing more widespread using of existing dwellings would delay accomplishment of the program's overriding objective — to provide decent housing for ownership by low-income families," Tucker said.

3. A proposed amendment to assure that benefits of the bill's provisions be made available to low-income families, not for families of moderate income.

4. Opposition to a rental assistance program as contemplated in Part A of Title II of the bill, a program virtually identical to the 221 (d) (3) provision, with rentals computed on the basis of a 1 per cent mortgage rather than 3 per cent mortgage. This program should be rejected since no amendment is necessary to limit the application of this provision to lower-income families, Tucker set forth, because such a program —rent supplements—already is in operation.

5. The proposed diversion of funds sought for increased public housing contract authority to the rent supplement and leased housing programs. Noting that the administration seeks nearly twice the funding for public housing contracts as for rent supplements, Tucker declared that "the public housing program has led a long but undistinguished life. Public housing . . . is a far more expensive, less satisfactory means of housing the nation's low-income families."

6. Endorsement of the neighborhood development concept as an addition to the urban renewal program. "By allocating only those funds that a community can reasonably expect to utilize during a particular period, and by enabling local authorities to return those portions of federal grants it recaptures upon disposition of improved property that much sooner, a far more efficient use of funds will be possible."

7. Opposition to certain provisions in the bill which would broaden, almost without limitation, the uses to which land acquired in advance for public purposes could be put. This federal money would be used to acquire and stockpile land for future development in accordance with plans approved by the Department of Housing and Urban Development. The new language which the administration proposes under this amendment, Tucker pointed out, is: "Land planned to be utilized in the future for public purposes." He said that construction of a new community, even a housing project, could be interpreted as a "public purpose," adding, "If this be the objective of the administration, then it ought to be more candid with the Congress and explain how much more it will be able to do with the words 'public purposes' that it cannot do with 'public works or facilities.' The secretary's (Robert C. Weaver of the Department of Housing and Urban Development) detailed analysis of his testimony is silent on this one point."

July 19, 1968

Mr. A. C. Brown
Brown-Reese Realty
37 Lynhurst Drive, S.W.
Atlanta, Georgia 30311

Dear Mr. Brown,

This letter is in response to the telephone calls we have received from you, and your agency representatives concerning the offering for sale of my home located at 2200 Beecher Circle, S. W., Atlanta, Georgia.

I agree with you and your representatives that my house is a desirable one and I have no doubt that you have interested clients. I like it, too. I like my neighbors, my community, our Civic Clubs, and particularly our Churches. The question then becomes, "Why should I move?" Why should I give up all of this just because another person wants what I own?" Were I to sell my house, your client could not enjoy the advantages I have mentioned above. He could only own the house. So, I would not like to put him in such a position.

Recently, my wife asked one of your representatives who had called, "Where would we go?", and he replied, politely, "You might want to move to the Northeast side of town." I'm not interested. I like my home. My question is, "Why do you not get some listings for your clients on that side of town?" The new housing law opens it up to you, as I understand it.

If I understand the objectives of our responsible local leadership, both colored and white, integration seems to be primary, however, this movement in Southwest Atlanta seems to be contrary to that--its objectives seem to be integration, followed by segregation. To me, this defeats the stated purpose of civil rights.

Mr. Brown, the above questions are rhetorical and no answer is desired. I hope this letter will explain my reasons for telling you last night that my home is not for sale.

Sincerely,

JAMES B. KEMP
Vice-President

2200 Beecher Circle, S. W.
Atlanta, Georgia 30311
July 19, 1968

Dear Neighbor,

Attached is a copy of a letter I have mailed to Brown and Reese Realty Company, followed by erection of a "Not For Sale" sign in my yard. This, because I am fed up with the tactics being used to create fear in the minds of the homeowners in our neighborhood.

Do you realize that there is not yet even one Negro family living on Beecher Circle, S.W.? Yet, this fear they apparently have created, has caused "For Sale" signs to spring up like tulips in the Spring.

I believe we should ask ourselves today the question "Is this trip necessary?" If we decide to make the trip, can we be guaranteed that our new destination will guarantee us anything?

I think in the natural course of events we can logically expect intergration will place a Negro family in an area, however, only our actions as an individual and a group will permit them to segregate our neighborhood.

If, for example, we move off and leave our very fine churches, what will happen to them? Will Negroes be able to take them over simply by paying back taxes? God forbid!

I do not wish to live beside a Negro any more than you do, but I hope by standing pat we can defeat their objectives in our area.

Sincerely,

Jim

JAMES B. KEMP

Integrating Suburbia

Negro Real Estate Man Eases Black Families Into White Sections

Broker in Kansas City Area Goes Slow to Avoid Panic; But Beginning Was Stormy

How Three Families Fit In

By DENNIS FARNEY
Staff Reporter of THE WALL STREET JOURNAL

FAIRWAY, Kan.—You might call Don Sewing a real estate militant. His business is selling houses—and integrating white suburbia.

The short, stocky Mr. Sewing, 37, is a Negro real estate broker, and his activities here in suburban Kansas City make him a highly unusual one. Most Negro brokers, hemmed in by prejudice and social custom, operate only in Negro neighborhoods or those in transition from white to black. But Mr. Sewing is spearheading a bold effort to integrate the most wealthy and prestigious residential area of metropolitan Kansas City, northeast Johnson County, Kan.

Northeast Johnson County has a population of 200,000, including Fairway and 10 other suburbs. The area's 1968 per-capita income of $3,918 ranked it fifth among the nation's counties; a pattern of discrimination in housing had long kept it a white preserve.

Then Mr. Sewing shattered this color bar three years ago by moving his own family into all-white Fairway—and he has been busy finding homes for Negro buyers ever since. Those who have observed his efforts say his careful campaign offers a look at how genuine integration can come to white neighborhoods without the turmoil that many whites expect and fear.

A Calculated Dispersal

Two factors make Mr. Sewing's effort especially significant:

—The initiative and the strategy come from Negroes themselves rather than from groups of white open-housing advocates. No one encouraged Mr. Sewing to integrate northeast Johnson County—least of all Johnson County's white real estate brokers, who blocked earlier Negro efforts to buy homes here with a variety of discriminatory practices.

—The strategy itself, a calculated dispersal of Negroes throughout the area, is a big departure from the past tendency for Negroes to cluster together in newly integrated areas, often driving whites away. In practice, the Johnson County effort is a fine balance of aggressiveness and self-restraint—best sensed, perhaps, by listening to Mr. Sewing himself.

"I don't think integration should be a matter of waiting until a neighborhood is 'ready,'" he says. "I think the best kind of education for a person who hasn't had the experience of living in an integrated neighborhood is to integrate it."

Yet Mr. Sewing deliberately has passed up chances to sell additional northeast Johnson County homes to Negroes—and to make a quick profit—by exploiting the fears of his new white neighbors through "blockbusting" tactics. Instead, he's trying to scatter his clients throughout northeast Johnson County in a pattern that will open up the area, yet prevent racial turnover and neighborhood resegregation into black ghettos.

Forestalling White Retreat

Integration attempts often break down when the whites desert the newly integrated area for more distant suburbs. Mr. Sewing's strategy of dispersal is designed to forestall that retreat. "If we (Negro brokers) are able to sell housing to minorities, in a scattered pattern, all over the Kansas City metropolitan area, then there will be no hiding place," he explains. Then most whites will simply stay put and see integration through, he believes.

This approach received a potential boost Jan. 1, when a major part of the new Federal open-housing law took effect. The law bans discrimination in an estimated 11.8 million apartment units and also outlaws discrimination in the sale of new homes by professional builders. (On Jan. 1, 1970, all existing single-family homes will be covered when sold through a broker.) Most people, Mr. Sewing among them, doubt that the law itself will end de facto segregation in cities; they are convinced that steady pressure by Negroes will be necessary to do that. But Mr. Sewing says he feels it will "take people off the hook" by giving whites a justification for not discriminating.

But even before the Federal law, Mr. Sewing's strategy was succeeding. There are 22 Negro families in northeast Johnson County today—a fraction of the number that could probably be here had wholesale blockbusting followed Mr. Sewing's move to Fairway. But the Negro families are dispersed through six of the area's 11 municipalities, and many whites believe the area is now prepared to do something it never could have done three years ago—accept additional Negroes almost as a matter of course.

Some Unpleasant Incidents

Of the 22 families, 13 have purchased their homes through Mr. Sewing's agency. The rate of the new Negro arrivals is accelerating, and Mr. Sewing and a second Negro broker already living here plan to open Johnson County offices this spring. Mr. Sewing's present office is in a largely Negro area of Kansas City, Kan.

The initial 22 families haven't entirely escaped unpleasant incidents. But the extent to which the families have become genuinely part of their neighborhoods is often striking.

Consider the experiences of three families:

Thirty-one-year-old Lloyd White, his wife, Vivian, and their four children are the only Negroes in Prairie Village, a pleasant suburb of about 30,500. Gathered with their children around the fireplace in their $20,000 brick-and-frame home on quiet West 78th Street Terrace, they tell of attending a New Year's Eve party at a neighbor's home down the street. None of the homes in the immediate area has changed hands since the Whites arrived in September 1966, and if any neighbors resented their arrival, says Mrs. White, they were "too cool to show it."

Nine-year-old Lisa, a fourth-grader at nearby Tomahawk School, has been to eight slumber parties this school year, including the

Dear Mr

I have been following with great interest the sales of homes in the area. Are you going to be selling your home soon? I am offering my services to you. I fully understand how irritating it is to be pestered continually by a real estate salesman telephoning or knocking on your door trying to list your home.

Now is the time to list your home, while the market is good. Our sales staff wants to and will work hard for you. We will screen the prospects, both according to their desires and financially, so that you experience the absolute minimum of inconvenience. our sales personnel always make a specific appointment with you to show the home. A "for sale" sign will not be placed on your property if you object.

The staff is composed of experienced real estate personnel who are familiar with the property in this area. We do not have scores of other listings. This means your property will receive the maximum attention from our staff.

Give me the opportunity to meet with you personally and discuss the listing of your home in more detail. Please feel free to telephone me daytor night and I will personally come over. My residence telephone number is 758-3572. I shall be anxiously awaiting your reply.

With kindest regards, I am

Very truly yours,

Joseph J Hudson

Reg Murphy

The Homeseller Writes a Letter

One day last week Mrs. C. E. Robinson found a disturbing letter in the mailbox at her home in Southwest Atlanta. It was signed by a man we will call Mr. Jones, sales manager of a realty company here. It began:

"I have been following with great interest the sales of homes in the area. Are you going to be selling your home soon? I am in the real estate business and I am offering my service to you . . . Mrs. Robinson, I appeal to your better judgment, let me list your home now while the market is good. Our sales staff want to and will work hard for you . . . Our 'for sale' sign will not be placed on your property if you object . . ."

Mrs. Robinson then sat down and wrote The Constitution: "In other words, sneak one in on your neighbors. Maybe others who say they are not selling (really) are. Can you imagine what happens when a person receiving this letter sees a Negro realtor at his neighbor's house (uninvited, of course) trying to solicit the neighbor's home to sell?"

Yes, Mrs. Robinson, we can imagine. This is the type of tactic which has been undertaken in too many parts of Atlanta in the past few weeks. Somebody needs to speak to the issue now—and then somebody needs to take action.

•

Let me begin by asking the real estate agent, Mr. Jones, a few questions. Why do you ask whether Mrs. Robinson will be selling her home soon? Why do you appeal to her better judgment to sell now "while the market is good?" Do you know something about a selling panic? Or is there some other reason that will cause values to decline?

Is it normal procedure for you to promise that "for sale" signs will not be placed on the lawn? And do you feel good about inviting Mrs. Robinson to sell the home "while the market is good?"

No good real estate agent would be willing to see a responsible and stable neighborhood thrown into chaos and confusion, would he, Mr. Jones? I am certain that you are in that category.

But your letters have overtones of blockbusting, which I am sure you would deny. Because you believe in stable neighborhoods and not creating selling panics.

•

Mr. Jones, you say in your letter that you appeal to the better judgment of the resident. I can only assume that means her better judgment is to remain in a stable neighborhood, not panicking and running.

I also assume that you would be opposed to breaking up a neighborhood and causing panic. You don't believe in a neighborhood going from all-white to all-black, do you, Mr. Jones?

We probably are in agreement that there is no need for a neighborhood to disintegrate, and for residents to flee, just because there is a new neighbor down the street.

But don't you think the net effect of your letter is likely to be the creation of fear that could upset the entire neighborhood?

And don't you think that every real estate man in Atlanta who is writing such sleazy letters should stop it this instant?

DURING THE DEBATE OVER THE PUBLIC ACCOMMODATIONS SECTION, THERE WERE MANY RESTAURANT OWNERS (MANY OF WHOM COULDN'T SAY SO, OPENLY) WHO SUPPORTED OPEN ACCOMMODATIONS. WITH A FEDERAL LAW ON THE BOOKS, THEY WERE TAKEN "OFF THE HOOK" WITH REGARD TO DECIDING WHETHER OR NOT TO DESEGREGATE. IT SEEMS TO ME THAT A REAL ESTATE FIRM WOULD WANT A SIMILAR LAW FOR SIMILAR REASONS: TO GET "OFF THE HOOK," SO TO SPEAK, WITH THE PUBLIC. WITH AN OPEN OCCUPANCY LAW, THE REAL ESTATE FIRM WOULD NOT HAVE TO ANSWER TO THE PUBLIC FOR TRANSACTIONS MADE IN ACCORDANCE WITH AN OPEN OCCUPANCY LAW.

THE REALTOR'S CONCERN IS UNREALISTIC -- THERE HAS BEEN INTEGRATION OF SHELDER IN THE EMORY UNIVERSITY AREA, AND NO ONE HAS BATTED AN EYELASH.

WHEN THE WHOLE COMMUNITY BECOMES AVAILABLE ON A FAIR BASIS TO ALL CITIZENS, THEN THE HOUSING SITUATION BECOMES COMPARABLE TO THE PUBLIC FACILITIES SITUATION AT PRESENT.

Metropolitan Fund's Newest Study Proposes A Paired Community For Southeast Michigan

A BOLD and imaginative alternative to the urban/suburban housing crisis has been proposed in the design study for a "paired new-town" community which would be developed in Detroit and a suburban location, simultaneously and under a single development authority.

The study, *Regional New-town Design, A Paired Community for Southeast Michigan,* was released February 17 by the Metropolitan Fund, Inc., the research organization which conducted the study on behalf of the State of Michigan.

Lt. Gov. Accepts Report for Milliken

Accepting delivery of the paired new-town report on behalf of Governor Milliken, Lt. Gov. James H. Brickley read a statement by the Governor, telling the audience:

"The State of Michigan must have, and we are presently developing, a comprehensive policy on urban growth, a policy which addresses itself to the best use of available land in our urban areas, as well as to the many other related matters of urban concern.

"Development of such a policy is high on my priority list.

"One exciting new development in urban growth, both in this country and abroad, is the creation of Newtowns. It is evident that such Newtowns must be a part of urban development policy. However, equally important is consideration of the central city and its desperately needed revitalization.

"The possibility of encompassing both concerns in a single, imaginative development led to our requesting . . .

(Continued on p. 2, Col. 3)

A one billion dollar, largely private venture to be developed over a 20-year span, the "paired new-town" would provide housing for 100,000 people and create new jobs for 40,000 of the residents. Some 75,000 of the residents would live in a suburban component of the community, 25,000 in the Detroit component.

The study identifies nine potential sites within Detroit and ten on the suburban fringe, recommending that two of these sites be "paired" in a prototype development.

The study was directed by Dr. Hubert Locke, of Wayne State University, who headed a team of local and national physical planners, social scientists, political scientists and economists who created the final design. The study was conducted at the request of Governor Milliken, utilizing funding from HUD, the Kresge Foundation and Metropolitan Fund.

The concept of a "paired new-town" was originated by the Metropolitan Fund as an attempt to "make certain that future urban growth—both physical and economic—takes into account the needs of both the cities and the suburbs, so that one is not expanded and enhanced at the expense of the other." according to Dr. Locke.

In a supportive statement preceding the report, a special policy committee of the Metropolitan Fund points out that "a competitive relationship between peripheral development and central city rebuilding would be pointless . . . there is not sufficient space in the city to house the region's future population growth . . . there must be peripheral development to accommodate the quantity of future growth, and there must be central city rebuilding to enhance the quality of that future growth. Selfish competition between the two necessities could cause both to fail. Rather, the two need to be joined." The proposed paired community would do so.

In a social proposal described by the policy committee as having "much vision in its broad seeking of a better quality life style for the future," the report recommends sweeping changes in the delivery of social services within the paired community.

Suggestions are made concerning new forms of service, and delivery of service, in health care, education, recreation, public safety, communications, judicial-legal, shopping, religion, employment, garbage collection, lighting and others.

(Continued on p. 2, Col. 1)

Locke Tells the "Why" of A Paired Community

Dr. Hubert Locke, paired new-town Project Director, talked about "why" a paired community in presenting the finished report at Metropolitan Fund's annual meeting, pointing out:

"It will undoubtedly be considered by many as bold, radical and visionary — and if it is, then as one who had a small part to play in its production, I for one will be pleased.

"And while we believe this Report is a radical innovation in New Town planning, it has not been planned and conceived in a vacuum. As the Preface points out, this Report in a very modest sense, can be considered as an appended footnote to the comprehensive Doxiadis Report released last fall by the Detroit Edison Company and as one practical outgrowth of the invaluable data compiled in SEMCOG's Transportation and Land Use Study.

Mathewson Discusses City Planning On Seven Country Mid-East Trip

An increasing social awareness in America's planning of its cities is the general theme of a series of discussions being held by Metropolitan Fund President Kent Mathewson in a seven-country tour of the Middle East in May and June. Undertaken at the request of the State Department, the trip will include visits with the heads of state and principal business, civic, academic and local government personages in the countries of Saudi Arabia, Iran, Kuwait, Lebanon, Pakistan, Jordan and Israel.

Four Aspects

Presentations in each of the countries will include discussions by Mathewson of the social, physical and governmental aspects of American city planning. He will also talk about the private sector's role in city development and redevelopment. Particular attention will be paid in the discussions to new-town development in the United States, with much interest shown in Detroit's paired new-town concept as developed by Metropolitan Fund.

Visual Program

Mathewson's presentations will be supported by an extensive visual program designed by the United States Information Agency (USIA) staff, including graphic material from the Columbia, Maryland, new-town development, the Welfare Island and Bedford-Stuyvesant inner-city projects in New York, the BART transit system in San Francisco and the Ghiardelli Square renovation project in San Francisco.

Mathewson commenced his trip by attending a reception on May 1st given in his honor by the Governor of Mecca. He will conclude his trip with a briefing tour of new-town accomplishments in Israel, returning to the United States in mid-June.

With Metropolitan Fund's paired new-town concept gaining international interest, Kent Mathewson shows a copy of the "Regional New-town Design" report to HUD Secretary George Romney. Shortly after meeting with Romney, Mathewson left for a six-week trip through the Middle East to discuss the "conscience of America as reflected in its social planning." The program is sponsored by the State Department.

25. The Concept of a Planning Region—The Evolution of an Idea in the United States*

JOHN FRIEDMANN

Part II of this paper was written in 1955. It does not purport to describe the *practice* of planning in the United States; it attempts, rather, to sketch the *evolution* of an idea: the concept of what is a suitable area for the administration of planning programs. Reference is to the United States, of course, and the focus is on planning activities that in scope exceed municipal boundaries. For urban and regional planning in this country have developed as two different specializations as, indeed, they have in most parts of the world. City planners have been concerned mainly with creating a more efficient physical environment; regional planners have been principally engaged in solving problems of resources and economic development. The reason for this divergence is shown to lie chiefly in the controls available to urban, state, and federal governments for the implementation of policy objectives. The article concludes with a plea for the integration of the regional and urban approaches to planning within areas that have the city as their center of dominant influence.

PART I

American planning practice, and not only the practice but the idea of planning itself, has always been in sharp contrast to the approach popular in Central Europe and elsewhere. Characteristically, it is almost completely devoid of ideological overtones; it is, for the most part, loose and informal; and it is closely linked to operations.[1] As such, it is congenial to the American pragmatic temperament and well adapted to the federal system of decentralized government and ad-

* Reprinted from United Nations, Department of Economic and Social Affairs, Working Paper No. 12, June 25, 1958, and *Land Economics*, Vol. 32 (Feb. 1956).

ministration. The Grand Conception, the Five-Year Plan, is a phenomenon unknown in the United States. Planning tends rather to be piecemeal and experimental.

This is well illustrated by the history of American economic development, a development which might almost be called spontaneous. It was certainly not and still is far from being a centrally directed or planned development. This should not be taken to mean, however, that government has not taken a very active part in economic affairs, be it through fiscal policy, grants-in-aid, subsidies, regulations, research, or resources management. But programs such as these were never, except superficially, related one to the other in a total planning operation. And consequently, there has been no attempt to achieve a regional integration of national policies. Just as no priorities are assigned according to function, so also are there no priorities according to area. Spatial integration has been left to take care of itself. That this approach has, on the whole, been successful is a tribute to the American system. There is no assurance, however, that it would work equally well in other parts of the world.

Regional planning in the United States has at various times had reference to different types of activity as well as to different types of area. There was a time, roughly from 1933 until the end of World War II, when regional planning meant primarily the development of water resources and adjacent land resources within a given river basin. The basic planning unit was the watershed and the objective, the fullest possible use of all physical resources for the improvement of living levels within the area. The Tennessee Valley Authority has been the outstanding example of this type of planning, but a number of other river basins have followed suit: the Columbia, the Central Valley of California, the Missouri, the Arkansas and Red Rivers. Several administrative schemes were tried. The TVA, however, remains the only "authority" in full charge of a comprehensive development program.

The postwar era brought to the fore a different set of problems, and the undogmatic character of planning in the United States made possible a quick adjustment to the new conditions, as attention shifted from the watershed to the metropolitan region as the major planning area. As more and more people streamed into the sprawling urban communities, problems of urban settlement leaped suddenly into the limelight of public concern. City limits had lost their practical significance as population spilled beyond it and as large parts of the United States came within the immediate influence of urban centers. In consequence, so-

called regional metropolitan planning agencies sprang up in many parts of the country.

At the same time, there was also a sharp and growing awareness that many states and groups of states had been left behind in the race for industrialization or, at least, were growing less rapidly than the more advanced centers. There were, for instance, the older industrial areas that had failed to create favorable conditions for the expansion of dynamic industries: chemicals, synthetics, electronic machinery. And there were the "new" regions whose spectacular economic growth had, within a few years, created pressing social and physical problems of adjustment. The phenomenal expansion of industrial and commercial investments following the war had thus created a highly competitive mood in all of the 48 states. Each state wanted to get its share of the new wealth. And so there came into being a new type of "regional planning"—area development. Nearly all of the states established planning or development agencies whose principal job was research into the resource possibilities of their respective areas, information about industrial opportunities, and promotion. In very few instances, however, were these agencies also given control over the planning of state capital budgets.

All told, there are in the United States today a vast number of organizations and institutions concerned with various aspects of regional development. Dr. Perloff lists 19 types of groups, comprising hundreds of individual organizations, from City Planning Commissions in the multimillion cities such as Los Angeles and New York, to official Metropolitan Planning Organizations, Metropolitan and Rural Special Districts, State Planning and Development Agencies, Interstate Organizations, private Area Development Agencies, Regional Authorities, consulting firms, and so forth.[2] This multiplicity of "planning" is truly amazing; and yet there is no plan! A plan is largely an instrument for the integration and coordination of policies. But there exist other means for integration, and Americans have generally preferred more informal methods for bringing together various programs to the rigid "blueprint" of a master or development plan.[3]

What is the relevance of this approach to regional planning for other countries, especially for those which are only now beginning their march towards economic independence and higher levels (and standards) of living? In some respects, the approach is difficult to copy, if only because it assumes certain habits of mind and of administration that are peculiarly American. On the other hand, U.S. experience sug-

gests some guidelines that it may be useful to explore, regardless of what the national style may be.

Experimental Character of Planning

As has been mentioned before, American planning has been particularly undogmatic. As new problems have arisen, the approach to planning—concepts, methods, administration—has changed to meet new challenges in the best possible way. Intellectually, this may not be as satisfying as a more theoretical approach; on the other hand, it is appropriate to a view that considers planning not as an end in itself but as a means toward the solution of specific problems. Much, of course, will depend on the definition of the problem itself, the scope that is given to it, and on the objectives to be reached. But in each case, it is the problem that suggests the means for solution, and not the other way around. In situations that are rapidly changing—as with all of the transitional economies throughout the world—the experimental attitude is much to be preferred to the dogmatic.

Flexible Planning Regions

Flexibility in the application of regional concepts is a corollary to the experimental character of planning. Economic development proceeds through different geographic or spatial arrangements: from rural to urban areas—a shift from agriculture to industry; from one or a few small urban-industrial centers and their surrounding regions to progressive regional decentralization of industrial activities; from "dual" economies to a single national market area. At each stage of development, different regional delimitations will be the most convenient and efficient for purposes of planning. Thus, large multistate regions may be the answer in the beginning, and upon these may be superimposed river basin development schemes; later, the metropolitan region may be the answer, with special programs designed for subregions that need particular attention. No one set of regions is ever completely satisfactory. Each problem must be analyzed in its own terms.

Integration of City and Regional Planning

Cities may be considered as centers of economic development: they affect economic patterns in the areas over which their influence extends, and, at the same time, they are affected by the growth which surrounds them. No effective regional planning can be done—in the sense of resource and economic development—without considering the role of cities, without considering the *core* of economic progress. Similarly, a

good city planner cannot afford to ignore the character of the "city region" and the whole vast hinterland that surrounds the urban nucleus: the characteristics of growth and the requirements of planning are determined by it. The recent trend in the United States toward metropolitan planning recognizes this interrelationship and is taking measures to cope adequately with it. But even less urbanized countries must face up to this problem, and the delimitation of planning regions and the organization of planning administration should take the unity of city and region into account.

Program Planning

Planning is not really planning unless it is effectively related to action programs and administration. That is partly the reason why planning in the United States has been relatively unobtrusive, so that many visitors to this country have, in fact, gone away convinced that planning here does not exist. But it does exist—as an approach to problem solving. Planning activities are very much a part of the way in which existing organizations carry on their daily business. There may not be any specific group indicated to do the planning because everybody is in a sense engaged in planning. A plan that lacks operational significance is a museum piece, and planning does not necessarily begin with a plan but with introducing greater rationality into public decision-making, through better information (research and analysis) and through foresight (projection). Many alternatives for organizing the administration of planning present themselves. But one of the cardinal rules should be that every planning endeavor must be intimately related to the operations of the institution for which the planning is to be done.

It is reasonable to expect that at least these characteristics of American planning are transferable to other parts of the world. There are other aspects which probably are not, and in certain respects, U.S. experience may not be applicable at all to less developed countries. For example, in the question of evolving a national policy of regional development; or in adjusting national policies according to the unique problems and characteristics of the different regions in a country; or, again, in the integration of national programs within individual regions. These are essentially new problems for much of the world and each country will have to feel its own way, perhaps committing mistakes, but learning from them also, and so, by a method of trial and error, evolving an approach to regional and national planning which will be adequate to meet present and foreseeable problems and will be designed to fit within an existing structure of values and institutions.[4]

[2] *Ibid.*, pp. 101–103.

[3] Master plans, however, have been used very successfully in city planning, and "blueprint" planning is, of course, customary in private industry. Only in relation to public economic life has formal, over-all planning been rejected.

[4] Interest in problems of regional development has in recent years received great stimulus from the activities of the Regional Science Association with headquarters at the University of Pennsylvania and Resources for the Future, Inc., a Ford Foundation subsidiary located in Washington, D. C. These organizations have contributed greatly to the general revival of academic concern with regional questions, and much interesting work is now going on at a number of universities throughout the country.

PART II
THE CONCEPT OF A PLANNING REGION*

With few exceptions, public planning activities are delimited and organized in space. The region, the county, the metropolitan area, and the city are usually considered to be the basic units for planning.

In the present essay we shall be primarily concerned with the functional relation between the two main forms of areal planning, between city and regional planning. Theoretically, there should be little to distinguish one from the other. In both cases the major problem is the same: how to bring the physical environment in which men live under the controlling influence of the public interest. In practice, however, city and regional planning in the United States have proceeded along diverging paths.

* The writer is indebted to Drs. Harvey S. Perloff and Harold M. Mayer, both of the University of Chicago, for many helpful comments and suggestions during an earlier formulation of this essay.

To explain this lack of unity we would have to go far into the historical origins of planning in this country—a task too ambitious for the present essay.[1] But the basic distinction between city and regional planning appears when we consider it as primarily a difference in *controls* available to local and federal government for guarding the public interest.

In the cities, planning has evolved largely as an effort to maintain existing rental values and to improve the circulation of people and the flow of goods.[2] Zoning, subdivision control, and the powers of eminent domain are among its principal and most effective tools. Occasionally, too, city planners are charged with the preparation of capital improvement budgets, and the planning function has been extended to problems of internal growth and development. In most cities, however, the predominant concern is still with the present. Only peripheral attention seems to be given to a comprehensive approach which would determine the "needs" of the community ten, twenty, or even fifty years ahead and would proceed to show how these "needs" might best be met in the present. Rarely is the community offered a choice to consider what kind of a future it would have. The element of *design* in planning is almost totally lacking, and the evolution of life in the community is left by default to the haphazard interaction of private interests.

Regional planning, on the other hand, has grown up under quite different circumstances.[3] "Regional planning," wrote the National Resources Committee in 1935, "should, in the main, confine itself to dealing with the physical resources and equipment out of which socio-economic progress arises."[4] By this definition, regional planning has one major focus of interest: the development of physical resources. But the control powers of the federal government were so restricted that its point of entry into regional planning was the field of water resources where it had primary jurisdiction. Through the development of water resources for a multiplicity of uses it was hoped that social and economic advance in the watershed would be furthered.[5] The watershed, therefore, became rapidly identified as the "proper" region for planning, and the recognition that land resources are intimately re-related to the use of water only strengthened this view. Whether it was called the Tennessee Valley, the Columbia Basin, the Missouri Valley, the Central Valley, or the Arkansas-Red River Valleys, the physical setting was always a major drainage basin organized for comprehensive resource development. Flood control; the development of facilities for navigation, electric power, irrigation, and recreation; stream sanitation; erosion

control and reforestration; even mineral development came to be included under development schemes in major river basins.[6]

The best known and certainly the most advanced regional planning agency in the United States is the Tennessee Valley Authority. Elsewhere in the United States a more complex scheme for regional planning has been worked out which involves a multiplicity of federal agencies such as the Bureau of Reclamation, the Corps of Engineers, the Soil Conservation Service, and the Forest Service; and, to an increasing extent state and local organizations. In every instance, however, administration is found to be organized along regional (watershed) lines.

The contrast between city and regional planning which we have attempted to sketch may be summarized by saying that city planning has been primarily concerned with community conservation through land use planning and control while the purpose of planning for regions has been economic progress through the development of natural reresources. What Catherine Bauer calls an "iron curtain" has descended between city and resources planners.[7] Two different professions, two different vocabularies have grown up. Communication between them has become exceedingly difficult, and on the level of practical action there appears to be little coordination between schemes of regional and urban development.

Now, coordination is no absolute value. It becomes valuable only where it furthers a particular objective. Thus, we may well ask whether regional planning as currently organized can achieve the end of sustained economic progress without taking explicitly into account the existence of urban centers and whether city planning in its present form can effectively achieve *its* purposes while ignoring the larger regional framework within which the city has to function. These questions have not as yet received adequate attention.

The concept of the region as a tool for planning had its origin in the Great Depression. There had been forerunners, of course, such as the Regional Planning Number of the *Survey Graphic* in 1925,[8] and the writings of Benton MacKaye[9] but, as late as 1934, Hedwig Hintze could write in the *Encyclopedia of the Social Sciences* that "in the United States regionalism has never really appeared."[10] To be sure, there existed many examples of metropolitan planning in New York, Boston, Washington, Chicago, Los Angeles and several of the other large American cities but, as we shall see, the "new regionalism" explicitly rejected the metropolitan area as a logical unit for planning.

The new philosophy took hold especially in the South where planning came to be looked upon as the truly dynamic aspect of regionalism.[11] It was an essential particle of the regionalist's fate that planning would provide the means toward the "rehabilitation of the people, toward the reconstruction of regional economy, toward increasing the region's revenue to the nation as well as its own wealth, and toward general regional, cultural adjustment."[12] The South saw in regional planning an opportunity to halt the decline of its resources and its people and to achieve what came to be vaguely referred to as "regional balance," while yet maintaining its unique agrarian culture and tradition. Whether there was not, indeed, a conflict among these objectives is a question that was not apparently considered.

The writers primarily responsible for elaborating on this concept of the planning region were teaching at Southern universities.[13] And the South, in their view, was indeed the archetype of a "true" region. It was identified with a distinctive "folk culture," the region being "an expression of the folk who occupy it and who give it a distinctive character through their 'natural' extra-organized, extra-technological, and unrationalized ways of life."[14] Folk culture, no doubt, was the cohesive bond that held a region together. But it was not sufficient for a definition. The region was also a distinctive area because it possessed "the largest possible degree of homogeneity measured by the largest possible number of economic, cultural, administrative, and functional indices, for the largest possible number of objectives."[15] Clearly, only a rural economy could, by any stretch of the imagination, be considered sufficiently "homogeneous" to qualify as a region. Though urbanization had made progress in the South, it had not yet drawn the focus of regional interest upon itself.[16]

An imagery of rural values still prevailed in the 1930's.[17] Perhaps the most amazing document of the times is a collection of essays written by twelve Southern writers in which the issue was unambiguously posed: agrarian versus industrial society.[18] These essays turned into a vigorous defense of the "Southern way of life," of traditionalism against what the authors called the "American or prevailing way," against progressivism. Industry must never come to the South in large numbers; the South was to remain a separate cultural enclave, a sanctuary of leisurely culture in the "European" sense.[19] And when a few years later TVA set about to develop the great hydro-electric potential of the Tennessee River, even *Fortune* magazine in an otherwise sympathetic article expressed grave doubts that all of the energy produced by federal dams could ever be sold to industrial consumers.[20]

Economic betterment in the South could be accomplished only by over-all planning—that, at least, was the current belief. *Laissez-faire* as a solution to the difficulties confronting the South was rejected as "futile and cruel."[21] The New Deal provided the impetus for planning. And the homogeneous, natural region seemed to be ideally suited to the comprehensive planning approach. No one, it might be added, seemed to be especially surprised by this strange wedding between Southern rural conservatism (region) and Northern progressivism (planning).[22]

The National Resources Committee which sponsored an extensive study of the region for planning tried to avoid some of the pitfalls of the ideological approach taken by its Southern proponents. "Regional planning," the Committee stated, "is not an end in itself; rather it is an instrument for [illegible] basis for action. It is a means for deriving [illegible] programs, and it should be an aid in determining what kinds of devices are most suited to carrying out these policies and programs."[23] But the ideology was in the air; it was pervasive, and it entered as an unconscious bias into the thinking of the Committee when it rejected the concept of the region based upon metropolitan influence:

> "To construct regions which would adhere to cities rather than to the broader aspects of resources, economic patterns and regional interests is to place the emphasis upon one factor rather than the total region. Upon such a basis, regional planning tends to become an expanded form of city planning. On the other hand, it is by no means certain that planning has not arisen at least in part out of necessity of preserving local rural culture and resources against chaotic economic and social forces emanating from the city. Even were cities themselves carefully planned, this would still be true, for the city is an organism whose very nature places its nutritive processes above larger regional considerations."[24]

This was in 1935. In 1938, Lewis Mumford published his brilliant study on *The Culture of Cities*.[25] While generally sympathetic to the Southern exponents of regional planning, he could not—and would not—escape the basic fact that it was the city which gave a region its cultural vitality. Like his Southern brothers-in-arms, he thought he recognized the region as a "natural area." But, he added, "to define human areas, one must seek, not the periphery alone but the center."[26] The city was thus a fact of the utmost geographic importance "for the urban center tends to focus the flow of energies, men, and goods that passes through a region, concentrating them, dispersing them, diverting

them, rerouting them, in short, exerting a close and controlling influence over the development of region as a dynamic reality."[27] The city was viewed as analogous to the heart of the body: a controlling mechanism which pumps the life blood of energy, people, and commerce to all parts of the regional organism.

Shortly after the appearance of Mumford's book came the war, and with it began the sudden and startling rejuvenation of the American economy. Already by 1942 there were signs that the wind had shifted: the city was beginning to make an impression on the consciousness of the nation. In a challenging article, Louis Wirth proposed the metropolitan region as a planning unit.[28] That a restatement of the principles of metropolitan planning was necessary at this time only emphasizes the pervasive influence which the Southern School of regionalists had had on the spatial organization of planning. Wirth proposed that the immediate area constituting the region should be the area of daily intimate and vital interrelation between the city, its suburbs, and periphery and, further, that the region should be a unit "which takes account of the city's and its surrounding area's place in the national and world economy."[29]

Toward the end of the war there appeared a sharply critical article which attacked what it recognized as the rural traditionalist bias of regionalism on the grounds that it had failed to do justice to the facts of the technological revolution that was remaking America. "Regionalism," wrote Kollmorgen, "runs counter to the technological aspects of society which are universal and dominant and will eventually prevail over discordant folkways which regionalists may try to perpetuate."[30] Urbanism, to Kollmorgen, was the "wave of the future" that would sweep everything before its onrushing advance.

But the rural values propounded by the regionalists derived from a hardy stock and would not die so easily. Two years after Kollmorgen's incisive critique, and already well into the postwar era, a group of Yale University social scientists and planners resurrected the imagery of a natural region with its foundation in folk culture.[31] This time, however, the regionalists went beyond the traditional requirements of "geographic unities" and "homogeneous desires, attitudes, and wants," and suggested a forceful analogy of the region with individual living organisms.[32] Living in one of the most urbanized, industrial "regions" in the United States, the authors of the Yale Report searched for a regional philosophy that would somehow conform to their urban experience. In "biologism" they found an adequate basis for their beliefs by which

they could challenge the mechanistic aspects of an urban society which they at once accepted and opposed. In this, they came very close to Lewis Mumford's own interpretation a decade earlier.

The Yale Report was perhaps the last outburst of the regional planning ideology in this country. But it did not mean the end of regional research as such. Since 1947 a number of regional studies have been published which continue the long line of such studies first begun by the National Resources Planning Board in the 1930's. The *Economy of the South*, sponsored by the United States Council of Economic Advisers, was one of these and a typical example of the difficulties that the older regionalists encountered.[33] The study included 13 Southern states, chosen on the basis of a "certain homogeneity in geography, population, climate, income, and history," but especially because each of these states was felt to be vitally concerned "in the production of one or both of the two great cash crops which dominate the agriculture of the region, cotton and tobacco."[34] But no sooner had they stated it, than the authors of the Report retracted this inclusive definition. "In fact," they continue, "the problem of homogeneity arises almost as soon as more than one State is included if, indeed it does not arise within the borders of a single State."[35] From a rigorous, scientific viewpoint a definition of the region according to homogeneous factors seemed rather a shaky one in 1949.

A second important regional study dealt with the New England economy.[36] But here the problem of definition appeared in even a more striking form. While purporting to deal with the whole of the "region," the report is actually preoccupied with southern New England, to the relative neglect of rural Maine, Vermont, and northern New Hampshire. Although in their statistics the authors were compelled to admit the basic north-south distinction inherent in the human geography of the region, they described New England elsewhere as an "old industrial community." But surely this is no more than half of the story. The "region" turns out, in fact, to be two, divided among an even greater number of metropolitan spheres of influence.

The very ambiguity of both these reports regarding the nature of their "regions" suggests that the old conceptions had become of doubtful value. A new regional order and a new kind of planning appeared in the making, an order based on "interdependence" instead of a spurious homogeneity. And again it was Louis Wirth who spoke out for the new concept.[37] In such a region, he wrote, "the component parts are not necessarily similar or identical but stand in a relationship of significant interdependence or integration of life in one or more respects. Such a

PAGE PARTIALLY ILLEGIBLE

region finds difficulty in delineating its boundaries, but is more likely to have a salient or dominant center . . . ."[38] His article helped to clear the way to a view of regional planning that would be in greater accordance with the facts of economic development. To an elaboration of this view we shall now proceed.

It was primarily through the efforts of the Chicago school of sociologists during the 1930's—building on the pathbreaking work of McKenzie—that the concept of the metropolitan region as the logical unit for planning was developed and refined.[39] Concurrently with these studies at Chicago, the German geographer, Walter Christaller, suggested that any inhabited area would exhibit a certain structure of settlement which may be read as a hierarchy of central places standing in a mutually dependent relationship to each other.[40] The validity of Christaller's rigid geometrical pattern of central places has been variously questioned.[41] Its main influence, however, was to provide a new perspective on regionalism and regional structure. To the attentive reader it suggested an approach which by-passed the old problem of delineating homogeneous "folk-regions."

The first major advance beyond these pre-war researches was achieved in this country by Donald Bogue, who provided large-scale empirical evidence for the theory of metropolitan dominance advanced by McKenzie and offered aggregate measurements of metropolitan regional structure.[42] The next step in the development of metropolitan theory soon followed with an attempt to bring together the theories of regional structure as a system of central places (Christaller) and of metropolitan structure (Bogue). Rutledge Vining of the University of Virginia, in a highly stimulating paper, proposed to view the human landscape as an "inter-connected system of central places."[43] Vining appeared to be strongly influenced in his theory by certain traffic flow maps he had seen for the United States. Indeed, his maps seemed clearly to indicate an hierarchical pattern of cities that transcended any "regional" boundaries and presented instead a picture of economic "flows" of different densities, joining one city to another.

This novel view of the "region," in effect, dispensed with the traditional regional concept altogether. Rather, it pictured a *system of cities* having certain properties of stability, though individual units within the system might always be shifting.[44] Considerable support for this view can be found in the long-run trends of the American economy.

An ever-increasing proportion of the total population lives today in

cities or on the periphery of cities. According to Bogue, 57 percent of the population in 1950 lived in the 162 metropolitan areas defined by the Census, and the proportion continues to rise with each year.[45] Shift of population from rural to urban-metropolitan areas implicit in these figures is well portrayed in recent Census maps: population appears to move into clusters around a relatively small number of central places, and most of the rural countryside is becoming rapidly depopulated. Much of this growth during the past two decades occurred within the "rings" of metropolitan areas, however, rather than in central cities.[46] A rough picture of this important trend may be got by comparing the growth rates of urban and rural non-farm populations during recent decades. Between 1930 and 1950 urban population in the United States increased by 30 percent, contrasted with a 64 percent gain in the rural non-farm sector. Much of this gain was in the suburbs.

With a high concentration of population in cities and in the areas peripheral to them, central places also gained relatively in economic power. Transport and communications systems came increasingly to focus on the dominant cities. The traffic flow map reveals the striking instance of "nodality" in the flow of the economy.

PAGE PARTIALLY ILLEGIBLE

Population growth centering around cities must be viewed in the context of the upheaving changes in the American economy which have led to a progressive reduction of employment in farming and to a corresponding increase of opportunities in manufacturing and other sources of employment. The full development of a system of cities is related to economic changes and the particular pattern to which it conforms is dependent on the stage of economic maturity which the economy has reached. With rapid industrialization, new non-farm jobs tend to become available at a faster rate in the larger cities of an area than elsewhere.[48] And income changes, on the whole, parallel this movement of jobs to the large cities.[49] Economic development seems, indeed, to act in such a way as to enhance the possibilities of further growth at central places.[50] Not only does industrialization tend to improve the accessibility of an area by encouraging the provision of a wider variety of transportation services in the center, but it creates its own markets, tends to tip the balance of available capital for investment in favor of the city, and contribute to the progressive specialization of the labor force.[51] And once a pattern of urban settlement is established, its basic structure tends to perpetuate itself.

As the larger cities become more heterogeneous, the smaller cities and communities within their sphere of influence become functionally more specialized. Some grow into "satellites" of the center, others into specialized service, industrial or market cities. While the center of economic power in this pattern is the metropolis, all the communities within its economic reach are mutually dependent upon one another and upon the metropolitan center in its turn.[52]

The emerging pattern of the economy—what Lampard calls its metropolitan phase[53]—is thus built up increasingly around the *city region* with its dense urban core, its less densely populated outer "ring" (population declining outward toward the periphery of this "ring" along the major routes of access), and its satellite communities.[54] With increasing industrialization the conditions for further rapid growth in city regions tend to improve, and the "links" between and among city regions—in terms of population flows and the flows of goods and communications—tend to be strengthened. There is increasing interdependency throughout, and the structure of the whole economy tends to become more precisely defined along functional lines.

If this description of the spatial structure of a developing economy is substantially correct, we conclude that the city region has, in fact, become the basic areal unit for carrying out comprehensive developmental planning below the national level. It is a region defined by an

intricate pattern of economic and social interdependencies; it is, therefore, a "community" informed of certain common interests; and above all, the locus of socio-economic power for a broader geographic area.

The basic requirement for the existence of a city region is transportation. Modern transportation facilities permit the outer "ring" to extend outward from the city core for about one hour's driving distance along major highways and connecting tributary roads.[55] Rapid transportation makes possible the ingathering of materials (e.g., lumber) from within this "ring" as well as the distribution of goods to outlying points of consumption. And it enables individuals to commute freely to most places of employment within the city region which, in turn, permits a more rational ordering of residential, industrial, commercial, and recreational areas. Accessible and rapid transportation is the means by which the various sections of the city region are welded together into a unified whole; it is modern transportation which has made the city region at all possible.

In the past, regional planning in the United States has dealt primarily with the problem of resource development as a means for improving the economic welfare of people, while city planning has been mainly concerned with problems of land use control and circulation. Now we may argue that both of these functions—development and control—should be brought together in a common framework and that the logical framework for this purpose is the city region.

The focus of economic development is thus shifted from a broader territorial basis and an emphasis on *natural* resources to the city region and an emphasis on *metropolitan* resources, such as transportation, space, and community organization. Given this focus, planning for the city region should proceed along two parallel courses of action: (1) in the direction of developing metropolitan resources with a view to encouraging general economic prosperity; and (2) in the direction of controlling land use so as to create a pleasing, no less than an efficient, environment for living. Thus conceived, the planning function should extend across the entire area dominated by the central city.

The resources of most city regions in the United States are far from being fully developed. Yet the socio-economic reality of city regions will not be wholly attained until its resources have been brought to optimum productive levels.

Transportation is perhaps the most strategic of these sources where it unfolds the locational advantages of the city region. It allows for

accessibility to the center and for rapid circulation among the various parts of the city region. Speaking in metaphor, we may say that transportation is the "nervous system" of a regional organism and is absolutely vital to its survival. It will influence both the structure and the efficient functioning of the city region as a center of economic development. Robert B. Mitchell, in the foreword to a study of accessibility in southeastern Pennsylvania, writes much in the same vein:

> "Our 20th century technology makes possible a close and rapid contact among all parts of a great metropolitan area. Distance need be measured no longer by miles, but by minutes and convenience. This is the one most powerful fact in shaping the nature and arrangement of the various metropolitan localities. The potential of each locality is largely determined by its accessibility to other parts of the region. In turn the prosperity of the region as a whole will be very much affected by the quality of its internal circulation system."[56]

In improved internal transportation, Mitchell sees a way to "maximize opportunities for the good life and for prosperity in the Region."[57]

Second in importance only to transportation, are the space resources of the region. It is true that both transportation and space have traditionally been recognized as areas central to the concerns of city planners, but they have seldom been looked upon as *resources* which may be *developed* to assist in the economic growth of a "region."

Space is always in limited supply, modified as it is by its location, physical attributes, and the extent of man-made improvements on the land. It would be a radical mistake to believe that useful or "economic" space in the area surrounding a central city is co-extensive with the total number of square miles of this area, simply because this area does not as yet appear to be densely settled. The techniques of land use planning, subdivision control, and zoning are becoming quite as necessary in the less inhabited areas of a region as within the crowded urban core itself.[58]

A third important resource of the city region is found in the organization of its community life. As the city proper is itself often composed of different "neighborhoods," and as these join with one another in the polity of city life, so does the city region form a "community" which is composed of a number of interrelated parts: the urban core, industrial "satellites," "suburban" residential areas, village communities, and areas reserved for recreation and agricultural use. The economic integration of the city region will be expressed through the proper planning of its transportation and space resources, but it must be reflected in the social

integration of the city region as well. Social integration sets limits to the possible economic integration of regional life. No part of the city region can fully develop its potentialities except within this larger regional framework. Functional differentiation compels the component parts of the region to strive for closer mutual ties and always greater interaction. It is the development of the city region as a truly urban *community* which assures to each component part its special advantages and resources.

The basic spatial relations in an economy are found (1) between a central city and its surrounding region and (2) between one city region and another. The first type of relationship and its significance for planning has been described in the foregoing section. The second type of relationship has greater relevancy for national planning. Differences in the level of economic development among larger socio-economic "regions," such as those defined by the Census, are gradually disappearing in the United States.[59] A truly *national* economy is emerging, with individual "regions," in the old sense, gradually losing their claims to special federal attention. Regional criteria of "need" are no longer as determining to policy as criteria derived from purely national "needs."

Not only are the old regional differences in the United States disappearing, but most of the more densely settled parts of the country may eventually come within the influence of city regions. The landscape will be overlaid with a network of such regions, one region joined to the other. Donald Bogue came to a similar conclusion when he wrote:

> "In the not too distant future . . . . the number of metropolitan centers may increase to such an extent that 65 miles will be the maximum distance which most areas lie from a central city, and technological improvements in transportation may permit all communities within this radius to participate directly with the metropolis."[60]

If this hypothesis is correct, and already it seems to hold true for large sections of the country, attention in national planning will have to shift increasingly to the relations *among* city regions. Transportation assumes a major role in defining these relations, and the current high pitch of interest in express highways is indicative of this trend.

In addition to planning for the city region and inter-regional relations, special resource problems may arise from time to time which call for

a different areal organization than the one we have emphasized in this essay. In the case of power, water, or recreation resources, to cite some prominent examples, development may be organized on the basis of "functional" regions. Such a region may consist of an integral number of city regions grouped together for the purpose of planning a single function. In view of the interlinked pattern of city regions emerging in the more densely populated parts of the country, this particular form of regional organization is one likely to be followed. There are other possibilities, of course, where a functional region such as a watershed would cut across city regional boundaries or where several states would join in the solution of a mutual problem. But even here, the fact that city regions exist will loom large in planning considerations.

Although as much as 90 percent of the total population of the country may eventually reside within city regions, there will be large areas of sparsely settled land that fall outside the immediate influence of central cities. Such areas as the Cumberland Plateau, the Blue Ridge Mountains, the Ozarks, the Great Lakes cut-over regions, parts of northern New England, and large sections of the Southwest and West fall in this category. They pose special planning problems due to the poverty of their populations and their limited resources. An extensive type of development through recreation, forestry, or grazing will ofen form the basic approach to these areas. They are regions characterized by special physical disadvantage for a more intensive development. They may be called "functional regions" when public policy addresses itself specifically to problems related to the development of their resources. However, the name is unimportant. What is important is the recognition that special problems beset these areas; that they fall outside the existing pattern of city regions and thus outside the main stream of economic progress; and that only a small proportion of the country's population will reside in them.

Apart from these special areas, the United States economy maintains a definite spatial structure expressed in the pattern formed by city regions, and functional planning will usually be carried out successfully where it is closely related to this pattern, point for point. City regions are the nerve centers of economic life in an area. They are the seats of economic power where most of the population is concentrated, where most of the vital decisions affecting larger areas are made, and where the financial means are present for carrying these decisions into action. Any planning which ignores this primary fact about the spatial structure of an economy must be judged unrealistic.

NOTES

[49] *Ibid.*, chap. V.

[50] *Ibid.*, chap. VI.

[51] *Ibid.*, pp. 31–36.

[52] The metropolitan center is itself related to other centers and, according to Vining, occupies a place in the hierarchy of cities within the national system as a whole. What we have attempted to describe in the preceding pages is only the growth of one of the sub-systems within the larger system for the nation.

[53] Eric E. Lampard, "The History of Cities in the Economically Advanced Areas," *Economic Development and Cultural Change*, January 1955, p. 102.

[54] The term "city region" is preferred to "metropolitan region" because the concept is meant to apply also to cities which are smaller than those defined by the Census as "metropolitan." According to the Census, the population minimum for the central city of a standard metropolitan area is 50,000. "City region," as here defined, may be areas with a central urban core of about 30,000 population. The parallel British term would be "town region."

Public Law 89-136
89th Congress, S. 1648
August 26, 1965

An Act

79 STAT. 552.

To provide grants for public works and development facilities, other financial assistance and the planning and coordination needed to alleviate conditions of substantial and persistent unemployment and underemployment in economically distressed areas and regions.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Public Works and Economic Development Act of 1965".

Public Works and Economic Development Act of 1965.

STATEMENT OF PURPOSE

SEC. 2. The Congress declares that the maintenance of the national economy at a high level is vital to the best interests of the United States, but that some of our regions, counties, and communities are suffering substantial and persistent unemployment and underemployment; that such unemployment and underemployment cause hardship to many individuals and their families, and waste invaluable human resources; that to overcome this problem the Federal Government, in cooperation with the States, should help areas and regions of substantial and persistent unemployment and underemployment to take effective steps in planning and financing their public works and economic development; that Federal financial assistance, including grants for public works and development facilities to communities, industries, enterprises, and individuals in areas needing development should enable such areas to help themselves achieve lasting improvement and enhance the domestic prosperity by the establishment of stable and diversified local economies and improved local conditions, provided that such assistance is preceded by and consistent with sound, long-range economic planning; and that under the provisions of this Act new employment opportunities should be created by developing and expanding new and existing public works and other facilities and resources rather than by merely transferring jobs from one area of the United States to another.

TITLE I—GRANTS FOR PUBLIC WORKS AND DEVELOPMENT FACILITIES

SEC. 101. (a) Upon the application of any State, or political subdivision thereof, Indian tribe, or private or public nonprofit organization or association representing any redevelopment area or part thereof, the Secretary of Commerce (hereinafter referred to as the Secretary) is authorized—

(1) to make direct grants for the acquisition or development of land and improvements for public works, public service, or development facility usage, and the acquisition, construction, rehabilitation, alteration, expansion, or improvement of such facilities, including related machinery and equipment, within a redevelopment area, if he finds that—

(A) the project for which financial assistance is sought will directly or indirectly (i) tend to improve the opportunities, in the area where such project is or will be located, for the successful establishment or expansion of industrial or commercial plants or facilities, (ii) otherwise assist in the creation of additional long-term employment opportunities for such area, or (iii) primarily benefit the long-term unemployed and members of low-income families or otherwise

substantially further the objectives of the Economic Opportunity Act of 1964;

78 Stat. 508.
42 USC 2701 note.

(B) the project for which a grant is requested will fulfill a pressing need of the area, or part thereof, in which it is, or will be, located; and

(C) the area for which a project is to be undertaken has an approved overall economic development program as provided in section 202(b)(10) and such project is consistent with such program;

(2) to make supplementary grants in order to enable the States and other entities within redevelopment areas to take maximum advantage of designated Federal grant-in-aid programs (as hereinafter defined), direct grants-in-aid authorized under this section, and Federal grant-in-aid programs authorized by the Watershed Protection and Flood Prevention Act (68 Stat. 666, as amended), and the eleven watersheds authorized by the Flood Control Act of December 22, 1944, as amended and supplemented (58 Stat. 887), for which they are eligible but for which, because of their economic situation, they cannot supply the required matching share.

16 USC 1001 note.

(b) Subject to subsection (c) hereof, the amount of any direct grant under this section for any project shall not exceed 50 per centum of the cost of such project.

(c) The amount of any supplementary grant under this section for any project shall not exceed the applicable percentage established by regulations promulgated by the Secretary, but in no event shall the non-Federal share of the aggregate cost of any such project (including assumptions of debt) be less than 20 per centum of such cost. Supplementary grants shall be made by the Secretary, in accordance with such regulations as he shall prescribe, by increasing the amounts of direct grants authorized under this section or by the payment of funds appropriated under this Act to the heads of the departments, agencies, and instrumentalities of the Federal Government responsible for the administration of the applicable Federal programs. Notwithstanding any requirement as to the amount or sources of non-Federal funds that may otherwise be applicable to the Federal program involved, funds provided under this subsection shall be used for the sole purpose of increasing the Federal contribution to specific projects in redevelopment areas under such programs above the fixed maximum portion of the cost of such project otherwise authorized by the applicable law. The term "designated Federal grant-in-aid programs," as used in this subsection, means such existing or future Federal grant-in-aid programs assisting in the construction or equipping of facilities as the Secretary may, in furtherance of the purposes of this Act, designate as eligible for allocation of funds under this section. In determining the amount of any supplementary grant available to any project under this section, the Secretary shall take into consideration the relative needs of the area, the nature of the project to be assisted, and the amount of such fair user charges or other revenues as the project may reasonably be expected to generate in excess of those which would amortize the local share of initial costs and provide for its successful operation and maintenance (including depreciation).

(d) The Secretary shall prescribe rules, regulations, and procedures to carry out this section which will assure that adequate consideration is given to the relative needs of eligible areas. In prescribing such rules, regulations, and procedures the Secretary shall consider among other relevant factors (1) the severity of the rates of unemployment in the eligible areas and the duration of such unemployment and (2)

the income levels of families and the extent of underemployment in eligible areas.

(e) Except for projects specifically authorized by Congress, no financial assistance shall be extended under this section with respect to any public service or development facility which would compete with an existing privately owned public utility rendering a service to the public at rates or charges subject to regulation by a State or Federal regulatory body, unless the State or Federal regulatory body determines that in the area to be served by the facility for which the financial assistance is to be extended there is a need for an increase in such service (taking into consideration reasonably foreseeable future needs) which the existing public utility is not able to meet through its existing facilities or through an expansion which it agrees to undertake.

(f) The Secretary shall prescribe regulations which will assure that appropriate local governmental authorities have been given a reasonable opportunity to review and comment upon proposed projects under this section.

SEC. 102. (a) In addition to the assistance otherwise authorized, the Secretary is authorized to make grants in accordance with the provisions of this title to those areas which the Secretary of Labor determines, on the basis of average annual available unemployment statistics, were areas of substantial unemployment during the preceding calendar year.

(b) Areas designated under the authority of this section shall be subject to an annual review of eligibility in accordance with section 402, and to all of the rules, regulations, and procedures applicable to redevelopment areas except as the Secretary may otherwise prescribe by regulation.

SEC. 103. Not more than 15 per centum of the appropriations made pursuant to this title may be expended in any one State.

SEC. 104. No part of any appropriations made pursuant to this title may be expended for any project in any area which is within the "Appalachian region" (as that term is defined in section 403 of the Appalachian Regional Development Act of 1965) which is approved for assistance under the Appalachian Regional Development Act of 1965. Ante, p. 21.

SEC. 105. There is hereby authorized to be appropriated to carry out this title not to exceed $500,000,000 for the fiscal year ending June 30, 1966, and for each fiscal year thereafter through the fiscal year ending June 30, 1969. Appropriation.

FINANCIAL ASSISTANCE FOR SEWER FACILITIES

SEC. 106. No financial assistance, through grants, loans, guarantees, or otherwise, shall be made under this Act to be used directly or indirectly for sewer or other waste disposal facilities unless the Secretary of Health, Education, and Welfare certifies to the Secretary that any waste material carried by such facilities will be adequately treated before it is discharged into any public waterway so as to meet applicable Federal, State, interstate, or local water quality standards.

TITLE II—OTHER FINANCIAL ASSISTANCE

PUBLIC WORKS AND DEVELOPMENT FACILITY LOANS

SEC. 201. (a) Upon the application of any State, or political subdivision thereof, Indian tribe, or private or public nonprofit organization or association representing any redevelopment area or part thereof, the Secretary is authorized to purchase evidence of indebtedness and to make loans to assist in financing the purchase or development of land

and improvements for public works, public service, or development facility usage, including public works, public service, and development facility usage, to be provided by agencies of the Federal Government pursuant to legislation requiring that non-Federal entities bear some part of the cost thereof, and the acquisition, construction, rehabilitation, alteration, expansion, or improvement of such facilities, including related machinery and equipment, within a redevelopment area, if he finds that—

(1) the project for which financial assistance is sought will directly or indirectly—

(A) tend to improve the opportunities, in the area where such project is or will be located, for the successful establishment or expansion of industrial or commercial plants or facilities,

(B) otherwise assist in the creation of additional long-term employment opportunities for such area, or

(C) primarily benefit the long-term unemployed and members of low-income families or otherwise substantially further the objectives of the Economic Opportunity Act of 1964;

78 Stat. 508.
42 USC 2701 note.

(2) the funds requested for such project are not otherwise available from private lenders or from other Federal agencies on terms which in the opinion of the Secretary will permit the accomplishment of the project;

(3) the amount of the loan plus the amount of other available funds for such project are adequate to insure the completion thereof;

(4) there is a reasonable expectation of repayment; and

(5) such area has an approved overall economic development program as provided in section 202(b)(10) and the project for which financial assistance is sought is consistent with such program.

(b) Subject to section 701(5), no loan, including renewals or extensions thereof, shall be made under this section for a period exceeding forty years, and no evidence of indebtedness maturing more than forty years from the date of purchase shall be purchased under this section. Such loans shall bear interest at a rate not less than a rate determined by the Secretary of the Treasury taking into consideration the current average market yield on outstanding marketable obligations of the United States with remaining periods to maturity comparable to the average maturities of such loans, adjusted to the nearest one-eighth of 1 per centum, less not to exceed one-half of 1 per centum per annum.

(c) There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this section and section 202: *Provided*, That annual appropriations for the purpose of purchasing evidences of indebtedness, making and participating in loans, and guaranteeing loans shall not exceed $170,000,000, for the fiscal year ending June 30, 1966, and for each fiscal year thereafter through the fiscal year ending June 30, 1970.

(d) Except for projects specifically authorized by Congress, no financial assistance shall be extended under this section with respect to any public service or development facility which would compete with an existing privately owned public utility rendering a service to the public at rates or charges subject to regulation by a State or Federal regulatory body, unless the State or Federal regulatory body determines that in the area to be served by the facility for which the financial assistance is to be extended there is a need for an increase in such service (taking into consideration reasonably foreseeable

future needs) which the existing public utility is not able to meet through its existing facilities or through an expansion which it agrees to undertake.

(e) The Secretary shall prescribe regulations which will assure that appropriate local governmental authorities have been given a reasonable opportunity to review and comment upon proposed projects under this section.

LOANS AND GUARANTEES

SEC. 202. (a) The Secretary is authorized (1) to purchase evidences of indebtedness and to make loans (which for purposes of this section shall include participations in loans) to aid in financing any project within a redevelopment area for the purchase or development of land and facilities (including machinery and equipment) for industrial or commercial usage, including the construction of new buildings, the rehabilitation of abandoned or unoccupied buildings, and the alteration, conversion, or enlargement of existing buildings; and (2) to guarantee loans for working capital made to private borrowers by private lending institutions in connection with projects in redevelopment areas assisted under subsection (a)(1) hereof, upon application of such institution and upon such terms and conditions as the Secretary may prescribe: *Provided, however*, That no such guarantee shall at any time exceed 90 per centum of the amount of the outstanding unpaid balance of such loan.

(b) Financial assistance under this section shall be on such terms and conditions as the Secretary determines, subject, however, to the following restrictions and limitations:

(1) Such financial assistance shall not be extended to assist establishments relocating from one area to another or to assist subcontractors whose purpose is to divest, or whose economic success is dependent upon divesting, other contractors or subcontractors of contracts theretofore customarily performed by them: *Provided, however*, That such limitation shall not be construed to prohibit assistance for the expansion of an existing business entity through the establishment of a new branch, affiliate, or subsidiary of such entity if the Secretary finds that the establishment of such branch, affiliate, or subsidiary will not result in an increase in unemployment of the area of original location or in any other area where such entity conducts business operations, unless the Secretary has reason to believe that such branch, affiliate, or subsidiary is being established with the intention of closing down the operations of the existing business entity in the area of its original location or in any other area where it conducts such operations.

(2) Such assistance shall be extended only to applicants, both private and public (including Indian tribes), which have been approved for such assistance by an agency or instrumentality of the State or political subdivision thereof in which the project to be financed is located, and which agency or instrumentality is directly concerned with problems of economic development in such State or subdivision.

(3) The project for which financial assistance is sought must be reasonably calculated to provide more than a temporary alleviation of unemployment or underemployment within the redevelopment area wherein it is or will be located.

(4) No loan or guarantee shall be extended hereunder unless the financial assistance applied for is not otherwise available from private lenders or from other Federal agencies on terms which in the opinion of the Secretary will permit the accomplishment of the project.

(5) The Secretary shall not make any loan without a participation unless he determines that the loan cannot be made on a participation basis.

(6) No evidences of indebtedness shall be purchased and no loans shall be made or guaranteed unless it is determined that there is reasonable assurance of repayment.

(7) Subject to section 701(5) of this Act, no loan, including renewals or extension thereof, may be made hereunder for a period exceeding twenty-five years and no evidences of indebtedness maturing more than twenty-five years from date of purchase may be purchased hereunder: *Provided*, That the foregoing restrictions on maturities shall not apply to securities or obligations received by the Secretary as a claimant in bankruptcy or equitable reorganization or as a creditor in other proceedings attendant upon insolvency of the obligor.

(8) Loans made and evidences of indebtedness purchased under this section shall bear interest at a rate not less than a rate determined by the Secretary of the Treasury taking into consideration the current average market yield on outstanding marketable obligations of the United States with remaining periods to maturity comparable to the average maturities of such loans, adjusted to the nearest one-eighth of 1 per centum, plus additional charge, if any, toward covering other costs of the program as the Secretary may determine to be consistent with its purpose.

(9) Loan assistance shall not exceed 65 per centum of the aggregate cost to the applicant (excluding all other Federal aid in connection with the undertaking) of acquiring or developing land and facilities (including machinery and equipment), and of constructing, altering, converting, rehabilitating, or enlarging the building or buildings of the particular project, and shall, among others, be on the condition that—

(A) other funds are available in an amount which, together with the assistance provided hereunder, shall be sufficient to pay such aggregate cost;

(B) not less than 15 per centum of such aggregate cost be supplied as equity capital or as a loan repayable in no shorter period of time and at no faster an amortization rate than the Federal financial assistance extended under this section is being repaid, and if such a loan is secured, its security shall be subordinate and inferior to the lien or liens securing such Federal financial assistance: *Provided, however*, That, except in projects involving financial participation by Indian tribes, not less than 5 per centum of such aggregate cost shall be supplied by the State or any agency, instrumentality, or political subdivision thereof, or by a community or area organization which is nongovernmental in character, unless the Secretary shall determine in accordance with objective standards promulgated by regulation that all or part of such funds are not reasonably available to the project because of the economic distress of the area or for other good cause, in which case he may waive the requirement of this provision to the extent of such unavailability, and allow the funds required by this subsection to be supplied by the applicant or by such other non-Federal source as may reasonably be available to the project;

(C) to the extent the Secretary finds such action necessary to encourage financial participation in a particular project by other lenders and investors, and except as otherwise provided in subparagraph (B), any Federal financial assistance extended under this section may be repayable only after other loans made in connection with such project have been repaid in full, and the security, if any, for such Federal financial assistance may be subordinate and inferior to the lien or liens securing other loans made in connection with the same project.

(10) No such assistance shall be extended unless there shall be submitted to and approved by the Secretary an overall program for the economic development of the area and a finding by the State, or any agency, instrumentality, or local political subdivision thereof, that the project for which financial assistance is sought is consistent with such program: *Provided*, That nothing in this Act shall authorize financial assistance for any project prohibited by laws of the State or local political subdivision in which the project would be located, nor prevent the Secretary from requiring such periodic revisions of previously approved overall economic development programs as he may deem appropriate.

ECONOMIC DEVELOPMENT REVOLVING FUND

SEC. 203. Funds obtained by the Secretary under section 201, loan funds obtained under section 403, and collections and repayments received under this Act, shall be deposited in an economic development revolving fund (hereinafter referred to as the "fund"), which is hereby established in the Treasury of the United States, and which shall be available to the Secretary for the purpose of extending financial assistance under sections 201, 202, and 403, and for the payment of all obligations and expenditures arising in connection therewith. There shall also be credited to the fund such funds as have been paid into the area redevelopment fund or may be received from obligations outstanding under the Area Redevelopment Act. The fund shall pay 75 Stat. 47.
into miscellaneous receipts of the Treasury, following the close of each 42 USC 2501
fiscal year, interest on the amount of loans outstanding under this Act note.
computed in such manner and at such rate as may be determined by the Secretary of the Treasury taking into consideration the current average market yield on outstanding marketable obligations of the United States with remaining periods to maturity comparable to the average maturities of such loans, adjusted to the nearest one-eighth of 1 per centum, during the month of June preceding the fiscal year in which the loans were made.

TITLE III—TECHNICAL ASSISTANCE, RESEARCH, AND INFORMATION

SEC. 301. (a) In carrying out his duties under this Act the Secretary is authorized to provide technical assistance which would be useful in alleviating or preventing conditions of excessive unemployment or underemployment (1) to areas which he has designated as redevelopment areas under this Act, and (2) to other areas which he finds have substantial need for such assistance. Such assistance shall include project planning and feasibility studies, management and operational assistance, and studies evaluating the needs of, and developing potentialities for, economic growth of such areas. Such assistance may be provided by the Secretary through members of his staff, through the payment of funds authorized for this section to other departments or agencies of the Federal Government, through the employment of private individuals, partnerships, firms, corporations, or suitable institutions, under contracts entered into for such purposes, or through grants-in-aid to appropriate public or private nonprofit State, area, district, or local organizations. The Secretary, in his discretion, may require the repayment of assistance provided under this subsection and prescribe the terms and conditions of such repayment.

(b) The Secretary is authorized to make grants to defray not to exceed 75 per centum of the administrative expenses of organizations which he determines to be qualified to receive grants-in-aid under sub-

section (a) hereof. In determining the amount of the non-Federal share of such costs or expenses, the Secretary shall give due consideration to all contributions both in cash and in kind, fairly evaluated, including but not limited to space, equipment, and services. Where practicable, grants-in-aid authorized under this subsection shall be used in conjunction with other available planning grants, such as urban planning grants authorized under the Housing Act of 1954, as amended, and highway planning and research grants authorized under the Federal Aid Highway Act of 1962, to assure adequate and effective planning and economical use of funds.

68 Stat. 590.
12 USC 1703 note.
76 Stat. 1145.
23 USC 101 note.

(c) To assist in the long-range accomplishment of the purposes of this Act, the Secretary, in cooperation with other agencies having similar functions, shall establish and conduct a continuing program of study, training, and research to (A) assist in determining the causes of unemployment, underemployment, underdevelopment, and chronic depression in the various areas and regions of the Nation, (B) assist in the formulation and implementation of national, State, and local programs which will raise income levels and otherwise produce solutions to the problems resulting from these conditions, and (C) assist in providing the personnel needed to conduct such programs. The program of study, training, and research may be conducted by the Secretary through members of this staff, through payment of funds authorized for this section to other departments or agencies of the Federal Government, or through the employment of private individuals, partnerships, firms, corporations, or suitable institutions, under contracts entered into for such purposes, or through grants to such individuals, organizations, or institutions, or through conferences and similar meetings organized for such purposes. The Secretary shall make available to interested individuals and organizations the results of such research. The Secretary shall include in his annual report under section 707 a detailed statement concerning the study and research conducted under this section together with his findings resulting therefrom and his recommendations for legislative and other action.

(d) The Secretary shall aid redevelopment areas and other areas by furnishing to interested individuals, communities, industries, and enterprises within such areas any assistance, technical information, market research, or other forms of assistance, information, or advice which would be useful in alleviating or preventing conditions of excessive unemployment or underemployment within such areas. The Secretary may furnish the procurement divisions of the various departments, agencies, and other instrumentalities of the Federal Government with a list containing the names and addresses of business firms which are located in redevelopment areas and which are desirous of obtaining Government contracts for the furnishing of supplies or services, and designating the supplies and services such firms are engaged in providing.

(e) The Secretary shall establish an independent study board consisting of governmental and nongovernmental experts to investigate the effects of Government procurement, scientific, technical, and other related policies, upon regional economic development. Any Federal officer or employee may, with the consent of the head of the department or agency in which he is employed, serve as a member of such board, but shall receive no additional compensation for such service. Other members of such board may be compensated in accordance with the provisions of section 701(10). The board shall report its findings, together with recommendations for the better coordination of such policies, to the Secretary, who shall transmit the report to the Congress not later than two years after the enactment of this Act.

Report to Congress.

SEC. 302. There is hereby authorized to be appropriated $25,000,000 annually for the purposes of this title, for the fiscal year ending June 30, 1966, and for each fiscal year thereafter through the fiscal year ending June 30, 1970. Appropriation

TITLE IV—AREA AND DISTRICT ELIGIBILITY

PART A—REDEVELOPMENT AREAS

AREA ELIGIBILITY

SEC. 401. (a) The Secretary shall designate as "redevelopment areas"—

(1) those areas in which he determines, upon the basis of standards generally comparable with those set forth in paragraphs (A) and (B), that there has existed substantial and persistent unemployment for an extended period of time and those areas in which he determines there has been a substantial loss of population due to lack of employment opportunity. There shall be included among the areas so designated any area—

(A) where the Secretary of Labor finds that the current rate of unemployment, as determined by appropriate annual statistics for the most recent available calendar year, is 6 per centum or more and has averaged at least 6 per centum for the qualifying time periods specified in paragraph (B); and

(B) where the Secretary of Labor finds that the annual average rate of unemployment has been at least—

(i) 50 per centum above the national average for three of the preceding four calendar years, or

(ii) 75 per centum above the national average for two of the preceding three calendar years, or

(iii) 100 per centum above the national average for one of the preceding two calendar years.

The Secretary of Labor shall find the facts and provide the data to be used by the Secretary in making the determinations required by this subsection;

(2) those additional areas which have a median family income not in excess of 40 per centum of the national median, as determined by the most recent available statistics for such areas;

(3) those additional Federal or State Indian reservations or trust or restricted Indian-owned land areas which the Secretary, after consultation with the Secretary of the Interior or an appropriate State agency, determines manifest the greatest degree of economic distress on the basis of unemployment and income statistics and other appropriate evidence of economic underdevelopment;

(4) upon request of such areas, those additional areas in which the Secretary determines that the loss, removal, curtailment, or closing of a major source of employment has caused within three years prior to, or threatens to cause within three years after, the date of the request an unusual and abrupt rise in unemployment of such magnitude that the unemployment rate for the area at the time of the request exceeds the national average, or can reasonably be expected to exceed the national average, by 50 per centum or more unless assistance is provided. Notwithstanding any provision of subsection 401(b) to the contrary, an area designated under the authority of this paragraph may be given a reasonable time after designation in which to submit the overall economic development program required by subsection 202(b)(10) of this Act;

(5) notwithstanding any provision of this section to the contrary, those additional areas which were designated redevelopment areas under the Area Redevelopment Act on or after March 1, 1965: *Provided, however*, That the continued eligibility of such areas after the first annual review of eligibility conducted in accordance with section 402 of this Act shall be dependent on their qualification for designation under the standards of economic need set forth in subsections (a)(1) through (a)(4) of this section.

75 Stat. 47.
42 USC 2501 note.

(b) The size and boundaries of redevelopment areas shall be as determined by the Secretary: *Provided, however*. That—

(1) no area shall be designated until it has an approved overall economic development program in accordance with subsection 202(b)(10) of this Act;

(2) any area which does not submit an acceptable overall economic development program in accordance with subsection 202(b)(10) of this Act within a reasonable time after notification of eligibility for designation, shall not thereafter be designated prior to the next annual review of eligibility in accordance with section 402 of this Act;

(3) no area shall be designated which does not have a population of at least one thousand five hundred persons, except for areas designated under subsection 401(a)(3), which shall have a population of not less than one thousand persons; and

(4) except for areas designated under subsections (a)(3) and (a)(4) hereof, no area shall be designated which is smaller than a "labor area" (as defined by the Secretary of Labor), a county, or a municipality with a population of over two hundred and fifty thousand, whichever in the opinion of the Secretary is appropriate.

(c) Upon the request of the Secretary, the Secretary of Labor, the Secretary of Agriculture, the Secretary of the Interior, and such other heads of agencies as may be appropriate are authorized to conduct such special studies, obtain such information, and compile and furnish to the Secretary such data as the Secretary may deem necessary or proper to enable him to make the determinations provided for in this section. The Secretary shall reimburse when appropriate, out of any funds appropriated to carry out the purposes of this Act, the foregoing officers for any expenditures incurred by them under this section.

(d) If a State has no area designated under the preceding subsections of this section as a redevelopment area, the Secretary shall designate as a redevelopment area that area in such State which in his opinion most nearly qualifies under such preceding subsections. An area so designated shall have its eligibility terminated in accordance with the provisions of section 402 if any other area within the same State subsequently has become qualified or been designated under any other subsection of this section as of the time of the annual review prescribed by section 402: *Provided*, That the Secretary shall not terminate any designation of an area in a State as a redevelopment area if to do so would result in such State having no redevelopment area.

"Redevelopment area."

(e) As used in this Act, the term "redevelopment area" refers to any area within the United States which has been designated by the Secretary as a redevelopment area.

ANNUAL REVIEW OF AREA ELIGIBILITY

SEC. 402. The Secretary shall conduct an annual review of all areas designated in accordance with section 401 of this Act, and on the basis thereof shall terminate or modify the designations of such areas in accordance with objective standards which he shall prescribe by

regulation. No area previously designated shall retain its designated status unless it maintains a currently approved overall economic development program in accordance with subsection 202(b)(10). No termination of eligibility shall (1) be made without thirty days' prior notification to the area concerned, (2) affect the validity of any application filed, or contract or undertaking entered into, with respect to such area pursuant to this Act prior to such termination, (3) prevent any such area from again being designated a redevelopment area under section 401 of this Act if the Secretary determines it to be eligible under such section, or (4) be made in the case of any designated area where the Secretary determines that an improvement in the unemployment rate of a designated area is primarily the result of increased employment in occupations not likely to be permanent. The Secretary shall keep the departments and agencies of the Federal Government, and interested State or local agencies, advised at all times of any changes made hereunder with respect to the classification of any area.

PART B—ECONOMIC DEVELOPMENT DISTRICTS

SEC. 403. (a) In order that economic development projects of broader geographical significance may be planned and carried out, the Secretary is authorized—

(1) to designate appropriate "economic development districts" within the United States with the concurrence of the States in which such districts will be wholly or partially located, if—

(A) the proposed district is of sufficient size or population, and contains sufficient resources, to foster economic development on a scale involving more than a single redevelopment area;

(B) the proposed district contains two or more redevelopment areas;

(C) the proposed district contains one or more redevelopment areas or economic development centers identified in an approved district overall economic development program as having sufficient size and potential to foster the economic growth activities necessary to alleviate the distress of the redevelopment areas within the district; and

(D) the proposed district has a district overall economic development program which includes adequate land use and transportation planning and contains a specific program for district cooperation, self-help, and public investment and is approved by the State or States affected and by the Secretary;

(2) to designate as "economic development centers," in accordance with such regulations as he shall prescribe, such areas as he may deem appropriate, if—

(A) the proposed center has been identified and included in an approved district overall economic development program and recommended by the State or States affected for such special designation;

(B) the proposed center is geographically and economically so related to the district that its economic growth may reasonably be expected to contribute significantly to the alleviation of distress in the redevelopment areas of the district; and

(C) the proposed center does not have a population in excess of two hundred and fifty thousand according to the last preceding Federal census.

(3) to provide financial assistance in accordance with the criteria of sections 101, 201, and 202 of this Act, except as may be

herein otherwise provided, for projects in economic development centers designated under subsection (a)(2) above, if—

(A) the project will further the objectives of the overall economic development program of the district in which it is to be located;

(B) the project will enhance the economic growth potential of the district or result in additional long-term employment opportunities commensurate with the amount of Federal financial assistance requested; and

(C) the amount of Federal financial assistance requested is reasonably related to the size, population, and economic needs of the district;

(4) subject to the 20 per centum non-Federal share required for any project by subsection 101(c) of this Act, to increase the amount of grant assistance authorized by section 101 for projects within redevelopment areas (designated under section 401), by an amount not to exceed 10 per centum of the aggregate cost of any such project, in accordance with such regulations as he shall prescribe if—

(A) the redevelopment area is situated within a designated economic development district and is actively participating in the economic development activities of the district; and

(B) the project is consistent with an approved district overall economic development program.

(b) In designating economic development districts and approving district overall economic development programs under subsection (a) of this section, the Secretary is authorized, under regulations prescribed by him—

(1) to invite the several States to draw up proposed district boundaries and to identify potential economic development centers;

(2) to cooperate with the several States—

(A) in sponsoring and assisting district economic planning and development groups, and

(B) in assisting such district groups to formulate district overall economic development programs;

(3) to encourage participation by appropriate local governmental authorities in such economic development districts.

(c) The Secretary shall by regulation prescribe standards for the termination or modification of economic development districts and economic development centers designated under the authority of this section.

"Economic development district."

(d) As used in this Act, the term "economic development district" refers to any area within the United States composed of cooperating redevelopment areas and, where appropriate, designated economic development centers and neighboring counties or communities, which has been designated by the Secretary as an economic development district.

"Economic development center."

(e) As used in this Act, the term "economic development center" refers to any area within the United States which has been identified as an economic development center in an approved district overall economic development program and which has been designated by the Secretary as eligible for financial assistance under sections 101, 201, and 202 of this Act in accordance with the provisions of this section.

"Local government."

(f) For the purpose of this Act the term "local government" means any city, county, town, parish, village, or other general-purpose political subdivision of a State.

Appropriation.

(g) There is hereby authorized to be appropriated not to exceed $50,000,000 for the fiscal year ending June 30, 1967, and for each fiscal

year thereafter through the fiscal year ending June 30, 1970, for financial assistance extended under the provisions of subsection (a)(3) and (a)(4) hereof.

(h) In order to allow time for adequate and careful district planning, subsection (g) of this section shall not be effective until one year from the date of enactment. Effective date.

TITLE V—REGIONAL ACTION PLANNING COMMISSIONS

ESTABLISHMENT OF REGIONS

SEC. 501. The Secretary is authorized to designate appropriate "economic development regions" within the United States with the concurrence of the States in which such regions will be wholly or partially located if he finds (A) that there is a relationship between the areas within such region geographically, culturally, historically, and economically, (B) that with the exception of Alaska and Hawaii, the region is within contiguous States, and (C) upon consideration of the following matters, among others, that the region has lagged behind the whole Nation in economic development:

(1) the rate of unemployment is substantially above the national rate;

(2) the median level of family income is significantly below the national median;

(3) the level of housing, health, and educational facilities is substantially below the national level;

(4) the economy of the area has traditionally been dominated by only one or two industries, which are in a state of long-term decline;

(5) the rate of outmigration of labor or capital or both is substantial;

(6) the area is adversely affected by changing industrial technology;

(7) the area is adversely affected by changes in national defense facilities or production; and

(8) indices of regional production indicate a growth rate substantially below the national average.

REGIONAL COMMISSIONS

SEC. 502. (a) Upon designation of development regions, the Secretary shall invite and encourage the States wholly or partially located within such regions to establish appropriate multistate regional commissions.

(b) Each such commission shall be composed of one Federal member, hereinafter referred to as the "Federal cochairman", appointed by the President by and with the advice and consent of the Senate, and one member from each participating State in the region. Each State member may be the Governor, or his designee, or such other person as may be provided by the law of the State which he represents. The State members of the commission shall elect a cochairman of the commission from among their number. Membership.

(c) Decisions by a regional commission shall require the affirmative vote of the Federal cochairman and of a majority, or at least one if only two, of the State members. In matters coming before a regional commission, the Federal cochairman shall, to the extent practicable, consult with the Federal departments and agencies having an interest in the subject matter.

(d) Each State member of a regional commission shall have an alternate, appointed by the Governor or as otherwise may be provided Alternates.

by the law of the State which he represents. The President, by and with the advice and consent of the Senate, shall appoint an alternate for the Federal cochairman of each regional commission. An alternate shall vote in the event of the absence, death, disability, removal, or resignation of the State of Federal cochairman for which he is an alternate.

Compensation.

(e) The Federal cochairman to a regional commission shall be compensated by the Federal Government from funds authorized by this Act up to level IV of the Federal Executive Salary Schedule. His alternate shall be compensated by the Federal Government from funds authorized by this Act at not to exceed the maximum scheduled rate for grade GS-18 of the Classification Act of 1949, as amended, and when not actively serving as an alternate for the Federal cochairman shall perform such functions and duties as are delegated to him by the Federal cochairman. Each State member and his alternate shall be compensated by the State which they represent at the rate established by the law of such State.

78 Stat. 417.
5 USC 2211.

78 Stat. 400.
5 USC 1113.

(f) If the Secretary finds that the State of Alaska or the State of Hawaii meet the requirements for an economic development region, he may establish a Commission for either State in a manner agreeable to him and to the Governor of the affected State.

FUNCTIONS OF COMMISSION

SEC. 503. (a) In carrying out the purposes of this Act, each Commission shall with respect to its region—

(1) advise and assist the Secretary in the identification of optimum boundaries for multistate economic development regions;

(2) initiate and coordinate the preparation of long-range overall economic development programs for such regions;

(3) foster surveys and studies to provide data required for the preparation of specific plans and programs for the development of such regions;

(4) advise and assist the Secretary and the States concerned in the initiation and coordination of economic development districts, in order to promote maximum benefits from the expenditure of Federal, State, and local funds;

(5) promote increased private investment in such regions;

(6) prepare legislative and other recommendations with respect to both short-range and long-range programs and projects for Federal, State, and local agencies;

(7) develop, on a continuing basis, comprehensive and coordinated plans and programs and establish priorities thereunder, giving due consideration to other Federal, State, and local planning in the region;

(8) conduct and sponsor investigations, research, and studies, including an inventory and analysis of the resources of the region, and, in cooperation with Federal, State and local agencies, sponsor demonstration projects designed to foster regional productivity and growth;

(9) review and study, in cooperation with the agency involved, Federal, State, and local public and private programs and, where appropriate, recommend modifications or additions which will increase their effectiveness in the region;

(10) formulate and recommend, where appropriate, interstate compacts and other forms of interstate cooperation, and work with State and local agencies in developing appropriate model legislation; and

(11) provide a forum for consideration of problems of the region and proposed solutions and establish and utilize, as appropriate, citizens and special advisory councils and public conferences.

(b) The Secretary shall present such plans and proposals of the commissions as may be transmitted and recommended to him (but are not authorized by any other section of this Act) first for review by the Federal agencies primarily interested in such plans and proposals and then, together with the recommendations of such agencies, to the President for such action as he may deem desirable.

(c) The Secretary shall provide effective and continuing liaison between the Federal Government and each regional commission.

(d) Each Federal agency shall, consonant with law and within the limits of available funds, cooperate with such commissions as may be established in order to assist them in carrying out their functions under this section.

(e) Each regional commission may, from time to time, make additional recommendations to the Secretary and recommendations to the State Governors and appropriate local officials, with respect to—

(1) the expenditure of funds by Federal, State, and local departments and agencies in its region in the fields of natural resources, agriculture, education, training, health and welfare, transportation, and other fields related to the purposes of this Act; and

(2) such additional Federal, State, and local legislation or administrative actions as the commission deems necessary to further the purposes of this Act.

PROGRAM DEVELOPMENT CRITERIA

SEC. 504. In developing recommendations for programs and projects for future regional economic development, and in establishing within those recommendations a priority ranking for such programs and projects, the Secretary shall encourage each regional commission to follow procedures that will insure consideration of the following factors:

(1) the relationship of the project or class of projects to overall regional development including its location in an area determined by the State to have a significant potential for growth;

(2) the population and area to be served by the project or class of projects including the relative per capita income and the unemployment rates in the area;

(3) the relative financial resources available to the State or political subdivisions or instrumentalities thereof which seek to undertake the project;

(4) the importance of the project or class of projects in relation to other projects or classes of projects which may be in competition for the same funds;

(5) the prospects that the project, on a continuing rather than a temporary basis, will improve the opportunities for employment, the average level of income, or the economic and social development of the area served by the project.

REGIONAL TECHNICAL AND PLANNING ASSISTANCE

SEC. 505. (a) The Secretary is authorized to provide to the commissions technical assistance which would be useful in aiding the commissions to carry out their functions under this Act and to develop recommendations and programs. Such assistance shall include studies and plans evaluating the needs of, and developing potentialities for,

economic growth of such region, and research on improving the conservation and utilization of the human and natural resources of the region. Such assistance may be provided by the Secretary through members of his staff, through the payment of funds authorized for this section to other departments or agencies of the Federal Government, or through the employment of private individuals, partnerships, firms, corporations, or suitable institutions, under contracts entered into for such purposes, or through grants-in-aid to the commissions. The Secretary, in his discretion, may require the repayment of assistance provided under this subsection and prescribe the terms and conditions of such repayment.

Federal share of costs.

(b) For the period ending on June 30 of the second full Federal fiscal year following the date of establishment of a commission, the administrative expenses of each commission as approved by the Secretary shall be paid by the Federal Government. Thereafter, not to exceed 50 per centum of such expenses may be paid by the Federal Government. In determining the amount of the non-Federal share of such costs or expenses, the Secretary shall give due consideration to all contributions both in cash and in kind, fairly evaluated, including but not limited to space, equipment, and services.

Appropriation.

(c) There is hereby authorized to be appropriated $15,000,000 for the fiscal year ending June 30, 1966, and for each fiscal year thereafter through the fiscal year ending June 30, 1970, for the purposes of this section.

ADMINISTRATIVE POWERS OF REGIONAL COMMISSIONS

SEC. 506. To carry out its duties under this Act, each regional commission is authorized to—

(1) adopt, amend, and repeal bylaws, rules, and regulations governing the conduct of its business and the performance of its functions;

(2) appoint and fix the compensation of an executive director and such other personnel as may be necessary to enable the commission to carry out its functions, except that such compensation shall not exceed the salary of the alternate to the Federal cochairman on the commission and no member, alternate, officer, or employee of such commission, other than the Federal cochairman on the commission and his staff and his alternate, and Federal employees detailed to the commission under clause (3), shall be deemed a Federal employee for any purpose;

(3) request the head of any Federal department or agency (who is hereby so authorized) to detail to temporary duty with the commission such personnel within his administrative jurisdiction as the commission may need for carrying out its functions, each such detail to be without loss of seniority, pay, or other employee status;

(4) arrange for the services of personnel from any State or local government or any subdivision or agency thereof, or any intergovernmental agency;

(5) make arrangements, including contracts, with any participating State government for inclusion in a suitable retirement and employee benefit system of such of its personnel as may not be eligible for, or continue in, another governmental retirement or employee benefit system, or otherwise provide for such coverage of its personnel, and the Civil Service Commission of the United States is authorized to contract with such commission for continued coverage of commission employees, who at date of

commission employment are Federal employees, in the retirement program and other employee benefit programs of the Federal Government;

(6) accept, use, and dispose of gifts or donations of services or property, real, personal, or mixed, tangible or intangible;

(7) enter into and perform such contracts, leases, cooperative agreements, or other transactions as may be necessary in carrying out its functions and on such terms as it may deem appropriate, with any department, agency, or instrumentality of the United States or with any State, or any political subdivision, agency, or instrumentality thereof, or with any person, firm, association, or corporation;

(8) maintain an office in the District of Columbia and establish field offices at such other places as it may deem appropriate; and

(9) take such other actions and incur such other expenses as may be necessary or appropriate.

INFORMATION

SEC. 507. In order to obtain information needed to carry out its duties, each regional commission shall—

(1) hold such hearings, sit and act at such times and places, take such testimony, receive such evidence, and print or otherwise reproduce and distribute so much of its proceedings and reports thereon as it may deem advisable, a cochairman of such commission, or any member of the commission designated by the commission for the purpose, being hereby authorized to administer oaths when it is determined by the commission that testimony shall be taken or evidence received under oath;

(2) arrange for the head of any Federal, State, or local department or agency (who is hereby so authorized, to the extent not otherwise prohibited by law) to furnish to such commission such information as may be available to or procurable by such department or agency; and

(3) keep accurate and complete records of its doings and transactions which shall be made available for public inspection. Records.

PERSONAL FINANCIAL INTERESTS

SEC. 508. (a) Except as permitted by subsection (b) hereof, no State member or alternate and no officer or employee of a regional commission shall participate personally and substantially as member, alternate, officer, or employee, through decision, approval, disapproval, recommendation, the rendering of advice, investigation, or otherwise, in any proceeding, application, request for a ruling or other determination, contract, claim, controversy, or other particular matter in which, to his knowledge, he, his spouse, minor child, partner, organization (other than a State or political subdivision thereof) in which he is serving as officer, director, trustee, partner, or employee, or any person or organization with whom he is serving as officer, director, trustee, partner, or employee, or any person or organization with whom he is negotiating or has any arrangement concerning prospective employment, has a financial interest. Any person who shall violate the provisions of this subsection shall be fined not more than $10,000, or imprisoned not more than two years, or both. Penalty.

(b) Subsection (a) hereof shall not apply if the State member, alternate, officer, or employee first advises the regional commission involved of the nature and circumstances of the proceeding, application, request for a ruling or other determination, contract, claim, controversy, or other particular matter and makes full disclosure of

79 STAT. 569.

the financial interest and receives in advance a written determination made by such commission that the interest is not so substantial as to be deemed likely to affect the integrity of the services which the commission may expect from such State member, alternate, officer, or employee.

(c) No State member of a regional commission, or his alternate, shall receive any salary, or any contribution to or supplementation of salary for his services on such commission from any source other than his State. No person detailed to serve a regional commission under authority of clause (4) of section 506 shall receive any salary or any contribution to or supplementation of salary for his services on such commission from any source other than the State, local, or intergovernmental department or agency from which he was detailed or from such commission. Any person who shall violate the provisions of this subsection shall be fined not more than $5,000, or imprisoned not more than one year, or both.

Penalty.

Conflict-of-interest.

(d) Notwithstanding any other subsection of this section, the Federal cochairman and his alternate on a regional commission and any Federal officers or employees detailed to duty with it pursuant to clause (3) of section 10 shall not be subject to any such subsection but shall remain subject to sections 202 through 209 of title 18, United States Code.

(e) A regional commission may, in its discretion, declare void and rescind any contract or other agreement pursuant to the Act in relation to which it finds that there has been a violation of subsection (a) or (c) of this section, or any of the provisions of sections 202 through 209, title 18, United States Code.

76 Stat. 1121.

ANNUAL REPORTS

SEC. 509. Each regional commission established pursuant to this Act shall make a comprehensive and detailed annual report each fiscal year to the Congress with respect to such commission's activities and recommendations for programs. The first such report shall be made for the first fiscal year in which such commission is in existence for more than three months. Such reports shall be printed and transmitted to the Congress not later than January 31 of the calendar year following the fiscal year with respect to which the report is made.

TITLE VI—ADMINISTRATION

SEC. 601. (a) The Secretary shall administer this Act and, with the assistance of an Assistant Secretary of Commerce, in addition to those already provided for, shall supervise and direct the Administrator created herein, and coordinate the Federal cochairmen appointed heretofore or subsequent to this Act. The Assistant Secretary created by this section shall be appointed by the President by and with the advice and consent of the Senate and shall be compensated at the rate provided for level IV of the Federal Executive Salary Schedule. Such Assistant Secretary shall perform such functions as the Secretary may prescribe. There shall be appointed by the President, by and with the advice and consent of the Senate, an Administrator for Economic Development who shall be compensated at the rate provided for level V of the Federal Executive Salary Schedule who shall perform such duties as are assigned by the Secretary.

Assistant Secretary of Commerce, appointment.

78 Stat. 417.
5 USC 2211.

Administrator for Economic Development, appointment.

(b) Paragraph (12) of subsection (d) of section 303 of the Federal Executive Salary Act of 1964 is amended by striking out "(4)" and inserting in lieu thereof "(5)".

(c) Subsection (e) of section 303 of the Federal Executive Salary Act of 1964 is amended by adding at the end thereof the following new paragraph: 78 Stat. 417. 5 USC 2211.

"(100) Administrator for Economic Development."

ADVISORY COMMITTEE ON REGIONAL ECONOMIC DEVELOPMENT

SEC. 602. The Secretary shall appoint a National Public Advisory Committee on Regional Economic Development which shall consist of twenty-five members and shall be composed of representatives of labor, management, agriculture, State and local governments, and the public in general. From the members appointed to such Committee the Secretary shall designate a Chairman. Such Committee, or any duly established subcommittee thereof, shall from time to time make recommendations to the Secretary relative to the carrying out of his duties under this Act. Such Committee shall hold not less than two meetings during each calendar year.

CONSULTATION WITH OTHER PERSONS AND AGENCIES

SEC. 603. (a) The Secretary is authorized from time to time to call together and confer with any persons, including representatives of labor, management, agriculture, and government, who can assist in meeting the problems of area and regional unemployment or underemployment.

(b) The Secretary may make provision for such consultation with interested departments and agencies as he may deem appropriate in the performance of the functions vested in him by this Act.

TITLE VII—MISCELLANEOUS

POWERS OF SECRETARY

SEC. 701. In performing his duties under this Act, the Secretary is authorized to—

(1) adopt, alter, and use a seal, which shall be judicially noticed;

(2) hold such hearings, sit and act at such times and places, and take such testimony, as he may deem advisable;

(3) request directly from any executive department, bureau, agency, board, commission, office, independent establishment, or instrumentality information, suggestions, estimates, and statistics needed to carry out the purposes of this Act; and each department, bureau, agency, board, commission, office, establishment or instrumentality is authorized to furnish such information, suggestions, estimates, and statistics directly to the Secretary;

(4) under regulations prescribed by him, assign or sell at public or private sale, or otherwise dispose of for cash or credit, in his discretion and upon such terms and conditions and for such consideration as he shall determine to be reasonable, any evidence of debt, contract, claim, personal property, or security assigned to or held by him in connection with loans made or evidences of indebtedness purchased under this Act, and collect or compromise all obligations assigned to or held by him in connection with such loans or evidences of indebtedness until such time as such obligations may be referred to the Attorney General for suit or collection;

(5) further extend the maturity of or renew any loan made or evidence of indebtedness purchased under this Act, beyond the periods stated in such loan or evidence of indebtedness or in this

Act, for additional periods not to exceed ten years, if such extension or renewal will aid in the orderly liquidation of such loan or evidence of indebtedness;

(6) deal with, complete, renovate, improve, modernize, insure, rent, or sell for cash or credit, upon such terms and conditions and for such consideration as he shall determine to be reasonable, any real or personal property conveyed to, or otherwise acquired by, him in connection with loans made or evidences of indebtedness purchased under this Act;

(7) pursue to final collection, by way of compromise or other administrative action, prior to reference to the Attorney General, all claims against third parties assigned to him in connection with loans made or evidences of indebtedness purchased under this Act. This shall include authority to obtain deficiency judgments or otherwise in the case of mortgages assigned to the Secretary. Section 3709 of the Revised Statutes, as amended (41 U.S.C. 5), shall not apply to any contract of hazard insurance or to any purchase or contract for services or supplies on account of property obtained by the Secretary as a result of loans made or evidences of indebtedness purchased under this Act if the premium therefor or the amount thereof does not exceed $1,000. The power to convey and to execute, in the name of the Secretary, deeds of conveyance, deeds of release, assignments and satisfactions of mortgages, and any other written instrument relating to real or personal property or any interest therein acquired by the Secretary pursuant to the provisions of this Act may be exercised by the Secretary or by any officer or agent appointed by him for that purpose without the execution of any express delegation of power or power of attorney;

(8) acquire, in any lawful manner, any property (real, personal, or mixed, tangible or intangible), whenever deemed necessary or appropriate to the conduct of the activities authorized in sections 201, 202, 301, 403, and 503 of this Act;

(9) in addition to any powers, functions, privileges, and immunities otherwise vested in him, take any and all actions, including the procurement of the services of attorneys by contract, determined by him to be necessary or desirable in making, purchasing, servicing, compromising, modifying, liquidating, or otherwise administratively dealing with or realizing on loans made or evidences of indebtedness purchased under this Act;

(10) employ experts and consultants or organizations therefor as authorized by section 15 of the Administrative Expenses Act of 1946 (5 U.S.C. 55a), compensate individuals so employed at rates not in excess of $100 per diem, including travel time, and allow them, while away from their homes or regular places of business, travel expenses (including per diem in lieu of subsistence) as authorized by section 5 of such Act (5 U.S.C. 73b-2) for persons in the Government service employed intermittently, while so employed: *Provided, however*, That contracts for such employment may be renewed annually;

60 Stat. 810.

60 Stat. 808; 75 Stat. 339, 340.

(11) sue and be sued in any court of record of a State having general jurisdiction or in any United States district court, and jurisdiction is conferred upon such district court to determine such controversies without regard to the amount in controversy; but no attachment, injunction, garnishment, or other similar process, mesne or final, shall be issued against the Secretary or his property.

Nothing herein shall be construed to except the activities under this Act from the application of sections 507(b) and 2679 of title 28, United States Code, and of section 367 of the Revised Statutes (5 U.S.C. 316); and 62 Stat. 910, 984; 75 Stat. 539.

(12) establish such rules, regulations, and procedures as he may deem appropriate in carrying out the provisions of this Act.

PREVENTION OF UNFAIR COMPETITION

SEC. 702. No financial assistance under this Act shall be extended to any project when the result would be to increase the production of goods, materials, or commodities, or the availability of services or facilities, when there is not sufficient demand for such goods, material, commodities, services, or facilities, to employ the efficient capacity of existing competitive commercial or industrial enterprises.

SAVING PROVISIONS

SEC. 703. (a) No suit, action, or other proceeding lawfully commenced by or against the Administrator or any other officer of the Area Redevelopment Administration in his official capacity or in relation to the discharge of his official duties under the Area Redevelopment Act, shall abate by reason of the taking effect of the provisions of this Act, but the court may, on motion or supplemental petition filed at any time within twelve months after such taking effect, showing a necessity for the survival of such suit, action, or other proceeding to obtain a settlement of the questions involved, allow the same to be maintained by or against the Secretary or the Administrator or such other officer of the Department of Commerce as may be appropriate. 75 Stat. 47. 42 USC 2501 note.

(b) Except as may be otherwise expressly provided in this Act, all powers and authorities conferred by this Act shall be cumulative and additional to and not in derogation of any powers and authorities otherwise existing. All rules, regulations, orders, authorizations, delegations, or other actions duly issued, made, or taken by or pursuant to applicable law, prior to the effective date of this Act, by any agency, officer, or office pertaining to any functions, powers, and duties under the Area Redevelopment Act shall continue in full force and effect after the effective date of this Act until modified or rescinded by the Secretary or such other officer of the Department of Commerce as, in accordance with applicable law, may be appropriate.

TRANSFER OF FUNCTIONS, EFFECTIVE DATE, AND LIMITATIONS ON ASSISTANCE

SEC. 704. (a) The functions, powers, duties, and authorities and the assets, funds, contracts, loans, liabilities, commitments, authorizations, allocations, and records which are vested in or authorized to be transferred to the Secretary of the Treasury under section 29(b) of the Area Redevelopment Act, and all functions, powers, duties, and authorities under section 29(c) of the Area Redevelopment Act are hereby vested in the Secretary. 42 USC 2525.

(b) The President may designate a person to act as Administrator under this Act until the office is filled as provided in this Act or until the expiration of the first period of sixty days following the effective date of this Act, whichever shall first occur. While so acting such person shall receive compensation at the rate provided by this Act for such office. Acting Administrator, designation.

Effective date.

(c) The provisions of this Act shall take effect upon enactment unless herein explicitly otherwise provided.

Pending project applications.

(d) Notwithstanding any requirements of this Act relating to the eligibility of areas, projects for which applications are pending before the Area Redevelopment Administration on the effective date of this Act shall for a period of one year thereafter be eligible for consideration by the Secretary for such assistance under the provisions of this Act as he may determine to be appropriate.

(e) No financial assistance authorized under this Act shall be used to finance the cost of facilities for the generation, transmission, or distribution of electric energy, except on projects specifically authorized by the Congress, or to finance the cost of facilities for the production or transmission of gas (natural, manufactured, or mixed).

SEPARABILITY

SEC. 705. Notwithstanding any other evidence of the intent of Congress, it is hereby declared to be the intent of Congress that if any provision of this Act or the application thereof to any persons or circumstances shall be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder of this Act or its application to other persons and circumstances, but shall be confined in its operation to the provision of this Act or the application thereof to the persons and circumstances directly involved in the controversy in which such judgment shall have been rendered.

APPLICATION OF ACT

SEC. 706. As used in this Act, the terms "State", "States", and "United States" include the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and American Samoa.

ANNUAL REPORT

SEC. 707. The Secretary shall make a comprehensive and detailed annual report to the Congress of his operations under this Act for each fiscal year beginning with the fiscal year ending June 30, 1966. Such report shall be printed and shall be transmitted to the Congress not later than January 3 of the year following the fiscal year with respect to which such report is made.

USE OF OTHER FACILITIES

SEC. 708. (a) The Secretary is authorized to delegate to the heads of other departments and agencies of the Federal Government any of the Secretary's functions, powers, and duties under this Act as he may deem appropriate, and to authorize the redelegation of such functions, powers, and duties by the heads of such departments and agencies.

(b) Departments and agencies of the Federal Government shall exercise their powers, duties, and functions in such manner as will assist in carrying out the objectives of this Act.

(c) Funds authorized to be appropriated under this Act may be transferred between departments and agencies of the Government, if such funds are used for the purposes for which they are specifically authorized and appropriated.

APPROPRIATION

SEC. 709. There are hereby authorized to be appropriated such sums as may be necessary to carry out those provisions of the Act for which specific authority for appropriations is not otherwise provided in this Act. Appropriations authorized under this Act shall remain available until expended unless otherwise provided by appropriations Acts.

PENALTIES

SEC. 710. (a) Whoever makes any statement knowing it to be false, or whoever willfully overvalues any security, for the purpose of obtaining for himself or for any applicant any financial assistance under section 101, 201, 202, or 403 or any extension thereof by renewal, deferment or action, or otherwise, or the acceptance, release, or substitution of security therefor, or for the purpose of influencing in any way the action of the Secretary, or for the purpose of obtaining money, property, or anything of value, under this Act, shall be punished by a fine of not more than $10,000 or by imprisonment for not more than five years, or both.

(b) Whoever, being connected in any capacity with the Secretary, in the administration of this Act (1) embezzles, abstracts, purloins, or willfully misapplies any moneys, funds, securities, or other things of value, whether belonging to him or pledged or otherwise entrusted to him, or (2) with intent to defraud the Secretary or any other body politic or corporate, or any individual, or to deceive any officer, auditor, or examiner, makes any false entry in any book, report, or statement of or to the Secretary, or without being duly authorized draws any order or issues, puts forth, or assigns any note, debenture, bond, or other obligation, or draft, bill of exchange, mortgage, judgment, or decree thereof, or (3) with intent to defraud participates or shares in or receives directly or indirectly any money, profit, property, or benefit through any transaction, loan, grant, commission, contract, or any other act of the Secretary, or (4) gives any unauthorized information concerning any future action or plan of the Secretary which might affect the value of securities, or having such knowledge invests or speculates, directly or indirectly, in the securities or property of any company or corporation receiving loans, grants, or other assistance from the Secretary, shall be punished by a fine of not more than $10,000 or by imprisonment for not more than five years, or both.

EMPLOYMENT OF EXPEDITERS AND ADMINISTRATIVE EMPLOYEES

SEC. 711. No financial assistance shall be extended by the Secretary under section 101, 201, 202, or 403 to any business enterprise unless the owners, partners, or officers of such business enterprise (1) certify to the Secretary the names of any attorneys, agents, and other persons engaged by or on behalf of such business enterprise for the purpose of expediting applications made to the Secretary for assistance of any sort, under this Act, and the fees paid or to be paid to any such person; and (2) execute an agreement binding such business enterprise, for a period of two years after such assistance is rendered by the Secretary to such business enterprise, to refrain from employing, tendering any office or employment to, or retaining for professional services, any person who, on the date such assistance or any part thereof was ren-

dered, or within one year prior thereto, shall have served as an officer, attorney, agent, or employee, occupying a position or engaging in activities which the Secretary shall have determined involve discretion with respect to the granting of assistance under this Act.

PREVAILING RATE OF WAGE AND FORTY-HOUR WEEK

SEC. 712. All laborers and mechanics employed by contractors or subcontractors on projects assisted by the Secretary under this Act shall be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a—276a–5). The Secretary shall not extend any financial assistance under section 101, 201, 202, or 403 for such a project without first obtaining adequate assurance that these labor standards will be maintained upon the construction work. The Secretary of Labor shall have, with respect to the labor standards specified in this provision, the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 64 Stat. 1267; 5 U.S.C. 133z–15), and section 2 of the Act of June 13, 1934, as amended (40 U.S.C 276c).

49 Stat. 1011; 78 Stat. 238.

63 Stat. 108.

RECORD OF APPLICATIONS

SEC. 713. The Secretary shall maintain as a permanent part of the records of the Department of Commerce a list of applications approved for financial assistance under section 101, 201, 202, or 403, which shall be kept available for public inspection during the regular business hours of the Department of Commerce. The following information shall be posted in such list as soon as each application is approved; (1) the name of the applicant and, in the case of corporate applications, the names of the officers and directors thereof, (2) the amount and duration of the loan or grant for which application is made, (3) the purposes for which the proceeds of the loan or grant are to be used, and (4) a general description of the security offered in the case of a loan.

RECORDS AND AUDIT

SEC. 714. (a) Each recipient of assistance under this Act shall keep such records as the Secretary shall prescribe, including records which fully disclose the amount and the disposition by such recipient of the proceeds of such assistance, the total cost of the project or undertaking in connection with which such assistance is given or used, and the amount and nature of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

(b) The Secretary and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access for the purpose of audit and examination to any books, documents, papers, and records of the recipient that are pertinent to assistance received under this Act.

CONFORMING AMENDMENT

SEC. 715. All benefits heretofore specifically made available (and not subsequently revoked) under other Federal programs to persons or to public or private organizations, corporations, or entities in areas designated by the Secretary as "redevelopment areas" under section 5 of the Area Redevelopment Act, are hereby also extended, insofar as

75 Stat. 48.
42 USC 2504.

practicable, to such areas as may be designated as "redevelopment areas" or "economic development centers" under the authority of section 401 or 403 of this Act: *Provided, however*, That this section shall not be construed as limiting such administrative discretion as may have been conferred under any other law.

SEC. 716. All financial and technical assistance authorized under this Act shall be in addition to any Federal assistance previously authorized, and no provision hereof shall be construed as authorizing or permitting any reduction or diminution in the proportional amount of Federal assistance to which any State or other entity eligible under this Act would otherwise be entitled under the provisions of any other Act.

PLANNING REGION FORMED FOR CAROLINAS AND GEORGIA

The Governors of North Carolina, South Carolina and Georgia agreed today (Dec. 21) to link 159 counties in their states in an economic planning program to create new jobs and business in the Coastal Plains Region.

The economic development boundaries were agreed to by Governors Dan K. Moore of North Carolina, Robert E. McNair of South Carolina and Carl Sanders of Georgia during a ceremony at the U. S. Department of Commerce.

The Region was established under the provisions of the Public Works and Economic Development Act of 1965, which authorizes the Department of Commerce to aid areas of the Nation with lagging economies.

The Coastal Plains Region includes 45 counties in North Carolina, 28 counties in South Carolina and 86 counties in Georgia.

Secretary of Commerce John T. Connor officially designated the multi-state Region at the ceremony, which was also attended by members of the Congressional delegations of the three states.

Ross D. Davis, Assistant Secretary of Commerce for Economic Development, spoke during the program about the philosophy and aims of the multi-state regional approach to economic development.

(more)

Davis said today's designation clears the way for forming a Regional Economic Development Commission. Federal funds will be available to pay the administrative costs of the Commission during the remainder of this fiscal year and for its first two full years of operation.

The Commission, when established, will consist of representatives of the three states and a Federal Co-chairman.

The Federal Co-chairman, who will be appointed by President Johnson, will call the formal organizational meeting of the Commission. The state members will elect a Co-chairman.

The Commission, which will have a staff of about 25 persons, will have its main office in Washington, D. C., and a field office in the Region.

The Commission will draw up long-range plans for developing the human and natural resources of the Region. Programs recommended by the Commission may be financed by private capital sources or from public funds. In some cases these programs may require additional legislative action.

Some of the characteristics of the Region are low family income, out-migration of labor and capital, and the loss of jobs through the mechanization of farming.

The region includes some areas with healthy economies which can help stimulate the growth of those sections with the most severe problems.

US/COMM/DC/47316
12/21/66

UNITED STATES DEPARTMENT OF

COMMERCE

John T. Connor, Secretary Washington, D.C.

Office of the Secretary

REMARKS BY SECRETARY OF COMMERCE JOHN T. CONNOR PREPARED FOR DELIVERY AT THE CEREMONY DESIGNATING THE COASTAL PLAINS ECONOMIC DEVELOPMENT REGION AT THE DEPARTMENT OF COMMERCE, WASHINGTON, D. C., 11:30 A. M., WEDNESDAY, DECEMBER 21, 1966

I am very pleased to welcome today the Governors of Georgia, North Carolina and South Carolina and the members of Congress who so ably represent these three States. I am also happy to greet our other distinguished guests who share our interest in regional economic development through the new Federal-State cooperative effort represented by Regional Commissions.

Today marks the first step towards building regional economic development programs for the Coastal Plains. With the concurrence of the three great States of Georgia, North Carolina and South Carolina, it is my duty to designate this area as the Coastal Plains Economic Development Region and to invite the States to join with the Federal Government in forming a Regional Commission.

With each new economic development region that we designate, we are moving forward towards fulfilling President Johnson's determination that every region realize its fullest potential to share in, and contribute to, the prosperity of the entire Nation.

As our Nation has grown in size and complexity, its regions have tended to be characterized more and more by their separate economic problems and opportunities. It is becoming increasingly evident that to overcome their own special problems, to realize their own highest development, and to make their full contribution to the Nation, the people of each region must work and plan together toward the realization of feasible goals based on careful analysis of their own resources and the national resources in which they share.

We must also remember that what we are talking about here is in the national interest, as well as regional. The prosperity of every region is tied to that of every other region--and the economic health of the entire Nation is tied to that of its every part. Therefore, we know that assistance which the Federal Government gives to a region in this work of planned development should be returned manyfold. Encouraging the efficient use of unexploited and under-utilized manpower and other resources is, in fact, one of the best investments the Nation can make.

Recognition that regions sharing common characteristics and common problems and opportunities cross State and county boundaries has brought us to a new venture in Federal-State cooperation. In this program the Federal Government does not work separately with the individual States but works as a partner with the States to serve our common purpose.

We feel assured that the Coastal Plains is a region satisfying the intent of the legislation. We are confident that a Regional Commission formed for the Coastal Plains will have great and challenging work to do, with every prospect of success.

Therefore, in keeping with Section 501 of the Public Works and Economic Development Act, I do hereby designate the Coastal Plains Economic Development Region, consisting of 159 counties in the States of Georgia, North Carolina and South Carolina as set forth in a document which I shall presently sign and shall invite the appropriate officials of the States to sign, as evidence of their concurrence in this action.

The Signing of the Document Designating the Coastal Plains Economic Development Region

Adjournment

"The experience of the last 30 years has shown conclusively that the increasing prosperity of any region of this country increases the prosperity of the Nation . . . We have the resources and the skill to extend American abundance to every citizen and every region of this land. This program will help give us the instruments to match our determination to eliminate poverty in America."

President Lyndon B. Johnson
Message on Area and Regional Economic Development
March 25, 1965

"Only through a creative and cooperative partnership of all private interests and all levels of government—a creative Federalism—can our economic and social objectives be attained. This partnership has written the story of American success. And a new vitalization of this partnership and a new confidence in its effectiveness have produced the extraordinary economic and social gains of recent years."

President Lyndon B. Johnson
The Economic Report for 1966
January 27, 1966

DEPARTMENT OF COMMERCE
UNITED STATES OF AMERICA

STATEMENT BY ROSS D. DAVIS, ASSISTANT SECRETARY OF COMMERCE FOR ECONOMIC DEVELOPMENT, AT CEREMONIES DESIGNATING THE COASTAL PLAINS ECONOMIC DEVELOPMENT REGION AT 11:30 A.M. WEDNESDAY, DEC. 21

The law which provides the occasion for this ceremony furnishes the means for the States and the Federal Government to work together in assisting a region to achieve its highest economic potential. This Act authorizes the Secretary of Commerce to designate multi-state economic development regions with the concurrence of the States involved and to invite these States to join the Federal Government in forming a regional commission.

A regional commission is composed of one Federal member, nominated by the President and confirmed by the Senate, and one member from each of the participating States -- the Governor or his designee, or such other person as may be provided by State law. The Federal member serves as Federal co-chairman and one of the State members is elected by his colleagues to serve as State co-chairman.

Once the State members have been appointed, and the Federal co-chairman has been confirmed by the Senate, the regional commission can formally be established and begin operations.

The work of each regional commission will focus on developing and implementing a program to increase the economic growth of the region. The regional commission will first engage in planning - to determine what ought to be done to advance the region's economy. It will then be able to develop and implement a program to carry out these plans. In short, the Commission is both a planning and an

action body. To plan without considering implementation is just as futile as to enact programs without considering their overall effect.

In its planning role, a regional commission must thoroughly examine the regional economy to determine specific problems, plans and potential for future development. Based upon this increased understanding of the area, the Commission is then able to define long-range goals and to determine a preferred strategy for achieving these goals in the region.

But planning does not end with identifying the goals and strategies. This would be planning for planning's sake and would have no value in meeting present and future needs. In addition, the Commission must concern itself with formulating the programs to reach its goals. In this task, the Commission should consider the whole spectrum of Federal, State and local activities relevant to economic development. The Commission should develop close and continuing relations with agencies at all levels of government and encourage these agencies to consider the goals and strategy of the Commission when approving projects in the region. Major program areas which would be helpful to a region's economic development include: (1) manpower development and utilization; (2) infrastructure development; (3) natural resources development and conservation; (4) recreation; and (5) expanding private economic activity.

Part of the planning activity of a commission also involves initiating ideas for programs having region-wide significance and suggesting to Federal and State agencies and the Congress the ways in which these programs could be carried out. These recommendations include both suggestions for modifying existing programs and proposing ideas for new activities.

As President Johnson said at Ann Arbor, Michigan, in 1964, the solution to our problems "does not rest on a massive program in Washington, nor can it rely solely on the strained resources of local authority. They require us to create new concepts of cooperation, a creative federalism, between the national capital and the leaders of local communities." The regional commission is one expression of this concept of creative federalism. The States can contribute unique insights into the nature of the region's problems and opportunities. Through the Commission, the programs of the entire Federal Government can be focused and mobilized to solve these problems and, with State and private resources, realize these opportunities.

Those of us in the Department of Commerce who have special concern with economic development look forward to working with you to advance the economic welfare of the Coastal Plains Economic Development Region and thus to advance the economic growth of our nation as a whole.

WASHINGTON, D.C. 20230

February 28, 1967

Miss Louise Cole
Southern Regional Council, Inc.
5 Forsythe Street, N. W.
Atlanta, Georgia 30303

Dear Miss Cole:

This is in response to your letter of February 15, 1967.

Five Economic Development Regions have been designated under Title V of the Public Works and Economic Development Act of 1965. They are the Ozarks, New England, Upper Great Lakes, Four Corners, and Coastal Plains Regions.

I am enclosing a press kit on the designation of the Coastal Plains Region and maps of the other four Regions.

The Ozarks Regional Commission was formally organized on September 7, 1966. It hopes to have a regional plan ready by mid-summer. The other four Commissions are in varying stages of the organizational process.

Other questions posed by your letter are academic at this time.

Sincerely,

Rose McKee

NEWSLETTER

ATLANTA REGION METROPOLITAN PLANNING COMMISSION
900 GlennBuilding / Atlanta, Georgia 30303

September, 1967

Attention Legislators

An ARMPC new report - "MONEY AND LOCAL GOVERNMENT" available in September

Source materials reviewed by attorneys, Alston, Miller, Gaines, strongly support the following:

- Creation of an additional major source of revenue for local governments coupled with full-value property assessment procedures.
- Increase in or complete removal of constitutional and statutory debt limitations on local governments.
- No further exemptions from property taxation by State law.
- Removal of unnecessary legislation.

Facts and Figures

1966 FBI Uniform Crime Report shows the following rates of increase:

U. S.	10.2%
Southern States	13.7%
Georgia	9.1%
Atlanta area	6.2%

Recent State Highway traffic counts indicate in excess of 38,000 cars in and out of the Airport each day.

Dave Slater Heads SE/AIP Atlanta Offered as 1968 Conference Site

At 3-day annual conference in Greensboro. Sidney Thomas, Jr., Columbia, S. C., Vice President, and Bert Winterbottom, Greenville, S. C., Secretary-Treasurer.

Conference featured travel throughout Piedmont region of North Carolina -- solid waste disposal and metro airport planning among topics discussed.

National Association of Real Estate Editors

Conducting survey on population movements -- WAII-TV coordinated round-table discussion of Atlanta area on September 5. Glenn Bennett representing ARMPC and Atlanta Chamber.

Schedule

Sept. 5-15	- Community Development Workshop. University of Georgia Center for Continuing Education, Athens.
Sept. 11-15	- Tech's Summer Institute on Application of Planning Principles to Rural-Urban Change. (2nd Session)
Sept. 12	- Airport Development Coordinating Committee, 5:00 P.M., Airport Board Room. Followed by dinner at Air Host Inn, sponsored by ARMPC.
Sept. 14-15	- Georgia Regional Executive Directors Association (GREDA), Statesboro, Georgia.
Sept. 19	- TCC, 2:00 P.M.
Sept. 21	- Luncheon for Planners, at Wesley Woods, 1825 Clifton Road, N. E., Decatur. Speaker: Scott Houston. 12:30 P.M.
Oct. 1-6	- American Institute of Planners, national convention, Washington, D. C.

Corporate Square

Hard-hat luncheon featured ground-breaking by proxy (video tape) for $22 million office park at N. E. Expressway and North Druid Hills Road. Design looks good - "kiosks" and all!

In Memoriam

Dennis O'Harrow

Executive Director of American Society of Planning Officials 1953-1967

ARMPC Official Population Estimates As of April 1, 1967

Clayton County	75,300
Cobb County	167,600
DeKalb County	336,800
Fulton County	605,700
Gwinnett County	56,600
SMSA Total	1,242,000
City of Atlanta	513,200
Fulton part	470,600
DeKalb part	42,600

These "best current estimates" grew out of in-depth study of past procedures and assumptions.

ARMPC Orients HUD, Atlanta Housing Staff

Briefed on scope, function, understanding of regional planning. Representatives from HUD: Joe Errigo, summer planning intern; Harold Henn, summer planning intern; Ernest Marsolan, urban planner. AHA urban renewal trainees: James Bing, Darryl Chaney, Curtis Parrish, and Shelley Stanley.

DeKalb County, MAPCO Sign Contract

For topographic maps of entire county. At a scale of 1" = 200', using ARMPC aerial photography.

Referrals

Cobb County - Phase I of County-Wide Sewer System.

Gwinnett County - Extension of Water Lines.

Staff Roundup

Jeff Wingfield, Roy Newsome in St. Louis for progress report from Horner-Shifrin, consulting engineers. Nearing completion of existing water and sewer systems inventory -- basic findings to be issued in memorandum before end of year.

ARMPC employees to resume studies -- Don Hartman at University of Tennessee, George Simpson at Columbia University, Tim Urban at University of North Carolina.

Metropol Review

Clinton Chafin, Metropol Chairman, attended 3-week police administration seminar at Harvard.

Metropol and Georgia Police Academy to initiate a 2-week recruit training school beginning October 2. New sessions to open the first Monday of each month except December.

Transportation Planning Process in Metro Atlanta - Present and Future

Sponsored by ARMPC and State Highway Department on September 12, at 11:00 A.M., in the Board Room of the Highway Department. Purposes of meeting:

- Assessment of current eligibility of local governments and agencies for federal capital grants.
- Information on procedures and progress in transportation planning.
- Discussion of future arrangements for permanent transportation planning procedures involving Highway Department, local governments, ARMPC, MARTA, and Atlanta Transit System.

NATIONAL GROWTH THROUGH REGIONAL DEVELOPMENT

U.S. DEPARTMENT OF COMMERCE
John T. Connor, Secretary

Ross D. Davis, Assistant Secretary
and Director of Economic Development

"The experience of the last 30 years has shown conclusively that the increasing prosperity of any region of this country increases the prosperity of the Nation. . . . We have the resources and the skill to extend American abundance to every citizen and every region of this land. This program will help give us the instruments to match our determination to eliminate poverty in America."

President Lyndon B. Johnson
Message on Area and Regional Economic Development
March 25, 1965

The Regional Problem

In 1965 Congress authorized a new program for promoting the economic development of those regions of the United States which lag behind the Nation as a whole. The basic premise of this new program is that certain regions of our Nation are faced with common economic problems which extend beyond several State boundaries and which require region-wide solutions. The progress is based upon lessons learned from the county-by-county approach, which has proven inadequate for problems that pervade much larger areas. When poverty or stagnation strikes a large region, the road to prosperity lies beyond the efforts of local communities, no matter how valiant those efforts may be. In such a case, the key to growth lies in a region-wide approach. The obstacles to growth which are common to an entire region must be removed if the communities within a region are to prosper.

The Regional Approach

Regional problems are complex and varied. Some regions are remote from major market areas and have never fully participated in our national prosperity. Another region may be highly developed but also marked by a slow rate of growth—its industries may have lost their competitive advantage over those in other regions. Again, a regional economy may have been based largely on resources that have suffered serious depletion.

But whatever the reason, the Congress recognized that there are some economic problems which are less than national but greater than local in scope. Moreover these problems do not often coincide with State boundaries but are multi-state and regional in nature.

The approach adopted by the Congress was to create regional institutions to deal with regional problems. Title V of the Public Works and Economic Development Act authorizes the establishment of Regional Commissions in those regions where economic development lags behind the Nation as a whole. It will be the job of each Commission to help the region realize its full economic potential. The Department of Commerce, through the Office of Regional Economic Development, provides financial assistance and supporting services for the planning and research aspects of the program.

Objectives of Regional Development

Regional development seeks to remove the obstacles to regional growth and thus increase our national prosperity. Depressed regions are a drag on the entire economy. They require a high proportion of welfare expenditures. They do not constitute a ready market for the products of other regions. We must therefore provide these regions with the tools to plan and achieve their own advancement. As President Johnson has said, ". . . the increasing prosperity of any region of this country increases the prosperity of the Nation. We have truly become a national economy."

Another aim of regional development is to see that government spending at the Federal, State, and local levels serves as a maximum stimulus and support to sound regional growth. The principal contribution to growth is expected to come from the more effective utilization of existing government programs.

The need to find the most effective methods of allocating our tax dollars in relation to the benefits sought is particularly urgent in those regions whose economies are operating at less than full potential. These are the areas which can least afford a haphazard management of expenditures in the public sector.

Underlying all regional planning and development is concern for people. Its basic purpose is to help assure that the opportunities for human development and achievement are available as widely as possible. In doing this, it builds on the diversity of the Nation's resources, both human and natural. This diversity, within a sound national economy, strengthens democracy and helps keep it keen and responsive.

Designation of Regions

Under provisions of Title V of the Public Works and Economic Development Act, the Secretary of Commerce designates, with the concurrence of the affected States, those regions "which have lagged behind the whole Nation in economic development." A region is defined on the basis of common geographic, cultural, historical, and economic relationships. There are a number of possible ways in which a region may lag behind. Some are mentioned in Title V, such as low income, high unemployment, slow growth, a high rate of out-migration, and inadequate facilities. To be designated, a region must meet the two tests: Common relationships and economic lag.

Establishment of Commissions

Once a region has been designated, the States of that region are invited to participate in a Regional Commission. Each State has one member, usually the Governor or his designee, and an alternate member.

The President appoints, with Senate confirmation, a Federal member to serve as Federal cochairman of the Commission and an alternate Federal member. The State members elect a State cochairman. Actions of the Commission require the vote of the Federal cochairman and a majority of the State members. The Commissions are authorized to employ full-time staffs to assist them in their work.

Functions of a Commission

Each Commission will analyze the problems of its regional economy and develop an overall strategy for enhancing the growth of the region. It will:

- Identify the reasons why the region's economy is lagging behind the Nation;
- Identify the human and physical resources available within the region;
- Determine the overall development goals for the region based upon the region's potentialities;
- Develop alternative programs for reaching those goals and identify what needs to be done by government and private enterprise;
- Work with Federal, State, and local governments for the implementation of the Commission's recommendations.

The planning activities of the Commission will be a continuous process rather than a one-time effort. Strategies, goals, and priorities will undergo constant revision and adjustment as experience dictates.

Financial Assistance

Title V authorizes the Federal Government to provide planning, research, and technical assistance to the Regional Commissions and to pay the administrative expenses of the Commissions for their first two to three years. Thereafter the Federal Government can contribute 50 percent.

The Commissions employ staffs of approximately 20 to 25 persons. In addition, the Department of Commerce provides each Commission with research and technical and planning assistance. This may be provided by staff of the Department and by contracts with private firms or institutions.

Office of Regional Economic Development

The Office of Regional Economic Development (ORED) reports directly to the Assistant Secretary of Commerce and Director of Economic Development, who also supervises the Economic Development Administration (EDA).

The basic job of ORED is to:

- Help establish the Regional Commissions;
- Provide each Commission with technical and support services;
- Recommend policies and procedures for regional development;
- Maintain liaison between each Commission and other agencies of the government;
- Act as a clearing house of information on regional development;
- Assist the Federal Cochairman of each Commission;
- Review and analyze the recommendations of each Commission.

DESIGNATION OF THE

COASTAL PLAINS ECONOMIC DEVELOPMENT REGION

WHEREAS, the Secretary of Commerce is authorized by Title V of the Public Works and Economic Development Act of 1965 to designate appropriate "economic development regions" within the United States with the concurrence of the States in which such regions will be wholly or partially located; and

WHEREAS, the Secretary of Commerce has found that portions of the States of Georgia, North Carolina, and South Carolina comprise a region, hereinafter specifically defined, (a) whose areas are related geographically, culturally, historically, and economically, (b) which is contained within contiguous States of the United States, and (c) which has lagged behind the whole nation in economic development; and

WHEREAS, the States of Georgia, North Carolina, and South Carolina have accepted the invitation of the Secretary of Commerce to establish a multistate regional economic development commission to be known as the Coastal Plains Regional Commission;

NOW, THEREFORE, FIRST, the Secretary of Commerce hereby designates the Coastal Plains Economic Development Region, to include initially those counties enumerated in the attachment hereto; and

SECOND, the undersigned hereby concur in such designation on behalf of their respective States, and agree that an authorized representative of each State will meet at the call of the Federal Cochairman, following his appointment by the President by and with the advice and consent of the Senate, for the purpose of establishing the Coastal Plains Regional Commission in accordance with the provisions of Title V of the Public Works and Economic Development Act of 1965.

IN WITNESS WHEREOF, the undersigned, duly authorized, do sign this designation on this day of .

U.S. DEPARTMENT OF COMMERCE

COASTAL PLAINS ECONOMIC DEVELOPMENT REGION
FACT SHEET, BASED ON 1960 CENSUS

79,493 square miles in the Coastal Plains Region
137,613 square miles total territory in North Carolina, South Carolina and Georgia

10,881,865 persons in the three States
4,987,115 persons in the Region

79 persons per square mile in the three States
63 persons per square mile in the Region

763,194 out-migration from the three States from 1950 to 1960
507,079 out-migration from the Region from 1950 to 1960

$3,459 median family income in Region
$5,660 median family income in U.S.

Region is primarily an agricultural area with tobacco, cotton and peanuts as the three major crops. Advance in mechanization of farming has taken jobs of many small farmers and farm workers. This trend is expected to continue.

Some of the more important industries which have a potential for development in the Region include: food processing, wood processing, seafood processing, tourism and recreation, chemicals, transportation, minerals, electronics and metals fabrication.

Designation by Secretary John T. Connor, with concurrence of the States, in accordance with the provisions of the "Public Works and Economic Development Act of 1965," (PL 89-136).

REGIONAL PLANNING AND DEVELOPMENT COMMISSIONS

In the nationwide concern for the alleviation of economic hardship, it has become apparent that hard core areas of poverty and lagging development lie in small towns and farm communities of the nation as well as in major urban centers. Commonly cited illustrations, for example, are the Appalachian hollow and the small town that once served as the hub of commercial activity and supplied the needs of the surrounding countryside but is now steadily falling farther behind its bigger competitor on down the highway.

An effective attack on the problems of underdeveloped areas, urban or rural, requires action by local, state, and federal governments in partnership with the private sector of the economy. Local governments are obviously unable to cope on their own with the root causes of poverty and economic underdevelopment. On the other hand, they can take many steps to help their communities become more attractive as places in which to live and carry on productive enterprises. The trouble is, local governments in many areas of sparse population and after years of declining activity have limited fiscal and human resources to draw upon. Such resources are vital, just to take advantage of assistance programs increasingly available from state and federal governments. Moreover, the geographic jurisdiction of individual local units of government, even as broad as the county, is frequently not large enough to constitute a viable base for economic development.

Rural farm and nonfarm communities in a number of states are now moving into better positions to overcome these basic inadequacies of small communities, with the assistance of state legislation and state technical and financial assistance. In such states as Wisconsin, Georgia, Tennessee, and Missouri, they have undertaken to pool the financial and human resources of local communities over a broader yet essentially homogeneous area, for the purpose of studying economic and social needs and resources, making plans for best development of their resources, and acting cooperatively, usually through existing units of local government, to carry out the plans. The instrument for doing this is an areawide planning and development commission, representing the local governments of the area and employing a trained technical staff equipped to develop workable long range plans and work closely and effectively with community organizations, public and private, in carrying them out.

A major effort to help underdeveloped areas has at the same time been mounted by the federal government. The Economic Development Administration, as did the predecessor Area Redevelopment Administration, aim at providing economic stimulants through public works loans and grants. The Appalachian Regional Commission focuses on the economic and social problems of an area covering largely mountainous territory and small towns of parts of 12 states. The Economic Opportunity Act is directed toward rooting out and preventing poverty wherever it exists, and was amended in 1965 with specific direction to see that appropriate resources are devoted to the

poverty-stricken of both rural and urban areas. These programs are in addition to Department of Agriculture programs aimed basically at raising the income and improving the lot of the individual farmer and rural resident, and the Department's more recent efforts through its rural community development service to provide technical assistance to farm communities in planning and developing their local economies. Finally, the Administration proposed to the Congress in 1966 a Community Development District program, under which rural communities would be given incentives and assistance to engage in orderly planning for the development of large rural areas.

Certain problems of interlevel and interprogram coordination have emerged from these new federal and state efforts. One is the danger that many different state, local, and federal programs in the same basic field--physical, economic, and social development--will exhaust the leadership and organizational resources available in the rurual communities. Another problem is the likelihood of overlapping, confusing, and perhaps contradictory requirements for local communities to comply with in order to take advantage of programs offered by federal and state governments. Thus, for example, the principal program under the Economic Opportunity Act--the Community Action Program--is administered at the local and multi-county level through community action agencies, pursuant to organization and procedural requirements set forth in detail by the Office of Economic Opportunity. The Economic Development Administration has its own requirements for participation in its areawide program of stimulating loans and grants. The Appalachian Regional Development Act sets forth still additional requirements for local development districts. In each case, however, the governor of the state has, or may have, a hand in designating or approving designation of the boundaries of the respective development districts, and thus the state has leverage to effect some coordination.

It was in consideration of these conditions and the need to provide the framework for most effective use of limited resources, particularly in nonmetropolitan areas, that the Advisory Commission on Intergovernmental Relations in its 1966 report on Intergovernmental Relations in the Poverty Program made the following recommendation:

> ...that States authorize and provide financial incentives for creation and operation of multi-purpose regional public agencies in non-metropolitan areas to undertake physical, economic and human resource planning and development programs (including community action, economic and rural development, and areawide planning) over multi-county areas, particularly those areas in which local institutions have been unwilling or unable to respond to existing needs.
>
> The Commission further recommends that where States have taken such action, the head of each Federal department and agency administering grants for physical,

economic and human resource planning and development be required, by statute or Executive Order, to: (a) require use of the geographic base established pursuant to such State action as a condition of Federal grants to such area; (b) utilize, to the maximum extent feasible, such multi-purpose agencies as the recipients of such grants; and (c) where other than the multi-purpose agency is used, require establishment of adequate checkpoint procedures to assure program coordination with, and the maximum use of the governing body, technical staff, and physical facilities of such multi-functional agencies.

The following draft statute would provide legislative authority and financial incentives for carrying out this recommendation at the state and local levels. To some extent it reflects experience in Georgia with areawide planning and development commissions. Some of these commissions have operated as community action agencies under the Economic Opportunity Act and the governor has also indicated that he will designate the commissions to serve as development districts under the Economic Development Act, and, if passed, the Community Development District Act of 1966. Like the Georgia experience, in addition, the statute provides for state matching grants to encourage establishment and assist in operation of the areawide commissions. The draft act also reflects to some degree reference to the Wisconsin regional planning law, the Missouri state and regional planning and community development act, and the Tennessee economic development district act. A section-by-section summary follows.

After the declaration of purpose (section 1) and definitions (section 2), the statute makes the governor responsible for laying out multi-county planning and development districts (section 3) and for establishing commissions to carry on the planning and development functions in the districts (section 4). State stimulation for formation and operation of the districts is provided by authorizing state appropriations to match the local contribution up to a specified maximum (subsection 6(g)). Thus the statute gives the state some basic duties and responsibilities for the regional approach to economic and social planning and development.

At the same time, the act places major responsibility on local units of government in creation and operation of the commissions, reflecting the need to enlist their active support and participation. It makes county governing bodies responsible for initiating the designation by the governor of the development districts (subsection 3(a)), and all local units of general government for determining among themselves the composition of the commissions, subject to the requirement that commission members must be local elected officials (subparagraph 4(l)).

In the belief that states may differ as to the degree to which they wish to make the commission capable of carrying on operating and construction activities on their own, two basic alternatives are

presented with respect to the powers of the commissions. The first (section 5) empowers a commission to perform planning activities and, under contract or agreement with one or more local units, administer on their behalf programs available under federal planning and development legislation. The latter include community action and other activities under the Economic Opportunity Act and public works facilities construction under the Economic Development Act. Financing of the commission (section 6) is limited essentially to dues assessed against the local units of government, charges for special services, federal grants, state incentive matching grants, and revenues received from local units under contracts or agreements to administer federal programs for them.

The second alternative authorizes the same planning activities as under the first, but in addition, in bracketed subparagraphs of section 5, empowers a commission to act on its own in conducting operating and construction programs under federal and state development legislation. Bracketed subsections of section 6 give the commissions powers of property taxation, borrowing, and special assessments to support their direct operating and construction responsibilities.

Other provisions are the same under both alternatives. The governor is empowered to designate, unless precluded specifically by federal law, regional planning and development districts to serve as planning and development districts for purposes of federal planning and development programs. This provision, plus the provision for the commissions to act either on their own or on behalf of local governments in administering state and federal grants (subparagraph 5(2)), would provide the framework for having federal and state planning and development programs administered within the same geographic boundaries and making most effective use of leadership and staffing. The commissions are also empowered to assist state agencies in providing technical assistance to local governments, for example, assisting the state office of economic opportunity in providing technical assistance under the Economic Opportunity Act (subparagraph 5(2)).

Suggested Legislation

[Title should conform to state requirements. The following is one suggestion: "An act providing for the establishment of multi-county regional planning and development commissions."]

(Be it enacted, etc.)

1 Section 1. Purpose. The legislature finds that: (1) many
2 citizens of the state, particularly those residing outside of
3 major urban centers, are not able to participate fully in the
4 economic opportunities afforded to other citizens, largely

5 because many of these areas are economically and physically
6 underdeveloped; (2) despite the best efforts of local units of
7 government, these areas are in need of assistance in planning
8 and developing their economic, physical, and human resources;
9 (3) successful achievement of these objectives requires a com-
10 prehensive, coordinated, and orderly program by which the re-
11 sources of a number of communities may be pooled to overcome
12 the effects of sparsity of population and inadequacies of eco-
13 nomic and other resources; (4) the Congress has enacted a
14 number of laws, including the Economic Opportunity Act, [the
15 Appalachian Regional Development Act[1]], the Public Works and
16 Economic Development Act, [and the Community Development Dis-
17 trict Act[2]] which provide assistance in carrying out planning
18 and development activities to meet the needs of the citizens
19 and to more fully develop areas of lagging growth; (5) these
20 federal laws have separate and different requirements as to
21 the organizational structure and geographic areas of local or
22 areawide units administering their programs, with consequent
23 overlapping and confusion and excessive demands on local lead-
24 ership and staff resources; and (6) the assistance of the state
25 is needed to make the most effective use of these and other
26 programs in organizing and administering programs to meet the
27 needs of the citizens of such areas. It is the purpose of this
28 act, therefore, to provide more effective means and incentives
29 for planning and development of the physical, economic, and
30 human resources of the state, including a regional framework
31 for effective execution and coordination of federal planning
32 and development programs.

1 Section 2. Definitions. As used in this act:

2 (1) "Governing body" means the board, body, or persons in
3 which the powers of local units are vested.

4 (2) "Local units of government" or "local units" include

---

1. Applicable to 12 states affected by the Appalachian Regional Development Act.

2. Inclusion is conditioned on passage of Community Development District Act.

5 cities, villages, towns, counties [enumerate other units of
6 general local government].
7 (3) "Population" means the number of residents as shown by
8 the most recent nationwide census of population.
9 (4) "District" means an area of two or more contiguous
10 counties designated by the governor as a regional planning and
11 development district pursuant to section 3 of this act.
12 (5) "Commission" means a regional planning and development
13 commission established pursuant to section 4 of this act.
1 Section 3. Designation of Regional Planning and Develop-
2 ment Districts. (a) The governor may designate regional plan-
3 ning and development districts when he finds the following
4 conditions exist: (1) the governing bodies of two or more
5 contiguous counties signify by resolution that they desire
6 designation of such counties as a district for purposes of this
7 act; (2) the public has had an opportunity to register its
8 views on the proposed creation of such a district, either at a
9 public hearing held by the governing bodies upon adequate public
10 notice prior to the adoption of the resolution, or through such
11 other means as the governor shall find satisfactory; (3) there
12 exists within the proposed district a clear need to plan and
13 develop its physical, economic, and social resources, and the
14 area contains adequate financial and other resources to sup-
15 port successful achievement of these objectives, including a
16 minimum population of [ ], but the governor may waive such
17 population limitation if he finds that the purposes of this act
18 require such action; (4) the area within the proposed district
19 has sufficient elements of homogeneity based upon, but not
20 limited to, such considerations as topographic and geographic
21 conformations, extent of urban development, the existence of
22 special or acute agricultural, forestry, conservation or other
23 rural problems, uniformity of social or economic interests and
24 values, park and recreational needs, civil defense, or the
25 existence of physical, social, and economic problems of a
26 regional character; and (5) the proposed district meets such
27 other reasonable and necessary general conditions, standards,

28 and criteria as the governor may establish to further the pur-
29 poses of this act. In establishing standards the governor
30 shall afford all affected parties adequate notice and an oppor-
31 tunity to present relevant information.
32 (b) Regional planning and development districts designated
33 by the governor under this section shall be used as the basis
34 for proposing or designating areas for the purposes of the
35 following federal acts, to the extent not precluded by such
36 acts, unless the governor finds it necessary to waive or re-
37 vise the districts to fulfill the purposes of this act: (1)
38 the Economic Opportunity Act of 1964; (2) section 403 of the
39 Public Works and Economic Development Act of 1965; (3) section
40 301 of the Appalachian Redevelopment Act of 1965; [(4) section
41 3 of the Community Development District Act of 1966 (S. 2934)[3]];
42 and (5) such other federal acts, existing or hereafter enacted,
43 as may authorize financial assistance for undertaking physical,
44 economic, and human resource planning and development programs.
45 (c) The governor may, after consultation with the govern-
46 ing bodies of the counties involved, revise the designation of
47 districts as required to reflect changing conditions or other-
48 wise to fulfill the purposes of this act.
49 (d) The [state planning office, office of local affairs,
50 or other appropriate state agency] may assist interested local
51 units in arranging for designation of a planning and develop-
52 ment district and in establishing a regional planning and de-
53 velopment commission as provided in sections 3 and 4 of this
54 act. All departments and agencies of the state and any poli-
55 tical subdivisions and public authorities thereof, are author-
56 ized and directed to provide such assistance and data as may
57 be needed in carrying out the purposes of this act, including
58 designation of districts and establishment of commissions.
59 (e) The governor may enter into agreements with the gov-
60 ernors of any adjoining states to establish interstate regional

---

3. Inclusion is conditioned upon passage of Community Development District Act.

61 planning and development districts consisting of one or more
62 counties in each of the affected states. In negotiating the
63 agreements, the governor shall be guided by the provisions of
64 this act with respect to the area of such districts and the
65 selection, composition, powers, and functions of district com-
66 missions. Any agreement shall specify: (1) its duration; (2)
67 the precise organization, composition, and nature of the legal
68 or administrative entity created thereby together with the
69 powers delegated thereto; (3) its purpose or purposes; (4) the
70 manner of financing the joint or cooperative undertaking and of
71 establishing and maintaining a budget therefor; (5) the permis-
72 sible method or methods to be employed in accomplishing the
73 partial or complete termination of the agreement and for dis-
74 posing of property upon partial or complete termination; and
75 (6) any other necessary and proper matters.

1 Section 4. Establishment of Regional Planning and Develop-
2 ment Commissions. The governor may approve the establishment
3 of a regional planning and development commission for each
4 regional planning and development district to assist the local
5 units of government within the district in carrying out the pur-
6 poses of this act. Commissions approved by the governor shall
7 conform to the following requirements:

8 (1) A commission shall consist of representatives of local
9 units of government within the district, who shall be elected
10 officials of the units. Their number, terms, and manner of
11 selection shall be specified in resolutions of the governing
12 bodies of the local units in the district representing in the
13 aggregate at least two-thirds of the population of the district.
14 For the purposes of this determination, a county sahll be as
15 one local unit and the population of the county shall be based
16 upon the inhabitants residing in the unincorporated area of
17 such county as determined by the last decennial census of the
18 United States.

19 (2) No compensation shall be paid members of a commission.
20 This shall not affect in any way renumeration received by a
21 state or local official who in addition to his responsibilities.

22 as a state or local official serves as a member of a commission.
23 All members of a commission may be reimbursed for reasonable
24 and necessary expenses incurred in the performance of their
25 duties as members of the commission.
26 (3) Commissions shall comply with such other reasonable and
27 necessary general standards, conditions, and criteria as the
28 governor may establish in order to further the purposes of this
29 act, but the governor, in establishing the standards, shall
30 afford all affected parties adequate notice and an opportunity
31 to present relevant information.
1 Section 5. Powers and Functions of Commissions. A regional
2 planning and development commission shall have the following
3 powers and functions:
4 (1) Elect its own chairman, and establish rules of proce-
5 dure, officers, and organization necessary for carrying out its
6 prescribed functions. The commission may authorize, in conform-
7 ity with established rules, an executive committee or officer of
8 the commission to act for it on all matters. It shall meet at
9 least once a year and shall keep a record of its resolutions,
10 transactions, findings, and determinations which shall be a pub-
11 lic record. It shall appoint a director who shall serve at the
12 pleasure of the commission. The director shall be the chief ad-
13 ministrative officer of the commission and shall appoint and re-
14 move necessary staff subject to such personnel policies and
15 standards as the commission may establish. The commission shall
16 fix the compensation of all employees.
17 (2) Prepare and from time to time revise, amend, extend, or
18 add to plans for development of the district. The plans shall be
19 based on studies of physical, social, economic, and governmental
20 conditions and trends and shall aim to coordinate development of
21 the district in order to promote the general health, welfare,
22 convenience, and prosperity of its people. The plans shall em-
23 body the policy recommendations of the commission and shall be
24 fully coordinated with the planning of state agencies and depart-
25 ments engaged in related activities, including [enumerate agencies].

26 (3) Enter into contracts or agreements with one or more
27 local units and private nonprofit groups within the district to
28 act on their behalf in applying for, administering, and coor-
29 dinating grants and contracts available for programs authorized
30 by state and federal laws for physical, economic, and human
31 resources planning and development, including but not limited
32 to the Economic Opportunity Act of 1964, the Public Works and
33 Economic Development Act of 1965, [the Appalachian Regional
34 Development Act of 1965[4]], and [the Community Development Dis-
35 trict Act of 1966[5]].
36 [(4) Apply for, administer, and coordinate grants and con-
37 tracts available for programs authorized by state and federal
38 laws for physical, economic, and human resources planning and
39 development, including but not limited to the Economic Oppor-
40 tunity Act of 1964, the Public Works and Economic Development
41 Act of 1965, [the Appalachian Regional Development Act of
42 1965[4]], and [the Community Development District Act of 1966[5]].]
43 [(5) Sue and be sued; acquire by purchase and condemnation
44 all lands and property rights necessary for its purposes; lease,
45 construct, maintain, and operate the use of facilities requisite
46 to its performance of authorized functions, together with all
47 lands, properties, equipment and accessories for such facili-
48 ties; and sell or otherwise dispose of any real or personal
49 property acquired and which is no longer required for the pur-
50 poses of the commission.][6]
51 (6) Enter into contracts with state agencies, including the
52 state office of economic opportunity, to act on behalf of or
53 assist such agencies in providing technical assistance and
54 other services to communities within its jurisdiction.

---

4. Applicable to the 12 states affected by the Appalachian Regional Development Act.

5. Inclusion conditioned on passage of the CDD Act.

6. States may consider it desirable to adopt optional subparagraph (4) in order to empower the commission to receive and administer development grants on its own, rather than on behalf of the local governments pursuant to contracts or agreements. In that case it would also need the instrumental powers provided in bracketed subparagraph (5).

55 (7) Submit and adopt all necessary plans, enter into con-
56 tracts, accept gifts, grants, and federal funds, prepare and
57 submit budgets, make rules and regulations and do all things
58 necessary for carrying out the purposes of this act.
59 (8) Exercise its powers jointly or in cooperation with
60 agencies or political subdivisions of this state or any other
61 state, or with agencies of the United States, subject to statu-
62 tory provisions applicable to interjurisdictional agreements.
1 Section 6. Financial Support of Commissions. (a) For the
2 purpose of providing funds to meet its expenses, a commission
3 may levy dues on the local units of government within the dis-
4 trict. Such dues shall be fair and equitable and shall be
5 based on the population of each local unit as determined on the
6 basis of the latest decennial census.[7] For the purposes of
7 this determination, a county shall be as one local unit and the
8 population of the county shall be based upon the inhabitants
9 residing in the unincorporated area of the county as determined
10 by the last decennial census of the United States. By agree-
11 ment between the commission and a local unit, special addi-
12 tional charges may be levied on such local unit as reimburse-
13 ment for unique or special services provided by the commission.
14 [(b) A commission shall annually fix the amount of money
15 necessary to be raised by taxation upon the taxable property
16 in its district, as revenue to meet its expenses and pay its
17 indebtedness for the current fiscal year. Annually before
18 [insert date], the assessor of each [insert name of local unit
19 performing assessment] shall transmit to the commission a
20 written statement showing the taxable value of all property
21 within the jurisdiction of such [local unit performing assess-
22 ment] which lies within the district. The value shall be as-
23 certained from the [assessment records] for the year, as equal-
24 ized and corrected by the [state property tax review agency].
25 On [insert date], the commission shall fix the tax rate, [not

---

7. Alternatively, dues may be based on the equalized assessed value of the units of government.

26 to exceed [ ]], based upon the aggregate of equalized values
27 transmitted by the assessors. On [insert date] the tax rate
28 shall be certified to the governing bodies of the counties
29 within the district and taxes shall be levied and collected for
30 the commission in the same manner as taxes levied for county
31 purposes.]

32 [(c) A commission may set and collect charges for services
33 it supplies and for use of facilities it provides.]

34 [(d) A commission may issue bonds for any capital purpose
35 of the commission, but a proposition authorizing issuance of
36 bonds shall have been submitted to the electors of the district
37 at a special election and assented to by a majority of the
38 persons voting on the proposition at the election.]

39 [(e) A commission may levy special assessments payable
40 over a period of not exceeding [ ] years on all property
41 within the district specially benefited by an improvement, on
42 the basis of special benefits conferred, to pay in whole or in
43 part the damages or costs of the improvement.]

44 [(f) A commission may by majority vote of all the members
45 borrow money from any local unit of government and the local
46 units are hereby authorized to make loans or advances on terms
47 mutually agreed upon by the commission and the legislative
48 bodies of the local units.][8]

49 (g) To assist financially with the development and coor-
50 dination of activities of regional planning and development
51 commissions, appropriations are authorized for grants to the
52 commission. The grants shall be administered by the [specify
53 state office[9]] and shall equal [25, 33-1/3, 50] percent of the
54 annual budget of the commission, but not to exceed $[ ] for
55 any commission for any fiscal year. The grants may also be
56 used for the purpose of matching federal programs of assistance

---

8. Alternative subsections (b) - (f) would be appropriate for consideration if the commission is given operating powers by section 5, alternative subsection (4).

9. Possibilities are the state planning office or office of local affairs.

for planning and development.

Section 7. Advisory Committees. A commission may appoint advisory committees whose membership may consist of individuals whose experience, training, or interest in one or more programs, or representation of particular groups or areas, may qualify them to render valuable assistance to the commission by acting in an advisory capacity or consulting with the commission on its activities. Members of the advisory committees shall receive no compensation for their services, but may be reimbursed for actual expenses incurred in performance of their duties.

Section 8. Report and Evaluation. (a) A regional planning and development commission shall make an annual report of its activities to the chief executive officers, legislative bodies, and planning agencies of all local units of government within the district, the members of the [legislature] elected from [legislative] districts lying wholly or partially within the district, and the governor.

(b) The governor shall from time to time evaluate the effectiveness and activities of districts designated and commissions established under this act and may take actions, including the withholding of state funds authorized under subsection 6(g) and the revision of designation of districts required under federal planning and development programs, necessary to accomplish the purposes of this act. The governor shall afford the affected parties a full opportunity to present their views and shall make a full and prompt report to the legislature of actions taken.

Section 9. Separability. [Insert separability clause.]

Section 10. Effective Date. [Insert effective date.]

THE URBAN PLANNING PROJECT

This project will attempt, with both short term and long term programs and goals, to slow the trend toward establishing ghettos and to develop positive programs to reverse that trend. Major emphasis will be on offering technical assistance to urban planners and other public officials. (This is already being done in one city in Florida.) We shall attempt also to offer assistance to the appropriate departments of the federal government and to study, analyze, and interpret the role of these departments. Special attention will be given to the regional and state offices of these departments. Consultative services will be available to local groups who wish to develop an interest in this area and to those who wish to stabilize a changing neighborhood or those who want to begin the process of neighborhood integration. Programs concerned with neighborhood improvement will also be assisted. An incidental but important part of this project will be to work with schools of architecture and urban planning in curriculum development to see that planners now being trained will have a better understanding of the necessary technical and social aspects of adequate urban planning. To direct this project we have been fortunate to secure Mr. Moreland Griffith Smith, FAIA. An

Jan. 1966

architect formerly of Montgomery, Alabama. Mr. Smith has been at work since November and the progress to date is most encouraging.

THE URBAN PLANNING PROJECT

The Urban Planning Project has as its purposes to assess urban planning in the region, to encourage involvement of all the community in progressive programs, to encourage local governments to make all services available on an equal basis, and to evaluate the policies of and cooperate with the several federal agencies. The Project is directed by Moreland Griffith Smith, FAIA, and assisted by Susan Bresler.

Publications during the year were: Neighborhood Stabilization (a guide to a changing neighborhood); A Home of Our Own (a guide for the new home buyer); Mr. Mayor, Can We Solve Our Housing Dilemma? (a guide for civic leadership); and, yet-to-be-published, studies of housing in Atlanta and of neighborhood housing and community improvement volunteer efforts.

The Project staff has been heavily involved in professional consultations with the leadership, official and unofficial, of a number of communities and with several of the local and state Councils on Human Relations. They have been requested and are giving professional analyses to the overall urban planning efforts of six southern cities. There have been a number of consultations with persons in the regional and national office of the Department of Housing and Urban De-

Jan. 1967

velopments, as well as a meeting with Secretary Weaver. The staff and the Executive Director have worked with the staff of Doxiadis and Associates and have conferred with Dr. Doxiadis. From the conferences may come a proposal for an experimental metropolitan regional study.

In the hopes of encouraging more realistic curriculum for students of architecture and urban planning, there have been several meetings with university faculties, particularly those of the Universities of Pennsylvania and North Carolina. We hope to continue and expand this work.

The Urban Planning Project epitomizes the SRC dilemma and opportunity: how, with very limited staff and resources, to develop programs that make a difference. We are encouraged with the first year's experimentation.

THE URBAN PLANNING PROJECT

As with several other projects, the Urban Planning Project has been essentially a one-man operation, directed by Moreland Griffith Smith since its inception in late 1965.

While as a planner, Mr. Smith has done some significant consulting work for the leadership of several southern cities, main emphasis has been an attempt to have a broader influence on urban planning than can be afforded with a city-by-city consultative approach.

Special effort has been made to reach appropriate officials in the Department of Housing and Urban Development on both the national and regional levels. Some attention, too, has been given to national professional groups. In several instances, the project has worked in cooperation with other programs and individuals within SRC. This has been true especially with the Projects in voter education and community organizations. Also, Mr. Smith, as an architect, joined with Mr. Boone in a very significant consultation with officials in Kentucky concerning the building of a new state prison there.

During the year there has been continued consultative work on codes as they affect low cost housing, an ambitious report prepared for the Mayor of Atlanta on future urban

Jan. 1968

planning for the area with emphasis on abolishing ghettos, and in several instances consultants and materials have been provided to concerned groups in "transitional" neighborhoods.

Currently, the project is exploring the idea of providing, through SRC and other agencies, considerable assistance to the cities in the region involved in the Model Cities Program, with emphasis on providing assistance to those people in the communities most affected by this program. Initial exploration is being done in Charlotte. Public and private groups in a number of cities have expressed interest and, at this point, the exploration is being done with the assistance of the regional and national offices of HUD.

THE URBAN PLANNING PROJECT

The past year has seen the enactment of the first Federal Civil Rights Housing Law. Regardless of the direction taken by the new Federal Administration, there will undoubtedly be non-complaince, as has been the case with all of the other civil rights laws. Attitudes have hardened, resistance techniques have been perfected, the mood of the country has moved ever to the right. Since the Federal Government is seen as a monster handing down decrees from afar, it becomes increasingly important to work to change attitudes on the grass roots level.

Local fair housing groups are springing up all over the country. These can be used as a vehicle of change. The SRC Urban Planning Project will continue to work with these groups to soften community attitudes and to bring about the enactment of local housing laws. Some of these groups have obtained foundation funds to aid Negroes in financing integrated housing. This aspect needs to be broadened.

In the past, throughout the South, there has been considerable dispersion of Negro residential areas. However, the Southern pattern has changed rapidly in recent years to parallel more closely urban solutions in the North. Inter-

state Highways and rapid transit as well as railroads are presently commonly designed to prevent easy access between white and Negro neighborhoods. Further, buffer zones prevent streets from going through and bus routes are circutious. This creates a great hardship in time and money for Negroes going to and from work. The Urban Planning Project would of course continue to work with local planning groups to stress the desirability of more free and equal circulation.

The idea has been raised that there is a great need for an in-depth study of one sample city. This would doubtlessly show how the placement of freeways and urban renewal has been determined---the displacement of Negroes in relation to whites, the percentage of Negro ownership of condemned land in relation to the percentage in rejected alternatives. Case histories of the machinations of real estate boards and of the FHA should be included. SRC reports get wide publicity and are effective instruments for change. Such a report would provide a solid base from which to work in effecting change in the area of housing.

The 1968 open occupancy legislation opens up opportunities for bolder solutions for total city planning---land use, intra-city transportation, inter-neighborhood communication

proximity of jobs to housing---which can contribute to a healthier economic base and thus appeal to the business interests within the city.

If we are to have an open society, urban planning is a necessity. The SRC project cannot make an impact through its own efforts alone. Resources and staff are inadequate. It will, however, continue to work in this area, and especially seek to influence others to take up this fight. It will seek to develop financing for research papers that will call attention to the need for action, and thus enlist others in this cause.

It is propoesed to continue the Urban Planning Project, trying to encourage the private sector to participate in urban planning areas in order to broaden the base of interest within the city in order to reach all economic strata. It is felt that this can be done by encouraging the awareness of the American Institute of Planners, the Chamber of Commerce, as well as the neighborhood organizations, in addition to organizations which SRC has advised and worked with, such as:

1. Southwest Atlantans For Progress
2. The Housing Committee, Houston Council
3. New Orleans Consortium

4. The Arkansas Council on Human Relations

5. The Georgia Council on Human Relations

6. The North Carolina Council on Human Relations

7. The South Carolina Council on Human Relations

8. The Tennessse Council on Human Relations

9. The Virginia Counicl on Human Relations

10. The American Friends Service Committee

11. Ansley Park Fair Housing

12. The Mayor's Committee on Housing Resources

13. The Mayor's Code Committee

14. HUD, Nationally and Regionally

The Urban Planning Project will also continue to circulate the seven (7) publications.

1. Neighborhood Stabilization

2. A Home of Our Own

3. Mr. Mayor - Slum Ghettos in Your City, Can we Solve Our Housing Dilemma?

4. Neighborhood - Where Human Rights Begin

5. A Guide to Programs for Better Homes and Neighborhoods

6. Atlanta Residential Patterns

7. A Report to the Mayor

HOW MONEY CAN MAKE OR BREAK OUR CITIES

Copyright 1961 by Jane Jacobs

Urban-renewal laws, both Federal and state, are based on certain widely accepted theories about what causes the decline of city neighborhoods and the formation of slums. Most of the reasoning followed among city planners for decades is demonstrably invalid. In New York, for instance Greenwich Village "ought" to be a slum and Morningside Heights "ought" to be a huge success. Just as striking as the nonsense that the urban-renewal law contains are the matters it leaves unmentioned, such as credit blacklisting. This practice is one of the chief reasons why slums form and also why so few slums, once formed, are able to improve themselves even when the people who live in them are both capable of improving their conditions and eager to do so.

Blacklisting shuts off the most important kind of housing money; the conventional credit extended by nongovernmental lenders, principally savings-commercial banks, and some pension funds. Although these institutions do not publicize the fact, they map cities into areas in which they will either invest or not invest. The decision is almost always unanimous. All large American cities--and many small cities too--have areas blacklisted for investment in this fashion. The practice is one of the most destructive forces at work in our cities; it leads almost inevitably to unnecessary stagnation or to unbridled slum exploitation.

Credit blacklisting is impersonal. It operates not against persons as such or even against buildings as such, but against neighborhoods. For example, a merchant in New York's blacklisted East Harlem, not able to get a $15,000 loan for expanding and modernizing his successful business there, had no difficulty in raising $30,000 to build a house in a Long Island suburb.

The motive of lenders in deciding to blacklist a district are not villainous. They are merely applying lessons they have learned from the city-planning theories of the 1930's, which aimed, among other things, at starving out dense city districts and nourishing suburbs. Blacklist maps came in at the same time as slum-clearance maps, and the two are ususlly identical both in conception and in results. Indeed, one of the objects of the planners: slum-clearance maps is to warn investors not to invest in certain areas. Sometimes the lenders anticipate the planners. In either case, it is decided that such and such a place is becoming a slum. Its future, insofar as it is considered at all, is projected in terms of the most widely accepted remedy for slums; eventual erasure after a period of further decline.

Credit-blacklist maps, like slum-clearance maps, are thus prophecies. And they are accurate for the simple reason that they are self-fulfilling prophecies. If no money is available to improve a neighborhood, if people there can improve their situation only by leaving, decline is all but inevitable.

SLUMS THAT FOUGHT BACK

Few areas, once blacklisted, manage to escape their doom. The only district, so far as I know, that met the problem head-on and forced reversal of the decree is the Back-of-the-Yards district in Chicago. This area used to be a notorious slum, the familiar hodgepodge of weather-beaten buildings that is generally recognized as an obvious candidate for the bulldozers. Residents applying for jobs outside the district used to give false addresses. But most of the men worked in the stockyards, and during the 1930's the district and its people became deeply involved in unionizing the packing plants. Extending the mood of militancy, a number of able men started an experiment in local organization. Called the Back-of-the-Yards Council, it came to operate much as a government does. Policies are set by a kind of legislature of two hundred elected representatives, which has a good deal more power than most formal citizens' organizations, both for carrying out public services of its own and for making its will known to the municipal government. The district's ability to get from City Hall the municipal services, facilities, regulations, and exceptions to regulations it needs is regarded with awe throughout Chicago.

SAUL ALINSKY

In the interval between the formation of the council and the early 1950's, many of the people in the district graduated into skilled industrial, white-collar, or professional jobs. According to most city-planning theorists, the next move at this stage should have been a mass emigration to the suburbs. The abandoned district should thereupon have been filled by a new wave of slum dwellers.

But the Back-of-the-Yards people wanted to stay--as is often the case in such neighborhoods. The existing institutions, especially the churches, wanted them to stay. At the same time, thousands of residents also wanted to improve their homes beyond the small amount of remodeling or refurnishing already accomplished. They were no longer compelled to be slum dwellers and they did not wish to live as if they were.

The two desires--to stay and to improve--seemed incompatible. The Back-of-the-Yards had been blacklisted for mortgage credit. But in this case a local organization was both smart enough and powerful enough to find a way out of the trap. A survey by the council revealed that businesses, residents, and institutions in the district had deposits in some thirty of Chicago's savings-and-loan associations and savings banks. It was agreed that these depositors would be prepared to withdraw their deposits simultaneously if lending institutions continued to blacklist the district.

On July 2, 1953, representatives of the banks and the savings-and-loan associations were invited to a meeting. The mortgage problem of the district was presented and discussed amicably. Certain polite remarks were made about the numbers of depositors in the district and the size of their deposits. Before the meeting was over, several of the lenders promised to give favorable consideration to requests for loans. The same day, the council began negotiating for a site for forty-nine new dwellings. The most squalid row of slum apartments was equipped with indoor plumbing and modernized in other ways

by means of a $90,000 loan. Within three years, some five thousand houses had been rehabilitated by their owners. In 1959, construction of several small apartment houses was begun. The residents are pleased and proud of the progress their district has made with the banks' interest and co-operation, and the bankers, in their turn speak admiringly of the area as a location for sound investment. Nobody was thrown out of the district and "relocated." In short, the process of decay has been arrested and reversed.

The North End of Boston is an example of a blacklisted neighborhood that has managed to stave off disaster by another kind of resource. For thirty years, the largest conventional mortgage loans made in the North End have been for $3,000, and even those have been rare. The most affluent suburb could hardly have held up over such a period under such terms. The North End has managed as well as as it has only because many of its residents happen to be in the building trades. They have given or bartered their services so that much of the improvement or extensive repairs has cost only the price of the materials, which had to be financed out of savings. These methods, however, cannot be stretched to cover the financing of new construction. In the North End, cut off from mortgage credit, businessmen or landlords must have cash in hand to finance even improvements that will quickly justify themselves by bringing in more income.

Unless a neighborhood possesses both extraordinary vitality and a good deal of luck, the lack of conventional mortgage money makes further deterioration inevitable. There is no way of telling the full extent of destruction wrought by blacklisting, but it is enormous. The lower East Side of New York, an area of great potential--at least as great a potential as Greenwich Village--was thus doomed. The Society Hill district in Philadelphia, where vast sums of public urban-renewal money are now being spent, steadily lost residents and would-be residents for decades because of the impossibility of getting legitimate loans to buy or to improve property. Blacklisting doomed East Harlem in New York, which in 1937 seemed at least as likely as Boston's North End to be able to hold a deeply attached population, many of whom were moving economically into the middle class. Much of Brooklyn lies under the pall. Nearly all neighborhoods that possess any appreciable Negro pupulation, in all Northern cities, are automatically blacklisted for conventional mortgage credit.

MONEY FROM THE SHADOWS

Blacklisting does not necessarily mean that an area is cut off from all types of building investment. Stagnant or decaying areas that are losing the very residents who might help bring improvement often undergo a special form of investment upheavel.

There are three separate and distinct kinds of money used to finance city building these days. And as the money goes, so go our cities. When conventional mortgages are not available, a second kind of financing often appears out of a kind of financial underworld. The sources of this money are usually mysterious, its paths devious. Interest rates for this sort of capital start at about twenty per cent and range as high as the market will

bear, in some cases up to eighty per cent in combination with arrangers' fees. Those who provide this money are, in effect, the loan sharks of the real-estate world.

Immense opportunities are opened to this shadow-world money in areas where conventional mortgage credit has been halted. The exploitative money is used to buy up property for which there are no other purhcasers or purchase money, and presumably never will be. The buildings quickly become slums. First comes the withdrawal of all conventional money; then unscrupulous money lenders move in to underwrite complete ruin. This sequence is familiar in most of our large cities and seems to be taken for granted.

At the point of complete ruin, a third kind of money for city building investment is often provided by government, either out of tax receipts or through governmental borrowing power. Housing projects underwritten by Federal or state governments are financed by this third kind of money; so are the subsidies for land clearance that make possible privately financed redevelopment and urban-renewal projects. In addition, the Federal government will guarantee as much as ninety per cent of the residential mortgages given by conventional lenders, provided the investment conforms to the standards set by the Federal Housing and Home Finance Agency. The object is to buy up land and buildings and prepare the way either for public housing projects or for private renewal projects. In the latter case, the government money prepares the way for re-entry of conventional investment and partially subsidizes it.

In addition, however, this governmental money also prepares the way for further extensions of shadow-world investment. Blanket use of the powers of eminent domain often brings handsome profits to slum landlords because of the fact that the earning power of a building is one of the factors taken into account in setting a condemnation award. The most exploited buildings can be, and often are, the ones that bring the largest profits. Their owners then can use their gains to buy more property than they formerly had, in new localities that they promptly convert into new slums. In New York, some of these unscrupulous investors take not only their money but also their former tenants with them to a new location, thereby helping the city solve the "relocation" problem. Slum shifting has its own efficiencies.

All three kinds of money--conventional, shadow-world, and governmental--are typically involved in debacles of city decay and upheaval. The whole cycle, destructive as it is, is the logical outcome of what logical men can do when they let themselves be guided by the axioms of conventicnal city planning.

Theories as well as laws determine the ways in which money is invested. First comes the image of what we want, then the machinery is adapted to turn out that image. The kind of investment programs we have today are the direct result of city-planning theories which have idealized ruthless and oversimplified changes and which have written off as irrelevant most of the possibilities of gradual change and adaptation. Money is being spent to please the planners rather than the people who live in our cities. But if and when we decide that a lively, richly diversified city capable of continual growth and improvement is desirable, then surely we shall be able to adjust the financial machinery to get what we want.

It is all too easy to blame the decay of our cities on traffic, or immigrants, or the whimsies of the middle class. The decay of our cities goes deeper. It goes right down to our ignorance about how cities are built. The ways in which real-estate capital is used--or is withheld from use--are powerful instruments. Money can make a city, or destroy it.

Kenwood Foils the Block-busters

by

Elinor Richey

How the women of one of Chicago's best neighborhoods got together—white and Negro alike—to save their homes.

Chicago motorists speeding southward along Lake Shore Drive sometimes take a wrong exit and get a surprise. A few minutes from the noisy Loop, they find themselves in a quiet, leafy neighborhood of distinguished, well-kept old residences. Since most of this area is covered with slums and housing projects, they may wonder what miracle happened here.

The place is central Kenwood, and it was no miracle. Having watched Kenwood from adjoining Hyde Park, I know that a bitter battle was fought to save it. The foe was a pack of unscrupulous real-estate brokers determined to convert Kenwood into a lucrative rooming-house district. The heroines are young matrons who seem now to have won the astonishingly effective fight they began waging nine years ago.

Something else the stranger notices is that Kenwood is interracial. But he can't tell by merely looking that in this twenty-block neighborhood of 250 homes, whites and Negroes are more than desegregated; they are genuinely integrated. By contrast, Hyde Park remains essentially a district of biracial living. Its parties and organizations show token integration, not the real thing, which Kenwood now takes for granted. Integrated in 194[illegible] three years before trouble came, central Kenwood has a home-ownership ratio of 65 per cent white to 35 per cent Negro. It is the only established American community with a large proportion of Negroes where white residency has increased without controls; the gain was 10 per cent in the past five years. Kenwood defies the experts who place the "tipping point" at one fifth of the population; for a decade its Negro home ownership has fluctuated between [illegible] and 45 per cent.

It is an exceptional neighborhood in [illegible]ood many ways, some of which help to account for its success with integration. In the first place, its inhabitants are relatively wealthy. Most of its Negroes are upper-income (several are millionaires) while its whites are mainly middle- and upper-middle-income professionals. Secondly, Kenwood is fortunate in its location. Because it is close to the University of Chicago, it attracts people—faculty members and others—who are anxious to live in and preserve the area, even if this means devoting an unusually large share of time and income to the upkeep old houses demand.

The community has gotten a boost, too, from a huge urban-renewal project in neighboring Hyde Park. If poor families had not been removed from Hyde Park, the half-mile or so between Kenwood and the University campus would probably have become a Negro slum and Kenwood would have found it all but impossible not to follow suit.

But when Kenwood residents had to face the block-busters, they had still another factor working in their favor: the neighborhood had been integrated for several years. Unlike areas which panic when Negroes enter, thereby inviting exploitation, Kenwood quietly accepted its first Negro family—the Gleasons. Dr. Maurice Gleason, who had been a wartime director of surgery at an Army hospital on the Burma Road, had a large gynecology practice; Mrs. Gleason, a University of Chicago Ph.D., was on the staff of the graduate school; their daughter was of preschool age. Any qualms about the new family soon subsided. The Gleasons settled down in a big Victorian house under five elm trees in 1948.

Over the next three years, eleven other Negro families followed, scattering widely over central Kenwood. Among them were Lloyd Hall, chemist, winner of two national awards; United Nations Delegate Edith Sampson, now a municipal judge; the late Roi Ottley, novelist; Earl Dickerson, insurance company president; and Jewel Rodgers,

attorney, who nominated Richard Nixon at the 1960 Republican convention.

Dr. Gleason had assessed Kenwood correctly as a place with enough equilibrium to judge character instead of color. The community got its impetus from the Chicago Fire of 1871. Losing their homes, some of Chicago's wealthy families trekked south to a sparsely settled marsh. After draining it and laying out broad avenues, rich meat-packers and plow makers built mansions in the current eclectic styles. Even after Chicago grew around it, Kenwood long held such families as Swift, Stuart, Spalding, Wilson, Rand, and Ward. Some of the country's best late-nineteenth-century residential architecture was built there—designs by Kenwood resident Louis Sullivan and by Frank Lloyd Wright. Many of these "Chicago School" residences look surprisingly modern—and, architecturally, they are. Men of newer fortunes—Rosenwald, Schaffner, and Block—continued to build fine houses in Kenwood on into the 1920s.

Gradually, the neighborhood became predominantly middle-class. Big servant staffs were gone, but wives did wonders with gadgets and part-time maids and gave quarter-sawed oak paneling and marble foyers loving care. The first Negro families took similar pride in their homes.

What Block-busting Means

But in 1951 Kenwood became alarmed, not because of its Negro residents, but because of what was happening in adjacent neighborhoods. It had started with the Negroes' desperate need for housing. Capitalizing on the tremendous population pressure from the ghetto, real-estate brokers were using block-buster tactics. They maneuvered Negro buyers onto white blocks, then fanned racial prejudice into fear and flight. "Do you want your children playing with Negroes?" homeowners were goaded; "do you want to be the only white family?" The profits lay in complete turnover. Whites who tried to stay and form an interracial community got "the treatment." Threatening phone calls shattered sleeping hours; rocks crashed through windows, paint splashed. When the last family was hounded out, the attack shifted to the next block.

After a block had thus "changed," housing violations came. Property owners profiteered by subdividing houses and apartments illegally. Luxury apartments were converted into "studios" by installing a Negro family and a hot plate in every room. Service broke down, and mounting garbage drew flies, rats, and stray dogs. Landlords got away with it because conditions in Chicago's "Black Belt" are so bad that almost any change is an improvement. The unhappy truth is that, for most of the Negro poor who came to Kenwood, the rooming houses were a step up.

Families with homes nearby, however, looked on in shock and considerable fright. Several put their houses up for sale. Soon a three-story mansion in the heart of Kenwood teemed with dozens of tenants. Six cars crowded the driveway; lights glowed from every window, including the basement. A third-floor ballroom was reported to be curtained off into family units, and roomers were sleeping in the attic, gaining access via a rope ladder.

Kenwood was outraged. Didn't the brokers know central Kenwood was zoned for single-family residences? Joining the Hyde Park–Kenwood Community Conference (organized by Quakers and Unitarian churches to solve problems created by racial changeover) homeowners rushed to bring violators before a city housing board. Volunteer sleuths copied car licenses, counted tenants, photographed trash and garbage, and amassed an airtight case of zoning violation—only to find that prosecution was hopelessly slow. Thousands of housing cases were backlogged in court and only a few were heard each week. It might take years. Meanwhile, two more houses went to speculators.

"For Sale" signs began sprouting like dandelions. Block-busters flocked in, captured more houses, and promptly filled them to capacity. Beds and stoves were moved in wholesale; a roomer repaired cars on the front lawn. Feeling that time was running out, family after family departed, convinced that the fighting was futile. "No community has ever stopped the block-busters. There's nothing to be done."

One newcomer, however, not knowing the size of the job, had started doing something. She was Mrs. Hubert Will, a bright-eyed, friendly woman, called "Nicky," who had taught kindergarten in Indiana before marrying a lawyer. The Wills had bought in Kenwood the previous fall when their fourth child was on the way, and afterwards the new baby kept her indoors. It was spring before she got out to explore the neighborhood. The first

---

Elinor Richey, who lives in Chicago and has an M.A. from Northwestern, has written for many of the major magazines and in the past was editor and staff writer for publications in Florida, West Virginia, Ohio, New York, and Illinois. She is now specializing in urban problems.

woman she introduced herself to told her that all the white people were moving out of Kenwood because it was "turning into a Negro slum."

Nicky turned the carriage homeward. She couldn't bear to look around. She had the kind of house she had always wanted for her family, and now they were going to lose it. But this is crazy, she thought angrily. There is a housing shortage in Chicago, and other families must need the same kind of house. Suddenly, it was clear that all she had to do was find those families.

She started by telephoning friends in her old neighborhood. "Are you house-hunting? . . . There are wonderful buys in Kenwood!" Well, did they know of anybody who was? The telephone dial clicked away, yielding new voices, new prospects. Between telephone sessions, she darted around Kenwood, ears set for real-estate gossip. When a house went up for sale, she learned its price, size, and talking points and tried to think of families for it.

Mrs. Will's Negro neighbors applauded her. They saw themselves being enveloped by the slums they had fled, and noted bitterly that the whites who criticize Negro living patterns still push them into congested, rat-infested ghettos where decent homes are impossible. Repeatedly, middle- and upper-income Negroes had sought to form high-standard Negro or interracial neighborhoods, only to be thwarted—and now it was happening again. Many real-estate brokers who are sticklers for protecting standard-of-living homogeneity where whites are concerned ignore the concept for Negroes, whom they lump in one class. After middle-class Negroes successfully "pioneer" a white neighborhood, agents deliberately introduce Negroes from a much lower economic level to frighten whites away. Negro professionals and businessmen are thus deprived of the kind of environments they want. As Alderman Leon Despres put it: "Chicago has said to Negroes, 'No matter how urbane you may be, no matter how educated, no matter how good your reputation or high your honor, you must stay in the ghetto'."

Families, Not Roomers

Nicky scored a sale—a two-story brick house bought by a printing executive. After that, owners invited her help in selling. She also persuaded restless neighbors to stay put. Two elderly widowers, who were threatening to leave, quieted down after she found a housekeeper for one and a family buyer for a house next-door to the other. She sold several more houses, including a big brownstone that a speculator was dickering for.

Then she got a jolt. A real-estate agent tipped her off that more than sixty houses were on the market, rather than the eleven she knew about. Owners were listing surreptitiously. Curiously, most block-buster sales were to domestic servants. While she was trying to interest a wealthy family in an elegant mansion, it was sold to a Negro chambermaid. Exasperated, Nicky looked up the agent, a suave young man, and urged him to sell to the family market. The next morning he telephoned. "You and I could work together," he said silkily. "Let me know when you hear a house is going on the market and I'll make it worth your while." Nicky hung up, furious. At that moment the doorbell rang. Another family selling, she thought hopelessly.

It was Eleanor Petersen—which only made Nicky feel worse. She had sold the Petersens their house. Eleanor and Carl, an advertising writer, had married on Guadalcanal, where Eleanor had been a Red Cross worker; they had three small sons. Nicky knew they had spent a lot on remodeling. She told Eleanor that she was sorry she had gotten them into a trap, that it looked as if the block-busters had taken over.

"Not yet," Eleanor said. Deciding to help Nicky, she suggested that, first, they find out what was wrong with the market. How could chambermaids buy expensive houses?

Eleanor sped about in her small English car, talking to realtors, homeowners, and recent buyers. The block-busters' financial strategy began to emerge. After scaring whites into selling at a loss, an agent shopped for a Negro dupe. Most Negroes couldn't afford Kenwood houses, and the well-off weren't buying because word had spread that the neighborhood was deteriorating. So block-busters lured home-hungry illiterates into "contract sales," telling them they could afford installment payments of several hundred dollars a month by filling houses with roomers. The "buyers" were obliged to rent every foot, leaving only garages and kitchens for themselves. Agents retained title and, if a payment was missed, repossessed the house and installed another dupe. In effect, the buyer was an unpaid slum manager for the block-buster. Instead of being profiteers, the rooming-house keepers were victims.

Nicky continued telephoning, while Eleanor rang doorbells, seeking recruits. She found fear, bewilderment, anger, stoicism—everything but hope. Nobody believed block-busters could be stopped, but thirteen women responded to Elea-

nor's plea, "At least, let's have a meeting and talk about it."

Eleanor told the women they could save Kenwood if they all pitched in and worked. She reported on Nicky Will's house sales, and explained what they had learned about block-busters. "We've got to wage a selling campaign as strong as theirs, but aimed at the family market." Why not promote the neighborhood by staging some event that would bring people to see Kenwood's attractions? Did anybody have a suggestion?

An open-air concert, a children's fair, a street dance, and a flower show were discussed and rejected. Then a lawyer's wife, Helen Fruchtman, pointed out that none of these ideas focused on homes. "Why not hold an open house tour of Kenwood's most attractive homes and gardens?" she suggested. Some of the group felt it would be risky to invite strangers into Kenwood houses, and later the Kenwood Redevelopment Corporation* also considered the idea "impractical."

But at the next meeting, proponents of Open House prevailed, eleven to four. The four nays got up and left. Eleanor fanned enthusiasm in the rest by encouraging each to assume responsibility for some phase of the project. Eventually, they hoped, the whole community would participate.

Recognizing that their fight was with the block-busters, not their victims, the women decided to survey the welfare of the low-income families in the area, offer whatever help was needed, and pay regular calls on distressed families. Finally, the group voted to call itself the Women's Real Estate Committee, naming Eleanor chairman.

Most Kenwood women were willing to help with Open House, Negro women included. Connie Williams, a Howard University graduate married to a doctor, recently explained: "We had more at stake in fighting neighborhood deterioration than did our white neighbors. When white people are forced out by slums, they have a choice of places to go. We don't. We can only keep moving just ahead of the slum—an awful prospect."

Wooing Buyers

Twelve homes—both white and Negro, none for sale—were selected for exhibit on a Sunday afternoon. They ranged from a remodeled coach house to a sixteen-room Georgian mansion. Tobie (Mrs. Irving) Harris, a radio writer married to a psychoanalyst, inspired some valuable publicity by visiting editors and broadcasting directors and wangling choice news spots and column mention.

Two o'clock of that October Sunday in 1954 found Kenwood under a cloudless sky, dressed up and waiting for company. Streets and sidewalks had been broom-swept, thanks to Madeline Hudson's clean-up committee. Under tawny trees, clipped lawns were smooth as rugs. Indoors, silver gleamed and woodwork shone. At tour headquarters in a church, about eight hundred people milled on the lawn. Hostesses moved through the crowd passing out a program-brochure about "our suburb in the city" which included a blank for name, address, and phone number. "If you're interested in Kenwood real estate, fill this out and return it to one of us."

Kenwood husbands, enlisted as drivers, talked up Kenwood en route. Smiling hostesses welcomed guests and started them on strolls through rooms and grounds with other Kenwood husbands as guides. At the seventy-five-year-old Victorian home of an investment counselor, visitors wandered under twelve-foot ceilings, inspecting Adam and Chippendale furniture and three-tiered Old World shutters. Later, they stepped into a Georgian mansion's elegant sunken living room. At the modernized coach house, guests were fascinated by a circular turnstile (for reversing carriages) under the rug.

Afterwards, groups returned to the church for refreshments. Hostesses mingled with guests, collecting the filled-in blanks. Those interested had a chance to discuss market opportunities at once, in the social room, where Nicky Will supervised a group of interviewers. "Do you like Kenwood? . . . What size house does your family need?"

Monday, the committee met to celebrate. Forty-seven guests had expressed interest in Kenwood real estate. The women divided the prospects among themselves. Nicky gave pointers on making telephone contacts; Madeline Hudson was to compile an annotated list of houses for sale; and a woman was assigned to each block to keep Madeline's list current. The group decided to ask local realtors to act as brokers for their sales. Their invitation had a double purpose: to encourage local agents to regain territory from block-busters, and to deter them from unethical practices themselves. Pressed by competition, several local brokers had made objectionable deals with speculators. The committee would forgive past sins and pass along sales if the agents would mend their ways.

Invited to a breakfast meeting to hear the pro-

* This was a group formed by Kenwood men who hoped to rehabilitate the neighborhood by adding new housing, but it never got off the ground.

posal, the realtors were unimpressed. They doubted that the Open House prospects were serious and they all believed Kenwood would become a slum. But in exchange for whatever business the women might drum up, they agreed to sell only to the white and Negro family market.

As the realtors predicted, the forty-seven prospects were not plums waiting for picking. Most had changed their minds. Several said they had heard Kenwood was "going all Negro"; others said their banks had advised against buying there.

Fourteen families were still interested, however. Soon several were discussing price. Hopes rose, then fell when a young family decided on a house, but failed to obtain financing. Then another buyer had the same trouble—couldn't get a mortgage.

Alarmed, Eleanor assigned women to investigate. To their distress, they discovered finance houses had blacklisted Kenwood. In Chicago, as throughout the country, areas in the grip of block-busters are stamped bad credit risks.

The committee canvassed Chicago for mortgage sources. One loan officer after another explained that they had to protect stockholders by vetoing risky loans. Finally, the women found one mortgage house willing to discuss financing with Kenwood home buyers. Wooing buyers on one side and mortgages on the other, the committee succeeded in turning five prospects into homeowners; the five were honored at a Newcomers' Tea.

No longer starry-eyed, the women realized they were in for a long siege. Kenwood now swarmed with glib-talking salesmen, and families were still fleeing. The committee began soliciting buyers among newcomers to Chicago. Supplying local colleges and industries with Kenwood house listings, they got in exchange information about new employees—who would, of course, need places to live. The search for mortgage opportunities went on, and Tobie Harris took on the continuing responsibility of supplying favorable Kenwood news and social items to the papers. Kenwood men helped by scouting out institutions which might purchase some of the larger houses. Through their efforts, several properties ultimately went to religious and educational organizations. Men also worked at keeping up the grounds around vacant houses.

Meanwhile, Kenwood members of the Hyde Park–Kenwood Community Conference bolstered the neighborhood through organized block efforts. Committees tried to keep streets and sidewalks clean, to improve police protection and garbage removal service, and to encourage maintenance of property. Block groups also helped prevent racial misunderstanding, and quelled false rumors by tracking them down. Kenwood attorneys Houston Harsha and Edward Rothman donated time to prosecute housing-violation cases for the conference.

By spring 1955, the committee had added seven more homeowners. Not enough. Several times as many houses had gone up for sale. Every block had one or more rooming houses and dozens of properties were sitting on a stagnant market. The odds were with the block-busters.

What would swing the balance their way? Finally, the committee fell back on Open House. In late May, with Ann (Mrs. Courtenay) Barber, a New Yorker who had married into an old Kenwood family, as chairman, "Kenwood's Second Annual Open House" brought seven hundred visitors. Tour homes showed off blossoming gardens, and one tour included Dr. Gleason's new house, low-slung and contemporary, which was getting a flurry of attention in magazines. The day yielded nine buyers. Thanks to the committee's efforts, all found financing. Newcomers included the family of Dr. Markus Barth, professor son of the Swiss theologian Dr. Karl Barth; the committee had persuaded a broker to fly to Iowa and talk with the Barths before they moved to Chicago.

Victory on Two Fronts

Looking back, the women could measure gains in their battle with the block-busters. But they could see another kind of progress too. At the October 1955 tea, Nicky Will became aware of how little they now thought about racial differences. "Working together on our common problem," she said recently, "solving something together that none could have solved alone, had given us a common bond. We were no longer Negroes and whites, but individuals, personalities. On New Year's Eve, last year, my husband and I gave a joint party with a Negro couple, the Ralph Metcalfes, and nobody thought it a bit unusual." Similarly, Connie Williams recalls that in the beginning Kenwood Negroes had lived among their white neighbors without really becoming part of the white community. Their social and religious life remained back in the ghetto. Only in working together on plans for Open House did Kenwood's white and Negro matrons learn each other's first names.

But block-busters had another trump card—money. They no longer pressed owners to sell at

HARPERS August 1963

a loss. To regain ground, they were ready to pay highly inflated prices. It wasn't enough to find buyers and financing if the block-busters could outbid the family market. "If a seller was dickering with a block-buster," Eleanor told me, "we all but camped on his doorstep, begging him to sell to a family. Often money outtalked us." In this crisis the wealthier Negroes who had regained interest in Kenwood came to the rescue. No middle-income white buyer could afford to outbid block-busters, but a few well-to-do Negroes could.

Then help came in the form of housing enforcement. The Hyde Park–Kenwood Community Conference made a breakthrough by supplying their own inspection and legal teams. Soon the courts ordered a notorious rooming house known as "The Castle" closed with fifty violations, including collapsed ceilings, litter-blocked exits, rats, and vermin. Other prosecutions followed. The most troublesome rooming houses were closed on court order; others were permitted to remain open on condition that they comply with health and safety regulations and reduce occupancy. The Hyde Park–Kenwood Community Conference helped tenants of the closed buildings to find more desirable housing in the area. Real-estate brokers, who had agreed not to make deals with speculators, sold the former rooming houses to family buyers, who deconverted and restored them.

When Open House drew buyers a fourth and fifth year, Kenwood began to believe in its comeback. Then a newspaper publisher bought a home and gave it a hang-the-cost renovation job that set a trend; a flurry of remodeling swept through Kenwood, and several new homes were built. New and remodeled homes were shown at Open House to demonstrate that Kenwood was up-and-coming. From the five pampered guests at the first Newcomers' Tea, the number rose to nine, to fourteen, to twenty-five, hovering at that figure for several years, then tapering off for lack of sellers.

Today, property values are nearly twice what they were during the trouble years. Central Kenwood is the only Chicago neighborhood where the white and Negro home market is interchangeable. Connie Williams' near neighbors include a white family who bought from Negroes and a Negro family who bought from whites. During the past year, four houses have gone from Negro to white owners, bringing the present total to 164 white and 87 Negro families.

No longer needed to sell houses, the committee has found vital activity in another quarter. The close ties between white and Negro residents, the product of shared effort, showed signs of loosening as newcomers from segregated backgrounds moved in and there was no longer an urgent community problem to draw them together. As elsewhere, when whites and Negroes live in one community as equals, proximity tended to dissolve racial hostility and suspicion. But nothing more positive happened. The committee set about obtaining more genuine integration by sponsoring community-wide social events throughout the year—teas, parties, benefits, receptions, and an Open House Sponsors' Ball. Special effort is made to get newcomers to participate. Recently, at the home of a Negro doctor, an interracial crowd of 250 danced in a ballroom where turn-of-the-century debutantes once made their bows.

As for Open House, the committee has no thoughts of abandoning it. It has become a Chicago tradition, drawing larger crowds every year. The committee gets year-round requests to conduct private tours for organizations. Increasingly, Kenwood is one of the local sights Chicagoans take their visitors to see. A decade ago it was within a hairbreadth of becoming a transient slum; now it has the aura of a historic district, much as Georgetown has for Washington. In Chicago, where vast areas spoiled by block-buster exploitation are currently being bulldozed, Kenwood is eloquent testimony to the virtues of preserving variety within a city instead of accepting the sterile monotony of "projects" as the only solution to a pressing housing problem.

The committee realizes that it has made only a small contribution to easing Chicago's racial tensions. While Kenwood has given some upper-class Negroes surcease from continual moving, many other Negro Chicagoans, especially the poor, remain at the mercy of block-busters and speculators. And until the suburbs are open to Negroes, Chicago, whose Negro population is currently growing at the rate of 26,000 a year, will remain overcrowded. So far there is little reason for optimism. Of thirty-two Chicago suburbs surveyed by the Bureau of the Census three years ago, only four had more than a hundred nonwhites.

Much remains to be done. But Kenwood has clearly shown how block-busters can be stopped and how interracial living can be made to work. Because it is a suburban sort of neighborhood, yet one located in the center of a metropolis, Kenwood can perhaps be of help to both city and country communities trying to achieve similar residential blends of Negroes and whites—blends so solid that color is the last thing you notice. I hope it will.

Integration– The Problems Nobody Talks About

A frank report on what happens when Negroes and whites live together—even with the best of intentions and under the best conditions

BY RICHARD MARGOLIS

Joey Carter, three years old, stands at the edge of a neighbor's yard in Levittown, Pennsylvania, and watches the white children splash around in the big wading pool. Joey is wearing a bathing suit.

"Go home," a mother tells him. "You're too small to swim in the pool. You'll drown."

Joey ponders this. "Ruthie is in there," he says, "and I'm bigger than her."

"Go home," says the mother. "*Please*, go home."

In Marynook, a suburbanlike neighborhood on Chicago's South Side, a Negro man guides a power mower across his front lawn. A little boy from across the street skips over and starts a conversation.

"You new here?" the boy asks.

"That's right."

"We're moving," the boy says.

The man switches off the motor. "How come?" he asks.

"'Cause you're here."

In a suburb of New York a mother stands at her kitchen window and watches Billy, her four-year-old son, approach the new neighbors' boy. The new neighbors are the first Negro family to move into the area.

Should I call him back? she silently wonders. Should I forbid him to play with colored? She watches the children play around the puddly ditch that separates the two yards. They place an old wooden plank over the ditch and march across it, back and forth, back and forth.

Later Billy says to his mother, "I made a new friend."

"Did you? And is he nice?"

"Yeah," says Billy. "We built a bridge."

This is a report on bridges and barriers—the old racial barriers that surround our neighborhoods and the new, often shaky bridges with which many Americans are now seeking to span the gap.

The gap is wide and deep. Robert C. Weaver, administrator of the U.S. Housing and Home Finance Agency, has branded residential segregation the "most stubborn and universal of the Negro's disadvantages." Another government official has defined the typical American neighborhood as an "unassailable white fortress." (*Continued on page 137*)

a little more candor. We discovered that our daughter, uncommitted to any school of psychiatry, wasn't going to fit into any of our formulas; she was an unpredictable, mysterious, unknown quantity; she was herself. The whole thing came in a steady and continuing flow of shocks to our professional egos. In our work we began to look with a jaundiced eye on the too-easy, pat explanations of human behavior. Clinical diagnoses failed to describe satisfactorily the marvelous quirks and fascinating peculiarities in people. It disturbed us mightily, but we began to admit to each other that diagnostic test reports all sounded alike and everybody went through an oral phase and an anal phase and an oedipal phase, but people who had the same labels were so markedly different—there just had to be more to the picture. We also began to observe that insight into their own unconscious problems wasn't curing those patients receiving psychotherapy of all their problems.

Gradually our tools for understanding and solving human problems began to appear less magical and all-powerful. Humility set in; in fact, a new humility is abroad in the land. We are beginning to realize that it was a violation of the human spirit to treat it like a machine. No single theory or group of theories, none of the labels we created, however valid they may have been in part, ever captured the essence of man. A diagnosis doesn't create a person or explain poetry or idealism or love. We are beginning to have a healthy respect for the unknown mysteries, the strange and special and still-little-understood human soul.

If we can accept and understand where we lost our way, we can begin to move again without that sense of having been betrayed, without cynicism and a sense of having failed. For we certainly did not fail at all. The new insights have contributed enormously in helping people to understand themselves and each other, to communicate, to express their needs, to release themselves from the paralyzing effects of serious emotional crippling. Our error lay only in expecting too much and in assuming that we could define and create the healthy personality, whereas this involves a range, a variety, a breadth of possibilities, before which we must still stand in awe and wonder.

In all my contacts with parents, my most intense and consistent impression has been that parents, like any people, are more often quite wonderful than not; that a very large number have worked gallantly to understand new ideas and to make use of new insights. Confusion has been coupled with courage; despite anxiety and uncertainty I have seen parents struggle tenaciously to learn, to adapt, to experiment. Because some of us demanded too much, we have felt disappointed and let down. Despite this, we really are making many wonderful and important gains, and we shouldn't be so discouraged. My hope is that we can regain a sense of perspective and, without rejecting new ideas, re-evaluate the use we make of our knowledge so that it may become more truly and individually ours. Rapid change has tended to make us feel uneasy, alienated from what is basic, true, instinctual, in ourselves. It seems to me that this need not continue. We need to find out what interferes most with the enjoyment of parenthood today, and what can be done about it.

My husband and I have had an opportunity to live with and become close friends of a French family living in a small town in the north of France. During one of our visits there I tried to explain to the mother what it was that I did in America, what my job was. Despite my fractured French she seemed to understand very well; in America there were people who studied all about children and then gave parents advice about raising them. She shrugged unhappily and said, "I am afraid we have nothing like that here. All we can do is raise them by the heart."

It seems to me that it should be possible to use new information, to go on learning, to use knowledge in such a way that, instead of paralyzing us, it would free us to be more natural, to be more deeply and truly ourselves, to open ourselves to life and to live by the heart as well. THE END

INTEGRATION
Continued from page 69

Yet there are signs in many communities that the old barriers are starting to give way, and that neither white neighborhoods nor white sentiments are as unassailable as they once appeared. Housing experts cite three specific trends toward integration.

(1) *"Stay-put" neighborhoods:* Many residents of all-white neighborhoods situated on the edge of Negro sections are choosing *not* to run when Negro families start to filter in. Instead, they quickly form organizations to prevent panic selling in the neighborhood and to thwart real-estate firms bent on triggering a hasty evacuation of white homeowners. A wit has suggested that such neighborhoods should adopt "We Shall Not Be Moved" as their campaign song.

(2) *Fair-housing groups:* About 550 citizens' fair-housing groups have organized throughout the nation, most of them in the suburbs. More are forming every week (five years ago there were only 18), and all have embarked upon programs to open their communities to Negro families.

(3) *"No fuss" integration:* Hundreds of previously all white suburbs have already been "integrated"—that is, they have accepted at least one Negro family as their neighbor; and they have done so, as a rule, without fuss or fanfare.

Does integration work? Can Negro and white families learn to live side by side without violence, without panic and without embarrassment? What happens in neighborhoods where they come together? How much integration can we realistically expect in our communities over the next few years? And if it occurs, how will it change our lives and the lives of our children?

The search for answers will take us to a variety of neighborhoods, and will introduce us to many people who are themselves searching for answers. These include the families, Negro and white, who face the issue every day—in their own community and on their own block.

It is hard to integrate; it is harder still to integrate gracefully. The two races have lived apart for so long that now when they do come together they tend to grow stiff and awkward. The right word, the easy gesture, eludes them. As a rule the Negroes are hesitant, reserved, afraid of being hurt; the whites are either coldly hostile or extravagantly friendly.

The first Negro family to move to Skokie, Illinois, needed around-the-clock police protection from angry neighbors. The second Negro family, a year later, was welcomed with smiles, presents and a virtual epidemic of neighborhood Kaffeeklatsches.

In Jefferson Valley Estates, Yorktown Heights, New York, white residents at first carefully shunned a new Negro family, but later surprised themselves by electing the husband vice-president of their neighborhood association.

Negroes are sometimes amused by this tendency among whites to blow either very cold or very hot—especially by the latter. "We're very much in demand around here," says Henry Ford, of Levittown, Pennsylvania. "We integrate a lot of parties." Ford, a high-school teacher and a former linebacker for the Pittsburgh Steelers, has observed that some of his white acquaintances like to invite him "just to have a Negro there." And like many other Negroes he has noted the white person's compulsion, when talking with a Negro, to bring up the subject of civil rights. "Someday," he says wistfully, "I'd like to have a nice, normal, nonracial conversation—about golf, or something like that."

But the compulsion cuts both ways, as Ford readily admits. "Once," he remembers, "I went to a party where nobody talked about the race issue. I kept waiting and waiting but it was never mentioned. So guess what happened. *I* brought it up."

It is one of the more exasperating features of neighborhood integration that all concerned, white and black alike, seem perpetually aware that they are practicing it. The result, probably unavoidable, is one awkward situation after another. "Look," said the Rev. James Upshaw, pastor of Christ Presbyterian Church in Terra Linda, California, to a Negro parishioner, "I'm prejudiced. When a Negro walks into the room, I see him first as a Negro. That's the way I was taught to think; but I'm doing everything I can to change it."

The white reflex of seeing the Negro before seeing the man—that is, of thinking, Joe is a Negro, rather than simply, Joe is my neighbor—is difficult to change in practice no matter how different one's

principles may be. Mr. Upshaw comes from Georgia, where he learned to think of Negroes as a race apart. "If I had gone swimming with a Negro down there," he says, "people would have expected to find a black mark where our bodies touched." Now, of course, he does swim with Negroes—in Terra Linda's community pool.

In Riverside Terrace, a neighborhood in Houston, Texas, Mrs. A. C. Ingersoll III faced a typical predicament. Riverside Terrace is one of those "stay-put" neighborhoods, where many Negro families have moved in and many white families have chosen not to move out. Mrs. Ingersoll and her husband are leaders in the neighborhood's struggle to stay racially integrated, but her discarded prejudices occasionally come back to haunt her. "I believe in integration," she says, "but I was not entirely comfortable with it. Seeing my children playing with Negro children was quite hard at first."

Mrs. Ingersoll was raised in St. Louis, and her world was a white world. Negroes seemed exotic. "I'll never forget the time our colored maid cut herself," she says. "Her blood was red—like mine!"

In integrated neighborhoods the road to misunderstanding is paved with good intentions. There is the story of the white woman in a New York City suburb who called on her new Negro neighbor bearing a gift of freshly baked brownies. "Oh, dear," she stammered as she presented the brownies, "I hope you won't take these personally!" Her neighbor didn't.

Stereotyped images of Negroes serve to compound the difficulties. The common white notion, for example, that all Negroes are poor can lead to some absurd situations. In a Chicago suburb a white woman driving by the home of a Negro family who had recently moved into the area noticed that the lady of the house, who was cleaning up the yard, was wearing a pair of old blue jeans. The white woman promptly went home and sent her a box of old clothes. The Negro woman was amused; her husband, an engineer, earns more than enough to provide her with a stylish wardrobe.

In a wealthy neighborhood in Great Neck, New York, a white woman invited her new Negro neighbor to tea. She arrived, and was admitted by the hostess' little girl. "Mommy," the little girl shouted, "I think the new maid is here."

Sometimes a white neighbor's unconscious prejudices will emerge in the form of an apparent compliment. "They're always telling me what a clean house I have and how neat my kids look," complains a Negro housewife living in a predominantly white neighborhood. "What they really mean is, 'You're not dirty like other Negroes. You're different.'" Understandably enough, Negroes resent this sort of flattery. Yet many feel it necessary to bend over backward—to keep their houses spotless and their children faultlessly dressed—just to avoid possible criticism from white neighbors.

"It's easy to tell which houses are occupied by Negroes," remarked a white resident of Concord Park, an integrated development near Philadelphia. "They're the ones with the nicest-looking yards."

The Negro may sense that some white neighbors not only are reluctant to let go of their prejudices ("After all," notes a Negro housewife, "they've cherished them for years!") but also are, in fact, eager to pounce on any bit of evidence that seems to confirm them. In one neighborhood in Chicago, Mr. and Mrs. Robert Smith and their three small children are the only Negro residents. (Their name is not Smith—the pseudonym is used to spare them further difficulty in an already troubled situation.) "My neighbors will not speak to me," Mrs. Smith says, "but they will not ignore me either. We are watched constantly."

When the Smiths have company, women gather in little groups in front of the house. They eye the guests' cars and sometimes even take down license numbers. "I guess they're afraid we're going to turn this place into a rooming house, or something," Mrs. Smith says. "When I go past my kitchen window sometimes, there's my neighbor staring out at me through her kitchen window. Frankly, I'm a little tired of living in a fish bowl."

Edgy white residents have a tendency to leap to unwholesome conclusions about their Negro neighbors. In Los Angeles a white woman kept a close watch on the comings and goings of a Negro family that had recently moved into the house behind hers. After a few weeks of observation she reported to a visitor, "Well, they don't hang their wash out on the line, they don't have much company and they don't seem to touch liquor. But the man hasn't been home in three days. He's probably run off somewhere." The man was away on business.

"If there's one thing I can't stand, it's a pushy parent!"

REDBOOK

Sometimes in social situations one finds subtle forms of bigotry parading as banter. This was doubtless the case at a recent women's luncheon in Houston, where amid the bright and easy chatter the conversation turned to the subject of family ancestry. One of the guests described her own impeccable Southern lineage, then turned with a saccharine smile to the only Negro woman present. "And what are *your* origins, dear?"

The Negro woman smiled back just as sweetly. "I," she said, "am the product of back-yard shenanigans in the slave South."

Expressions of pure malice by whites are usually easier for Negroes to handle than unintentional affronts. When a white neighbor in Chicago told Mrs. Smith, "We won't throw rocks through your window, but we won't invite you over for coffee either," Mrs. Smith was able to retort that it mattered not a whit to her one way or the other. The situation was unpleasant but at least it was clear-cut.

But it is harder to deal with the awkward situation that can develop when malice is not involved. This was the case recently when the Fords were invited to dinner at the home of a white couple in Levittown. From their chairs in the dining room the Fords could see, tacked to the kitchen wall, a decorative display of Aunt Jemima posters.

When, much later, the host and hostess of that evening discovered that the Fords had been offended by the posters, they were genuinely surprised. They had certainly not intended to insult their guests, yet that is precisely what they had done, because Aunt Jemima brings to mind a familiar stereotype—that of the chuckling, carefree "mammy"—and many Negroes find this image offensive. In an integrated neighborhood, it appears, one must clear both one's mind *and* one's walls of comfortable stereotypes.

Negroes themselves concede that they may be unusually sensitive about such matters and too ready to assume the worst, sometimes seeing evidence of rejection where none exists. For example, in one section of Terra Linda, which has been integrated for nearly ten years, some of the new Negro families became upset because no one on the block came over to welcome them. The Negroes did not understand that in that particular corner of Terra Linda, residents don't go out of their way to welcome anybody. "We build our fences very high here," notes one of the residents. "We like our privacy." Thus what the new Negro families took for discrimination was just the opposite: they were being treated like everybody else—that is, ignored.

Conversely, when Negro families are welcomed by the neighbors, they are sometimes unwilling or unable to respond in kind. In Houston's Riverside Terrace, several white housewives have complained that their Negro neighbors are "standoffish." As one woman puts it, "You have them over for coffee and to parties and things like that, but they never invite you back. I suppose it's because they feel self-conscious with us, but it kind of hurts."

A Negro housewife who has lived in Terra Linda for several years notes that she was "shy" at first about inviting neighbors to her house. "I do much more entertaining now than I did before," she says. "I guess I feel more secure now about the whole situation."

As a rule, the neighborhoods that have been integrated the longest are the ones least conscious of being integrated at all, and Terra Linda's community of Eichler homes is a case in point. Located across the bay from San Francisco, Terra Linda has about 11,000 families, most of whom live in all-white sections. But the section developed by Joseph Eichler and his son Edward (about 2,500 homes) has

been open to people of all races from the beginning.

Eichler Homes, Inc., is the country's largest builder of suburban houses in the $20,000-$25,000 price range. In 1955 the corporation sold one of its new houses in Terra Linda to Dr. Granville Cogg, a Negro. Immediately, before he and his family had a chance to move in, some of the residents organized a protest group. In an interview conducted by the Fund for the Republic, an organization that studies the problems of democracy, Edward Eichler recalls his meeting with the protest group:

"The ringleader was a definite psychopath. He threatened me physically and with all sorts of other actions. One of his threats was that he would put in front of his house . . . a big sign that would read: 'Eichler Homes Sells to Negroes.' . . . The second ringleader was an Army officer . . . and I was somewhat more direct with him on the grounds that he was a military officer. I told him he should not participate in such an activity no matter what his views were. I suspect that some people in the group got out after this conversation, but some of the talk kept up and was frightening more and more people who otherwise would not have been aroused."

A second meeting was held "and my father spoke to them this time. . . . My father told them, in substance, that he was damned if they were going to tell him what to do. He put it on a very personal basis: He had a bigger investment than they did; it was his property and his decision. . . . He offered to buy their houses back. He made this offer very specifically to the ringleaders. They immediately refused, saying that their houses were worth much more money than when they had bought them."

The moment the Coggs moved in, according to Edward Eichler, all protest ceased, "and it was the last word we ever heard." Since then some 25 Negro families and a number of Chinese and Japanese families have bought homes there without incident. Property values during this period have soared, and residents moving out in the normal turnover usual in any community are able to sell their houses quickly and profitably.

Several of the members of the original protest group over the subsequent years have changed their minds about integration: they are for it. "I was very much against the Coggs at first," one of them admits. "But I don't even think of them as Negroes any more—just people."

Nowadays no one in the neighborhood talks much about integration: it is a fact of life and no longer an issue. "We are reaching the point," observes a Terra Linda housewife, "where race makes no difference. We don't think of our neighbors as Negroes or whites, but simply as neighbors." This may be an exaggeration, but only a slight one. One group in particular takes integration very much for granted—the children. And this is true not only in Terra Linda but in all neighborhoods where it has been successful.

"The integrated neighborhood," says Dr. Benjamin M. Spock, "is the ideal place to bring up children. People who are most prejudiced are those who have, in

(Continued on page 143)

Let lovely DEBBIE DRAKE prove to you in just 10 days that...

YOU CAN HAVE A PERFECT FIGURE

for your basic body type

At 18, Debbie Drake was—in her own words—"the most shapeless thing anyone ever saw." But today she is one of the most popular beauty and health instructors in America. Millions watch her on TV. In this book she tells you all about the simple exercises and proper diet that quickly gave her the lovely figure she has now.

There is no ideal figure that's perfect for all women. The petite and the statuesque have measurements that vary widely, yet *each* can have a figure *perfect for her own basic body type.*

In this new book, Debbie Drake shows you how to overcome your figure faults and develop a figure that's perfect for YOU — *your* size, weight, height, age, and bone structure.

You don't have to strive for the measurements of a particular movie star or model. Many lovely girls, whose figures draw many an eye, wouldn't meet the model specifications of 34-24-34. *Your* perfect figure is achieved when you *understand* your general body type and MAKE THE BEST OF WHAT YOU HAVE.

Debbie Drake guarantees that in just a few short weeks you can have a regal bearing that commands admiration . . . a slim waistline . . . an attractive bustline . . . a body that will add immeasurably to your morale and self-confidence — whether you're sixteen or over sixty.

Just mail the coupon below and we'll send you a copy of DEBBIE DRAKE'S EASY WAY TO A PERFECT FIGURE for a free home reading. Take 10 full days to see how quickly, pleasantly, you can have a figure that's perfect for your basic body type — and the happier, healthier, longer life that goes with it. Let Debbie Drake show you:

- **How to determine your basic body type and then develop a figure that's perfect for your age, size, weight, height and frame**
- **How to melt pounds off your stomach with the "tummy-pull"**
- **How to beautify your legs with the "cake-walk"**
- **11 ways to exercise while traveling — on the job — telephoning**
- **How to use substitution — not starvation — as the key to successful reducing**
- **How to preserve your natural vitamin supply**
- **How to clear your skin by improving the circulation of the blood**
- **How to develop youthful, graceful hands**
- **How to stay at the most desirable weight for your body type**
- **How to regain your figure after pregnancy**
- **How to switch from haphazard eating to health-and-beauty ways of eating**
- **How to make every move with your body an exercise — stair-climbing — toe-walking — chin-lifting — finger-flexing — eye-rolling**
- **How to "face-the-facts" and turn those between-meal snacks into beauty-lifts**

PLUS . . . menus and diets . . . a special glamour exercise section . . . tips for good grooming . . . guides to relaxation . . . proper breathing methods . . . weight and calorie charts, with everything fully explained and accompanied by hundreds of photographs and drawings. Mail the coupon below and we'll send you a copy of DEBBIE DRAKE'S EASY WAY TO A PERFECT FIGURE — for a 10-day FREE TRIAL

Use This Book for 10 Days FREE — Let It Show You How Simple It Is To Achieve Your Own Perfect Figure

Read the book and follow its simple instructions for a full 10 days You'll find out how easy it is to develop your own perfect figure. You'll see how absolutely great you look and feel when your figure is right for your body type. If you're not delighted with this book, just return it within 10 days and owe nothing. You have nothing to lose — and you stand to gain years of happier, healthier living. Mail the coupon today.

(Continued from page 139)

general, *least* contact with the group they are prejudiced against."

As a rule, white children living in integrated neighborhoods accept Negro friends without question. Unlike their parents, they do not see race as an issue. A mother in Terra Linda notes that "my kids don't differentiate at all. When they invite friends to their birthday party, they don't tell me which friends are white and which friends are Negro—and I never ask. I have to wait till the day of the party to find out."

"It's kind of an odd experience," says another white mother in Terra Linda, "to have to explain the world to your children in reverse. They're just amazed that there are some places in the world where Negroes are not accepted."

Penn Moss, the curriculum coordinator of Dixie School District, which includes Terra Linda, points out that "in most towns, when the first Negro family moves into a white neighborhood, it's an *event*, and the children are bound to react to it. But here the children are used to Negro neighbors—they've been here from the start. That makes a big difference."

Moss says the presence of Negro children in the schools sometimes helps a teacher drive home a lesson. In a third-grade social studies class, for example, the teacher was attempting to explain that the word "native" referred merely to one's place of birth. "What is a native?" she asked. Various children answered that a native was "colored," "a savage" and "an African."

"But Johnny is colored," the teacher said, referring to one of her pupils, "and he's an American." The class eventually decided that they were all "natives" of America.

Because in all towns the integrated neighborhood is an exception to the established pattern, the children who live in it are likely to encounter problems when they enter the larger community. Friendships between Negro and white children, never questioned in the neighborhood, may be mocked and challenged by white schoolmates from outside the neighborhood.

In Terra Linda, Steve and Jim, both 12 years old, are inseparable friends. But because Jim is a Negro, Steve finds when they venture outside the neighborhood that he must frequently play the role of protector. "He tells the other boys to stop razzing Jim," Steve's mother explains, "and he keeps them from throwing Jim off his bike."

Sometimes Steve's white friends ask him, "How come your best friend is a nigger?" Steve doesn't know what to answer—but he has not abandoned his friend.

Jim has set foot in Steve's house only once. Each time he is invited in he explains that "my mother won't allow it." Once, though, Steve fell out of a tree and was knocked unconscious. Jim silently carried him into the house and sat by his bedside until the ambulance came to take Steve to the hospital.

Occasionally the pressures of prejudice may become too much for a white child, even if he knows better. He may find it easier to give in. At a cub scout

meeting in Terra Linda one afternoon. Frank, a Negro boy, was being teased unmercifully. "Go home and wash," they told him. "You're so black you'll never get the dirt off." To his own surprise, one of Frank's neighborhood chums found himself joining in. "I don't know why I did it," he told his mother later. "It's just that everybody was doing it."

In neighborhoods where Negro families are present but not welcome, the children of both races may become unwitting centers of conflict. For three-year-old Joey, who lives in a suburb of Philadelphia where most whites are friendly but some are not, "integration" means being called "nigger" and being beaten up by some white children on the block. His father stands at the window and watches Joey being pummeled. "Joey," he calls, "take care of yourself." And Joey does the best he can.

In Chicago the Smiths' three children —aged two, three and five—spend their days playing with one another. The white children on the block are not permitted to play with them. "That's the most awful part of the whole thing," Mrs. Smith says. "My children need playmates."

Once Mrs. Smith took her children for a walk. Passing a neighbor's house, she asked the neighbor's little girl if she'd like to come along. The little girl said she would, but she would have to go inside and get her mother's permission. She did not come out again.

When white parents are asked why they won't let their children play with Negro children, they frequently bring up the subject of intermarriage. "I don't want my daughter getting used to the idea of associating with Negro boys," says a white mother whose daughter is eight. "I know segregation is wrong—but so is intermarriage."

"It's the one thing I just can't stomach," says a white father who has worked hard for integration in his community "—the thought of my son marrying a Negro girl." Most Negro parents seem to feel the same way. "I wouldn't feel comfortable" and "I don't think society is ready for it" are frequent Negro comments about intermarriage.

In the typical integrated neighborhood, where Negroes comprise a tiny percentage of the over-all population, Negro teen-agers feel the full force of the intermarriage prohibition. They find themselves in a world where color makes a difference: it is a white world, and much of it is off limits.

The teen-aged Negro girl, faced with a shortage of Negro boys, is automatically excluded from dances and parties that require an escort. And she may find her old childhood girl friends drifting away from her—not because they are prejudiced but because they are part of a social circle from which she is barred: no date, no circle. The result can be a painfully lonely adolescence.

In two cases encountered by this reporter, the teen-ager persuaded her parents to move out of their integrated neighborhood and back to an all-Negro neighborhood—so she could attend a school with a larger enrollment of Negro boys.

Occasionally a Negro girl does get asked for a date by a white teen-ager, but her parents may not approve of interracial dating or it may not be the sort of invitation she cares to accept. A young Negro woman recalls such an incident. "When I was a senior in high school a very handsome football hero, who was white, called me up and asked me to meet him at the movies. I told him I'd go out with him but he'd have to call for me at my house and meet my parents. Well, he wouldn't do it. He couldn't believe that a Negro girl would be that respectable."

Negro teen-aged boys living in integrated neighborhoods are no better off than the girls. They too face a shortage of eligible dating prospects. "It's all right to dance with a white girl," observes a Negro teen-ager in Terra Linda, "but I don't think I'd date one. Some of the parents might object—and some of the guys too."

In general, then, neighborhoods that have only a few Negro families living there create special problems for Negro children and teen-agers; and these problems tend to be more vexatious if the neighborhood is in the middle of an all-white community.

"You bowl your way and I'll bowl my way."

REDBOOK

There is, however, another type of integrated neighborhood—the type situated on the edge of an all-Negro section. In such neighborhoods, as we shall see, the difficulty is not too few Negro families but the fear of too many.

For some 50 years white families have been steadily moving out of their old, established neighborhoods as Negro families have moved in. In most places today the process continues without pause and without much thought. Each week in Chicago, to cite a typical instance, two and a half additional blocks become all-Negro as white families demonstrate the well-worn reflex of fleeing to newer, "safer" neighborhoods. The result, of course, is more segregation. Over the past two decades, according to U.S. census figures, the proportion of Negroes to whites in nearly all major cities has sharply increased—and so has the proportion of whites to Negroes in nearly all suburbs.

But in some communities, of late, white families have found the strength to stay put. Their decision may stem not so much from a commitment to integration as from a loyalty to their neighborhoods: they like it where they are. But the upshot is integration—a frail and wavering kind of integration that demands constant tending by the neighbors.

"Stay-put" neighborhoods can be found in all parts of the nation. They include, to name just a few: Marynook, in Chicago; Leimert Park, in Los Angeles; Glenwood Lake, in New Rochelle, New York; Mapleton Fall Creek, in Indianapolis; and Riverside Terrace, in Houston. Riverside Terrace provides a striking example of the problems such neighborhoods face.

It is a gracious, tree-shaded neighborhood situated just to the south of a wide drainage canal known as Bray's Bayou. On the other side of Bray's Bayou there is a sizable community of middle-income Negro families.

About a year ago a few Negro families crossed the bayou and bought homes in Riverside Terrace. This was expected. For years local real-estate firms had "written off" Riverside Terrace, on the assumption that it would ultimately become a Negro neighborhood. Nearby areas had already undergone similar change. "Some of these neighborhoods," observed a Houston realtor, "were cleaned out in less than two weeks. Why, for a while there you couldn't even drive your car down the streets. They were jammed with moving vans."

At first it seemed as if Riverside Terrace's 1,000 families would follow the old pattern of evacuation. Hundreds of "For Sale" signs appeared overnight and property values began to slip badly. But some of the residents were not willing to move, at least not without a fight. They quickly formed an organization and launched an all-out campaign to quell the exodus. A letter was sent to every white resident, urging him not to panic and not to move. The group staged a series of neighborhood meetings, at which residents had a chance to ask questions and debate the pros and cons of staying put.

The campaign proved very effective. Residents began to have second thoughts about moving; many of the "For Sale" signs came down, and in their place were put up new signs which proclaimed: "THIS IS OUR HOME. IT IS NOT FOR SALE." A recent count around the neighborhood showed 225 "Not for Sale" signs as against 65 "For Sale" signs.

"The situation," says A. C. Ingersoll III, president of the group, "has definitely stabilized. Negro families now comprise about twenty per cent of the whole neighborhood, which is about the proportion of Negroes to whites in all of Houston."

Maintaining a reasonable ratio is now the neighborhood's major challenge. It will not be easy. White families are still moving out—though many of them now make their exits under cloak of night —and "block-busting" real-estate firms,

(Continued on page 153)

(Continued from page 149)

both Negro and white, are still doing all they can to encourage a mass white evacuation. Like other block-busting companies all over the country, they have a firm commercial purpose in view. Frightened whites will sell their homes as quickly as possible at low prices and Negroes desperate for homes in decent neighborhoods will buy the same houses at high prices. The real-estate companies handling the deals make a tidy profit.

One real-estate firm circularized white residents in Riverside Terrace with a message that began, "Don't panic—the move is on. Your neighborhood is changing slowly but surely." The purpose, of course, was to speed up the process. Another block-busting practice is to organize a caravan of cars, fill them with Negroes and slowly drive through the neighborhood—with the Negro passengers staring at the homes as if they were all prospective buyers.

The Riverside Terrace "stay-put" group can claim at least one major victory over the real-estate firms. For a long time the Houston daily newspapers, while giving the neighborhood's stand for integration an editorial pat on the back, had nevertheless continued to place for-sale offerings of Riverside Terrace homes under a "Colored Property" classification in the want-ad section (despite the fact that Negroes made up only about a fifth of the population and that 11 white families had recently bought homes in the neighborhood). But after several meetings between neighborhood residents and newspaper executives, and many protest letters, the newspapers began listing Riverside Terrace homes in the regular for-sale columns.

The new white families in Riverside Terrace were persuaded to move there by the neighborhood association's vigorous promotion campaign. The group has mailed out thousands of letters to prospective homeowners, describing the charms of Riverside Terrace.

"If we left it to the realtors," says Frances Rich, whose husband is a professor of physics at the University of Houston, "we'd never get anybody here. They take all their clients straight to the 'prestige' areas of town in southwest Houston; they don't even mention Riverside Terrace." Mrs. Rich and Mrs. Ingersoll have been devoting much time to guiding prospective buyers around the neighborhood. Both are studying for licenses as real-estate agents.

"We were impressed by the enthusiasm of the people here," says an Air Force colonel who recently moved into the area. "We felt if all these folks were willing to work so hard for their neighborhood, it must be a pretty nice place to live."

The Rev. Jack Woodard, an Episcopal minister, purposely moved in after the area was integrated. "The time is coming," he says, "when the two races must live together. I want my children to experience this." He calls the neighborhood's fight for stability "Operation Reality."

The campaign for racial balance has angered some people of both races. Ingersoll, who supported Barry Goldwater in the last election and who considers him-

Franklin School of Science & Arts
Nationally famous for excellence of training in Medical Technology—12 months; X-Ray Technology—9 months; Medical Secretary 12 months. Top paying position waiting. Coed. Free Placements. Approved. Founded 1919. **Write for Catalog R. 251 S. 22nd St., Phila. 3, Pa.**

Gradwohl School of Laboratory Technique Internationally known, M.D. supervised. Coeducational. G.I. Approved. H.S. diploma required. Enter monthly. One-year course, modern procedures. Placement service, big demand, good salaries. Catalog. **3512 Lucas Ave., St. Louis, Mo. 63103**

AIRLINE TRAINING

McConnell Airline School
Be an Air Hostess. Romance! Travel! Adventure! Fun! Train in just four weeks for exciting flight and ground positions. Airline-trained teachers. Free placement service. 21st year. Write for free catalog (give age).
1030 Nicollet Ave., Room R-45, Minneapolis, Minnesota

ENGINEERING SCHOOL

B.S. DEGREE IN 36 MONTHS
Small professionally-oriented college. Four-quarter year permits completion of degree in *Engineering* or *Business Administration* in three years. One year Drafting and Design Certificate program. Founded 1884. Rich heritage. Excellent faculty. Small classes. Well-equipped labs. New library. New residence halls. 300-acre campus. Graduate placement outstanding. *Modest costs.* Enter June, Sept., Jan., March. *For Catalog and View Book, write Director of Admissions.*

TRI-STATE COLLEGE
345 College Avenue • Angola, Indiana

self a "real conservative," was dismayed to find that some of his friends would no longer speak to him. "A number of my friends have written me out of the white race," he says.

Sometimes he and his wife Katie get phone calls in the middle of the night. The voice on the other end wants to know, "How does it feel to be a nigger-lover?"

On the other hand, some of the Negroes who have moved to Riverside Terrace fear the campaign for racial balance is really a pretext for racial discrimination. "How can they say they're for integration," asks a Negro resident, "when they're doing their best to discourage Negroes from buying homes here?" But a majority of the Negroes there understand the campaign's purpose and fully endorse it. "Frankly," a Negro housewife comments, "we expected the white people to move out. They always do. We're glad they didn't this time."

How long must Riverside Terrace continue to fight the battle for reasonable racial stability? If other similarly embattled neighborhoods around the country give any indication, Riverside Terrace's fight is far from won. The danger in all these neighborhoods is that despite a genuine desire on the part of white residents to keep them integrated, they ultimately will turn into Negro ghettos. And the reason lies not with the integrated neighborhood but with the surrounding white community, which continues to bar Negroes. With so few possibilities available, the Negro family naturally gravitates toward the neighborhood that has already been integrated.

Similarly, the Negro is more likely than his white neighbor to stay in an integrated area once he has moved there. He has little choice. Gradually, then, as white families move out for normal reasons having nothing to do with racial discrimination, the neighborhood tends to fill up with Negro families.

In Glenwood Lake, for instance, an integrated neighborhood in New Rochelle, New York, the struggle for stability has been going on for several years and the end is nowhere in sight. Four years ago 17 of the neighborhood's 177 houses were owned by Negroes, 160 by whites. Today Negro home ownership has increased to 60 houses—from about one tenth to about one third of the total. The change in proportion has been even more striking in Concord Park, a 139-home development in Philadelphia. Concord Park was built in 1953 by Morris Milgram, who pioneered in the building of housing open to all races. At that time 65 per cent of the residents were white and 35 per cent Negro. Today only 35 per cent of the families are white and 65 per cent are Negro, reversing the ratio.

It will be difficult for integrated neighborhoods located near Negro sections to *stay* integrated until other neighborhoods follow suit. This is beginning to happen in some towns—thanks, in part, to state and local fair-housing laws—but the process seems too slow to be of immediate help to "stay-put" neighborhoods.

Whatever the fate of neighborhoods like Riverside Terrace, they have dramatized the absurdity of panic, and they have developed some imaginative alternatives. "Any community that undergoes rapid racial change," declares Mrs. Daniel Bloom, chairman of the housing committee of the Glenwood Lake Neighborhood Association in New Rochelle, "is an unorganized community." She advises such neighborhoods to "organize instantly. Don't wait for panic. Panic is no longer an inevitable response to the presence of Negro families in one's neighborhood."

She might have added, with Thoreau, that "It is a characteristic of wisdom not to do desperate things."

Neighborhoods like Glenwood Lake, which continue to attract Negro families despite the threat these families pose to integration, suggest an interesting conclusion: that, generally speaking, what Negroes want is *better* housing and not necessarily *integrated* housing. There are, in fact, a number of all-Negro middle-class communities scattered throughout the country that do offer better housing to Negroes. But even assuming that such communities were socially desirable, they are plainly inadequate to meet the rising demand by Negroes for better homes.

Estimates made by the Advance Mortgage Corporation, a national lending institution, indicate that nearly 1 million Negro families will be in the market for a house during the 1960s. Many of these families will either buy homes in white neighborhoods or not buy at all. That is where nearly all the better housing is located, and that is where Negroes will have to go if they want it.

The evidence shows that they do want it. For example, in a Philadelphia study conducted by William Moyer, of the American Friends Service Committee, middle-income Negro families were asked what type of housing they wanted. Here is a typical reply: "We want a spacious ranch-style house with three bedrooms, a garage and a yard in a nice quiet neighborhood with people of similar interests."

Another interviewee declared, "I'm tired of hearing people say we want to move near whites. We don't want to move near whites; we just want what they've got—good housing."

Most Negroes are reluctant to move to white neighborhoods. Every family interviewed, says Moyer, "volunteered the information that they were not pioneers." They did not want to buy homes outside Negro neighborhoods, he concludes, "because of fear."

Sheldon T. Mays, a Negro real-estate man in Los Angeles and an officer in the local Urban League, confirms Moyer's findings. "Negroes," he says, "are afraid they'll catch hell in white suburbs. They want to be convinced that they are welcome and that they are not going to be treated like trash."

Stories of white violence in retaliation for Negro move-ins spread quickly through a Negro community—much more quickly than do stories of white acceptance of Negro families. Thus many Chicago Negroes avoid buying a house in Skokie because four years ago it was the scene of a near race riot. What Negroes may not know—or, as seems more likely, do not believe—is that Skokie's Human Relations Commission has developed techniques to prevent any unpleasantness, and that these techniques seem to work.

Before a new Negro family moves in, Skokie officials now meet with all the neighbors. "We tell them," says Village Manager Benjamin Marsh, "that they have nothing to fear if they don't panic. We urge them not to put their houses up for sale. We also tell them that we intend to keep the peace and that we mean business." Marsh says that since the first Negro family moved to Skokie "there has been a profound change in social attitudes. People talk more about integration now, and they understand it much better." But only four Negro families have moved to Skokie.

All over the country, in fact, white integrationists are complaining that they have more open-housing opportunities than they have Negroes to fill them. Especially vocal have been the many suburban fair-housing groups. These groups are discovering that once they have convinced their neighbors to practice open occupancy, the job is still only half done.

The typical citizens' fair-housing group is made up of people who sincerely want to "do something" about segregation in their town. It begins, often as not, with a burst of enthusiasm and a campaign to persuade residents to sign a "freedom of residence" pledge, which commits them to the idea of integration. Then the group sits back and awaits the first Negro family. But the first Negro family, in many instances, doesn't make an appearance, and the group's enthusiasm turns to frustration.

"Lots of people here are willing to sell their homes to Negro families," observes a fair-housing enthusiast in Wilton, Connecticut, "but we can't find any Negro families who are interested in living here."

It is the same in many areas scattered over the country. Recently the Chicago *Defender*, a Negro newspaper, ran this headline: WANTED: NEGRO BUYERS FOR HOMES IN WHITE SUBURBAN NEIGHBORHOODS. The article cited "some 3,000 homes available to Negro buyers in 17 areas [of Greater Chicago], most of these in suburbia." It urged Negroes to take advantage of the new opportunities.

But, as Sheldon T. Mays points out, "Negroes don't move for artificial reasons. They have to have a good reason—a *housing* reason. And then if they do move, they may prefer to move to another house in their present neighborhood, where they know everybody and where they're close to work.

"White suburbanites," Mays continues, "who announce that Negroes are now welcome and then expect to get swamped by hordes of Negroes are showing a surprising lack of humility."

If the choice is between integrated housing and a decent neighborhood, most Negroes, it appears, will choose the latter. In Philadelphia, officials of an integrated low-income cooperative located in a slum neighborhood near the center of town find they have a sizable turnover among Negro families who are moving up the economic ladder—and out of the cooperative. "Many of them move to Negro neighborhoods farther out," explains an officer of the Friends Neighborhood Guild, sponsor of the cooperative. "They say they don't want to bring up their children in a slum."

The spokesman summed it up this way: "Most of the white families are here because of their convictions—they want to live in an integrated neighborhood; most of the Negro families are here because of convenience, and when they can afford a better place, they get out."

It seems clear from all this that neighborhood integration depends upon considerably more than white intentions. "It is a long, tough process," observes Dr. Rhetta M. Arter, of Research Action Associates, private consultants on community problems. "A decision to open up a neighborhood does not automatically integrate it."

Dr. Arter and her colleague, Corienne R. Morrow, note that "the whole flow of the real-estate market is now in the opposite direction of fast integration." The

time to have pushed for widespread integration, they say, was immediately after World War II, when millions of veterans were buying new homes and settling new neighborhoods. "We missed a great opportunity then," says Dr. Arter. "Negro veterans had to buy homes in segregated developments—and many of them are still there. After all these years, why should they move?"

In this missed opportunity, say many integrationists, the federal government played a crucial role. Since World War II more than $117 billion worth of new housing has been insured by either the Federal Housing Agency (FHA) or the Veterans Administration. But less than two per cent of that housing has been available to nonwhite families, and much of that on a strictly segregated basis.

President Kennedy's famous Executive Order of 1962 finally did bar discrimination in federally aided housing—but by then the big postwar building boom was spent. "If President Truman had signed such an order in 1947," comments Edward Eichler, "we would have considerably more integration today." But in 1947 neither the government nor the electorate seemed ready for such a move. The fact is that until very recently the federal government consistently threw its weight on the side of segregation.

"From 1933 to 1938," report Frances Levenson and Margaret Fisher, both with the National Committee Against Discrimination in Housing, "the federal government actively promoted discrimination and segregation in much of the housing affected by its operations."

Typical was the following passage from an FHA manual: "If a neighborhood is to retain stability, it is necessary that properties shall continue to be occupied by the same social and racial groups."

The manual instructed homeowners how to keep out "undesirables" by means of restrictive covenants, and displayed a model restrictive covenant for any reader wishing to include one in his property deed. (Under a restrictive covenant the buyer of a house agreed never to sell it to Negroes—or Jews, or Catholics, or whomever the covenant specified. The technique was pronounced unconstitutional by the Supreme Court in 1948.)

In another manual, not revised until 1949, the FHA urged its mortgage evaluators to consider whether "effective restrictive covenants against the entire tract are recorded, since these provide the surest protection against undesirable encroachment. . . ." It warned evaluators to beware of "adverse influences," such as "the infiltration of business and industrial uses, lower-class occupancy, and inharmonious racial groups."

"It is one thing," declares Gunnar Myrdal in his classic on race relations, *The American Dilemma*, "when private tenants, property owners and financial institutions maintain and extend the pattern of racial segregation in housing. It is quite another matter when a federal agency chooses to side with the segregationists."

As Myrdal implies, the federal government has not been alone in promoting segregation. Home builders, real-estate firms and lending institutions all have contributed to the general pattern. For example, until recent years the official Code of Ethics of the National Association of Real Estate Boards included the following regulation: "A Realtor should never be instrumental in introducing into a neighborhood . . . members of any race or nationality, or any individual, whose presence will clearly be detrimental to property values in the neighborhood."

Similarly, the policies of most lending institutions have discouraged Negroes from moving to white neighborhoods. The Mortgage Bankers Association of Metropolitan Washington, for example, conceded in testimony before the U.S. Civil Rights Commission three years ago that "applications for mortgages from minority groups are not generally considered in areas that are not recognized as being racially mixed." In other words, Negroes could not get mortgages on homes in white neighborhoods.

In sum, as Algernon Black, a founder of the National Committee Against Discrimination in Housing, has observed, "The government, real-estate boards, bankers and builders all have played roles in creating a pattern of racial and zoning exclusion." And since so great an effort has been made over the years to establish neighborhood segregation, it will probably require at least an equivalent effort to get rid of it. "We are weighed down by the past," says Black. "We are moving in slow motion."

Plainly, though, the process of desegregation has already begun. The federal government no longer abets discrimination—in fact, it does much to discourage it; 17 of our states and more than 50 of our cities have enacted fair-housing laws, and banks are beginning to grant mortgages to Negroes in white neighborhoods.

More significant is the "change of heart" that seems to be taking place in many white neighborhoods. Communities like Terra Linda, Skokie and Riverside Terrace are facing up to integration and making it work. Scores of citizens' fair-housing groups have sprung up, seemingly overnight, and despite initial frustrations, most of them are still in business. "There is competition among some of these towns," says Edward Marciniak, director of Chicago's Human Relations Commission, "to see who can integrate first."

But it would be foolish to conclude that widespread neighborhood integration is near at hand. It is not. While some states and cities have been enacting fair-housing laws making discrimination illegal, voters elsewhere have been repealing such laws by large marjorities. Last November, Californians voted two to one to overturn the state's fair-housing law—and to bar such legislation in the future. Similar voter repudiations have occurred recently in Seattle, Detroit and Akron.

True, the votes may not be an entirely accurate measure of white prejudice. Many who endorsed repeal of fair-housing laws, for example, felt that they were striking a blow for private property rights and not necessarily *against* civil rights. Yet a sizable proportion of white Americans—about half, say the pollsters—still object to having a Negro family living next door. Perhaps many of them would change their minds once a Negro family actually did move next door (we have seen this happen already in integrated neighborhoods), but the prospect of initial white hostility is sufficient to discourage most Negro families from taking the plunge.

Even if all white Americans were suddenly to become confirmed integrationists, relatively few Negroes would rush to white neighborhoods. Such a move would mean a considerable wrench from the established pattern of their life. Most Negroes, it seems fair to say, want the *right* to move into white neighborhoods more than they want to exercise that right.

It would be equally foolish to assume that widespread neighborhood integration is impossible. On the contrary, it appears inevitable. Seventy years ago Booker T. Washington, then the spokesman for American Negroes, set forth his famous prescription for racial harmony: "In all things that are purely social, we [the two races] can be as separate as the fingers, yet one as the hand in all things essential to mutual progress." It was a doctrine meant to draw an indelible line between the races. Today the line is blurred. Americans who believe that neighborhood integration is "essential to mutual progress" are discovering that it also includes features that are "purely social." The white child, for example, who invites a Negro neighborhood chum to his birthday party is promoting mutual progress in a way that Booker T. Washington had not dared to envision.

If the desegregation of our neighborhoods is sometimes attended by pain and awkwardness—and it is—the prospect of continued neighborhood segregation seems no less painful. We are committed as a nation to school integration—yet how are we to accomplish it without neighborhood integration? It is impossible to escape the fact that neighborhood segregation causes school segregation, that separate housing usually leads to separate playgrounds, separate churches, separate hospitals, separate clubs, separate shopping facilities—in short, separate worlds.

The two worlds have tended to become fixed on the American landscape. White prejudice is thereby preserved and Negro equality postponed. "It must be recognized," declares sociologist Eli Ginzberg in *The Negro Potential*, "that the Negro cannot suddenly take his proper place among whites in the adult world if he has never lived, played and studied with them in childhood and young adulthood. . . . Only when Negro and white families can live together as neighbors . . . will the Negro grow up properly prepared for his place in the world of work."

And only then, one might add, will the white child grow up properly prepared for his place in a world populated by three billion people, most of whom are not white. THE END

Residential Segregation

An objective index shows that in every American city Negroes live separately from whites. Of the three principal causes—choice, poverty and discrimination—the third is by far the strongest

by Karl E. Taeuber

Some eight years ago this magazine carried a prediction that "the 'racial problem' of the U.S., still festering in the rural South, will become equally, perhaps most acutely, a problem of the urban North" [see "Metropolitan Segregation," by Morton Grodzins; SCIENTIFIC AMERICAN, October, 1957]. One need only recall the headlines of the past few years concerning racial strife in New York, Birmingham, Montgomery, Cleveland, San Francisco and many other cities to recognize that the "racial problem" has indeed moved into the urban North—and also into the urban South. A profound social change underlies these events; it is reflected in the figures of the 1960 census, which show that a higher percentage of Negroes than of whites live in cities. Ten large cities in the North and West contain the overwhelming majority of the Negroes in those regions, which in turn contain 40 percent of the nation's Negro population. In the South more than half of the Negroes are city dwellers.

Perhaps the most striking feature of the life of Negroes in cities is the segregation of their residences from the residences of whites. This ghetto situation is one of the most pronounced and most tenaciously maintained forms of segregation the Negro American faces. Residential segregation in turn underlies many other problems. From it arises *de facto* segregation in schools, hospitals, libraries, parks, stores and a variety of activities carried on within neighborhoods.

Residential segregation is particularly amenable to quantitative study because it is expressed in the physical location of white and Negro households. This situation is readily apparent in the illustration on page 14, which shows the distribution of the Negro population in Chicago. Even a cursory inspection shows that Negro residential areas are clearly distinct from white residential areas. A similar map of any other large city in the U.S. would also show a high degree of residential segregation.

Work of this kind has a deficiency, however, in that it leaves open a question: Which of two or more cities being compared has the greater degree of segregation? The kind of ambiguity that can arise is indicated by two maps published by a newspaper in Chicago a few years ago showing the patterns of residential segregation in Chicago and Birmingham. The accompanying headline declared that Chicago was the more segregated because its all-white areas were more extensive than Birmingham's. The same maps could have been used to argue that Chicago was the less segregated because its all-Negro areas were less extensive than Birmingham's. Both statements are true, and both reflect the fact that Negroes constitute a much larger proportion of the population in Birmingham than in Chicago.

What is needed in the measurement of residential segregation is a technique that does not lend itself to ambiguous interpretation. Such a technique would summarize the degree of residential segregation in a city independently of the percentage of Negroes in the city and of any subjective judgments. A measure of this kind is the "index of dissimilarity," which is widely used in studies of population distribution. The index compares two percentage distributions. When it is adapted to the comparison of white and Negro residential distributions, it is commonly called a "segregation index."

The rationale of the segregation index is that if there were no forces working toward residential segregation in a city, any given neighborhood would show about the same proportion of whites, Negroes and other races as one would find in the city as a whole. In other words, if the population of a nonsegregated city were half Negro and half white, the residents of any city block would be equally divided between the two races. Such a situation would produce a reading on the segregation index of zero. A reading of 100 is obtained when there is complete residential segregation: there are no Negro residents in white neighborhoods and no white residents in Negro neighborhoods.

With the necessary data in hand anyone can calculate a segregation index for a city by the method I use. First identify each neighborhood in which the percentage of Negro house-

PATTERN OF SEGREGATION appears in these photographs of playgrounds in New York City. The photograph above shows a playground at a public school in Harlem, an overwhelmingly Negro section of the city. The photograph below shows a playground at a public school on East 81st Street in a predominantly white section. Similar segregation by race is evident in every major American city.

CHANGING CHARACTER of Chicago neighborhoods is reflected by the colors in this map. Dark color shows areas with more than 25 percent Negro population in 1950; medium color, the same information for 1960; light color, for 1964. White areas are all-white neighborhoods; gray shows nonresidential sections. Data are based on a map prepared by the Chicago Urban League. Boundaries define 76 "community areas" set up by researchers at University of Chicago for statistical purposes; light gray shows water or noncity areas.

holds is higher than the percentage in the city as a whole. Find the number of Negro households and of white households in these areas. Calculate the percentage of the city's Negro households contained by the areas (a figure that is often above 90 percent) and the percentage of the city's white households in the areas (typically about 10 percent). The difference between the two percentages is the city's reading on the segregation index. To put it another way, a reading of 80 on the segregation index would indicate that 80 percent of the Negroes would have to be redistributed to predominantly or exclusively white blocks if the city were to achieve an unsegregated pattern of residence.

Two particular advantages can be cited for this index in comparison with other techniques that have been proposed for the measurement of residential segregation. The index has no direct dependence on the percentage of Negroes in a city, and it is relatively easy to calculate. On the other hand, certain hazards should be noted. Like any single index used to represent a complex phenomenon, the segregation index is a summary device that does not reflect all the subtleties of the actual situation. It does not indicate the character of the residential segregation in a city—that is, the strength of white feelings about where Negroes should live or the strength of segregation's emotional impact on Negroes—nor does it reveal the precise spatial configuration of Negro residential areas. In short, the best way to summarize the index is to say that it is a strictly objective measure, based on census data, of the general unevenness in the distribution of white and Negro households among residential neighborhoods.

The segregation index can be calculated from data for any set of residential areas: wards, precincts, census tracts, blocks and even the usually vague concept of a neighborhood. In general, the smaller the areas used in the calculation, the higher the degree of segregation that will be found. I prefer to use data for individual city blocks, because a calculation made on this basis shows the "fine structure" of the segregation pattern.

I have calculated the segregation indexes for 207 American cities—all the cities for which block data are available and that had at least 1,000 nonwhite households in 1960. The readings for these cities range from 60.4 in San José, Calif., to 98.1 in Fort Lauderdale, Fla. Half of the cities have segregation indexes above 87.8, half below.

No elaborate analysis is necessary to conclude from these figures that a high degree of residential segregation based on race is a universal characteristic of American cities. This segregation is found in the cities of the North and West as well as of the South; in large cities as well as small; in nonindustrial cities as well as industrial; in cities with hundreds of thousands of Negro residents as well as those with only a few thousand, and in cities that are progressive in their employment practices and civil rights policies as well as those that are not.

Negroes are of course not the only minority group subjected to prejudice and discrimination. How does the residential segregation of Negroes compare with that of Puerto Ricans in New York City, of Mexican-Americans in Los Angeles, of Japanese and Chinese in San Francisco? The segregation index is adaptable to questions of this type. One change is necessary in the method of calculation: instead of using data from city blocks, one must switch to census-tract data, which provide a more detailed ethnic classification. (Census tracts are statistical areas established by the Bureau of the Census for the study of small sections within cities; the tracts average about 5,000 in population.)

On the basis of census-tract data for 1960 it is possible to consider three groups in New York City: Negroes, Puerto Ricans and "other whites." (This discussion will ignore the fact that a few Puerto Ricans are Negroes.) Indexes calculated for each group show that

Puerto Ricans and Negroes are both segregated from "other whites." The degree of Negro segregation, however, is much higher. In addition there is considerable residential segregation of Puerto Ricans from Negroes [*see bottom illustration on next page*].

For Los Angeles in 1960 census-tract data permit identification of four groups: (1) Negroes; (2) other races, meaning nonwhites other than Negroes —mainly Japanese and Chinese; (3) whites of Spanish surname, a classification that provides a rough approximation of the Mexican-American population, and (4) "other whites." Segregation indexes making six comparisons among these groups are shown in the bottom illustration on the next page. The highest of the six indexes is the one comparing Negroes and "other whites." The second- and third-highest indexes are for the other comparisons involving Negroes. In other words, Negroes are markedly segregated from all other residents of the city. Lower index values appear in the comparisons of "other races," "whites of Spanish surname" and "other whites" with each other.

A different kind of analysis can be made for San Francisco. For that city data are available allowing assessment of the trends in segregation between 1940 and 1960 among whites, Negroes and other races. In 1940 San Francisco's Negro population was quite small, numbering only 5,000. During and after World War II it increased rapidly, reaching 74,000 by 1960. The population of other races also grew, from 27,000 to 62,000. (Chinese make up the largest portion of this group, although it also includes a sizable number of Japanese.) In the early 1940's the rapidly growing Negro population took over much of the housing vacated by the Japanese when they were moved to wartime relocation centers. The Japanese returning after the war developed new residential patterns. These trends are evident in the illustration at the left on page 17, which shows that the segregation of whites from other races has diminished sharply since 1940. As members of other races have dispersed from Chinatown and the Japanese colony they have adopted a residential pattern more like that of the city's whites. Concurrently their segregation from Negroes has increased. In contrast, residential segregation of Negroes from whites has remained at a high level throughout the two decades.

Similar trends can be found in many Northern cities, although the explanation is different. Half a century ago, when the immigration of Europeans was at its peak, Northern cities contained assorted ethnic colonies. At that time the Negro population in these cities was small. The vast migration of Negroes from the South to the North began during World War I, which marked the period when European immigration dropped sharply. Stanley Lieberson, one of my colleagues at the University of Wisconsin, has examined the changing patterns of residential segregation among the European immigrants and has found that in 1910 some ethnic groups were as segregated from native whites as Negroes were. Since 1910, however, the residential segregation of every group of European descent has been declining, whereas segregation of whites from Negroes has been increasing.

In the South historical data also show a long-term trend of increasing residential segregation of Negroes from whites. A special census of Charleston, S.C., in 1861 showed that whites and slaves were only slightly segregated from each other. In that era, of course, most urban slaves were housed in a walled-off portion of their owner's residence or in separate slave quarters on his property. By 1910 Negro-white segregation had risen appreciably in Charleston. Segregation indexes calculated for subsequent census years confirm a century-long increase.

The best-documented pattern of steadily increasing residential segregation in Southern cities uses special compilations of data from city directories for Augusta, Ga., which distinguish between whites and Negroes [*see illustration at right on page 17*]. Similarly detailed information is not available for other cities. Many miscellaneous data,

NEGRO DISTRIBUTION in Birmingham, Ala., is shown according to data obtained in the 1960 census. The outlined areas are census tracts, which are subdivisions established by the Bureau of the Census for the purpose of studying small areas within cities; the tracts average about 5,000 in population. The key at left indicates how the map can be read to show the percentage of Negroes in the population of each census tract in Birmingham.

REGIONAL CHANGES in residential segregation between 1940 and 1960 are indicated for four regions: Northeast, North Central, West and South. The numerals give each city's "segregation index" for 1940, 1950 and 1960; a rising index indicates increasing residential segregation in the city. The trend of segregation in each region between 1950 and 1960 is indicated by the colors: light for a downward trend and dark for an upward trend.

COMPARATIVE SEGREGATION of Negroes and other racial or ethnic groups is shown for two cities. Readings are in terms of segregation indexes for 1960. For example, comparison of Negroes with "other whites" (meaning whites other than Puerto Ricans) in New York shows that 80 percent of Negroes would have to be redistributed to achieve desegregation.

however, support the supposition that residential segregation was at a minimum during slavery and that subsequent years have brought the gradual obliteration of older patterns in favor of more segregated ones.

Systematic analysis of trends in residential segregation can begin with 1940, when the Bureau of the Census started publishing data for city blocks. On the basis of these data I have constructed a series of segregation indexes covering 1940, 1950 and 1960. The indexes show the trends in the 109 cities for which block data were published and that contained at least 1,000 nonwhite households in 1940. Residential segregation of whites from nonwhites was quite pronounced in all 109 cities by 1940. Even so, by 1950 the segregation scores for 83 of these cities had advanced to new peaks. The average among the 109 cities was an increase of 2.1 points, from 85.2 to 87.3.

A different story appears in the next decade. Between 1950 and 1960 only 45 cities registered increases; 64 showed decreases. The average for the 109 cities went down 1.2 points to 86.1 [*see top illustration at left*].

An average, of course, conceals individual performances. Examination of the changes in the two decades reveals some interesting variations between regions. From 1940 to 1950 the majority of cities in every region—Northeast, North Central, West and South—experienced increases in segregation, but the average increase was larger in the South (3.6 points) than in any other region. Cities in the North Central region showed an average increase of 1.5 points; the change among cities in the Northeast and the West was upward but negligible.

The contrast between Southern cities and those in other regions became more pronounced in the next decade. Among Southern cities the average of the segregation indexes rose 2.2 points between 1950 and 1960. In each of the other regions the average went down—rather sharply in the West (6.5 points) and the Northeast (4.7), less markedly in the North Central states (1.5).

Two generalizations can be made on the basis of these trends. The first is that many Southern cities are approaching the upper limit of complete segregation. Secondly, even if the 1970 census should show that the declines in the other regions continued during the present decade, it would still be many decades before residential segregation of

SEGREGATION TRENDS in San Francisco are shown in comparisons of whites, Negroes and other races from 1940 (*light bars*) to 1950 (*medium bars*) and 1960 (*dark bars*). The term "other races" refers mainly to the city's residents who are of Oriental origin.

RISING TREND of residential segregation in the South is indicated by the situation in Augusta, Ga. The data for the years before 1940 are based on city directories, which distinguished between white and Negro residents. Later data are from census reports.

whites from Negroes reached low levels in any part of the country. The modest declines during the 1950's in three regions do not conceal the fact that throughout the nation residential segregation continues to be a serious social problem.

Discussions of regional differences in segregation often bog down in unsubstantiated generalizations or outright polemic. Rather than attempt an intuitive interpretation of the changes in segregation, I undertook a more formal assessment. For each of 69 cities for which all the necessary data could be obtained I calculated five variables showing changes in the city's characteristics between 1940 and 1950 and between 1950 and 1960. The five variables were: rate of growth of the white population; rate of growth of the nonwhite population; rate of suburbanization; rate of new housing construction, and degree of improvement in the occupational level of nonwhite workers. With these figures in hand I assessed by statistical methods whether or not a city's change in segregation during a decade was related to changes in any of the five variables.

This is not the place to go more fully into the methodology of the study. Suffice it to say that the results of the analysis allow an interpretation that avoids the pitfalls of regional chauvinism. The analysis led to the following interpretation of the changing trends in residential segregation.

In cities throughout the country little new housing was built during the depression years of the 1930's and the war years of the 1940's. About the only exceptions were public housing and war-housing projects. These were almost invariably occupied on a segregated basis—either by public policy, the location of the site or informal controls. Rapid population growth stimulated by wartime industrialization gave rise to severe strains on the urban housing market. Extremely low vacancy rates were one index of the tight housing market that persisted throughout the 1940's. The situation was particularly serious for Negroes: Negro residential areas could not be expanded into surrounding white areas, but Negroes continued moving into the cities.

In these circumstances neither the pressures of rapidly growing Negro populations nor the improving economic status of Negroes could have much effect on patterns of residential segregation. With Negro residential areas becoming increasingly overcrowded, slight increases in the segregation index were common. In some cities, particularly smaller and more recently settled Southern cities that still had vacant land available for residential development, there was considerable new construction in the late 1940's. Virtually all of it was occupied on a segregated basis. These developments account for the large increases in the segregation indexes of the South.

The housing shortage eased tremendously during the 1950's. As millions of people—mainly white—flocked to new suburban housing, vacancy rates in cities climbed, levels of overcrowding among Negroes as well as whites were drastically reduced and Negro residential areas expanded. In Northern cities Negro populations continued to grow at a rapid rate. There was a large-scale turnover in the housing market as many higher-income whites obtained new housing, and lower-income whites and Negroes abandoned some of the worst of the old housing. Extensive highway construction, urban renewal and public housing projects contributed to residential change.

The statistical analysis shows that in this more permissive housing-market situation the pressures for housing for the growing Negro populations, together with the demand for improved housing created by the improving economic status of Negroes, were able to counteract and in many cases to overcome the historical trend toward increasing residential segregation. In Southern cities Negro population growth was slower and economic gains were less. The long-term trend toward

ACTUAL AND EXPECTED segregation indexes are shown for 15 cities on the basis of 1960 census-tract data. The comparison relates to the argument that the poverty of Negroes is the sole cause of residential segregation. The "expected" indexes (*dark bars*) show how much racial segregation there would be if the amount paid for housing were the only cause of segregation. Actual segregation indexes (*light bars*) are much higher, indicating that factors other than poverty are involved in the determination of Negro housing patterns.

increasing segregation slowed but was not reversed.

Improved economic circumstances among Negroes can, in a permissive housing market, be effective in reducing levels of residential segregation. This much is demonstrated by events of the decade from 1950 to 1960. The implications of this finding, however, should not be exaggerated. The relation shown by the statistical analysis also indicates that even if Negroes gained full economic equality at some time in the distant future, their residential segregation from whites would still be considerable.

Gunnar Myrdal suggested in *An American Dilemma,* his classic study of the race problem, three principal factors that could explain the prevalence of residential segregation. The first was choice: perhaps Negroes prefer to live in Negro neighborhoods. Myrdal granted that there was some truth in this notion, but he observed that the choice can hardly be considered a free one because it is made in a society in which discrimination and prejudice are widespread—often to the point where many Negroes who move into white neighborhoods are threatened with physical violence as well as social ostracism.

The second factor is discrimination. Sometimes this may be outright, as it still is in the housing markets of most cities, both North and South. Sometimes it may be more subtle, as tends to be the practice in cities with "fair housing" legislation, where Negroes who seek housing in white areas are often put off by various stratagems and evasions.

The third factor noted by Myrdal was poverty. To the extent that Negroes are unable to afford living in many areas of a city, segregation can result from economic factors rather than from discrimination in housing. Opponents of fair-housing legislation are often among those who are most vociferous in support of this point of view, arguing that efforts to combat residential segregation should be directed primarily toward improving the Negro's economic ability to compete in the housing market. Because this argument has such a plausible ring it is instructive to examine its empirical underpinnings.

Empirical data usually turn out to be more complex than any simple hypothesis would suggest, and this is certainly the case with data on race, income and residential segregation. In Chicago, for

example, nonwhite families in 1960 constituted 20 percent of all families but only 8 percent of those families with incomes of $10,000 and over. Clearly the city's nonwhites are on the average poorer than the whites and hence are less able to pay high housing costs. Yet 1960 census data on rental housing show median rents for both white and nonwhite households to be $88 per month. If poverty were the only explanation for residential segregation, it would follow that rental housing should be comparatively unsegregated. In fact it is not. In the ownership market it is apparent that Negroes are at a competitive disadvantage and that relatively few families can afford the more expensive new housing in the city and the suburbs. Most owners, however (both Negro and white), live in moderately priced housing.

One might conclude at this point that the poverty explanation for the residential segregation of Negroes has some merit but is obviously not the full story. Before I leave the reader with that conclusion I should like to discuss the matter more fully. The poverty argument is seldom stated explicitly but seems to depend on four assumptions: (1) that families with different incomes live in different areas of the city; (2) that Negroes have lower incomes than whites; (3) that nonwhite families at any given income level are able to obtain the same housing as whites at that level, and (4) that the observed pattern of residential segregation by race results from the first three assumptions.

To test the poverty argument I shall accept the first three assumptions and subject the fourth to empirical examination. Researchers at the University of Chicago have divided the city of Chicago into 76 "community areas" for statistical purposes [*see illustration on page 14*]. The 1960 census provides data on the distribution of income among the families in each area. Since nonwhite families account for 8.3 percent of all families with incomes of $10,000 and over, assume that in each community area they do likewise. By making similar assumptions for each income bracket one can calculate the "expected" number of nonwhite families in each community area. This calculation gives the distribution of white and nonwhite families that could be expected if Negro poverty were the sole explanation for residential segregation.

It should follow, if the poverty explanation is valid, that the expected distribution of nonwhites is similar to the actual distribution. This, of course, is not the case. In contrast to the wide range in actual percentages of nonwhite residents, every expected figure is between 13 and 33 percent. The actual segregation index calculated from the data for community areas is 83; that calculated from the expected data is 10.

The conclusion is inescapable that the poverty explanation for residential segregation has little merit. This conclusion does not apply only to Chicago. Experiments with several similar techniques for 15 other cities revealed the same findings. In fact, the more refined the technique, the more unequivocal the finding, that is, the less the portion of residential segregation that could be attributed directly to economic factors.

This point is reflected in the illustration on the opposite page, which shows the actual and expected segregation indexes for the 15 cities on the basis of 1960 census-tract data. In making these calculations I did not use the income distribution of families; instead I used the distribution of households—by value for owner-occupied units and by rent for renter-occupied units. In contrast with income, which indicates potential ability to compete in the housing market, this technique uses data on what families actually pay for housing. On this basis too the results show that Negroes are excluded from many residential areas in which their economic status would allow them to live.

There is an even simpler demonstration of the inadequacy of the poverty explanation for residential segregation. The crucial assumption that white and Negro families at the same income level are not residentially segregated is patently false. In no city do high-income Negroes live randomly scattered in the same neighborhoods as high-income whites. In no city do low-income Negroes live in the same neighborhoods as the majority of low-income whites. Regardless of income, most Negroes live in Negro neighborhoods and most whites live in white neighborhoods.

A summary assessment can now be made of the three factors cited by Myrdal. Neither free choice nor poverty is a sufficient explanation for the universally high degree of segregation in American cities. Discrimination is the principal cause of Negro residential segregation, and there is no basis for anticipating major changes in the segregated character of American cities until patterns of housing discrimination can be altered.

IMPACT OF SEGREGATION on Negroes who might otherwise be expected to exercise a free choice in housing is indicated by this block in the Harlem section of New York. Houses were designed by the architect Stanford White when Harlem was a white section; after it became Negro the block acquired the name "Strivers' Row" because so many white-collar and professional Negroes—barred from other areas by segregation—aspired to live there.

NEW APPROACHES TO CREATING STRONG NEIGHBORHOODS

JAMES V. CUNNINGHAM

NEW, serious attempts are currently being made by tough-minded, imaginative urban strategists to find a more comprehensive approach to making sound neighborhood communities out of troubled living areas.

Four attempts, in particular, are significant and worthy of close study. These are large-scale, sophisticated development efforts, now being tested in the neighborhoods of several metropolises. The four approaches are:

1. The neighborhood conservation approach of New York City.
2. The social invention approach of new city-wide urban organizations supported by the Ford Foundation.
3. The self-determination approach of the Industrial Areas Foundation, with its principal test area in Chicago.
4. The neighborhood urban extension approach of ACTION-Housing, Inc., in Pittsburgh.

In the "neighborhood conservation" and "social invention" approaches the focus is on urban resources. These approaches seek to improve schools, state employment systems, legal aid, health departments and the like, and then, imaginatively and aggressively, to take these modernized services to neighborhood people. Their power base is money and government control. The neighborhood conservation approach comes directly out of city hall, the social invention approach out of a private, nonprofit civic organization closely allied to city hall.

The "self-determination" and "neighborhood urban extension" approaches put emphasis on citizens becoming alert, organized and able themselves to locate and draw on the resources needed to build their neighborhoods. Both approaches draw money from elements of the urban establishment, as well as from neighborhood people. The self-determination approach draws on church denominations, labor unions and government contracts. Neighborhood urban extension draws from philanthropic foundations, corporations and government contracts.

New York City's neighborhood conservation approach was launched in 1959 in seven small living areas containing a total of 100,000 people. They were Chelsea, Bloomingdale, East Harlem, Carnegie Hill, Morningside, Hamilton-Grange and Hudson.

As is typical in old New York neighborhoods, most of the people in the seven test areas were tenants in large apartment buildings. Essentially

---

JAMES CUNNINGHAM serves with ACTION-Housing in Pittsburgh, described here. This article (reprinted from *New City*, May 15, 1965) is part of a chapter in his book, *THE RESURGENT NEIGHBORHOOD*, Fides Publishers, Inc., Notre Dame, Indiana, and is used here with their permission.

middle-income communities, each had a fairly new and significant proportion of low-income residents, many of whom were recent immigrants from the South or Puerto Rico.

When the program began, responsible property owners were selling out, mortgages for property improvement were difficult to obtain, housing laws were not being systematically enforced, overcrowding and deterioration of buildings were on the upswing. High traffic in vice and narcotics and increase in crime were causing panic among longtime residents. There was some racial violence. Services in the fields of health, education, recreation and social welfare generally were inadequate. Newcomers, particularly, were not being helped.

City government moved in to help these neighborhoods by stepping up public and private services and making these readily available from a neighborhood city hall; by having a settlement house, church, hospital, or university in each neighborhood sponsor the local program as a partner with the city; and by obtaining, through the sponsor, widespread citizen participation. Setting up the local city halls, the sponsors hired professional staffs to operate them.

The director of the neighborhood staff became an unofficial neighborhood "mayor" whose job was to put to work and co-ordinate all the services of the city and private agencies. He had no legal power, but had to depend mainly on leadership and persuasive skills. A central staff from the city gave supervision to the neighborhood programs and fed in the housing inspectors, city planners and other service specialists. After two years the city began to supply most of the financing, although the sponsors continued to supplement public funds, and take a strong partnership role. The city's aim from the beginning was to have neighborhood sponsors eventually take over complete management of the local effort, with city services continuing to be channeled into the neighborhood city hall.

Immediate impact was gained in each neighborhood through door-to-door surveys by city housing inspectors. Where large families were found living in one or two rooms, they were relocated, with an attempt made to solve their employment, health and other problems during relocation. The first seven neighborhoods were used as action laboratories in which to devise, test and then apply new housing, social action, public administration and community organization techniques. Economic and racial integration was strengthened by modernizing some deteriorating buildings for use as public housing. This made it possible for low-income families to live under decent standards in nonproject buildings. Improved sanitation services, including daily garbage pickup and street flushings, were provided in all neighborhoods. Among some of the experimental services were a neighborhood narcotics rehabilitation center, and a diagnostic and referral service for elderly residents.

While major planning, direction, and decision-making has come from city hall, the sponsoring agencies, citizen leaders and volunteers have played a large role in identifying neighborhood needs and in helping carry out some services. Steering committees of citizens, organized by the sponsoring agencies, have given guidance to staff on many policy and procedural matters and actually become involved in the execution of some of the projects.

Among the difficulties encountered in the seven neighborhoods: Relocation cut strong cultural and emotional ties for some families and brought social problems to the surface which could not always be remedied. Low-cost financing for modernization of buildings was not forthcoming. New construction of middle-income housing was not achieved. Success was incomplete in the sanitation program. Crime was cut, but gambling, prostitution, and surprisingly, bootlegging, continued. Relations between the races improved, but housing segregation continued rigid.

In spite of these weaknesses, the neighborhoods were much improved over-all, particularly in condition of housing. Chelsea, Bloomingdale and Morningside were saved from becoming slums and are now stronger communities than at any time in their recent history. They are now on their own. The city continues to put up half the money but has passed most operating responsibility to neighborhood agencies and residents.

With the war on poverty program now providing greatly increased funds and personnel, this government-guided approach has considerable thrust. From the standpoint of testing a new approach, the New York City effort might be more significant if it were kept a city hall-directed effort—with citizen partners—rather than attempting to shift the administrative responsibility to neighborhood institutions.

THE SECOND approach, which also puts emphasis on services furnished to people, is the social invention approach; it has been given large-scale support by the Ford Foundation and local foundations in each city where the approach is being tested.

This second approach is carried out by new kinds of metropolitan organizations—"half-way houses" between the public and private sectors—on whose governing boards sit both government officials and representatives of private interests

including business, industry, welfare, religion, labor and education. Six such nonprofit organizations have been set up in Boston, New Haven, Philadelphia, Oakland, the District of Columbia and North Carolina.

They have been granted a total of over $15 million by the Ford Foundation, and some of them are administering many millions more from foundations in their own cities, from war on poverty funds and other federal sources. These funds are used to reorganize and modernize old-line resources, particularly the public schools, state employment services, health departments, recreation agencies and welfare boards, so these resources more realistically meet today's needs.

These new organizations often operate by setting up demonstration projects to meet needs in new ways, by involving old-line resources in carrying out the demonstrations, and then by leaving the successful new ways of operating to be adopted by the resources as standard methods. New Haven's Community Progress, Inc., for instance, has helped revolutionize the relation of the public school to the neighborhood around it by helping transform the neighborhood school into a community center from which are operated programs in job training, senior citizen recreation, home improvements and the like. It has made a grant to the New Haven School Board for the appointment of special assistant-principals whose sole duties are making the schools available to the whole neighborhood through home economics classes for neighborhood housewives, recreational programs, opening of the school's medical and dental-examination facilities to all, development of the school building as a place for neighborhood forums and meetings, and other community programs.

Under this approach experts move into a neighborhood and begin to furnish imaginative new services to help people develop and neighborhoods improve. Some local people may be hired as staff assistants to help spread word of the new services to their neighbors. And citizen committees may be formed to help carry out the services.

This approach takes a metropolitan view of problems, but it too finds the neighborhood the effective action area for most of its programs.

Paul Ylvisaker, Director of Public Affairs for the Ford Foundation, outlines some possible tasks for the new organizations:

". . . social inventions can be immediately procedural, physical, and mechanical: e.g., building schools to double as neighborhood and social-service centers; starting the education of gray-area children at an earlier age; concentrating on improvement of speech, reading, and other communication skills among Negro and other newcoming children; adapting techniques borrowed from agricultural extension work to the needs and circumstances of an urban clientele, in such areas as health, family budgeting and home management, legal aid, credit use, house repair and rehabilitation, and a variety of others; combining work and study programs for school dropouts; relating and even subordinating physical to social planning; pooling local philanthropic funds for common programs—and I might add, wrenching philanthropy away from many of the easier, more traditional, and sanctimonious undertakings to which it has become fondly attached, to work at some of the really tough problems the modern urban community presents; recruiting industry and gearing vocational education to projections of technology and local manpower supply; early identification of urban newcomers; use of lay persons in school, recreation, welfare, and other programs; correcting abysmally bad practices in arrest, bail, defense, and other links in the chain of administering justice; finding constructive alternatives to present systems of high-density public housing and permanent-dependency welfare payments; and widening residential and occupational choice as a way of releasing individuals from the chain of ethnic, racial, and other attachments not freely chosen."

Neighborhood citizens are encouraged and assisted to organize as part of the social invention approach, and their suggestions are listened to, but they seldom play a central decision-making role. They do not make the decisions on what services are needed or how they are to be operated. They do become involved in using the services, in getting other citizens to use them, and in suggesting improvements. This approach seeks to make first-class citizens through education more than through decision-making.

THE THIRD approach is the self-determination approach of the Industrial Areas Foundation (IAF) in Chicago. IAF's approach is marked by conflict, militant action, a stance of demanding from rather than working co-operatively with the resources of metropolis, and considerable citizen involvement.

Its staff organizers enter a neighborhood at the invitation of local groups, usually neighborhood churches. The organizers use the frustration and injustice of job discrimination, rent gouging, overcrowded schools and similar issues to rally neighborhood people. Concentrating on the most deprived citizens, IAF workers create a broad-based neighborhood organization with local leadership. The organization attacks any outside force which exerts control over its neighborhood, and seeks to generate power to the point where it can

control planning for the entire neighborhood. It demands and often gets what it wants from government.

This approach was brought into being in the late 1930's by Saul D. Alinsky, IAF's director, who helped labor unions and ethnic groups in Chicago's then depressed stockyards area to form the now famous Back of the Yards Neighborhood Council. Through the Council people achieved a neat and prosperous neighborhood with a strong sense of community, firm links to city hall and a rigid policy of racial exclusion. Today, Alinsky himself is critical of these two latter policies. He believes in racial integration under quota arrangements, and in neighborhood organizations being independent of city hall.

Alinsky and IAF are now facing their severest test in the Woodlawn neighborhood of Chicago. Woodlawn is a Negro ghetto neighborhood of solid but overcrowded apartment buildings, heavy unemployment, high crime rate, schools that are unable to keep up with the needs of children, economic exploitation and despair—but the citizen effort there initiated and assisted by IAF has dramatically identified, awakened and brought to action these once discouraged citizens.

When a Chicago bank refused to reveal the name of the owner of a Woodlawn slum building it held in trust, one hundred citizen members of The Woodlawn Organization marched into the bank, camped on the floor, and announced they would not leave until they had the name. They got it. When the Chicago Board of Education refused to transfer Negro students from overcrowded Woodlawn schools, The Woodlawn Organization formed truth squads to count empty classrooms in white areas, and then picketed the Board.

Initiative and skills to form The Woodlawn Organization and shape its program have come from staff organizers of the IAF. Working with disdain toward other approaches to neighborhood development, IAF rejects many of the concepts and methods of city planning and urban renewal and insists that neighborhood people work out their own destiny by hiring their own planners. The Woodlawn Organization has attacked city government, credit merchants, slum landlords and the expansion plans of its neighbor, the University of Chicago. The basic IAF philosophy is spelled out by Saul Alinsky, as follows:

"In the development of an organization for democratic participation . . . resentments and dormant hostilities must be brought up to visible surface where they can become transformed into problems. . . .

". . . A people do not break through their previous fatalism of submerged resentment and frustration into open problems which can be faced and dealt with until they have a mechanism or a

'It is important that a spirit of innov

formula for effectively coping with these problems. Since their only resource lies in their numbers, organization becomes the instrument for implementation of change and resolution of these problems."

The Woodlawn effort has focused the attention of city newspapers and city government upon a once forgotten living area. There is yet little concrete, visible improvement to be seen in Woodlawn. There are, however, determined, organized, citizen leaders, formulating plans and laying the groundwork for revolutionary physical and social changes. The Woodlawn Organization recently worked out a compromise plan with the University of Chicago and the city whereby the urban renewal tool will be used to clear a deteriorated area in North Woodlawn, with one section of the cleared land to be used for University expansion, and the remainder for new middle-income housing for Woodlawn people.

Alinsky has appraised his Woodlawn effort thus:

". . . an orderly revolution began in Woodlawn and The Woodlawn Organization came into existence as the representative group of the Woodlawn community. Its membership includes 83 organizations, involving with minor exceptions all of the churches in the community (and the very few church exceptions possessed little if any local membership), businessmen's associations, the block clubs, the fraternal groups, and literally every interest organization of any membership in the neighborhood. They have repeatedly and publicly demonstrated their representative character.

"A voter-registration parade involving more than 45 buses carrying more than 2000 persons was formed, and moved with that discipline and allegiance characteristic of an organization whose roots are deep in the lives of people. This was a dramatic public demonstration not only of a substantial popular support, but of the broad representative character of The Woodlawn Organization.

"What kinds of words are used by the leadership? They use the word 'negotiate' instead of 'conference,' or 'sharing,' and understand the meaning of the word negotiate. Negotiate means meeting with others as equals, since the other party will not negotiate unless it recognizes that you have the power to compel negotiations.

ation and experiment be kept alive.'

"Mutual recognition of power is the necessary prelude to negotiation. In a meeting of negotiations the people enter with dignity of recognition as equals; they are not pleading inferiors, to be satisfied with less than their legitimate rights. They use the words self-determination, in the truest of American traditions and of Western civilization. They know the difference between citizen participation and robot ritual of agreement even if it is masked with so-called discussions."

The Woodlawn Organization has followed a policy of building internal strength by publishing its own newspaper (which has been at odds with the existing Woodlawn weekly), by operating an employment service available to members of its constituent groups, and by running its own private housing-code enforcement system, using the threat of picketing to force landlords into compliance with the code. The organization not only pickets landlords' homes but also their churches or temples while they are inside attending services.

If a group of neighborhood people come to The Woodlawn Organization for help with a problem, they are usually told to organize and affiliate first. The Woodlawn Organization seeks to be self-sufficient and independent. With Alinsky's strong urging, it is raising money to become financially free of IAF. Built as it is on a state of tension between neighborhood people and city government and other urban resources, the IAF approach raises questions as to how a sustained and responsible relationship is to be built between neighborhood and metropolis.

IAF seems to be aiming at some stable collective bargaining relationship similar to that which exists between labor unions and large corporations. The occasional use of militant, nonviolent action would seem to be quite necessary for an effective neighborhood organization. But a philosophy of sustained hostility would seem to endanger sense of community. For instance, a continual "fight city hall" stance could lead people to distrust local government and endanger a city's ability to raise taxes for needed services. Martin Luther King has made a success of nonviolent protest because he has been able to get his followers to take a stance of sustained love toward those against whom they are protesting.

Alinsky believes that a democratic society will always have many different sets of interests and that it is out of the tensions coming from conflicting points of view that we have the basic seedbed for creativity. He feels that to have a society in which you do not have a state of permanent tension is to have "a monolithic, totalitarian uniformity." Dealing forthrightly with controversial issues, building neighborhood power and using it militantly, and generating conflicting viewpoints would seem to be essential in beginning a development effort when the negative forces of deprivation, injustice, and discrimination are so intense and complex; but one wonders whether permanent tension between neighborhood community and metropolitan community, with one neighborhood demanding consideration above others, would not in the long run only worsen and intensify the negative forces.

THE FOURTH technique is Pittsburgh's neighborhood urban extension approach, built upon deep citizen involvement, and the modernization and utilization of metropolitan resources. Neighborhood urban extension has been created by ACTION-Housing, Inc., a metropolitan-wide citizens' organization, set up in 1957 to help carry out a broad program of housing development and urban renewal for the whole Pittsburgh and Allegheny County area. Its full name is Allegheny Council to Improve Our Neighborhoods-Housing, Inc.

ACTION-Housing's program is a comprehensive one: (1) working with private builders and leaders to increase the supply of well-designed housing for families with incomes too high for public housing and too low for the regular private market ($4,000 to $8,000); (2) modernization of aging housing and neighborhoods; and (3) establishing a research base for future housing and neighborhood development programs.

The principal tool used by ACTION-Housing to aid private builders is its Pittsburgh Development Fund, a revolving loan fund which provides seed money for the construction of private sales- and rental-housing for moderate-income families, as well as the stimulation of large-scale home modernization. Subscriptions to the Fund have reached nearly $2 million in grants and interest-bearing loans from 31 local companies, corporations, banks, department stores, utility companies and foundations. The desirability of loans to the Fund, rather than outright grants, has been emphasized.

After several years of experimentation carried out with neighborhood groups, ACTION-Housing came up with the neighborhood urban-extension approach to the revitalization of declining neighborhoods. ACTION-Housing enters a neighborhood after being invited to do so by local citizens. A staff man, the neighborhood ex-

tension worker, helps citizens begin to understand complex problems, assists them to make plans and helps them to get the vast resources of the metropolis extended into their neighborhood.

The neighborhood extension worker assists residents, merchants, clergymen, industrialists, and representatives of neighborhood interests to form a neighborhood council which becomes the major instrument for local planning and action. A written memorandum is executed between ACTION-Housing and the neighborhood council. In the written memorandum an equal partnership in decision-making is provided for, and the full rights and responsibilities of each partner are spelled out, including joint responsibility for fund raising. Before an extension worker is assigned to a neighborhood he is first interviewed by citizen leaders. If these leaders have valid objections to any candidate he is not hired. This approach is built on the principle that from participation in decision-making and organized action comes citizen responsibility.

At the beginning of 1963, three large Pittsburgh neighborhoods, from among several expressing interest, were chosen for a five-year test of the new approach. The department of city planning aided in the selection. Those chosen were Homewood-Brushton, Hazelwood-Glenwood and Perry Hilltop. Between them they held almost 75,000 people—one-eighth of the city's population.

Hazelwood-Glenwood was a central-city steel mill area with high unemployment, low educational level, predominantly white with some racial tension, a bleak shopping street, some handsome residential sections, but apparent mental and physical blight.

The people of this neighborhood have pioneered the war on poverty by tackling their employment problems in depth. They have registered the unemployed, recruited and trained volunteer counsellors, guided hundreds into jobs or training programs.

Council committees are working with public and private resources to make a long-range social and physical renewal plan, to improve dilapidated housing, to support school improvements, to have new houses built on vacant hillsides, to open the industrial riverfront for boating, to modernize the business strip, publish a newspaper and organize all residents into block groups. Tutoring programs are run for children who are not doing well in school. Racial tensions are eased by Negro and white working together on committees. Courses in effective management have been set up in the neighborhood by Duquesne University for local merchants and a modern recreation demonstration is under way, although these two programs have run into many difficulties.

The making of the city's first comprehensive neighborhood public-service plan has been undertaken by the Perry Hilltop area's citizen organization, the Perry Hilltop Action Council. In this effort, the Council is aided by the Institute of Local Government of the University of Pittsburgh, and by city government.

Teams of citizens, university consultants and public officials are examining every Perry Hilltop street, laying out new widenings, openings and extensions. They are evaluating lighting, fire and police protection, schools, parks and playgrounds. The area has a magnificent 250-acre, largely undeveloped park, for which they are creating a complete development plan. They are learning about new, efficient methods for routine housekeeping tasks like sewer cleaning. Hopefully, they will come up with ideas valuable to the whole city.

EACH approach described here seeks to find a process—a method of urban community organization—effective enough to transform declining urban living areas into strong modern neighborhood communities. No one of the approaches has yet been applied to a troubled suburb, but this probably will happen soon for there are now many troubled suburbs.

There is much to be learned from the experiences gained by participants in all four of the approaches that have been discussed. No one of them has yet proven itself a success, but each has achieved enough to warrant further demonstration and support.

There is some tendency for neighborhood development approaches to become alike as they are applied to problems and opportunities whose roots are similar in all urban places. But since neighborhoods and their needs vary widely, in spite of the similarity of problems, it is important that a spirit of innovation and experiment be kept alive in each approach. Further pressure for them to become alike results from the fact that all of them are drawing more and more funds from the same federal programs which are governed by the same standards. The tendency is for the militant "fight city hall" approach to become less militant and closer to the establishment (as witness there is the history of the Back of the Yards Council whose leaders now serve on boards and commissions of city government), and for the establishment-sponsored approach to move closer to the people.

Any promising new approaches should be given full opportunity to demonstrate the effectiveness of their different techniques. Living areas exist in endless variety. A variety of approaches is needed to achieve strong neighborhood communities everywhere.

EUNICE AND GEORGE GRIER

Equality and Beyond: Housing Segregation in the Great Society

RIOTS, RACIAL protests, and rising waves of crime and violence in Los Angeles and other cities across the nation have focused attention upon a problem unique to America—and one which, if not dealt with decisively and soon, can wreak wholesale destruction upon the objectives of the "Great Society." The point at issue is the increasing dominance of Negro ghettos, with all their human problems, at the heart of the nation's metropolitan areas. While racial segregation is by no means new to this country, in recent years it has assumed new dimensions. And the long-smoldering difficulties and disillusionments of a suppressed Negro population have simultaneously taken on new and frightening forms of expression.

The newly emergent pattern of segregation is as simple to describe as it is ominous in its implications. Since the end of World War II, Negroes have rapidly been replacing whites as the dominant population of our greatest cities. Meanwhile, the vast new suburbs growing up around these same urban centers—sharing most of the same problems and feeding upon a common economic base, but separated from the cities politically—have become the residence of an almost exclusively white population. Too many of the suburbanites disavow any concern or responsibility for the cities they have left behind.[1]

Yet the ghettos will not be ignored. To the degree that human problems—economic, social, educational, health—are concentrated in the ghetto, they become self-reinforcing. Exploitation flourishes, since "captive" markets can be forced to pay exorbitant prices for inferior merchandise and services, and continuing Negro population growth presses inexorably upon an inadequate and overage supply of housing. Discouragement and bitterness are the natural

expressions. As the Negro ghettos have grown in size, these symptoms of the deeper disease have sometimes reached epidemic proportions.

Unless drastic measures are taken, the ghettos and their problems will continue to grow. They contain within themselves the seeds of their own further expansion. The present urban nonwhite concentrations result only in part from the recent migration of Negroes out of Southern rural areas. They are also the product of natural increase (the excess of births over deaths) among populations already in residence. As a result, even if migration were to cease tomorrow, the ghettos would continue to grow. During the next few years, this trend will be rapid as the postwar "baby boom" reaches maturity and has its own offspring. With this expansion are likely to come greater pressures of people upon available space, and probably more damaging racial explosions.

Today there are very few major cities where Negroes do not constitute a significantly greater proportion than the roughly one-tenth they average across the nation as a whole. In virtually every city they are increasing rapidly. During the 1950's alone, Negro populations increased in New York City by 46 per cent; in Philadelphia by 41 per cent; in Washington, D. C., by 47 per cent; in Los Angeles by 96 per cent.[2]

One consequence of this growth pattern is that Washington has become the first important city to have a Negro majority. But it almost certainly is not the last. Baltimore and New Orleans are likely to join Washington by 1970 at the latest; Cleveland, Detroit, Philadelphia, and St. Louis before 1980.

Insight into both the nature and the causes of racial change in America's urban areas can be gained from the example of Washington, D. C. Since 1920, the metropolitan population of Washington (encompassing both the central city and its suburbs in neighboring Maryland and Virginia) has grown more than threefold, from less than 600,000 to over two million. Meanwhile, the proportion of Negroes in that population has remained essentially constant at roughly one-fourth of the total. In other words, Negroes have both migrated to and multiplied within *metropolitan* Washington at roughly the same over-all rate as whites.

Yet within the central city of Washington, D. C. (which now contains only about one-third of the total metropolitan population) Negroes have increased from one-fourth of the total to well over one-half, since virtually all the Negro increase has gone to the city.

At the same time, the proportion of Negroes in the suburbs has declined from 25 to only 6 per cent as an almost exclusively white outflux has overwhelmed long-existing suburban Negro enclaves.[3]

Rapid Negro increases have been almost universal in cities of large and medium population alike. But in proportional terms, the change has often been greater in the middle-sized cities. Syracuse, Rochester, New Haven, San Diego, and Fort Worth all saw their Negro populations approximately double during the 1950's. Thus these cities can no longer look with smug superiority upon a few urban giants marked by the blight and disorder of Negro ghettos. By the same token, Rochester, New York, and Springfield, Massachusetts recently achieved the headlines through racial disturbances.

Not all the predominantly Negro portions of today's cities are decaying, crime-ridden, potentially explosive slums, however. The movement of white families to the suburbs has recently opened up a number of highly desirable living areas for the small minority of Negroes who can afford them. Some of the finest residential sections of cities like Washington and Philadelphia—once predominantly white—now are interracial or heavily Negro. Their physical character and general flavor have changed little. Imposing stone and brick homes still stand on immaculately maintained lawns. Only the color of the occupants is different.

Yet these too are *Negro* neighborhoods, and—like the sprawling all-white subdivisions surrounding the cities or like the less desirable central districts where most Negroes are allowed to live—they betoken the growing segregation which is splitting our metropolitan areas into two huge enclaves, each the territory of a single race. Their continued social and physical stability, furthermore, is threatened by many of the same pressures of population increase and exploitation which beset the Negro slums. Segregation itself may not be new, but never before has it manifested itself on such a giant and destructive scale.

The Growth of Residential Segregation

How did this change occur so swiftly and so massively? Discrimination and prejudice are certainly among the causes, but they are not the only ones. America cannot escape responsibility for the many decades in which the rights of its Negro citizens were denied. Nonetheless, the present situation cannot be fully understood, nor can

solutions to its perplexing aspects be found, without recognizing that it was produced and is maintained in significant part by forces that are both broader than and different from racial discrimination.

The background to all that has happened lies in certain facts concerning the rapid urbanization of America's people—facts racially neutral in themselves, but having profound racial effects. As the nation has grown more populous, its inhabitants have located increasingly within metropolitan centers. A century ago Americans numbered 31 million, about one-fifth of whom lived in urban areas. By 1920 the total population had risen to 106 million, and the urban proportion had grown to one-half—a ninefold jump in absolute numbers (from about 6 million to 54 million) in only sixty years.

After World War II, population growth accelerated sharply. The largest ten-year increase in the nation's history took place between 1950 and 1960. During that decade 28 million new citizens were added, a total nearly equal to the entire population of a century ago. About 85 per cent of this increase occurred within 212 metropolitan areas, making about two-thirds of the nation's people urban today.

In addition to increase through births and immigration during these fruitful years, the cities gained also from large-scale population movements from the center of the country toward its boundaries (especially to the seacoasts and Great Lakes region) and from the South to the North. These streams of people, most experts agree, were both "pulled" toward the cities by job opportunities and other urban attractions (especially in the coastal areas) and "pushed" out of the rural areas by shrinking labor needs, especially in the depressed portions of the agricultural South. Negroes and whites shared in the migration—Negroes to a somewhat, but not drastically, greater degree in proportion to their share of the total population.

Migration to the cities helps explain why, after World War II, the nation turned to its suburbs in order to satisfy housing needs which had been accumulating during almost two decades of economic depression and world conflict. The previous growth of the cities had used up most of the land suitable for development within their boundaries. Yet the people had to be housed somewhere, and swiftly. The easiest place, requiring no costly and time-consuming demolition of existing buildings, was the suburbs.

How should the suburbs be developed? In answering this ques-

tion certain key public policy decisions—involving racial implications which were probably neither foreseen nor intended—joined with private actions to help produce the present situation. Primary among these was the critical decision to allow the private-enterprise system to meet the housing shortage on its own terms. Most of the government mechanisms mobilized to aid in the task, especially the mortgage guarantee provisions of the Federal Housing Administration and the Veterans Administration, served to support and encourage the efforts of private enterprise.[4]

Such a decision was completely in accord with America's social philosophy and economic structure. And, in light of the inherent dynamism of the private-enterprise system, it is not surprising that the home-building industry was able to provide usable physical shelter. Indeed, this success can be counted as one of the major achievements of a nation which has never been satisfied with small accomplishments. Almost every year following World War II more than one million dwelling units were constructed and occupied, a figure which is double the rate at which new families were formed. And, despite rapid population growth during the fifties, the 1960 Census showed that Americans were far better housed than ever before. Overcrowding and "doubling up" (two or more families in one dwelling) had been considerably reduced. So had dilapidated and otherwise substandard housing. To a greater or lesser degree, the entire population benefited from this widespread improvement—even Negroes, though they continued to be less adequately housed than whites.[5]

Nonetheless, the decision to let private enterprise satisfy the housing need carried with it unfortunate consequences for future residential patterns. It meant that the great majority of the new postwar suburban housing was built for those who could afford to pay the full economic price. Thus the basic mechanisms of the private enterprise system, successful as they were in meeting overall housing needs, selectively operated to reinforce existing trends which concentrated low-income families in the cities. At the same time, they encouraged the centrifugal movement of those who were more wealthy to the outskirts of the cities.

Most Negro families were among those with low incomes, the result of generations of discrimination in employment and education. Quite apart from direct racial discrimination, in which the private housing industry also indulged whenever it felt necessary, economics posed a giant barrier to the free dispersal of the growing

Negro populations. The findings of a market analysis conducted by Chester Rapkin and others at the University of Pennsylvania's Institute for Urban Studies at the peak of the postwar housing boom in the mid-1950's were quite typical. At that time, only 0.5 per cent of all dwellings costing $12,000 or more in Philadelphia had been purchased by Negroes—a fact which the authors laid mainly to economic incapacity. This was about the minimum cost of a modest new house in Philadelphia's suburbs.[6]

But this is only part of the story. Federal policies and practices in housing reinforced and increased the separation between the "Negro" cities and the white suburbs. In part, this was intentional. From 1935 to 1950—a period in which about 15 million new dwellings were constructed—the power of the national government was explicitly used to prevent integrated housing. Federal policies were based upon the premise that economic and social stability could best be achieved through keeping neighborhood populations as homogeneous as possible. Thus, the *Underwriting Manual* of the Federal Housing Administration (oldest and largest of the federal housing agencies, established by the Housing Act of 1934) warned that "if a neighborhood is to retain stability, it is necessary that properties shall continue to be occupied by the same social and racial group." It advised appraisers to lower their valuation of properties in mixed neighborhoods, "often to the point of rejection." FHA actually drove out of business some developers who insisted upon open policies.[7]

More recently, a number of studies by competent real-estate economists have thrown serious doubt upon the thesis that Negro entry lowers property values. Laurenti, in his thorough analysis entitled *Property Values and Race,* found that prices *rose* in 44 per cent of those areas which Negroes entered, were unchanged in another 41 per cent, and declined in only 15 per cent. These were long-term trends, and they were measured *relative* to trends in carefully-matched neighborhoods which remained all white—thus obviating any possibly misleading effects of generally rising prices.[8]

Surveying the literature, Laurenti noted similar results from other studies in various cities extending back as far as 1930. But erroneous though the allegation of nonwhite destruction of property values may have been, it nonetheless provided "justification" for widespread discriminatory practices, as well as active encouragement of private discrimination, by agencies of the federal government during a

period of critical importance in determining present residential patterns.

However, discrimination *per se* was only a small factor in the impact of federal policies and practices upon racial patterns during this crucial period. Much more important were more basic aspects of the structure and functioning of federal housing programs. Three major programs have dominated the field. The largest and most significant has been the Federal Housing Administration's mortgage insurance program, with its post-World War II counterpart for veterans, the Veterans Administration's loan guarantee program. Both granted their benefits chiefly to the "modal" family recently embarked upon married life, with children already born or on the way, and willing to commit itself to the responsibilities of home ownership with a mortgage. For such families, down-payment requirements were minimal, repayment periods lengthy, and credit restrictions lenient. A certain minimum of present earnings and good prospects for future income were paramount, as well as some evidence of faithful repayment of past obligations. Households which did not fit these criteria—smaller families, older couples, single persons, people with low or precarious earnings, families who sought dwellings for rent rather than for sale, even families dependent upon the wife's employment for an adequate income—all were required to satisfy their needs chiefly through the older housing left vacant by people moving to new homes in the suburbs.

Prominent among those left behind, of course, were Negroes. The federal programs permitted them to "inherit" the cities, along with an assortment of whites who did not meet the conditions for access to the new suburbs: the old, the poor, the physically and mentally handicapped, the single and divorced, together with some persons of wealth and influence who preferred the convenience of living in the central city. The significance of the housing programs for residential patterns, however, lay also in their tendency to pull young and upwardly mobile white families away from the cities and out toward the suburbs.

It may be that a large number of these families, given free choice, would have preferred to remain within the cities, close to work and to older relatives. But the FHA and VA programs generally did not provide nearly so liberal terms on the mortgages of older homes in the cities. Down payments were usually larger; repayment periods shorter; monthly payments higher. For most young

families, therefore, the suburbs were the only practical areas in which to solve their housing needs. In this way, the FHA and VA programs, essentially independent of any direct racial bias in their decisions on applications, enhanced the tendency toward white dominance in the suburbs.

The second of the federal government's major housing programs is subsidized low-income public housing, administered by the Public Housing Administration through local housing authorities. Its criteria for admission are based upon *maximum* rather than minimum income levels. Under these conditions relatively small numbers of whites can qualify because their earnings exceed the required standard. In many areas, even where conscious efforts are made to attract an interracial clientele, the great majority of residents are Negro. In further contrast to the FHA and VA programs, most public housing projects have been constructed in the central cities rather than in the suburbs—since one of their objectives is to reduce the incidence of blighted housing.

The differences between the two programs thus reinforce each other in their effects upon patterns of residence. While the FHA and VA have helped promote white dominance in the suburbs, public housing has helped enhance Negro dominance in the cities.

The third of the major federal housing programs is urban renewal. Established by the Housing Act of 1949, its chief goal is to combat physical decay in the central cities. In a sense, urban renewal has worked against FHA and VA programs, since, among other things, it attempts to draw back to the cities the more prosperous of the families who have left it. Until recently, the renewal program has usually cleared off blighted sections and replaced them with housing units priced in the middle- to upper-income brackets. Most often, as might be expected, the occupants of the site before renewal have been low-income members of a racial minority. They have been displaced by housing which, for economic reasons alone, was available mainly to whites and to very few Negroes. Some civil rights groups therefore have dubbed urban renewal "Negro removal."[9]

Renewal agencies are required by law to relocate displaced families into "decent, safe and sanitary" housing. Relocation procedures have recently received a great deal of criticism throughout the nation. Whether or not all of it is valid, it is an undeniable fact that most relocatees move only a short distance from their former homes. One study found, for example, that two-thirds of them relo-

cated within a radius of twelve city blocks. As a result, displaced low-income minorities ring the renewal site.

Sometimes this movement appears to set off a chain reaction. Whites in the neighborhoods to which the displacees move take up residence elsewhere—as do some of the more secure Negroes. The ultimate effect too often is to touch off spreading waves of racial change, which in the end only produce a broader extension of segregated living patterns. Thus, if the FHA, VA, and public housing programs have helped produce metropolitan areas which increasingly resemble black bullseyes with white outer rings, urban renewal has too often created small white or largely white areas in the center of the bullseyes—simultaneously causing the black ghettos to expand outward even further.

Combined with rapid population growth in the metropolitan areas, the interacting effects of federal policies and practices in the postwar era did much to produce the present segregated patterns. But they were not the only factors. Clear discrimination by private individuals and groups—including the mortgage, real-estate, and home-building industries—has also played its part. The activities of the "blockbuster" provide a good focus for examining the way this works.

The *modus operandi* of the blockbuster is to turn over whole blocks of homes from white to Negro occupancy—the quicker the better for his own profits, if not for neighborhood stability. Once one Negro family has entered a block, the speculator preys on the racial fears and prejudices of the whites in order to purchase their homes at prices as low as possible—often considerably below fair market value. He then plays upon the pent-up housing needs of Negroes and resells the same houses at prices often well *above* their value in a free market situation. Often he makes a profit of several thousand dollars within a period of a few days. Studies have indicated that skillful blockbusters frequently double their investments in a brief interval. They can do this only because tight residential restrictions have "dammed up" the Negro need for housing to such a point that its sudden release can change the racial composition of a neighborhood within a matter of weeks or months. Apart from the damage done to both sellers and buyers and to the structure of the neighborhoods themselves, blockbusters have a far wider negative impact. By funneling Negro housing demand into limited sections of the city (usually around the edges of the Negro slums, since these neighborhoods are easier to throw into panic), the

blockbusters relieve much of the pressure which might otherwise have encouraged the dispersion of Negroes throughout the metropolitan areas.[10]

Technically speaking, blockbusters represent an unscrupulous minority of the real estate industry—"outlaws" in a moral if not a legal sense. However, their activities would not prove profitable if racial restrictions on place of residence were not accepted and enforced by the large majority of builders, brokers, and lenders, backed by the supporting opinion of large segments of the white public.

By restraining the Negro market and permitting its housing needs to be satisfied only on a waiting-list basis, "reputable" members of the banking and housing industries have helped perpetuate the conditions under which their less-scrupulous colleagues can flourish. For reasons they consider entirely justifiable, they guard assiduously against the entry of Negroes into white areas. In recent testimony before the Commissioners of the District of Columbia, the President of the Mortgage Bankers Association of Metropolitan Washington stated bluntly that "applications from minority groups are not generally considered in areas that are not recognized as being racially mixed." A study by the Chicago Commission on Human Relations found that such a policy was pursued by almost all lending sources in that city. Voluminous evidence from both social research surveys and testimony before legislative and executive bodies indicates that the same is true of most real-estate boards in cities throughout the country.

Supporting this activity is the subjective equivalent of the ostensibly objective economic argument that underlay federal housing policy for years: the belief in neighborhood homogeneity—that is, neighborhood exclusiveness. The general attitude of much of the public (or the most vocal) has been that neighborhoods were better off when the people within them all belonged to the same broad socioeconomic groups and had the same ethnic or racial origins. In practice, of course, this commitment to neighborhood homogeneity has tended to exclude individuals who fell below a certain status level, not those who were above it. The latter, however, usually have "excluded" themselves in neighborhoods restricted to occupants of their own status.

After 1948, when the Supreme Court ruled that racial and religious covenants were unenforceable in the courts, minority groups began to find it somewhat less difficult to obtain access to neighborhoods on the basis of financial status and preference. Still, neigh-

borhood exclusiveness remained a commonly accepted value, widely enforced by the real-estate, home-building, and lending industries. It served as the final factor in the constellation which created the nation's new patterns of residential segregation.

The Shape of the Future

The future shape of metropolitan areas, in racial terms, is outlined clearly in population statistics. The growth of segregated patterns has attained a momentum that now tends to be self-sustaining. Most of the young white families who will provide the future increase in white population have moved outside the city limits. In Washington, D. C., for example, half of the remaining white population (children included) are over the age of forty. Even among the young adults, a disproportionate number are single.[11]

On the other hand, the central cities continue to be the place of residence of Negroes of all ages, including the young couples and teenagers approaching maturity who provide the potential for future population growth. Left to themselves, these population patterns can have no other effect than to swell the ghettos and further exacerbate the color dichotomy between cities and suburbs.

What steps would be necessary to halt or reverse these trends? The magnitude of the effort required is suggested by statistics computed by George Schermer for the Philadelphia metropolitan area. Schermer has estimated that merely to prevent the current areas of Negro concentration from expanding further would require an annual outflux of 6,000 Negro households. To *reverse* the trend and to disperse the Negro population evenly throughout the metropolis by the year 2000 would require the entry of 9,700 Negro households *annually* into currently white districts and the counter-movement of 3,700 white families into areas now Negro. No comparable shift of populations is presently occurring in Philadelphia or in any other metropolis. And, each year that the ghettos continue to expand, these figures grow progressively larger.[12]

The Costs of Segregation

Today's wide-scale patterns of segregation, and the prospect of their further expansion, have several extremely important consequences for the nation as a whole. One of the most dramatic of the current ramifications is the fact that the problems long associ-

ated with the Negro ghetto because of generations of discrimination —educational deficiencies, high rates of illness and social disorders, low employment rates, and predominantly low incomes even among those who are employed—all press with increasing force upon the cities as the ghettos continue to grow. At the same time, the financial and leadership resources of the cities have been severely depleted by the middle-class white movement to the suburbs. As a separate political entity, the city has, with growing force, been deprived by the expanding rings of suburbia of the resources it needs to set its house in order.

The newly emergent residential patterns have thus transformed segregation from a parochial concern largely confined to the South (though posing a moral dilemma for the entire nation) into the hardest kind of practical economic problem affecting all the urban centers of America.[13]

But the problem no longer stops at the city line. Today, segregation increasingly threatens the rational planning and development of entire metropolitan areas—a consequence of profound significance in light of continued population growth and the scarcity of urban land, which make it essential that future generations be housed in a less haphazard fashion.

In recent years choice land on the periphery of the larger cities has been devoured at a ferocious rate. In metropolitan Philadelphia, for example, while the population of the "urbanized" or heavily built up area grew by 24 per cent during the 1950's, its geographic spread doubled. This reckless consumption of land cannot continue much longer. Municipalities are already grappling in various ways with the challenge of making more efficient use of the land which is still within feasible commuting distance. The aim of their plans is to keep the metropolitan areas fit places in which to live, with a satisfactory balance of the various elements that together constitute an adequate human environment: homes, commercial and cultural centers, adequate transit facilities, industries, parks, and other necessities and amenities.

In metropolitan Washington, regional planning agencies recently devised a "Plan for the Year 2000." This plan is essentially a general set of principles for meeting the needs of a population that is expected to grow to more than twice its present size before the end of the century. The plan suggests that future growth be channeled along six radial "corridors" extending outward in star fashion from the central city. Highways and transit lines would run along-

side the corridors; centers of commerce and various service areas would be located at appropriate intervals. To preserve as much as possible of the green countryside, parks and open recreation areas would be placed between the corridors.

The plan, however, fails to take into account one vital consideration: the effect of race. If the movement of the city's population continues in its present directions, three of the planned corridors will be heavily Negro. They will have their central origins in neighborhoods which currently are Negro and which already are expanding outward in the directions proposed by the plan. The other three corridors will be almost exclusively white, since they originate in the only white residential areas that remain within the city. Thus segregation will be extended for an indefinite period into the new suburbs. If, on the other hand, Negro expansion is cut off along the three corridors which are presently "open," the future population growth will be forced back into the city, thereby intensifying dangerous pressures which already exist.[14]

Still another instance of the way racial segregation thwarts planning can be found in the emerging new towns which, in some parts of the country, at least, may soon begin to offer an alternative to the previous norm of suburban sprawl. These new communities—of which Reston, Virginia, and Columbia, Maryland, both already underway, are two important examples—will be planned and built from the outset as complete urban complexes, with a full panoply of shopping, employment, and recreational facilities. The most comprehensive of the new towns will also contain a wide selection of housing, ranging from bachelor apartments to large single houses, so that the residents will be able to satisfy their changing needs without moving from the community. Over-all population densities in these new communities will be considerably higher than in the dormitory suburbs of the recent past. Yet, through imaginative planning, they can offer their residents an even greater sense of spaciousness and privacy.

Already popular in Europe and Great Britain, the new town concept offers important advantages over the formlessness that characterizes America's postwar suburban development—advantages that accrue not merely to the residents of the towns but to the entire nation. The new towns offer a way of comfortably accommodating population growth while conserving irreplaceable green space. The proliferation of multi-million dollar superhighways can be slowed down. Pollution of the air by exhaust fumes will be re-

duced. Speedy, economical mass transit systems, now virtually unfeasible in many areas because of the low density and wide geographic spread of suburban growth, will become practical once more. There will even be substantial savings in taxes for municipal services, as well as in utility and commuting costs.

But the new towns, despite the hopeful prospect they represent, also confront the ever-present specter of race. To be successful in realizing their diversified goals, the towns will require a large number of service workers—including manual laborers, domestics, custodians, and sales people, to mention only a few categories. Today, the only significant reservoir of labor available for many of these occupations is the Negro population. Furthermore, civil rights laws now require equal access by all citizens to employment opportunities. Yet, in most instances, the new towns will be located too far from the central cities for easy and economical commuting. Thus, in all likelihood, the workers will have to be housed in the towns themselves.

But on what basis? Will the new towns contain, from the outset, pre-planned ghettos? If not, how is integration to be accomplished, given the differential income levels of the people involved and the many problems connected with providing low-cost housing under private auspices? Even if this last obstacle is overcome—as might be possible if Congress implements new and imaginative forms of governmental aid and subsidy—will white Americans long conditioned with the encouragement of their own government to rigid spatial separation, not only of races but of economic groups, accept any other arrangement?

If, on the other hand, the new towns do not offer accommodations to families of low income, what will happen as they draw away more and more of the cities' remaining affluent residents, while providing no comparable outlet for their growing low-income populations? Will vast new towns then be planned especially for the low income populations, thus extending patterns of racial segregation upon a scale even now unknown? Or will the cities merely be expected to absorb the population increase indefinitely?

Within some cities, the low income housing needs are already reaching crisis proportions. In Washington, D. C., for example, public attention has recently been focused on the problem through widespread civic protests. With virtually no vacant land remaining, and with a population which has grown since 1960 both in total numbers and in the proportion of low-income Negroes, Washington

now faces a perplexing dilemma indeed. Virtually every improvement of any magnitude in its physical structure, whether publicly or privately sponsored, further reduces an already inadequate low income housing supply.

Development of expressways to relieve traffic congestion has been threatened as a result. Even code enforcement aimed at improving housing conditions is endangered because it often results in evicting poor families with no place else to live. Yet private construction, stimulated by Washington's booming economy and unhampered by considerations that often affect public action, is proceeding apace. Almost all centrally located homes which are privately renewed for occupancy by middle-class families, and many of the sumptuous new apartment houses and office buildings as well, gain their valuable land by removing additional units from the low income housing supply. Some Washington observers are wondering how much longer this process can continue without triggering racial outbreaks similar to those which have already disfigured other major cities.

The complex issues which surround land development, both present and future, constitute only one of the concerns made increasingly problematical by the city-suburban racial split. Paradoxically, it presents obstacles also to current major attempts to aid minority groups in escaping from poverty and deprivation.

A good case in point is the multiple efforts to upgrade Northern public schools in a state of *de facto* segregation. For the most part, these schools are desegregated in principle, but because of surrounding residential patterns have become segregated in practice. A considerable amount of this segregation, it should be realized, occurred during the fifties as a direct result of population shifts. At the time of the Supreme Court decision barring school segregation, Washington, D. C., which is located among the border states, had a completely segregated educational system. Once the decision was announced, the city immediately desegregated. Yet only a decade later, because of intervening population shifts, the school system once again is almost entirely segregated. "Resegregation" is the term some concerned local citizens have coined for this disturbing phenomenon.

De facto segregation tends to create poor, inadequately serviced schools. The concentration of culturally disadvantaged Negro children makes it difficult to provide the intensive programs they need to reach an equal footing with their white contemporaries. In racially

mixed schools, their deficiencies are leavened through contact with children more fortunate in background and home environment. One attempted solution has been to bus Negro children to better schools which are underutilized and for the most part are predominantly white. But this approach has met with strenuous resistance from many of the parents (including some Negroes) whose children attend the better schools. Some officials fear that continued busing in the face of such protests would cause even more middle-class whites to leave the cities and thus make the situation even worse in the long run.[15]

The whole problem is exacerbated by the fact that most heavily Negro schools are located in the older and more depressed neighborhoods of the city. Both the schools and their surroundings are often in physical and social decay. Thus, in addition to everything else, it becomes difficult to attract or keep good teachers.

But the nation quite rightly, although belatedly, has committed itself to providing equal educational opportunities for all its citizens. In the face of *de facto* segregation, it is now trying to meet that commitment by a huge complex of experimental programs costing millions of dollars. If the programs are successful, their extension to all those who need them will ultimately mean the spending of many more billions. But aside from the question of money, the nation currently confronts the much more difficult question of whether the programs can in fact work, given the complex of environmental obstacles which exist.

Most of the dilemmas and problems posed by residential segregation in the United States are brought into focus by the current war against poverty. Can poverty among Negroes ever be eliminated while rigid segregation increases within the metropolitan centers? On the other hand, can the metropolitan areas ever be desegregated as long as the majority of Negroes remain poor? As segregation continues to grow and Negroes reach numerical predominance in more and more urban centers, will not the cities which house the majority of the nation's industrial and commercial life find themselves less and less able to cope with their problems, financially and in every other way? What then will be the answer for the metropolitan complexes where two-thirds of America's population currently reside and where as much as 85 per cent of the nation may live by the year 2000?

Aside from these large and basic questions of public policy and social change, residential segregation causes havoc on a more per-

sonal and individual level. And the personal damage is not to Negroes alone. Many of the neighborhoods newly entered by Negroes since World War II have been occupied by middle-aged and retired white families who often look upon their current homes as being their last—and whose emotional attachment to both house and neighborhood is based upon ties of familiarity and friendship built up over many years. These occupants feel deeply threatened by the entrance of a Negro family. The result often is mental stress, misery, and loneliness, as well as a sense of overwhelming personal loss at being "forced" to leave a home and neighborhood one had grown to love.[16]

The effects of precipitate change are particularly sad in ethnic neighborhoods where much of the community's life has centered around a house of worship and where neighbors often include kinfolk as well as friends. In such cases, the change is harmful not only to individual families but to institutions and social organizations that can rarely survive transfer to another location. Constant change is normal, of course, and neighborhood institutions should adapt constructively to it and help their members to adjust. Nevertheless, many institutions are unprepared, and the rapidity of racial change often gives them little opportunity to catch up with their responsibilities.

In all these ways, then, residential segregation is or has become central to major domestic problems of the nation. There is no way to determine the ultimate sum of its costs. It ranges into so many areas that it may accurately be designated the key question of our national life in the 1960's.

The Upsurge of Civic Concern

Over the past decade and a half, as the situation has worsened, the significance of residential segregation has steadily been pushing itself into the forefront of the national consciousness. As public comprehension has grown, one response has been a groundswell of concern and action on both public and private levels. This development cannot be overvalued. It is a change of almost revolutionary proportions, a change that has been accomplished not through violence or political disorder but through the constitutional mechanisms of the government and through the exercise of individual freedoms that form the basis of American society. Yet, this counteraction, despite its importance, is in itself presently insufficient for the task

at hand. The best way to indicate both the limitations of the current activity and the general direction in which the country must now move is to outline the various ways in which mounting public concern has expressed itself.

Between 1950 and today, the federal government has completely reversed its racial policy, moving from official sanction of segregation to a Presidential order that prohibits discrimination in any housing receiving federal assistance. The first official impetus for this change came in 1948, when the Supreme Court ruled that restrictive racial covenants were legally unenforceable. At first the Federal Housing Administration declared that the decision was inapplicable to its operation. Finally, late in 1949, it removed the model covenant and all references to neighborhood homogeneity from its manual and declared that after February 1950 it no longer would insure mortgages having restrictive covenants. The Veterans Administration and the Urban Renewal Administration both issued similar statements.

Further changes ensued. By 1960, they included the following: both the FHA and VA had ruled that the insured property they acquired (usually under foreclosure proceedings) would be made available to all buyers or renters, regardless of race, creed, or color; the administrative head of the FHA had instructed local offices to take "active steps to encourage the development of demonstrations in open occupancy projects in suitably located key areas"; both the FHA and VA had signed a series of formal agreements of cooperation with state and local agencies responsible for enforcing laws and ordinances against housing discrimination; the government had dropped a system of racial quotas in housing built for persons displaced by urban renewal; and it also had banned discrimination in a special loan program to assist the elderly in their housing needs.

These regulations and directives clearly represent a large stride forward from the directly discriminatory policies pursued before 1950. Yet their practical effect on the rigid patterns of segregation that had developed over the years was very small. In 1962, federal reports revealed that nearly 80 per cent of all public housing projects receiving a federal subsidy were occupied by only one race. Segregated projects were located as far North as Scranton, Pennsylvania, and Plattsburgh, New York—and, as might be expected, in practically every locality in the South. The vast majority of new suburban housing backed by FHA and VA mortgage guaran-

tees was occupied exclusively by white families. A scattering of developments built on urban renewal sites were made available to both Negroes and whites; but they were limited mainly to the largest cities of the North and West and generally priced at or close to luxury levels. Where integration existed, it was largely the result of state and local laws rather than national directives. Only seldom, however, were these laws adequately enforced.[17]

Nonetheless, by 1962, partly because of the ineffectiveness of previous changes, it had become clear that the broad problems of discrimination and segregation were too interwoven to be solved with piecemeal changes in federal policy. The first step toward a more comprehensive approach came on November 20, 1962, when the late President Kennedy issued an Executive Order barring discrimination in all housing receiving federal aid after that date. At the end of April 1964, it was estimated that 932,000 units of housing had come under the directives of the Order. In June 1964, it was estimated that between 12 and 20 per cent of all new residential construction was covered.

But the segregation that had developed in previous years still remained. Charles Abrams summed up both the limitations and the value of the Executive Order shortly after it was issued in the following way:

> The Executive Order will . . . touch only a small fraction of the housing market. If any real gains are to be made, its coverage must be widened or more individual state laws laboriously sought. The President's Order is no more than a small first federal step toward breaking the bottleneck in housing discrimination.
>
> Nevertheless, its importance cannot be discounted. First steps in civil rights legislation have often led to second steps when the will to move ahead has been present.[18]

The federal government has also made special, though limited, efforts to mitigate the unintended racial effects of its housing programs. Housing legislation gave the FHA, in cooperation with the Federal National Mortgage Association, the right to issue insured loans from government funds at below-market interest rates for housing to be occupied by families with incomes too low to acquire new homes in the private market. This indirect form of subsidy was intended in part to reach a larger number of Negro families. Urban renewal programs have begun to pay more attention to relocation procedures and to stress rehabilitation of existing dwellings rather

than total clearance. In some cities, Community Renewal Programs aided with federal funds are attempting to develop comprehensive plans for housing all groups in the population. In the public housing program, where Negroes predominate, federal action has paradoxically been least decisive. Still, many local authorities have tried to promote racial balance in their projects, and some have been experimenting with various types of nonproject housing scattered throughout the community.

But the fundamental orientations of the federal programs remain today—as do the deeply entrenched consequences of their operation throughout the peak years of the post-World War II housing boom. It will take more than piecemeal efforts to shatter such a solid foundation for the continued growth of segregated living patterns.

While the federal government was moving toward its policy of nondiscrimination in housing, many states and municipalities were moving in the same direction—and, in recent years, at a more rapid pace. Prior to 1954, only a few of the states in the North and Midwest had legislation which barred discrimination in any segment of their housing supply. The laws usually covered only low-rent public housing and, occasionally, units receiving such special forms of assistance as tax exemptions or write-downs on land costs.

As of mid-1965, however, sixteen states and the District of Columbia had barred discrimination in a substantial portion of their private housing supply. At the 1960 census these states together contained about eighty million people, or 44 per cent of the total population. Thus nearly half the citizens of the United States are now living in communities whose public policy is clearly opposed to deliberate segregation on the basis of race—even in housing built under private auspices. President Kennedy's Executive Order of 1962 therefore was basically an extension on the federal level of a principle already gaining widespread acceptance in states and localities across the nation.

However, mere nondiscrimination cannot by itself overcome the problem of segregation. It will take vigorous positive efforts on the part of government and private citizens to halt, let alone reverse, trends now so firmly entrenched.

Contributors to Change

Changes in public policy can usually be attributed to the determined efforts of a small minority of citizens who recognize a need

and work tirelessly to bring it to public attention. In no case has this been more true than with residential segregation. Led by the National Committee Against Discrimination in Housing—a small and meagerly financed organization which grew out of the first successful campaigns for housing laws in New York—religious, civic and labor groups in many parts of the country have spearheaded similar campaigns in their own states and cities. The resulting laws have provided a foundation upon which other types of private effort could build.

A second important variety of private effort toward housing desegregation is the intentional development of new housing on an open-occupancy basis. Beginning in 1937 with a small Quaker-sponsored project in southwestern Pennsylvania, the spontaneous development of nondiscriminatory housing by private groups got underway in earnest following World War II. Despite concerted opposition by the federal government, many local governments, and most segments of the real estate industry, a 1956 survey found that some fifty new interracial communities had been produced by private efforts up to that time. Some of them had been inspired by civic and social service organizations to foster racial equality, but a number had been constructed by businessmen for profit. Today, such developments are estimated to number in the high hundreds or even the thousands.[19]

In a third approach, "grass-roots" organizations in many cities across the country have sought to stabilize the occupancy of their own neighborhoods following the entry of Negroes. In numerous instances they have accomplished what many once thought impossible —quelling panic, avoiding possible violence, maintaining sound neighborhood conditions, even bringing new white residents into areas where formerly the prognosis had been for complete transition to all-Negro occupancy.[20]

Finally, in the suburbs of a number of cities, concerned white residents have banded together to help open their own neighborhoods to Negro families able to pay the price. The first of these "fair housing committees," established in Syracuse, New York, in the mid-1950's, was sponsored by the local Quaker Meeting. Religious influence of various denominations remains strong in many of the later organizations, now estimated to number more than one thousand.[21]

These private efforts represent one of the most encouraging examples of the inherent strength of American democracy and its

capacity for change. They have helped shatter many racial myths, have opened new housing opportunities for Negroes in areas not previously open to them, and have done much through practical demonstration to alter the attitudes of the white majority toward the prospect of Negro neighbors.

But in the face of population forces, they can have little effect in destroying racial segregation. The point was passed some years ago where either legal bars against discrimination or the best-intentioned of meagerly financed "grass roots" endeavors could accomplish the task. If Americans wish not only to create truly equal opportunity for all, but also to solve the many domestic problems which stem from inequality and the artificial separation of the races, they must now be prepared to move beyond mere nondiscrimination and good will—in a sense, beyond equality—into an area of positive and aggressive efforts to undo the damage already done. It will require a massive national effort, calling upon the full resources of both the public and private sectors.

The Task and the Methods

That the country possesses the fundamental resources it needs to solve the problem is fortunately clear. What is required is less the creation of new mechanisms than the effective harnessing and, where necessary, the reorientation, of those which already exist. Otherwise it will be impossible to meet the goal of rendering segregated housing patterns ineffective as an obstacle to the objectives of the "Great Society."

This aim, it must be stressed, need not be sought through methods which run counter to the basic tenets of American democracy. For example, it need not be attempted through forced redistribution of population. Force is not only intolerable, but unnecessary. The normal mobility of the American people is so great (about half of all households moved during the latter half of the 1950s alone) that redistribution can be achieved through the operation of free choice—if sufficient resources are applied to make socially desirable patterns of residence as attractive to the public as socially undesirable ones have been in the past.

Nor is it necessary to attempt a rigidly planned dispersal of Negro households. The aim, rather, should be to achieve complete freedom of choice in place of residence without respect to racial barriers. Within this framework of unconstrained choice, some sub-

stantial concentrations of Negro families would doubtless persist, just as Jews have remained in certain neighborhoods even after obstacles to their residing elsewhere have largely been eliminated. But the present monolithic character of the Negro ghettos, their inexorable growth, and the social evils they encourage would be broken.

The following are some specific measures which would help achieve the goal. The list is not all-inclusive; doubtless many readers will think of others which would be of value:

A central federal agency possessing the competence to plan comprehensively for all phases of urban development and the authority to translate plans into effective action. This agency must have the power to draw together federal operations in such diverse areas as housing, urban renewal, highways, transportation, and community facilities and to guide them toward a set of common objectives. The newly created Department of Housing and Urban Development can be such an instrument—if it can overcome the handicap of its origin in the Housing and Home Finance Agency, a loosely knit combination of essentially independent agencies, and achieve better coordination of individually powerful organizations than has the similarly amalgamated Department of Health, Education and Welfare. This will not be easy.

A total strategy for desegregation. The segregation problem is too complex to be solved without a total approach which recognized all the manifold forces which brought it to its present magnitude and threaten to enlarge it further. This approach must take maximum strategic advantage of all available resources and knowledge. It must be adaptable to varying local conditions and flexible enough to permit changes as "feedback" from early applications dictates. But it must be directed always to a clear and unwavering set of goals.

Broadened federal incentives for effective action by local governments and private entrepreneurs. Incentive programs have proved one of the most acceptable means of applying governmental leverage in a democratic system, for they do not involve compulsion and do not infringe upon freedom of choice. In housing, for example, incentives have promoted urban renewal (through grants to local authorities to clear slum land for redevelopment) and the construction of specific types of housing (through liberal mortgage insurance). Incentives must now be used to encourage comprehensive planning and action toward social goals. For example, suitable

incentives can encourage private builders to construct balanced communities serving all population groups, can attract and assist low-income minority families to move to such communities, can stimulate existing neighborhoods to self-renewal and racial stabilization, can encourage local governments to attack segregation in the comprehensive manner it requires by cooperation throughout the metropolitan areas.

Imaginative new forms of subsidy for low-income families. Traditionally, housing subsidies have been available almost exclusively for units built by local nonprofit authorities—chiefly in the form of multi-unit public "projects," which stood apart from their surroundings and amassed the social ills associated with poverty in much the same fashion as did older and less solidly constructed ghettos. More recently, various localties have experimented with methods for widening the range of choice and location in subsidized housing. The Housing Act of 1965 contains provisions which can make subsidies a much more valuable tool in combatting segregation. But their operation toward this end cannot be left to chance; it will require vigorous and imaginative guidance.

Comprehensive measures to increase minority incomes. Any measure which increases the purchasing power of racial minorities will bring a corresponding reduction in the critically important economic barriers to desegregation. Minimum wage floors must be raised; present ones are actually below the level defined by the federal government as "poverty." Federal resources must be directed toward expanding the number of jobs available, particularly for those of limited education. The most important need of the minority poor is for decent jobs at decent pay. Economic measures can and should be tied to housing. For example, low-income minority persons should be trained for the specific kinds of jobs which will be made available in the new, comprehensively planned communities on the outskirts of metropolitan areas. Housing should be planned for them close to these new job opportunities. Similarly, relocation from urban renewal areas should be coupled with a range of services, including training and assistance in finding employment, to help assure that displaced families improve not only their housing conditions but their economic situation as well.

Intensive efforts to improve the attractiveness of central cities. To date, urban renewal, in its efforts to draw middle- and upper-income families back to the urban cores, has focused mainly upon the physical aspects of decay. It is increasingly obvious that social

renewal is required also—that many of the economically more capable families, Negro as well as white and especially those with children, will not be persuaded to return to the central areas until they are assured of protection from the social pathology of the ghetto. City schools, for example, must be drastically improved; yet there is growing evidence that this will require not merely replacement of individual buildings and teaching staffs but also comprehensive restructuring of entire school systems. Crime and violence are among the greatest deterrents to affluent families who prefer to live in central areas, and the cities will be at a disadvantage until they prove that they can control both the chronically lawless and those driven to crime by frustration and economic need.

Vigorous enforcement of anti-discrimination laws and affirmative measures to promote equal opportunity. As noted earlier, anti-discrimination laws in themselves are unable to solve a problem which stems from much broader causes. But, if vigorously enforced, they can prove a most important weapon in the arsenal of measures against segregation. Further, as many of the more effective law-enforcement agencies already recognize, it is not sufficient merely to remain passive and wait for a minority conditioned by generations of segregation to recognize and claim its newly guaranteed rights. Affirmative measures are necessary to promote awareness of the law both among those it protects and those who offend against it.

Expanded support for "grass-roots" citizen efforts. While the efforts of spontaneous, citizen-led groups have had impressive success in helping change attitudes, practices, and laws across the nation, these groups have been severely handicapped by their meager resources. A few have been fortunate enough to receive substantial support, usually from local foundations. Where funds have permitted hiring full-time staff, the increase in effectiveness has often been dramatic. Compared to the many millions spent annually by philanthropic organizations on problems of comparable or even lesser importance, the few thousands devoted to housing segregation have been infinitesimal. This is still another way in which available resources must be redirected if the problem is to be solved.

A national educational campaign. For the first time in American history, the majority of the white public appears aware that discrimination and segregation defeat the goals of democracy. But it is a long step forward from this recognition to a vigorous and affirmative effort equal to the need. This will require a type and degree of

comprehension and commitment, by majority and minority peoples alike, which are still far from achievement.

National consensus is most readily achieved through full information about the problem and stimulation of public debate on the means of solution. A full-scale campaign to arouse and inform the American people must begin immediately if public understanding and support are to reach the necessary levels before segregation grows so much larger that it appears insoluble to many. The turning point may well come with the 1970 Census. If some tangible progress has not been made—or at least a plan of action proposed—before its statistics appear, discouragement may rule.

The core of organized citizen support necessary to mount such a campaign already exists—in such national organizations as the American Friends Service Committee, the Anti-Defamation League of B'nai B'rith, and the National Committee Against Discrimination in Housing and in the hundreds of citizen fair housing groups across the country. But their efforts must be focused, coordinated, and, above all, adequately financed. And they must be brought into the context of related activities such as urban planning and the war on poverty.

The task of eliminating segregation rests ultimately with the American people as a whole—led, as in every major struggle in their history, by a small group of devoted citizens. If they do not succeed, the result will almost certainly be the continued spread of Negro ghettos; large-scale physical blight generated by population pressures and exploitation; economic loss to many citizens of both races; persistent social disorder; and spreading racial tensions which strike at the very foundations of a free and democratic society. The choice is not merely between segregation and desegregation, but between wholesale destruction of property and human values and the continued growth and security of American society itself.

Contents of this article were basically prepared prior to employment of Mr. George W. Grier by the Government of the District of Columbia and Mrs. Eunice S. Grier by the United States Commission on Civil Rights. The opinions expressed by the authors are, therefore, not necessarily reflective of the views of either the Government of the District of Columbia or the United States Commission on Civil Rights.

9. The impact of race upon urban renewal, and vice versa, has been touched upon in many places. Among them: Robert C. Weaver, "Class, Race and Urban Renewal," *Land Economics,* Vol. XXXVI, No. 3 (August 1960). Also L. K. Northwood, "The Threat and Potential of Urban Renewal," *Journal of Intergroup Relations,* Vol. II, No. 2 (Spring 1961), pp. 101-114; and Mel J. Ravitz, "Effects of Urban Renewal on Community Racial Patterns," *Journal of Social Issues,* Vol. XIII, No. 4 (1957), pp. 38-49. For an optimistic view on the consequences of renewal for displaced families, see *The Housing of Relocated Families,* a summary of a Bureau of the Census survey of families recently displaced from urban renewal sites, published by the Housing and Home Finance Agency, Washington, D. C., in March 1965. The "pro-renewal" viewpoint is also presented in *New Patterns in Urban Housing,* Experience Report 104, published by the U. S. Conference of Mayors, Community Relations Service, Washington, D. C., May 15, 1965.

10. Probably the most thorough and telling analysis of the economics involved in racial turnover mediated by real-estate speculators was published by the Chicago Commission on Human Relations, a municipal agency, in 1962. In a single block which had changed from all-white to virtually all-Negro, with heavy involvement by speculators, the differential between the price paid by the speculator and that paid by the Negro buyer upon purchase under an installment contract ranged from 35 to 115 per cent, with an average of 73 per cent. The installment contract itself is a financing device which yields higher-than-average returns to the entrepreneur, so the profiteering only began with the sale. For a graphic description of the activities of these speculators, see Norris Vitchek (as told to Alfred Balk), "Confessions of a Blockbuster," *Saturday Evening Post,* July 14, 1962.

12. George Schermer, "Desegregation: A Community Design," *ADA News,* published by the Philadelphia Chapter of Americans for Democratic Action, July 1960. (Statistics somewhat revised by the author in light of subsequent information.)

13. Municipal governments must now confront the problem of race in many of their decisions. For an overview of local governmental action *vis-à-vis* race as of the early 1960's, accompanied by a good bibliography, see "The City Government and Minority Groups," *Management Information Service,* International City Managers Association, Report No. 229, February 1963.

This report can be obtained from the Potomac Institute of Washington, D. C., which participated in its preparation. See also many of the publications of the U. S. Commission on Civil Rights dealing with local practices in housing, employment, and so forth. But the extent to which racial considerations now affect local decisions in many subject areas is only scantily documented.

14. The relationship of racial factors to the Washington metropolitan plan is discussed in George B. Nesbitt and Marian P. Yankauer, "The Potential for Equal Housing Opportunity in the Nation's Capital," *Journal of Intergroup Relations,* Vol. IV, No. 1 (Winter 1962-1963), pp. 73-97.

15. The problem of *de facto* educational segregation and the civic conflict it often creates has been widely discussed in the public print. The *New York Times Index* is an especially useful source. For more scholarly treatments, see Max Wolff (ed.), "Toward Integration of Northern Schools," special issue of the *Journal of Educational Sociology,* February 1963. Also, "Public School Segregation and Integration in the North," special issue of the *Journal of Intergroup Relations,* November 1963. A provocative view on the feasibility of desegregation will be found in James B. Conant, *Slums and Suburbs* (New York, 1961).

16. The pain caused to long-time residents of ethnic neighborhoods by forced relocation in connection with urban renewal has been documented in Marc Fried, "Grieving for a Lost Home," in Leonard J. Duhl (ed.), *The Urban Condition* (New York, 1963). No doubt much the same kind of agony is caused when long-established white residents feel "forced" to give up their homes in changing neighborhoods.

17. The most complete and reliable source of up-to-date information on the status of housing anti-discrimination laws and ordinances throughout the nation is *Trends in Housing,* published bi-monthly by the National Committee Against Discrimination in Housing, 323 Lexington Avenue, New York, N. Y. 10016. A comprehensive analysis of action at all governmental levels up to the period just before the Federal Executive Order of 1962 will be found in Margaret Fisher and Frances Levenson, *Federal, State and Local Action Affecting Race and Housing,* National Association of Intergroup Relations Officials, September 1962. The texts of state and local laws as of the end of 1961 are summarized in *State Statutes and Local Ordinances Prohibiting Discrimination in Housing and Urban Renewal Operations,* published by the Housing and Home Finance Agency, Washington, D. C., December 1961.

18. Charles Abrams, "The Housing Order and its Limits," *Commentary* (January 1963). For another discussion of some of the limitations of the Order, as well as a legal rationale for its extension, see Martin E. Sloane and Monroe H. Freedman, "The Executive Order on Housing: The Constitutional Basis for What it Fails to Do," 9 *Howard Law Journal* (Winter 1963).

19. A nationwide study which examined the experiences of some fifty private housing developments open from the outset to interracial occupancy is

reported in Eunice and George Grier, *Privately Developed Interracial Housing, op. cit.* A more recent but less comprehensive compilation of experience, which leads nonetheless to many of the same conclusions, is found in *Equal Opportunity in Housing—A Series of Case Studies* (Washington, D. C., Housing and Home Finance Agency, June 1964).

Objective

The urban planning institute is designed to offer training in basic planning techniques used to carry out the normal functions of a local planning agency. The contents and methods of conducting the courses are fitted to the needs of those in city planning or related fields who have not had professional training or who wish to broaden their training. Emphasis is on techniques and their application rather than on theory.

Participants

The institute is open to city officials, highway planning engineers, building inspectors and others working in the field of federal, state, and local government, members and staffs of planning commissions, housing authorities and redevelopment agencies, and men and women in the fields of building, investment, industry and other fields related to city planning. Enrollment will be limited to assure discussion opportunities and participation essential to the program. No academic credit will be offered.

GENERAL INFORMATION

Admission

Enrollment will be limited to assure those who attend maximum benefit from the institute. Application must be made ten days prior to the beginning of the institute, and early application is strongly advised. The institute reserves the right to select from the applicants those whose qualifications suggest they will benefit most from the course. Admission is not transferable except by specific authorization after the qualifications of the proposed substitute have been reviewed. Applications received after the registration deadline will be considered only if space is available and at the discretion of the Admissions Committee.

The registration fee for this ten-day institute is $250.00 and should accompany each application. The fee will be returned to those not accepted for admission. If a registrant cannot attend, his fee will be refunded if notification of his withdrawal is received not later than the registration deadline, June 30, 1967.

Housing

Hotel reservations should be made directly with the hotel of your choice as far in advance as possible. More complete information on hotels, including prices, will be included in the registration acknowledgment.

Parking

Parking permits can be issued to registrants but parking on the campus is critical and no guarantee of parking space can be made.

Course Method

The basic course consists of seminars with extensive participation by those in attendance, assigned readings, seminar outlines and bibliographies, and the award of certificates to those who complete the course. There will be occasional evening meetings. All classes will be held in air-conditioned meeting rooms on the Georgia Tech campus.

Partial Listing of Participating Faculty

Howard K. Menhinick, Regents' Professor of City Planning, Georgia Institute of Technology

Malcolm G. Little, Jr., Associate Professor of City Planning, Georgia Institute of Technology

William S. Bonner, Professor, City Planning Division, University of Arkansas

Margaret C. Breland, Regional Planner, Atlanta Region Metropolitan Planning Commission

John Gould, Associate Professor of City Planning, Georgia Institute of Technology

Robert L. Sommerville, President, Atlanta Transit System, Inc.

Seminar Schedule

The first seminar session will be held on Monday morning, July 10, 1967, at 9:00 a.m. Thereafter, morning sessions will meet from 8:30-11:30 a.m. Afternoon sessions will meet from 1:00-4:00 p.m.

Please send final announcements on the following programs:

MANAGEMENT AREAS

- ☐ Personnel Administration
- ☐ General Supervisors Short Course
- ☐ Statistical Analysis for Management
- ☐ Profit Improvement Analysis
- ☐ Management Dynamics & Effective Decision Making (one or two week course)
- ☐ Management for Engineers
- ☐ Budgeting & Accounting for Industrial Managers
- ☐ Short Course in Municipal Utility Rates
- ☐ Management Applications of Mathematical Programming
- ☐ Management of Improvement Symposium

ENGINEERING AREAS

- ☐ Material Handling Short Course
- ☐ Project Management with CPM & PERT
- ☐ Methods of Operations Research
- ☐ Short Course in Statistical Experimental Design for Engineers
- ☐ Chief Industrial Engineer's Seminar
- ☐ Traffic Engineering Short Course
- ☐ Theory of Land & Engineering Surveys
- ☐ Nuclear Engineering Fundamentals
- ☐ Urban Transportation Planning & Analysis
- ☐ Fundamentals of Engineering Statistics
- ☐ Creativity in Engineering
- ☐ Effective College Recruiting and Engineering Education

SPECIAL INTEREST PROGRAMS

- ☐ Protective Relaying Conference
- ☐ Industrial Developers Seminar
- ☐ College Recruiting Seminar/Workshop
- ☐ Functional Analysis and Numerical Methods
- ☐ Annual Institute in Urban Renewal
- ☐ Urban Planning Institute
- ☐ Institute for Planning Aides

Please make a tentative reservation for me in the following course(s):

NEW RESEARCH PROJECTS

Wilson
Maeland Smith

"Building Systems Innovation:" The project objective is to provide a measurably improved building performance for a selected building type in the normal GSA-PBS building program at favorable cost effectiveness benefits. Performance specifications based upon user requirements will be prepared. The feasibility of using portions of the GSA building construction program to cooperate with private industry in developing new or improved building systems will be studied. Director: Robert Blake (100%). Sponsor: General Services Administration. Budget: $1,247, 000. Date begun: June 6, 1966. Date of anticipated completion: June, 1969.

RESOURCES

This issue of Resources *reports on some of the more significant events of 1968 relating to the use and management of natural resources. The selection is by no means comprehensive; it does, however, seek to give a representative section of the year's activities that may have long-range implications for future policy making.*

Some Highlights of 1968

NUMBER 30 RESOURCES FOR THE FUTURE, INC. JANUARY 1969

TRAVAIL IN THE NORTHEAST CORRIDOR

THE YEAR 1968 came and went with no market test of high-speed train service in the Northeast Corridor but with new evidence of strong demand for air travel along the Washington-New York-Boston axis.

While technical difficulties continue to delay the start of the Department of Transportation's program to test demand for fast, reliable train service between the three cities, another arm of DOT—the Federal Aviation Administration—was forced to announce ceilings on the number of flights in and out of John F. Kennedy, La Guardia, and Newark airports in the New York area, and Washington National Airport in the nation's capital. The announcement followed a period of increasing congestion at these airports, a congestion emphasized by the action of flight controllers "working to rule" in order to highlight the potential hazards that further traffic could cause. Time lost in "holding" (i.e., circling aloft while waiting in turn to land) rose dramatically, sometimes equaling the flight time between New York and Washington.

NOT ALL TRANSPORT experts see the provision of demonstration (market-testing) runs of newer, faster trains as checking the rapid growth in air travel. The FAA, for example, continues to focus on its demand projections, which see a continuous rise in aircraft operations from airports serviced by FAA traffic control: from 47.6 million in 1967 to 167.4 million in 1979. Much of that expected increase would take place in the Northeast Corridor. These projections take no account of possible shifts in mode of travel and assume airport capacity is not a constraint.

Some economists note that peak-hour scheduling results, in part, from airline competition for scheduling convenience. They ask whether freer price competition might help smooth out the peaks, with airport landing fees, in particular, used to ration scarce space at certain hours. Airport operators note, however, that capacity at the airports listed is taxed from 6:00 A.M. to 11:00 P.M., so bad is the congestion.

Introduction of much larger capacity planes can hold down the rate of increase in number of flights. At the same time there will be a much larger problem in handling the passengers from airport to final destination. Since fewer passengers want to go downtown, increasing use of buses rather than of fixed rails seems indicated.

The question remains in many people's minds: Can some of this demand be channelled to the railroad? The DOT Office of High Speed Ground Transportation was set up to answer that question. Working with private railroads and railroad suppliers, OHSGT is helping to fund a New York-Washington demonstration by the Penn Central and a New York-Boston run to be op-

RESOURCES

Some findings and conjectures from recent research into resource development and use

Fertility of a country is not enough, except art and industry be joined unto it.
ROBERT BURTON, *Anatomy of Melancholy* (1621)

NUMBER 32 RESOURCES FOR THE FUTURE, INC. SEPTEMBER 1969

ANTARCTICA'S POTENTIAL

VISITORS TO McMURDO SOUND can climb a small rocky point and visit Scott's hut, built in 1902 and last occupied in 1916. Inside they will find quantities of 50-year-old provisions in good condition —biscuits, lentils, dried fruit, and other staples for the men, hay and grain for the Siberian ponies, and sides of seal meat for the sled dogs. Apart from its poignancy, this scene shows why there have been suggestions that the Antarctic be used as a mammoth deep freeze, to store surplus food and grains indefinitely without either maintenance costs or charges for electricity.

Could cold storage be an economic use of Antarctica's most plentiful resource—cold weather? The answer is *probably not,* at least for some time to come, and then only under very special circumstances. Cold storage can be obtained more cheaply from areas much closer to the great concentrations of industry and commerce in the temperate zone of the Northern Hemisphere, as can many other things that the world wants and that the Antarctic could provide—materials like metals and fuels, for example. There are other possibilities, however, that are more in line with the Antarctic's special characteristics.

The climate is the most severe in the world. Summer temperatures range from above freezing to −60° F. Recorded winter temperatures have gone as low as −127° F. Strong winds aggravate the effects of cold, and men and equipment have to be protected from the penetration and abrasive powers of drifting snow.

Ninety-five per cent or more of the land area (consisting almost entirely of rock) is overlain with glacial ice up to fourteen thousand feet thick. Most of the surface of the continent, therefore, is unstable. It flows slowly toward the sea, forming crevasses as it passes over hills or islands, and breaking off into icebergs far out into the ocean. This constant shift creates costly problems of land and sea transportation, airstrips, permanent habitations, and possible mineshafts or drilling rigs.

A commercial possibility for which the continent's characteristics might be more of a help than a hindrance is tourism. Travelers are struck by the beauty of the Antarctic Peninsula and its islands, Victoria Land, McMurdo Sound, and other areas. Mountains rise ten thousand feet from the water's edge, icebergs stand in fantastic shapes, snowstorms and polar sunsets present beauty of color and form. The penguins, seals, and whales are as unusual as the climate and the landscape.

The lure of the unknown is strong in the Antarctic. Its heroic explorers are all of recent history, some still living. Few men have seen the Antarctic, not all of it

Some findings and conjectures from recent research into resource development and use

Some Highlights of 1969

NUMBER 33 RESOURCES FOR THE FUTURE, INC. JANUARY 1970

A RISING CONCERN . . .

RISING PUBLIC, professional, and governmental concern with environmental quality problems was evident in 1969. Apart from a continuous stream of studies and reports, governmental concern was best symbolized by establishment in the White House of an Environmental Quality Council, a cabinet-level advisory group with the President's Science Advisor and head of the Office of Science and Technology, Lee DuBridge, as executive secretary. The council is supported by a 15-man Citizens' Advisory Committee appointed by the President.

Lacking congressional appropriations, the council utilized the staff and administrative facilities of the Office of Science and Technology to begin its initial task of selecting the priorities for review and action. Special cabinet committees have been formed so far to deal with pesticides, solid wastes, air pollution from motor vehicles, air pollution generally, water pollution, noise, and handling and transportation of materials and waste that are hazardous to the environment; and a standing subcabinet-level committee concerned with outdoor recreation has been established.

The council, patterned on the National Security Council and the Urban Affairs Council, will have company soon. Under the National Environmental Policy Act of 1969 (S.1075) a Council on Environmental Quality, consisting of three members appointed by the President with advice and consent of the Senate, will be established in the Executive Office of the President. It will advise, assist, and support the President on environmental matters, including preparation of an annual Presidential report to be submitted to the Congress in which the President will assess what is happening to the environment, what future tendencies may be, and what policy action should be taken. It will also watch over execution of the act's announced policy that environmental impact will henceforth be a mandatory consideration in all agency programs.

While the President signed the new council into existence January 1, 1970, he simultaneously expressed opposition to a related measure urging the establishment of an office of environmental quality under a provision of the Water Quality Improvement Act of 1969 (S.7). This bill was still in conference at the time, but not on account of the suggested provision.

Both the new *council* and the proposed *office* are the result of a carefully worked-out compromise between the legislative efforts of Senators Jackson and Muskie, which also aim at formation of a joint con-

ANNOUNCING
The 1967-68 Calendar
REGULAR CONTINUING EDUCATION PROGRAMS

Georgia Institute of Technology

EDUCATORS and industrialists alike have been sharing increasing concern over the training problems caused by our burgeoning technology. To help professional graduates keep abreast of the forward strides in their specialized fields, the Department of Continuing Education at Georgia Tech is offering the following non-credit adult education courses.

The Department of Continuing Education is making every effort to present not only the newest ideas and techniques that are available on the campus that could be of use to industry, but is also trying to interpret new management thinking to those who could use such information. The following list of courses represent only part of the activities of the Department. The list is intended to be representative and is offered to indicate areas where training is available.

In order to insure a meaningful educational experience, enrollment in each course is limited (in most cases to 25 participants). All classes are held in the specially designed adult education facilities on the Georgia Tech campus.

If you wish further information about any of the regularly scheduled courses, it would be greatly appreciated if you would check the appropriate boxes and return the enclosed reply card. It would be particularly appreciated if you would write out ideas for training needs that are not covered by this calendar.

Department of Continuing Education

Georgia Institute of Technology

1944 NATIONAL BANK OF GEORGIA BUILDING • ATLANTA, GEORGIA 30303 • 523-1939

March 15, 1972

To Members of Resurgens and Friends Interested in Housing:

As planned at the "Which Way Atlanta?" Conference on Friday, March 3, members of the Housing Action Committee met for breakfast on Tuesday, March 7. Those attending the meeting were:

Herb Williams, Co-Chairman
Ted Wolf, Co-Chairman
Ed Barnum
Gene Bowens
Jim Earhart
Aaron Johnson
Nat Welch

The purpose of the meeting was to define one or more programs to be undertaken by members of the Housing Action Committee that would build upon the impetus of the Conference and implement the philosophies of Resurgens in the Housing area. The Committee agreed that the principal criteria for selection of a program should be that it offer interested members the opportunity to be active and to become involved.

Two programs were focused upon:

1. "Project Rehab". It is highly probable that the City of Atlanta will soon have available substantial federal funds to effect rehabilitation of sub-standard housing. It is also known that the City does not have the resources to establish proper criteria for screening either the sponsors or the applicants for grants under this rehabilitation program. The Housing Action Committee could make a substantial contribution by offering assistance to Col. Jones, Atlanta's Housing Coordinator, in the areas of promulgation of the rehabilitation program, assisting in priority establishment, etc. The Committee might also participate in the screening process, either on a pre- or post- basis, or as a reasonable alternative, press City Hall to hire a staff person to assist the Housing Coordinator with this work.

2. "Encounter with Romney". We understand that Secretary Romney will be visiting Atlanta in mid-May to speak to the Christian Council. The Committee feels that this will be an excellent opportunity to have an influence upon the activities of HUD in the Atlanta area. We are confident that we could meet with Secretary Romney for 45 minutes to an hour to present our recommendations for revision, modification and/or increased emphasis on the part of HUD's regional and area offices. To do this effectively, of course, will require the development of the specific presentation, visual materials, and the like.

Members of Resurgens and
Friends Interested in Housing

In order to progress each of these projects, the Committee is planning a workshop seminar from 6:30 p.m. to 9:30 p.m. on Wednesday, March 22, at the Central Presbyterian Church, 201 Washington St., S. W. The workshop will be devoted to structuring the elements of the projects, defining them in broad context, and assigning tasks to individual participants. Project completion will then be progressed rapidly over the next several days.

You indicated during our March 3 Conference that you wanted to become involved in Atlanta's future. This is one opportunity to become part of the action. Please mark your calendar to attend the workshop and help us to help Atlanta!

RESURGENS

Housing Action Committee

Status Report

April 11, 1972

Members of the Housing Action Committee met on Tuesday, April 11, at the Switzerland House. Primary purposes of the meeting were to get updated on Project Rehab and determine what our Committee's next steps should be.

CURRENT STATUS OF PROJECT REHAB

Bob Acree reported that he had been in contact with Washington HUD, and at first received a negative, then an affirmative statement about Atlanta's designation as a Project Rehab city. The word is that "continuous funding" will be available for selected projects. The effective date for the program is reported to be April 23 for an initial 1,000 units.

In view of the apparent lack of information and confusion about Project Rehab in Atlanta, we feel that we should try to bring about a more informed climate within the community. To this end, there was a suggestion that a seminar be planned where at least Resurgens members would be briefed about the program. The hope being that a more informed position will lead to more effective utilization of whatever community improvement resources are available through Project Rehab.

"LESSONS LEARNED" SURVEY

In order to try to avoid the mistakes that other cities have made with their rehabilitation programs, the Committee decided to solicit experience statements from other Project Rehab cities. These "lessons learned" will then be summarized and presented in a seminar, as well as a report. The format for this phase of the Committee's work is as follows -

- Determine which cities have Project Rehab experience. (Eugene Bowens).

- Design a survey questionnaire to be used in soliciting responses. (A core group led by Bob Acree and Eugene Bowens will meet at Central Presbyterian Church at 6:00 p.m. on Wednesday, April 12,

to draft the questionnaire).

- Submit the initial draft of the questionnaire to the Housing Action Committee after Colonel Jones has reviewed the document.

- Meet on Wednesday, April 19 at Central Presbyterian Church (6:00 p.m.) to finalize the questionnaire.

- Follow-up the questionnaire with telephone calls (Ron Meyers).

- Consolidate responses and structure the seminar and report.

MEETINGS OF INTEREST TO HOUSING ACTION COMMITTEE MEMBERS

Thursday, 4/12 ; 10:00 a.m., Atlanta Region Open Housing Coalition at the Aldermanic Chambers, City Hall

Saturday, 4/15; 9:30 a.m., Open Housing discussion - members of five churches to meet at Holy Cross Catholic Church, Chamblee-Tucker Road. Gene Bowens on the program.

Wednesday, May 24; 9:00 a.m., Fair Housing conference, sponsored by Atlanta Chamber of Commerce. Place to be announced.

OTHER ITEMS

Atlanta Regional Commission members and their areas of representation list will be provided to HAC members by Nat Welch.

Central Atlanta Progress report relative to Housing is recommended reading for all HAC members. We will attempt to obtain copies.

Respectfully submitted.

Herb Williams
Ted Wolf

1944 NATIONAL BANK OF GEORGIA BUILDING • ATLANTA, GEORGIA 30303 • 523-1939

RESURGENS

Housing Action Committee (HAC)

PROJECT REHAB WORKSHOP

April 12, 1972

A Project Rehab subcommittee of the HAC, headed by Bob Acree, met on Wednesday night to structure a questionnaire directed to HUD Area Representative who have cognizance over other Project Rehab cities. Gene Bowens currently is preparing a list of the Project Rehab cities and the HUD Area Representatives.

The purpose of the questionnaire, a draft of which is attached, is to give us an idea of those cities that have been successful with Project Rehab, as well as those which have been unsuccessful. Hopefully, then, Atlanta can emulate the practices and procedures of the successful cities, and avoid the mistakes of the others.

After compiling and analyzing the data that we receive from the HUD Area Representatives, we will contact officials in, and possibly visit, several of the successful and unsuccessful cities. We will then prepare a report of our findings and recommendations, and address it to Col. Malcolm Jones, Coordinator of Housing Resources for the City of Atlanta. Of course, we will distribute the report to others as deemed necessary by the HAC.

Please review the draft questionnaire carefully. We will discuss it at our next meeting on Wednesday, April 19, which will be held at the Central Presbyterian Church at 6:00 p.m.. If you feel that any additions or modifications should be made to the questionnaire, please be prepared to bring them up at the meeting.

Respectfully submitted,

Herb Williams
Ted Wolf
Co-Chairmen, Housing Action Committee

RESURGENS ATLANTA

Project Rehab Questionnaire

City of _____

PART I - Statistical Data and Procedures

1. Please attach a copy of the City's application to HUD for designation as a Project Rehab city.

2. Has the city provided funds for a staff to coordinate Project Rehab? If so,

(a) Amount of funding _____

(b) Number of personnel_____

(c) Brief description of functions:

(d) Organizational placement in the City's structure (reporting relationships.)

3. Number and amount of allocations that the City has received during each funding (program) year:

Year	Number	Total Amount

4. What is the total dollar amount of loans granted to date?

5. How many different sponsors and developers have participated in the program to date (i.e., taken advantage of the loans)?

6. What percentage of contractors, sponsors, and developers are local?

7. What percentage of contractors, sponsors, and developers are minority- based?

8. What is the number of units rehabilitated to date:

(a) Within target areas (e.g., Model Cities, Urban Renewal, etc.) ?

(b) Outside target areas?

9. What percentage of Project Rehab units have been returned to the market as:

(a) Rentals _____

(b) Sales units _____

10. What is the minimum and maximum number of units for each project; on what basis were these set?

(a) Maximum _____ ; Basis:

(b) Minimum _____ ; Basis:

11. How is the procedure for relocating families handled in the target areas and outside of the target areas? (Please attach copy of written procedures, if available.)

12. What are your project review and evaluation procedures? (Please attach copy, if available).

13. What procedures have been implemented to ensure the participation of small and minority interprises? (Please attach copy, if available)

PART II - Project Evaluation

1. What have been some strong points of the City's Project Rehab program in the following areas:

(a) Site selection:

(b) Financing:

(c) Relocation:

(d) Rehabilitation:

(e) Processing procedures:

2. What have been some of the weak points of the City's Project Rehab program in the following areas:

(a) Site selection:

(b) Financing:

(c) Relocation:

(d) Rehabilitation:

(e) Processing procedures:

3. How responsive have developers and sponsors been towards Project Rehab?

4. What efforts have been instituted by builders and developers to provide employment and job training opportunities for minorities and local residents?

5. Please give a brief description of community involvement in Project Rehab.

6. What other resources have been used or are being planned to support Project Rehab?

Mr. _____, Area Representative
U. S. Department of Housing and Urban Development
_____
_____
_____

Dear Mr._____:

The City of Atlanta recently was selected by HUD as a Project Rehab city. Resurgens Atlanta, which is a biracial civic group, is very enthusiastic about the potential that the project holds for significantly upgrading the housing picture in Atlanta. Accordingly, we have formed a Housing Action Committee to investigate means for assuring the success of Project Rehab in Atlanta.

We are contacting you in the hope that you will assist us in our endeavor. We understand that your office is the cognizant HUD agency with respect to Project Rehab in the City of _____. We would be interested in finding out, from your viewpoint, how the project has been handled in that city and the degree of success that has been achieved. Hopefully, then, Atlanta can benefit by emulating the positive practices, and avoiding those that have had a negative impact on success.

For your convenience, we have attached a two-part questionnaire. The first part deals with statistical and procedural data. The second asks for qualitative, narrative-type responses, which you or whomever is directly responsible for Project Rehab in your office may wish to answer. We have enclosed a stamped, self-addressed envelope for your use in returning the completed questionnaire.

Your cooperation in this matter will be greatly appreciated by Resurgens Atlanta, as well as by all people in the City of Atlanta. We thank you in advance for your help and cooperation.

Very truly yours,

RESURGENS ATLANTA

JAMES M. PIERCE
Executive Director

Dear Friend:

Not long ago, the mayors of eleven major American cities met to discuss their situation. "A disaster area", "going down the drain", "bankrupt" are some of the ways they described the crisis they face.

No wonder, with seventy percent of the population crammed onto two percent of the land. And the out-migration from the rural South continues. One and a half million in the past ten years. Well over a hundred thousand in 1970.

This disastrous course need not continue.

In two key Southern rural areas, people are finding they do not have to leave. They are learning how to keep their roots firmly planted in their home communities--where there is ample living space, clean air, hope for a good life. Here is where the Rural Advancement Fund is providing new ideas, new capital, and technical know-how to overcome the neglect, discrimination, and attrition which have made even subsistence no longer possible for large numbers of people.

With RAF's help, whole communities are at last beginning to raise themselves up and to face the future with hope. They are learning how to shift from no-longer-profitable cotton and tobacco crops to diversified vegetables, produced and marketed in volume through co-operatives, and grown without use of harmful chemicals.

RAF provides interest-free loans to the co-ops for machinery...helps plan for locally-controlled industry to complement the farming operations...offers leadership training and opportunities for young people...encourages health, housing, and other needed programs.

Please read the enclosed folder for further details. Then I hope you will write a generous check to spur this development and help it spread to other needy areas. You will have the satisfaction of becoming a partner in this tremendously hopeful program to save the rural areas and their people--and also help buy time for the cities.

Sincerely yours,

Julian Bond

Growing with help... growing with hope

In two of America's poorest areas, men and women who had forgotten how to hope are beginning to remember again.

They are the impoverished rural people, most of them black, of Burke County, Georgia, and Halifax County, Virginia. For generations, they watched their babies die at twice the white rate. They saw their cotton and tobacco farms shrink under the pressure of racism and discriminatory national agricultural policies. Shacks sagged, debts took food from the table, and flight from the land they loved seemed to many the only solution. So they fled by the thousands to the dubious sanctuaries of city ghettos. Those who determined to remain on the land found themselves being picked off, one by one, by the forces of poverty.

AIN'T NO BIG THING

Today, in Burke and Halifax, the people have come together in cooperatives that are transforming the land—and the spirit—of their counties. They are farming together, planning together, and hoping together. And, with significant new assistance from the National Sharecroppers Fund and its Rural Advancement Fund, they are producing a rural Renaissance that cynics said was not possible.

Signs of the times tell the story. In Burke, a sign in the office of the Eastern Georgia Farmers Cooperative says:

"If you do something for your co-op, your co-op will do something for you."

Outside the new marketing shed of the Southern Agricultural Association of Virginia (SAAV), in Halifax, the proud slogan reads:

"We Ain't No Big Thing But We're Growing."

ORGANIC AND IRRIGATED

Growing healthful, profitable organic crops on land written off as useless. Reaping fine vegetable harvests with modern machinery on irrigated land once parched and fallow. Producing a new way of life than can reverse the old pattern of tragic migrations.

Woodrow Harvey is chairman of the Burke co-op. He says:

"For the first time, I can see the way clear for a lot of folks who left to come back and farm. And for a lot who might leave to stay on. One man saw our new co-op harvester taking up more peas in a day than his family could handpick in a week. Next year you can be sure he'll really be into that pea production. Word has gotten around and I've heard from friends in New York and Chicago who say they're ready to return now. We're not out of the woods. **Folks who've been blindfolded a hundred years can't all open their eyes overnight. But with the support from the Rural Advancement Fund of NSF, more eyes are opening every day."**

A TRUE COMMUNITY

Four hundred miles away in Halifax, SAAV farmer Robert Wilkins was tired of farming tobacco, a crop that went up in smoke along with most of the profits. Now he watches his fields of plump cucumbers and squash being harvested by co-op workers while irrigation pipes spray another patch threatened by drought.

"This is the first time in my life I had irrigation," says Wilkins. "Always wanted it but couldn't afford it. You watched the white man irrigate while your fields dried up. They laughed when the co-op said we'd get it. But we got it. **Got something else too that you can't count by the bushel. We have people helping each other to get out of the hole we been in. We have a true community."**

ASPIRATIONS INTO PROGRAMS

The co-ops of Burke and Halifax are only three years old. But they represent the logical result of three decades of service to the rural poor by the National Sharecroppers Fund. **The aim has always been: Help the poor to help themselves.** Their problems often went unnoticed, particularly by urban Americans quick to condemn rural migrants on welfare but slow to comprehend that people in cities ate well while many families producing the food went hungry.

NSF fought for humane farm legislation and against Agriculture Department programs that kept poor farmers in general and black ones in particular ignorant of technological advances. It campaigned against racism that denied black farmers the loans that made white farmers solvent. At the same time, NSF workers went into the fields, listening to farm families, translating their aspirations into programs of change.

CO-OPS SPELLED SURVIVAL

By the late '60's, blacks on the land were in crisis. Some 4,500,000 had emigrated from the South since 1940. Denied equal opportunity by both public and private institutions, blacks all over the South who remained on the land saw their last chance for survival in cooperatives.

NSF's Rural Advancement Fund provided technical know-how and as much money as it could muster to co-ops in half a dozen states. Farming with seed and fertilizer bought at lower bulk prices meant a few extra dollars in the house to buy a child shoes or pay for a doctor's visit.

TOOLS ARE NEEDED TOO

But tools were also needed if their fields were really to bloom, lives to change, young people to stay home instead of fleeing to the cities. Tools like tractors and irrigation pumps cost money, and there was none. James Pierce, RAF/NSF's executive director, says:

"We decided to concentrate energy and funds

in Burke and Halifax. Anybody who expects historically deprived poor people to make it on spirit and hard work alone doesn't understand today's farming. Millionaire farmers get huge subsidies. So do aircraft companies. We wanted to do as much as we could for people who had the will but not the way."

MEN AND MARKETS

RAF/NSF loans helped turn the tide in Burke, where the average black family income was under $700 a year, and in Halifax, among the poorest ten percent of American counties. But it takes people to make money work. RAF/NSF rolled up its collective sleeves along with co-op members.

Technical advice and markets were the key. NSF staff probed the complex world of marketing that had been alien to one-crop cotton and tobacco farmers. With co-op approval, they secured firm contracts from dependable brokers, good terms for machinery purchase, and the best technical help from agriculture experts. Specialists developed organic fertilizer with components from far and near. Elected co-op management teams worked with members on planting and harvesting schedules to insure that peas, squash, and cucumbers would be ready for market on time. **All the things no individual could do alone became possible cooperatively.**

"I'll tell you," says Woodrow Harvey. "When we hit the button on the irrigation pump and folks saw water bubbling out over fields that were ours, bringing them to life, that made a lot of believers."

The organic squash and cucumber crop in Halifax (fittingly grown near the grim, grey stubble of a long-abandoned tobacco field) made a lot of believers, too. And not just in the county. Buyers in New York and Washington liked what they saw and clamored for more.

TO BELIEVE IN THE FUTURE

None of the people in Burke or Halifax who lived through earlier years of hopelessness are crowing. They know the heavy odds against them. They count the friends who left, the babies who never grew into childhood. Loan obligations and expenditures for this dramatic year leave little money to acquire more land, vital to produce the volume that means profit in the marketplace. Still, with crops in and time to gather for discussions, ambitious plans are being made by the communities and RAF to raise up the entire community. RAF/NSF has labored with local people on housing plans, co-op food stores and sewing centers, day care and health facilities. No one knows where the money is coming from. But plans proceed. The habit of hope has replaced the acceptance of despair.

RAF/NSF wants to see this hope flourish in Burke and Halifax, and the lessons learned there spread to other counties where people have forgotten how to hope. At this moment, there are scores of places where families oppressed by poverty cannot believe in a hopeful future. Or in themselves. Belief can be restored and dignity returned by living the cooperative way. RAF/NSF would like to assist in restoring that belief. And the Halifax community would be pleased to share its slogan with any people ready and willing to make it *their* cooperative reality:

"We Ain't No Big Thing But We're Growing."

The Church Rediscovers the City

America's urban churches and synagogues are rediscovering the city. And the results of the rediscovery process are having profound effects not only on the cities but on the churches as well.

From coast to coast and in cities of all sizes, church leaders of all faiths are tackling a variety of urban problems in a variety of ways. Mostly they act within the framework of their own particular church, but increasingly they are acting in concert with one another in an approach to "civic ecumenism" paralleling the growth of "spiritual ecumenism." And in the process a new breed of "activist" clergy has come forward.

With all this activity on the urban scene by religious groups, where do city officials fit in? How can City Hall best make use of the community resources of the church? And how best can City Hall work with "modern" clergymen to build a better city?

There are a variety of opinions from both sides. Some church leaders like to picture themselves as leading a fight against City Hall and its so-called entrenched policies. On the other hand, some city officials criticize ministers and priests for involving themselves and their flocks in social welfare and civil rights problems.

But churchmen are quick to reply that anything which affects people—whether urban, suburban, or rural—*is* their concern.

Robert Lee puts it this way in *The Church and the Exploding Metropolis*: ". . . There is no corner of the nation where the city's tower does not cast its shadow, no person who is not in some way influenced by the modern metropolis. A religion that does not take seriously urban civilization—the focal point of economic and social organization—is surely one that weakens itself. The place of religion should be at the heart of the city . . . precisely in turmoil and turbulence, in the joys and frustrations of the modern metropolis."

The Very Rev. Paul Moore Jr., Episcopal suffragan bishop of Washington, has said that "unless churches can speak to people in the slums and ghettos of the cities in a way that makes sense, they will fail."

As a leader in the "Inner City" program and a veteran of urban parishes in Jersey City and Indianapolis, Bishop Moore has related his experiences in *The Church Reclaims the City*, published last year. In it he says "that once the Church has been accepted (by the people in a rundown area) and the family has become

a part of its life, the Church assumes a far more important role than with the 'average' member; it becomes the center not only of worship, but of social life and social action, and the place to come when one has a problem of *any* kind."

This last statement is significant because, when one reviews the extent of church participation in urban affairs across the nation, the variety of its activities is amazing. Here are just a few church-sponsored urban projects:

• Housing for the elderly—church groups represent over half of the housing for senior citizens sponsored by nonprofit organizations with direct federal loans or FHA mortgage insurance under programs administered by the Department of Housing and Urban Development. Of the approximately 50,000 nonprofit units commited, church groups have accounted for nearly 28,000. And of the loans and mortgage insurance commited totaling over $590 million, church-sponsored projects account for about $330 million.

• Housing for the needy—some churches have purchased rundown homes in the neighborhood, fixed them up and rented them to low income families. Washington's Ascension and St. Agnes Episcopal Church scraped together contributions and loans and bought a house which was rented to two families with 13 children for less than $200 a month. "It pays the bills," says the Rev. Frederick H. Meisel, pastor. "If it were owned by a slum landlord it would bring in $600 a month."

• Day care and community centers—many urban churches open their doors throughout the week to serve the needs of their neighborhoods. Some run tutoring classes for slow learners, often staffed by volunteers from the suburbs. Others sponsor credit unions, day camps, and cleanup campaigns, and also provide family planning and family counseling services.

• Youth Employment services—The Rev. Leon Sullivan, pastor of the Zion Baptist Church in Philadelphia, says his church has one of the best youth employment services in the nation. About 1,000 youths land jobs each year through the service. Its Opportunities Industrialization Center has been operating 20 months and already has retrained 1,000 workers. Another 2,000 are in training and that number should be up to 4,000 by June 1966. "It is one of the largest retraining programs in the country," he says. "The $82.5 million program is financed by community, industrial and foundation money, including $1.7 million from the Office of Economic Opportunity."

• Other church groups operate clinics for narcotics addicts and rehabilitation centers for recuperating mental patients. A Reno church clinic specializes in counseling divorces. In San Francisco a church-sponsored homosexual council has been established.

"Social action spells out the fact that the Church cares and that it is important in the daily life of the community," Bishop Moore says. "Without it, a ministry in a blighted area is hypocrisy. A pastor may visit a family which is living four or five to a room without proper plumbing or heat and paying exorbitant rent; its children are undernourished and diseased. He cannot cheerfully say 'Jesus loves you,' pat the children on the head, and go whistling on his way back to the warm comfortable rectory without at least knowing that the Church as such is doing everything it can to alleviate conditions. Nor can people living under such conditions be much attracted to a Church which is not fighting for their rights."

Today's ferment in the urban church, particularly among the Protestant faiths, is a relatively recent development. Harvey Cox, assistant professor of theology and culture at Andover Newton Theological School in Massachusetts, outlined the church's earlier reaction to urban growth and the decline of inner-city areas this way in his book, *The Secular City*:

"How has the church related itself to these areas? Its first response, as is well known by now, was simply to run away as quickly as possible. The mass emigration of the Protestant churches from the city in the first half of the 20th Century is by now a shamefully documented fact. Recently conscience pangs have begun to set in. Since shortly after the Second World War these same churches have begun to notice the inner-city again."

The Rev. Ted McIlvenna of San Francisco's Glide Urban Center comments:

"Traditional Protestant moralism is still one of our biggest problems. Oh, if only we could hear the last of those time-honored sayings, 'A bad apple spoils the barrel,' and 'You don't have to climb into a cesspool to know it stinks.' Wouldn't it be lovely to recognize that people are neither apples nor cesspools?"

Bishop Moore says the reasons for the church's retreat from the city's depressed areas were twofold: migration of church members to the suburbs and the lack of an urban mission philosophy.

The migration of church members to the suburbs has been so great that a recent Methodist survey showed its 20 churches in San Francisco have only 6,000 members out of the city's population of 780,000. Little wonder, then, that the Methodist magazine *Together* recently editorialized: "Where is the frontier for this age? Where can the church lead and serve—as it must to live? That place, that frontier for today, is in our cities."

The Rev. Robert G. Howes, associate professor and chairman of the city and Regional Planning Committee at the Catholic University of America in Washington, is convinced that the trouble with megalopolis America is mostly moral.

"We have such advanced think machines . . . magnificent traffic models, dozens of exciting urban renewal projects, zoning and planning conferences, editorials on community improvement, etc. . . . Yet we fail to find order in megalopolis. What is lacking is moral commitment on the part of enough American citizens, official and otherwise." Father Howes says that it is largely the responsibility of the community's churches to supply this moral commitment. He urges

NEWSWEEK

Bishop Paul Moore: "Invite in the troublesome, nettlesome members of the clergy for off-the-record talks. They can be objective."

NEWSWEEK

Rev. James P. Morton: Cities should call upon churchmen to do more than "blessing the status quo, ringing the curtain up and down on the day's program . . ."

clergymen of all faiths to stand up for particular pieces of legislation which will benefit their communities, even at the risk that they "will be faulted for playing politics."

But religion also must avoid becoming "only another in the yelping pack of lobbies at City Hall, State House, or Capital Hill," Father Howes adds. "The churches of America do themselves serious harm if they proceed unaware of the tough push and pull of politics; if they short-change commonwealth, ignore the big and long picture; and accept without question every device, every technique, every short range and partisan solution proposed for every civic problem."

Churchmen must also be aware of the real depth of community issues, he says. They are "almost never short, quick, simple. Issues are mostly the iceberg top of great, submerged, shifting bulks of people, problems, and policy. . . . The study of any pastor proposing to preach next Sunday on a civic subject should be crowded with as much unbiased study materials as it is with books of piety and holy water. Megalopolis today is not the place for amateurs, however well meaning."

Father Howes also feels it's not fair to say that city officials have been ignorant of "people problems." "I feel the relationship between church and City Hall should be friendly but free," he adds. "It's not fair if the church polarizes opinion fully against City Hall—this is a dangerous thing. But, on the other hand, the church cannot serve merely as a funnel through which City Hall viewpoints flow to the people, either."

Father Howes suggests working with city officials through community councils of churches. He says such councils have two advantages: for City Hall in having one responsible place for the mayor and other city officials to go to explain what they're trying to do; and for the churches because they can bring their knowledge of human problems to the attention of the mayor.

"We shall be much less easily stampeded into precipitate action if each civic proposal must first be referred to the competent judgment of church-related men sitting in habitual assembly," Father Howes argues. He adds:

"The whole problem in the city, as far as city planning goes, is to give the little guy the big picture and give the big guy the little picture. And the church is ideally suited to fulfill this intermediary position."

Philadelphia's Rev. Sullivan says his church-related social action programs have had fine cooperation from City Hall. His advice for city officials elsewhere in working out programs and projects with church groups is this: "City officials should work with the leadership and try not to tell them what to do but to work with the progressive religious elements of the city."

Bishop Moore says it's hard to get away from the fact that concerned churches usually find themselves placed in the position of fighting City Hall. "It's a built-in thing," he says. "By and large, City Hall represents the community power structure. Often, there's a great deal of misunderstanding on the part of City Hall about what our more modern clergy is trying to accomplish. Most city officials think of clergy as opening up meetings, etc. But now there's a new bunch of clergy active in civil rights matters and they sort of confuse the city fathers a bit. Many city officials don't understand, for instance, the relationship of the police departments and some of the courts to the residents of the inner city. These branches of the city government, whether they mean to or not, represent to these residents oppression; they're symbols. And a great deal of hostility is engendered. So it's little wonder that usually the point of explosion revolves around police incidents. The policeman is a symbol of oppression and that's hurting so they're the ones they hit. I believe there's often real insensitivity on the part of those in City Hall in looking at human problems. The clergy is often closer to these problems."

But there are ways the sometimes strained relations between city officials and the "new" clergy can be improved, Bishop Moore says. His suggestion to City Hall is: more sympathetic communication. "Invite in the troublesome, the nettlesome members of the clergy for off-the-record talks. They can be objective. If City Hall has an honest program, the clergy will be cooperative. But if the program's merely windowdressing, City Hall can't expect the clergy's cooperation. It's a

new day in this field and City Hall has failed to realize it."

The Rev. James P. Morton, director of the Urban Training Center for Christian Mission in Chicago (which is supported by 11 Protestant churches), spoke out for more involvement by urban churches in community action during the National League of Cities' 42nd annual Congress of Cities last July in Detroit. He told the assembled city officials that it had been his "sad experience that usually our civic assemblies call upon the clergy to perform a very different role—common to the medicine man and magicians of all ages—which principally involves the blessing of the status quo, ringing the curtain up and down on the day's program (whatever it is); and then to collect one's fees, and go home. Clergy so often tend to be necessary ornaments."

Father Morton's role in the experimental Urban Training Center (which in October received a $600,000 Ford Foundation grant to establish a new program for ministers) is far from ornamental. It is to plunge ministers and seminary students into the city's slums to work and live to get them to interpret theologically the conditions they find there.

Seminarians also may soon get a chance to take part in the Federal Government's war on poverty under "a citizen sabbatical" program proposed recently by Sargent Shriver, head of the Office of Economic Opportunity. The theology students also would have an alternative to work in the Peace Corps overseas.

Throughout major metropolitan regions, church groups are being urged to cooperate in undertaking urban programs. The Glide Urban Center in San Francisco, financed by the Methodist-related Glide Foundation, believes churches must cooperate closely across denominational lines to fulfill their mission and to survive. "They must reach out to the unchurched, who persistently refuse to clamor at their doors," the Center says.

Bishop Moore says urban churches are establishing agencies to deal with social problems which are beyond the individual parish's ability to solve, just as foreign missionaries build hospitals and other institutions. One of the first great experiments in organic unity was the East Harlem Protestant Parish in New York. Counterparts of the East Harlem Parish have been established in New Haven, Cleveland, and Chicago. "The basic strength of its communication has been the participants' deep dedication and the clergy's ability to sacrifice their middle-class ways and superficial values to the mission of Christ," Bishop Moore adds. "The parish has been strong in witness—a life-size 'Passion Play' on Good Friday in a vacant lot is typical of its imaginative methods. It has been strong in social action and community life."

But theology professor Harvey Cox is critical of some of these efforts. "By and large this has added up to a flimsy and even self-deluding series of efforts," he says in *The Secular City*. "It has not only been too little too late; it has also been largely ill-conceived and patronizing. What is needed in these (blighted) areas are not incursions of rescue bands from outside, but a basic redistribution of power so that there is no longer any need for condescension. But this is asking for a sacrifice on the part of suburban churches that very few are willing to make."

Cox favors an organization scheme similar to that of The Woodlawn Organization (TWO) in Chicago formed with the "pyrotechnic and political" assistance of controversial Saul D. Alinsky and composed of some 90 community groups, including 13 churches. TWO was sparked, Cox says, by Protestant ministers and a Catholic priest. It represents, according to *Fortune* magazine's Charles E. Silberman," . . . one of the most meaningful examples of Protestant-Catholic amity and cooperation to be found anywhere in the United States." TWO organized rent strikes, picketing, and—according to Cox—has had a "spectacular impact" on Chicago politics.

Cox says the Woodlawn experiment in the Negro slums holds many clues for strategy for an urban church. "City mission societies and councils of churches would do well to examine this program and either launch or support similar experiments elsewhere," he continues.

Bishop Moore has some reservations about Alinsky's methods in Chicago but agrees with his theory that a lot of money and time must be put into such community programs to make them work. He also feels that Alinsky's use of anger to spur action is all right as long as it doesn't produce a Watts. But he says the Alinsky approach falls short because it may become too segmented, too localized. "This results in one neighborhood protecting itself over and against the rest of the city." Bishop Moore says any areawide organization set up to tackle urban problems perhaps should be secular with the churches participating.

Cox feels suburbanites should participate in this "revolution" on the urban scene although to do so might go against their best interests. "Increasing the relative power of the inner-city means decreasing the relative power of the suburbs," he says. "Changing bank practices, zoning laws, school financing, and tax structures means they will have to foot a larger if more equitable portion of the bill for supporting an urban society. But no one ever claimed that the summons of the Kingdom did not entail sacrifice and responsibility. . . . Middle-class suburbanites have exercised responsibility but have rarely sacrificed, and therefore their responsibility has hardened into an elaborate form of self-protection. Suburban politics is often antimetropolitan and self-centered, directed toward keeping taxes down and 'undesirables' out.

"Lower-class inner-city people, for their part, have sacrificed a lot, but they have not been willing or able to take political responsibility," Cox continues. "Therefore their sacrifices have tended to engender only bitterness and resentment. Suburbanites must now be called to sacrifice parochial interests for the health of the whole; and inner-city people must be called on to assume responsibility, not just for themselves but for the whole metropolis of which they are a part." ■

Capital Improvement Programming

Benefits of New Budget Method Can Apply to Smallest Locality

DAVID BERMAN
NLC Research Associate

■ Public officials at all levels of government face the difficult, and basic, problem of choosing from among many possible projects and programs those which provide the greatest benefits for the money to be spent. Recognition of this has focused increasing attention on methods to make the budgetary process a more business-like tool of management.

In Washington, the White House recently announced that the whole budget process in 22 federal agencies was to take on the business-minded approach of the Defense Department in evaluating both new and old programs. The energetic new director of the Bureau of the Budget, Charles L. Schultze, made it clear at a Washington planning conference in January that the Administration sees budget-making as serving two major functions: first, to encourage dynamic growth and to prevent inflation; and second, to achieve as many benefits as possible from the money available.

On the state and local level there is a definite trend toward the programming of capital needs on a long-term basis. States and cities throughout the nation have adopted various forms of the capital improvements programming. The Federal Government has encouraged programming on the local level by making it a requirement in its "workable program" for community development. Many states have demonstrated increasing interest in the same subject. In 1964, New Jersey gave new life to a long-neglected law which requires that capital programs be adopted by all units of local government.

The need for the adoption of capital improvements programming techniques by officials in small towns has not gone unrecognized in the literature. The National League of Cities, under contract with the Department of Housing and Urban Development, has prepared a "Guide to Capital Improvements Programming," designed for smaller cities. This Guide, soon to be published, presents a brief review of the merits of programming and the essential elements of the process. An excellent manual, "Budgeting for Smaller Governmental Units," published late last year by the Municipal Finance Officers Association, devotes attention to capital improvements programming and provides practical assistance to local units.

What is capital improvements programming? In essence, it is a system of looking ahead a specific number of years, and scheduling capital expenditures over that span of time. When conducted by a government, the process sets priorities for public improvements. A fully developed program should document the necessity, estimated cost, and anticipated means for financing each scheduled project.

Among the items commonly included in these programs are major expenditures for the construction or repair of fixed assets like water and sewer facilities, or public buildings; for urban renewal projects; and for the advance purchase of land needed for future parks, school sites, or other public purposes. Capital improvements programs generally look ahead over a period of five to seven years, although successful programs have been adopted which are longer or shorter than this. The specific nature of the projects to be included in the capital program, and the period for which projections are made, depend on local circumstances.

In many ways, the programming process may simply bring together information and ideas already available. There are five major steps:

1. Preparation of a list of capital improvements projects considered to be needed or desirable, based upon proposals of the department heads and other public groups or bodies.

2. Estimates of costs of these projects offset by operating savings.

3. Financial analysis of both the community's ability to pay for the projects and means used to finance them.

4. Review and tentative selection of projects for inclusion in the program in order of their priority.

5. Public review and legislative approval of the program.

Once the capital program has been approved, it is put into effect and updated on a yearly basis. The first year of the capital program is used to budget that year's annual capital expenditures. At the same time, the entire program is reviewed and extended another year. Thus, if a capital program is approved for the years 1966-71, the first year of the program is used to plan the government's capital improvement expenditures for 1966, and further projects are made for 1972. To some, the above process is known as "capital budgeting," "public improvements programming," or simply "capital programming." But to many, the term "capital improvements programming" seems most precise. By any name, it offers important advantages to a local government.

The need for facilities is brought in line with community goals, anticipated growth, and financial resources. Programming may coordinate and relate conflicting and overlapping projects of various departments and agencies in behalf of the whole community. Thus, the most needed and desirable projects will be constructed first and maximum benefits will be gained from the money spent.

With ample time for planning future construction, impulsive and costly mistakes may be avoided. For example, streets will not have to be dug up or altered if they are initially planned in relation to other facilities. Working with a list of projects for future consideration, the city officials have time to select and purchase the best possible construction sites and needed land. Such land, moreover, may be purchased at a fraction of the price it would cost in years ahead, resulting in considerable financial savings. Finally, by spacing out projects for a number of years in the future, the city may be able to stabilize tax rates and expenditures for construction and develop a sound fiscal program.

Capital programming is also good public relations. Citizens are given a chance to participate in the formulation of the program and to make their opinions known through open hearings and advisory committees. Moreover, programming fosters a sense of common objectives in the community and shows citizens that their demands for improved or additional facilities have been recognized.

Ideally, capital improvements programming should be based on long-term planning, on a comprehensive or master plan for the future development of the community. It should also be based on long-term fiscal planning. Local units which have already undertaken such planning have a head start in capital improvements programming as well as a sound policy base upon which to build their program.

Other units, however, need not wait. There is no need to begin with a fully perfected capital improvements program. What is important is that local units do the best they can with existing information, personnel, organization, and resources. In the end, each government must tailor a capital program to meet its own needs and objectives. The best way to do this is to try it; to learn by doing. ■

WHAT EVERY CITY GOVERNMENT SHOULD KNOW ABOUT

ECONOMIC DEVELOPMENT

HAROLD W. WILLIAMS

■ IF YOU VISIT the quiet, old town of Jefferson, Tex. (pop. 3,082), and drop in on the old Excelsior Hotel, you can see a 19th century guest book in which there is written a prediction and a signature. The prediction: "This is the end of Jefferson." The signature: "Jay Gould."

In those days, Jefferson was a thriving city, a river port. The city fathers couldn't be bothered with a railroad. And so Mr. Gould went about 15 miles south and established his Texas Pacific Railroad yards at Marshall. Mr. Gould was right. That was the end of Jefferson—as an economic force.

With the pace of economic change accelerating so rapidly in the last half of the 20th century, the lesson for city officials is even more pertinent today than it was in the days of Jay Gould.

If a city is to serve its citizens, it needs a dynamic and diversified economic base—a base which will provide the population with a growing standard of living, and which will support public services on a scale commensurate with the needs and desires of an active and intelligent population. Economic growth alone will not produce the Great Society, either nationally or locally, but neither can you produce a Great Society without economic growth.

The author is on the Washington staff of W. B. Saunders & Company, a division of EBS Management Consultants, Inc. A specialist in public planning and development programs, he is a former Deputy Administrator of the Area Redevelopment Administration, and helped plan many of the current "Great Society" programs for public works, economic development, regional development, manpower training, war on poverty, and community planning.

The Role of City Government

Up until a few years ago, city officials who expressed much interest in economic development were rare. Even today, official concern is limited. Look to New York City as a case in point, a city which has been losing manufacturing employment year after year and which only took the first faltering steps to sponsorship of an industrial development effort in 1965. And even this came only after private groups had taken the lead.

There have been exceptions, but most city officials have assumed that private groups would take care of economic development problems while the city took care of police and fire protection, streets and sewers, parks and buildings. As a result, chambers of commerce, private utilities, and "Committees of 100" have taken the leadership in economic development.

This system has worked well where there has been dynamic and effective private leadership, and the literature is full of such case histories. It hasn't worked well at all when private leadership was ineffectual or apathetic. And it has worked disastrously in those places where private leadership hasn't really wanted any new economic activity.

One thing is certain. It has always worked better when municipal government has worked closely with private economic interests—whether in a position of leadership or not. And today, with the pace of economic change accelerating and with local areas becoming increasingly more competitive in their efforts at economic development, it must be the concern of every city government to know how its actions affect economic development, to take actions which will maximize the potential for local economic growth, and to work in harmony with private development organizations.

Industrial Sites Needed

Industry needs space. Land must lend itself to construction at minimum cost; utilities must be available; access to water, rail, surface, and air transportation facilities is essential; the cost of the land must be reasonable; the land must be readily available; it must be free of unnecessary zoning restrictions.

When public officials review plans for community renewal, zoning, and open space, it is not enough to confine the review to matters of tax base, aesthetics, traffic flow, and the like, important as these aspects are. The effect of the plans on the community's ability to attract and hold industry must also play a major role in their evaluation.

A Favorable Trade Balance

We are all familiar with the concept of a favorable trade balance for our country. Especially, these days, with the publicity given to a deficit in our national balance of payments, we have become sensitive to the need to export more goods. A community must export goods and services, too, if its citizens are to get the dollars they need to maintain and upgrade their standards of living.

Here is an example of how this affects community physical planning. Suppose there are several options for the development of a piece of land. One option might envision a shopping center, complete with a bowling alley and theatre. Another might envision an industrial center with three or four light manufacturing buildings. From the standpoint of taxes, either development might provide equivalent tax returns; in fact, the shopping center might provide more taxes. But the shopping center exports little by way of goods and services, and makes no direct contribution to the economic development of the area (although it is valuable indirectly insofar as it upgrades the quality of life in the community). On the other hand, the industrial land can attract branch plants of businesses, spark the location of new businesses, and add to the total wealth of the area.

Obviously, there are other factors to be considered. And when all the factors are weighed, a shopping center may turn out to be a better decision than an industrial park. What is important, is that authorities take into account the need for a favorable local trade balance when key decisions are made. While local service industries are desirable, they add little to economic development. As someone once said, "You can't succeed in economic development by taking in each other's laundry."

The Visitor Industry

An important service industry which does bring in new dollars is the visitor industry, which includes tourists, traveling salesmen, and conventioneers. Some places, by virtue of their location or by some peculiar historical accident, such as the Battle of Gettysburg, become tourist attractions without much official local effort. Others have to work hard at bringing visitors in. Up until a few years ago the city of Detroit lacked up-to-date hotel and restaurant services, and had virtually no convention facilities. Because of its location, it should have had an outstanding visitor industry, but even businessmen often planned their trips to avoid more than the necessary minimum overnight stay. Happily, all that is being changed with the addition of a modern convention hall and several fine hotels and motels. These new attractions did not come by accident, but had to be developed by a hard-working public-private group of local development-minded people.

There is scarcely a community in the country which can't do more than it is now doing to attract and hold more visitors, and thereby improve its "trade balance." There is no magic or mystery to the formula. Good accommodations are essential. Information must be provided. Attractions must be developed. And the community must work hard at developing a reputation for hospitality.

Education and Training

First class educational facilities, from kindergarten through graduate school, are essential to economic development. Obviously, not every community can have a graduate school, but its elementary and secondary schools need to be good. And its residents need access to a good community college and post high school technical training. Where communities are too small to support these institutions, they must work together on a regional basis.

The community's educational program needs to be well-rounded. Good vocational training facilities can be as important to economic growth as a good college. The growth of many businesses is limited by the ability of the business to hire qualified workers. Even if the community trains people who eventually leave to take jobs elsewhere, the community is better off economically to have a former resident working somewhere else and sending money back home (or returning for visits) than to have that same individual jobless at home.

A good vocational training program starts with a good program in the schools for high school students. But it must also include training of dropouts, high school graduates, and adults. There are now federal funds for training of the unemployed and the out-of-school. Failure to use these funds effectively in attacking local joblessness is often a failure of will, not of means.

Transportation Facilities

Good transportation facilities are essential to economic growth. They provide the access to markets and to raw materials. The better the transportation facilities, the larger the potential market for an "export industry," the greater the stimulus to economic growth. But good transportation facilities don't come by accident. Groups must work consistently and intelligently to see that air and rail service are expanded, that highways don't by-pass the community, and that ports are modernized.

Nor is transportation the only cost of distribution. Sometimes a community can overcome an apparent transportation disadvantage by proper economic planning. Northeastern Minnesota, for example, is relatively further away from some markets than many areas of the country and local industries felt themselves to be at a competitive disadvantage. Our company was able to show local businessmen how they could partially overcome this disadvantage by various methods such as pool shipments, changes in packaging, and so on.

What will work for one community will not work in another. The essential thing is that transportation is important to economic development. Those who are concerned about the economic growth of a city ought

to make sure that their industries are getting the best possible transportation facilities, and that they are making the best possible use of facilities available.

Public Facilities

A great deal has already been written about the importance of the community's physical plant as a factor in encouraging economic growth. Water supply, waste treatment facilities, streets, hospitals, libraries, other community buildings—all play their part in promoting economic growth.

No community can afford to let its physical plant deteriorate or even to neglect to keep its physical plant growing. Fortunately, there are now many sources of assistance to local communities as a result of federal programs. The Housing and Urban Development Act, the Public Works and Economic Development Act, the new educational legislation, the Hill-Burton Act, the Water Pollution Control Act, and many others now provide considerable assistance to local communities. Most city governments know of these programs; many have not explored them fully or systematically.

Economic development, largely a result of the growth of private enterprise, can't be separated from decisions made by individual managers, each of whom is, above all, a human being.

While a computer may answer that a particular location is most desirable from a cost standpoint, the owner of a business may decide that another location is more desirable because he has family nearby or because his wife likes it.

You must, as a part of an economic development effort, see that attention is given to good shopping areas, parks, cultural affairs, beautification, and so on.

Labor Relations

Many areas have reputations that they are subject to labor disputes. Whether a particular community has this reputation or not, those who are concerned about economic development in the community should take steps to see that there are harmonious labor-management relationships, to the maximum extent possible, and that these relationships are publicized.

Holding of a labor-management committee meeting regularly, even in the absence of strife, is often a useful means for promoting better understanding. Wise leadership in such a committee can also make it a tool for settling disputes.

Labor has a special interest in economic development, but often fails to recognize that interest. This is particularly true in areas where the economic development effort is an exclusive affair, run by a small group of business leaders. It is not uncommon to hear of a new company facing a strike soon after it moves into an area, and business leaders blaming the union for not cooperating in the economic development effort. In such cases, the chances are strong that the union leaders have not been a part of the economic development effort. Where they are such a part, they can be noticed out front sharing in the burdens and the glory of the work and concerned for its success. This does not guarantee freedom from labor strife, but it can make settlement easier.

Business Climate

Businessmen are like the rest of us. Most of them prefer being appreciated. They are more apt to stay in a place or move to a place where they feel they are wanted. I have heard many businessmen say that they would like to leave their present locations because the community takes them for granted and leaves them to face petty annoyances such as failure to repair a street, poor bus service, or excessive trash removal charges.

A useful program in many communities involves periodic interviews and questionnaires to local industries to find out what their gripes are, and whether they can be helped to expand. Even the fact that the businessmen are asked helps, even if there are no specific problems to solve.

When dealing with prospective new industries, the local community should show real interest. Many businessmen report that they picked one location over another because the people seemed nice or that "the local people really acted as if they wanted us."

The local tax situation will require some study, but unless taxes are out of line or unreasonable, most businessmen are willing to pay their share. Some communities have undertaken tax concessions as a method for inducing the location of new industry. This is a decision which must be made locally. The advantages of the new payrolls have to be weighed against the cost of services to the new industry and the willingness of other taxpayers to bear the burden. The problem of tax concessions should be approached cautiously, if at all, and expert advice should be sought.

The Overall Look

Economic development affects everybody. It means more jobs, a growing community, a better life for all who live in a community. But this also means that economic development should not be the exclusive preserve of one segment of the community.

Local merchants have a strong interest in economic development, but they should not have the controlling interest. Local utilities have a great stake in a growing community and can contribute much to economic development. But they are not alone. Doctors, lawyers, laborers, teachers—all must be a part of the economic development effort.

Who, then, speaks for the community on economic development? Who else other than the official government of the community can speak on economic development? It seems clear that city governments must take the leadership in economic development and must see to it that there is a broadly organized overall economic development program that touches all aspects of the problem and includes all community groups.

Communities must grow, or they will deteriorate. Economic factors will provide the basis for growth. Economic development is the method by which economic factors can be influenced to bring about the most growth possible. Along with all the other problems of governing a modern city, economic development must be undertaken. If it is neglected, the other problems will be magnified. ■

The Implications of Innovations in the Field Often Have Been Overlooked by City Planners

NICHOLAS JOHNSON

■ THE CITY is man's greatest monument to the importance of communications. As a matter of logic and history, the need for contact between man and man constituted the principal impetus for the creation of cities.

But now, as critics of contemporary megalopolis are quick to point out, the city has undergone a Frankensteinian mutation. Its vast population, its crowded streets and congested living and working spaces, its cumbersome political and economic institutions, have made the city a place where communication is costly, inconvenient, and in great measure altogether impossible.

NICHOLAS JOHNSON *began a seven-year term as a commissioner of the Federal Communications Commission in 1966 after two years as Maritime Administrator. Before that he had been an associate member of a Washington law firm and also served on the University of California law faculty, primarily in the field of administrative law and economic regulation.*

It is remarkable that professionals concerned with the future of our cities have paid communications so little heed. There can be few facts of more consequence to their projections than the exponential rate of increase in the capacity of homes and offices to send and receive information. Moreover, many familiar examples of existing technology could be put to work on the array of problems which cloud the American city's troubled entrance into the final third of the twentieth century.

As city governments consult systems engineers in attacking their problems, communications technology will be hit upon more and more as the best means of wringing more effectiveness from strained budgets. Merely to recite a characteristic list of programs and problems is to suggest the vast potential contribution which communications can make in each area.

Widespread attention has already focused on the close relationship between communications and the operations of urban police departments. The President's Commission on Law Enforcement and the Ad-

ministration of Justice, in a report on science and technology prepared by the Institute for Defense Analyses, has compared police patrol systems to a living organism whose "primary input network is the public telephone system, and whose primary output network is the mobile radio police network."

As the importance of communications networks to effective crime control has become clearer to police departments, jurisdictions across the country have begun to demand, and manufacturers have begun to provide, more sophisticated devices. Radio-equipped patrol cars are commonplace. Foot patrolmen in many cities are being equipped with transmitting and receiving equipment capable of keeping contact with patrol cars or base stations. Street-corner call boxes which permit voice communication with police (and also fire) headquarters are on the market, for which the Federal Communications Commission has recently made available one narrow-band channel.

Furturistic Devices Due

Other devices are just over the horizon: electronic means for computer-controlled systems for locating any patrol car automatically; mobile teleprinters which transmit written orders to patrol cars and which will eventually provide mobile access to local, regional, and national computers for instantaneous data processing, storage, and retrieval; and mobile television receivers. Some day, if we so desire, we will be able to mount on the wrist of every patrolman communications equipment just as potent as that long used by Dick Tracy.

Indeed, the use of communications for crime control purposes is already one area where city governments have pioneered—and left federal communications agencies distinctly outpaced. The sliver of spectrum space allocated to the land-mobile radio service by the FCC in 1949 has been inadequate for years. In 1966 NATION'S CITIES predicted a 31 per cent increase in the need for radio frequencies for police uses by 1971. Recently the FCC has provided additional frequencies for police use. But new frequencies—and alternative systems for managing our use of current assignments — must remain among the most urgent items on the agenda of both the FCC and of local governments until this need is met.

Reaching the Public

In such fields as housing, health care, education, welfare, legal assistance—to name just a few—we have already established massive federal and local governmental programs. But, as is often remarked, the people who have the problems often do not know that there are outposts of government equipped to offer a cure. And it is easy for the administrators to remain substantially ignorant of the specific needs of the people who in fact fall under their jurisdiction, or perhaps be led to believe that there is no need to be served. Those who do recognize the need spend considerable time and money trying, in various ways, to communicate with those they seek to serve.

The President's National Advisory Commission on Civil Disorders listed "effective communication between ghetto residents and local government" as the first goal in its strategy for restoring urban tranquility. The Commission's recommendation was not based on theorizing. For the Commission's investigators reported that: "Virtually every major episode of urban violence in the summer of 1967 was foreshadowed by an accumulation of unresolved grievances by ghetto residents against local authorities. . . ." The basic cause of volatile backlog of discontent was not hostile officials. It was, the Commission said, "a widening gulf in communications between local government and the residents of the erupting ghettos. . . ."

It seems to me that no governmental institution can link government to the people as well as can radio and television. And broadcasting can become even more of a two-way means of communication which allows the people to reach their government—and other people.

In New York City, for example, a leading rock and roll station has for the last three or four years run a series of remarkably successful campaigns to aid the citizenry in its efforts to locate and use government agencies responsible for housing, medical care, and racial discrimination. Several times each day, the station broadcasts one-minute spots notifying its listeners that, if they wish to rectify a matter having to do with housing, they should call a specified number. On calling, the complainant would receive information about the specific agencies that should be contacted and the nature of the process necessary to register a complaint and obtain redress.

Radio a Vital Medium

Running this telephone service was a group of volunteer women calling itself "Call for Action." They processed 45,000 complaints about housing conditions. Over the two years, the city's housing agencies somehow were able to reduce the average time it took to process a housing complaint from more than 90 to less than 20 days. The value to the city of this imaginative—though simple—service was plainly enormous.

Some city agencies may look upon such activism by broadcasters as a threat. But certainly the dedicated governmental leader will recognize the prod of such ombudsman-style programs (a format plainly susceptible to a great variety of urban programs and problems) as an invaluable measure and guarantor of performance.

And all local agencies should recognize in television, and especially radio, a probably unparalled means of reaching their constituencies, especially ghetto residents who are the

recipients of many government services.

In many instances, the public school as we know it has been turning in a disturbingly deficient performance. Much of its inadequacies can usefully be understood as failures to communicate. As a medium, it has been cumbersome, expensive, and often altogether ineffective. And its message is too often out of step with the needs of the student seeking preparation for a role in tomorrow's economy.

Service Savings Possible

Here again, communications technology opens vistas that should excite educational theorist and budgetary planner alike. For example, continuing refinement of closed circuit television, teaching machines, and computer techniques promise substantial help in solving such troublesome problems as: the growing cost of assembling the burgeoning school population in adequately equipped buildings and classrooms; the difficulty of finding quality teaching personnel; and the necessity to keep good teachers abreast of fast-changing developments in their field. Broadcast or cable television systems can be used to make available these techniques of education in every individual's home—a development of increasing value in an economy where continuing technical change creates a constant need for reeducation of the adult work force.

What can communications do to moderate the costs and inconveniences of that great American institution, the rush-hour traffic jam? In part, it can alleviate it: police helicopters already radio information about traffic conditions to broadcast stations which relay it to commuters, hoping thereby to permit rational individual decisions to choose one route or another. This is, of course, but a crude device.

There is no reason why the flow of traffic cannot eventually be regulated through the use of sensory devices on the scene feeding information about conditions to computers which then relay instructions to traffic lights, lane-closing and opening signals, or perhaps outright temporary roadblocks, just as feed-back flow systems control "traffic" in a steel mill or an oil refinery. At the very least we could use communications (radio and telephone) to better coordinate and distribute information about available urban transportation systems, by equipping buses with two-way radios, and by broadcasting reports about scheduling during peak-load periods.

Moreover, to some extent, communications may be able to eliminate the traffic jam altogether by obsoleting rush-hours. A housewife who can place her order by phone doesn't have to drive across town to shop. A lawyer who talks to a client by phone can do as well from across the continent as from across the hall. The small conference in the airport motel can be conducted from home with much less cost and strain with the aid of closed circuit television and long distance xerography (facsimile transmission of documents).

Impact on Transportation

In fact, any of us in the information processing business (memo writing and reading, correspondence, files, magazines and books, phone calls, newswires, computers, conferences)—and we are a growing band—will soon be able to relax and leave the driving to the non-communicative commuters. When we do so in substantial numbers we will affect the cities' "commuter problem," transportation needs and traffic patterns, and the very reason for today's central cities.

Once we recognize the impact that communications advance may have on transportation needs and patterns in the metropolis, we can see just how fundamental its role will be. If work now done in offices will not in the future require what is called "a central location," what are the implications for commercial and residential location patterns? What kinds of considerations are there in such speculations that city planners might—or must—take into account in trying to fix the shape of metropolitan areas?

Dartmouth Professor and RAND consultant John Kemeny has predicted that most of the basic functions of the central city will be wholly or partially obsoleted by 1990, when a vast computer-communications network will provide all offices and homes with video and aural contact with each other and with every conceivable kind of educational, informational, and entertainment fare. To accept a prediction like that—and it is hard to find fault with it—is not, of course, to say that cities will disappear. But it is clear that they will be radically transformed, physically as well as in many other ways. Communications advance will be the basic technological fact around which the cities of the next decades will take their shape.

Communications Planning Need

Otherwise said, communications will be to the last third of the twentieth century what the automobile has been to the middle third.

If we had that period to do over again, undoubtedly one of the things we would change is the failure or refusal of city planners to talk to highway engineers and vice versa—when the cities of today were on the drawing boards a decade or two or three ago. No coordinated effort was made to adapt the structure of the metropolis to the fact and implications of the automobile—or to adapt both to the human needs of the people who live and work in the city. We do not want to repeat this mistake in accommodating future technological revolutions while designing the cities of coming decades.

To take stock of the relationships between communications and urban development, we need to consider short- and long-run measures. To

handle short-run problems, city governments might well consider establishing an individual or office, preferably as part of the mayor's office, specifically concerned with the totality of communications needs and activities of the city. Responsibilities of such an office might include:

- Establishment of priorities in the use of mobile radio frequency space by city agencies (and possibly private users as well), as the Office of the Director of Telecommunications Management does for the Federal Government. If such offices are established by local governments, they should be accorded a formal, and to some degree autonomous, role in the decisions of the FCC on frequency allocation.
- Ascertainment of the communications needs of various agencies and programs, and promotion and coordination of efforts to use the mass media to further these needs.
- Consideration of whether the city should establish its own municipal radio or television broadcasting or closed-circuit media, on the model of New York's highly vigorous and successful WNYC AM, FM, and TV.
- Determination of how the city should use its power to franchise cable television systems. Few if any city governments have recognized the potential value to themselves of the FCC's decision not to preempt the power to license CATV systems. It not only gives the city government a handle on the future structure, content, and ownership of the communications system which will emerge within its jurisdiction over the coming decade or two. It also provides a potentially substantial source of revenue.

For its part, the FCC could, if city governments showed an interest, establish an Office of Urban Communications. Some of the matters to which this office could address itself would include:

- To what extent is current research and development in communications addressed to improving communications between cities, as opposed to communications within cities? To what extent does this allocation accord with the priorities of the nation?
- To what extent is the current crisis in frequency allocation for land-mobile radio use a matter of urban priorities? How could the present criteria for allocating frequencies, and regulating the telephone company, be revised to reflect better the needs of the mid-twentieth century metropolitan center? What procedures can be devised to better ascertain urban needs?

For the long run, we have to do two things: think and experiment. Much of both jobs must be done on a financial and institutional scale which puts them beyond the reach and responsibility (at least the direct responsibility) of individual city governments. But if the federal government, private industry, and the universities do not undertake these jobs, it will be city governments which suffer. So they may properly be burdened with responsibility for prodding others to action.

But serious analysis of the criteria and resources for designing the urban communications systems of the next decades is an urgent necessity. The alternative is to leave the field to the private—and ultimately uncoordinated—"planning" done by the managers of the communications industry.

Here is an example of the sort of intellectual tasks that demand confrontation now:

Perhaps we need to completely rethink what we are doing in the technology of mobile radio, and pursue a wholly different course to the same end. At some point, virtually every technology or system is totally abandoned in favor of a wholly new means to the same end that is cheaper and more satisfactory. Steam locomotives gave way to diesel, and both gave way to propeller airplanes, which in turn gave way to jets.

Land mobile radio frequency congestion is now so serious in the cities that we could usefully double the amount of frequency space available. But what long term solution would that provide—even if the frequencies were available? Since additional use (even with today's restraints) is growing at the rate of 20 per cent a year, we would be—within five short years—back in precisely the same bind we are today. (In fact, additional demand would undoubtedly be generated by the additional frequencies and the period would be less than five years.) Present technologies and systems simply do not appear to be adequate to the task.

Cities Wired for Action

What alternatives are there? We don't know. They are largely unexplored. One suggestion is that a city might be wired in such a way as to permit a mobile radio *system* to operate with perhaps hundreds or thousands more transmitters of *very low power*. Today's radio-dispatched cab must be able to transmit perhaps 30 miles—in all directions—in order to communicate with its base station. If each block were wired to receive low power transmission, and relay it by cable to its destination, the city's information system could handle much more message traffic. Such a proposal has obvious implications for public utility regulation. It may be that we will have to give more attention to common carrier mobile radio systems, and less to private as congestion becomes intolerable under our present wasteful system.

One thing is certain. We are going to have to educate ourselves in the spending of large sums of money. The military has learned that adequate planning of a relatively simple and specialized communications system cannot be done for less than tens or hundreds of millions of dollars. How much more sophisticated, costly—and significant—is the adequate design of communications systems for the daily use of millions of urban Americans. An adequate investment in such planning can pay for itself many times over. But the hundreds, and occasionally thousands, of dollars we are accustomed to spending on civilian communications planning are simply not going to do the job, and may even leaves us worse off.

One of the most important areas in which we will have to invest that money is experimentation. We will need to test individual subsystems; for example, a design for a new urban mobile communications system ought to be recipient of funds for a massive pilot program in at least one American city. We will also need to test more comprehensive systems—perhaps for a neighborhood or a single suburban or residential community, perhaps through the Model Cities program or something like it.

Finally, we do want to have some genuine model cities—like the private efforts launched in Reston, Virginia, and Columbia, Maryland, and more significant still, the Experimental City now under consideration by three federal agencies and a consortium of Minnesota interests.

We cannot—even if we would—dismantle the urban complex. But that is no reason to despair. The tools are at hand to make urban life governable and liveable—if only we will take them up. Innovations in communications technology are crashing upon us like the waves of a stormy sea upon the beach. Each brings worlds of opportunity.

The implications are there for all of us: business, universities, the arts, government. Those in the communications business and those directly responsible for our cities' welfare must make it their urgent business to take account of the communications revolution, and to put its gifts at the service of urban man. ■

SMALL CITY U.S.A.

decline or growth?

HUD'S concern for the small town

Office of Small Town Services Promotes Better Communities

SAMUEL C. JACKSON

■ THE CONCERN of the Department of Housing and Urban Development for the future of small towns is as old as the laws under which it and its predecessor agencies operates —dating back some six Presidents and 16 Congresses.

The 1965 law creating the department charged HUD with concern for *all* of the Nation's communities—"town, village, or other local governments." Specific provision was added by Congress to assure that nothing in the act be construed to deny or limit the benefits of any program, function or activity of HUD on the basis of population or corporate status except as may be expressly provided by law.

The funds appropriated by Congress must flow to the local units on the basis of the merits of the local program and local need. When limits have been placed on a program by size of community, those limits have been upper population limits.

Thus, in response to the question posed to me around the country, "Has the federal government written off the small city?" I can answer unequivocally that HUD in rule and in practice, has written *in* the small city.

However, we are approaching the limits of what HUD can do alone. In this connection, I concur with Sec. George Romney when he said: "The role of government is limited, but it is also vital. It involves taking the leadership in developing national policies, goals and priorities, and then in helping to mobilize resources to carry out those policies and meet those goals." In short, there is much that small towns can and should be doing by themselves to revitalize their environment.

HUD recognizes that all cities may have been created equal but that the smaller community faces certain disadvantages in terms of ability to identify problems and priorities, to ascertain where assistance is needed and to mobilize available resources to seek and qualify for such assistance.

The creation of the Office of Small Town Services within HUD's Office of Metropolitan Development underscores our concern toward ensuring that the small community point of view and condition are fully recognized in developing policy and program decisions.

Thus, the Office of Small Town Services serves as a central point in HUD for focusing on the problems of smaller communities. A balanced program of activities and projects is being undertaken to:

- Facilitate and ensure that HUD resources are available to assist the nations' small towns in their community development process.
- Familiarize the small towns of America with HUD programs designed for improved local development.
- Ensure that smaller community needs and problems are recognized, analyzed, and reflected in departmental policy and program decisions.
- Work closely with federal, state, and local agencies as well as appropriate private organizations to provide smaller communities with needed specialized information and advisory services support.

Coordination of various HUD programs with other federal and state programs which serve small town development will be stressed through conferences, seminars, local visits, surveys, and studies. The smaller community's lack of adequate information regarding federal programs and technical capability to cope with the growing perplexities of urbanization will be key areas of focus. A greater involvement and capability of HUD central and regional offices and the states to assist small towns will be emphasized.

A comprehensive study dealing with the "Identification of Small Community Needs as Related to HUD Programs" is being conducted with the Office of Small Town Services responsible for providing the technical direction and monitoring. This effort will lead to a more effective delivery of programs to small towns.

The chief concern of this office is the small community and its problems and needs. The staff will work closely with local officials, HUD program officials, other federal agencies, the states, and other public and private groups. Activities will be coordinated through state agencies, particularly those funded under various HUD grant programs. Expertise in the areas of housing, relocation, planning, public facilities, manpower, management assistance, equal opportunity, etc. (available elsewhere in HUD and outside) will be brought into play to achieve quick and effective results.

This coordinating role is implicit in the grant and loan programs of HUD which are concerned with basic community needs and geared to aid communities in providing the kind of environment and services that business seeks for its employees, that citizens seek for a full and productive life.

Employer or employee, senior citizen or high school senior, shareholder or sharecropper—all look for decent and available housing, modern health facilities, pleasant park and recrea-

tion areas, a plentiful supply of power and water, a good public library, and other municipal services.

An examination of many of the HUD program elements bearing on small communities will give you an idea of what HUD's approach is and how it may be related to any small city.

Let us look at a few of these in terms of assisting the small city to meet its needs:

- More than 80 per cent of the cities in the public housing program are under 25,000 in population.
- Almost two-thirds of the urban renewal projects have been in cities of under 50,000 population. Over 50 per cent of participating cities have, in fact, populations of less than 25,000.
- Public facilities loans are almost totally restricted to communities under 50,000 population. Ninety-three per cent of the projects assisted have been in communities under 10,000.
- More than 83 per cent of water and sewer facilities grants have been to communities under 50,000. In the last fiscal year, out of a total of $175 million in grants, $120 million went to communities under 50,000 and $30 million went to communities under 10,000.
- Thirty-six of the cities selected to receive planning grants under the Model Cities program are communities under 50,000 population.

The latest tools to be added to our arsenal were provided in the 1968 Housing and Urban Development Act.

Of key concern to rural America is a new category of assistance—grant funds of two-thirds to three-fourths—for multi-county planning in rural and other areas outside of metropolitan areas.

Its basic purpose is to help preserve and utilize our very great human and economic investment in small towns and rural areas. Collaborating with the Department of Agriculture, we are hopeful of funding several dozen of these multi-county plans this year.

HUD does not seek out favored recipients for our financial resources. We have depended and will continue to rely upon local responsibility and local initiative to work its way.

We feel this will not only prove the best way to solve many problems, but only in this way can we create for all Americans a rewarding and meaningful environment.

It is our conviction that one of the more effective ways of reducing inner-city pressures is by enhancing the quality of life in the small towns. This would give those urban residents who might prefer living in smaller communities an option which, in many cases, is not now available to them. I should emphasize that it is not HUD's policy to stimulate this movement—we simply want to make available to core city residents the option of a rewarding life in our small towns.

To sum up, the federal government is not crossing out the small city. Every federal program is as relevant to the small city as to the large city; in every great domestic program, the strengthening of community life and an improved environment for its citizens can be traced.

We are doing everything possible to broaden the options for settlement—not to dictate distribution—but to enhance people's freedom of choice.

For, as President Nixon said: "We must assist small communities to develop an environment—of community services, recreational facilities, educational opportunities, better medical care, and job opportunities—that will alleviate poverty, that will hold out hope for a brighter future, and that will ease the pressures upon these citizens to join the march to the cities." ■

SAMUEL C. JACKSON *is Assistant Secretary for Metropolitan Development of the Department of Housing and Urban Development. Before coming to HUD, he was vice president of the American Arbitration Association and had been the Director of the Association's Center for Dispute Settlement.*

Helping Smaller Cities Face the Future

OUR NATION'S country towns, its rural villages, its smaller cities and boroughs are in great need of specialized and urgent attention. The very future of America's smaller municipalities will undergo severe change by the end of the century as our country absorbs new population half again its present size.

Some of the challenges now confronting smaller municipalities and which call for new approaches include: unique social problems that know no boundaries; the economics of smaller cities which are so vital to sound development; new roles for towns, villages, and boroughs in manpower training; and political restructuring and modernization.

But if there are challenges and problems for smaller cities, there also are new opportunities through the Model Cities program, partnership ventures via intergovernmental agreements, combination possibilities in federal-state urban programs, and the potential of planned, new city-type expansions. These all demand the availability of professional and technical assistance and the knowledge of organizational methods which are particularly difficult for the smaller municipality to obtain.

Last month this nation's two national municipal associations—the National League of Cities and the U.S. Conference of Mayors—announced the beginning of what could become an historic administrative joint service program. This has great significance for smaller municipalities.

The vast membership structure of both municipal organizations (particularly the unique state municipal league membership of the NLC) holds promise of important new programs and services designed to upgrade municipal government capabilities.

And when you add the newly broadened International City Management Association with its service programs now available to the administrative professional in any municipal government (and featuring a special smaller city management information service), this presents an unbeatable, three-way combination of national association services.

The National League of Cities and the U.S. Conference of Mayors soon will launch a Smaller Cities Service Center. As funds become available, this center will help smaller cities accomplish the following objectives:

- *Expand National Resources:* NLC and USCM will be better able to coordinate their respective policy and legislative programs and to work more closely with all federal agencies for the expanded benefit of smaller municipalities.

- *Improve Effectiveness:* Information resources to smaller cities will be expanded. This will result in greater research productivity, specialized supplements on federal aids, improved field survey and inquiry services, and Model Cities and service center assistance.

- *Strengthen Leadership:* Experiments in the field might lead to such projects as closed circuit television for leadership training, revitalization of a small town's economy by planned expansion, and management clinics to work out the "clustering" of smaller towns to get the most from facilities and professional talent in a region.

- *Upgrade Capability:* Technical resource panels made up of experts from other cities could meet the needs of officials from smaller cities and test ways to link smaller cities to informational and communications networks. Operational kits with "how-to-do-it" tips for specific government functions also could be packaged.

During the coming months the two organizations will be meeting with officials from smaller cities to document those needs which should receive the greatest priorities. As funding becomes available, the Smaller Cities Service Center will swing into full operation. ■

GRAPE WORKERS WIN!

After a five-year struggle, the United Farm Workers Organizing Committee has won a series of victories to benefit field workers. By mid-July new developments were occurring daily. The situation from the growers' point of view was best expressed in a headline in *California Farmer:* "All Hell Breaks Loose in the Melon Patch."

In an effort to contain the situation, California's Governor Reagan offered the use of the State Conciliation Service to arrange union elections among farm workers. Although this was a major shift from their previous position, grape growers quickly endorsed his proposal and called for a moratorium on strike and boycott activities.

UFWOC rejected the proposal, saying: "The time for elections is past." Referring to the growers' past stalling tactics, the union said it was ready to negotiate, but the strike and boycott would continue against growers without contracts.

On July 10 the Western Employers Council, representing growers with over 50 percent of California's table grape acreage, announced that a majority of the growers were ready to negotiate with UFWOC, even without prior elections. This was, in effect, an admission of defeat. The nonviolent strike and boycott had won out in the end.

New Executive Director, Move To Washington Announced

Trade union and civil rights leader James M. Pierce of Charlotte, N. C., became executive director of National Sharecroppers Fund on July 1. He succeeds Fay Bennett, executive director since 1952, who has resigned from the administrative post in order to devote full time to the Fund's developmental and educational programs.

Mr. Pierce's appointment was announced by NSF chairman Frank McCallister, who also said that the board had voted to move NSF national headquarters to Washington, D.C. this fall.

A native of Oklahoma, Mr. Pierce has worked as a union organizer and international representative in every state in the South since 1949. He was one of the first to bring Southern whites and blacks into the same unions.

As Southeastern coordinator for the AFL-CIO's Industrial Union Department, he directed major campaigns to organize textile workers and migrant farm laborers. More recently, he was Southern director for the American Federation of State, County and Municipal Employees.

Long active in civil rights and antipoverty work, Mr. Pierce helped form liberal-labor-black coalitions in several Southern states and campaigned vigorously for the first black candidates to seek top public offices in North Carolina.

"Jim Pierce's background and dedication make him ideally suited to the challenging job ahead," Mr. McCallister stated. "His passion for justice, his empathy for the poor and oppressed, his energy and initiative, and his realistic grasp of what it takes to deal constructively with community problems have won him friends and supporters among all elements of the population."

National Board Action

The current critical need to press for a massive federal commitment to end rural poverty was a key factor in the board's decision, made at its May meeting in Atlanta, to move NSF headquarters to Washington. The move will facilitate liaison with government agencies and close cooperation with labor and other national organizations.

All fund-raising, publicity, and educational activities will remain centered in the New York office under the supervision of Fay Bennett, who was named director of development.

(Continued on Page Four)

Child Care Center Holds "Graduation"

A rewarding event took place June 14 when the Houston County Day Care Center, in its own newly-renovated building on the outskirts of Perry, Georgia, held "graduation" exercises for ten 6-year old children.

Located on a clay road in the poorest section of town, the center was started three years ago by a group of mothers who were sole breadwinners for their families. They opened the center because they needed a place to leave their children while working.

The group rented a house with money raised locally. An NSF field representative, who had worked on the center's formation from the start, helped the group meet state licensing regulations.

Manned entirely by member-volunteers, the center cares for 36 children, 3 to 6 years old, five full days a week. Two nutritious meals and two snacks, now financed partially by a Department of Agriculture food program, are served daily.

The center faced a crisis last fall when the co-op members had to raise $5,000 at once to purchase the building. NSF'S Southern Rural Project staff raised $575 for a down payment. Then NSF, with the help of a generous supporter, was able to send a check for the full $5,000.

"The members and parents are very proud of the Day Care Center and the services it renders to the families of the community," Mrs. Ethel Williams, the center's director, said. "We are going to continue to work hard and make it grow and grow. We are thankful to the Sharecroppers Fund and to every one who has helped give us self-confidence and the will to succeed."

New Self-Help Houses Rise In Tennessee

Weathered board shacks, so long a standard feature of the rural South, are gradually giving way today to new homes and new hopes for the families living in them.

RAF/NSF's community aide in Tipton County, Tennessee coordinated one of the small but increasing number of

self-help housing projects that are helping to make this possible. Working to utilize the Farmers Home Administration's subsidized loan program, the aide began in late 1968 to find local poor families who could qualify for the government assistance and who were interested in building their own homes through group effort to save on costs.

By last summer FmHA had given preliminary approval to nine applications, and this initial group began construction in September. Each family contributed its labor as partial payment toward the cost of the house, a concept known as "sweat equity."

This summer the first nine families in the Tipton project are happy to be moving into their new homes.

Their project has provided lessons which make demonstration projects such as this one successful on a broad scale. Improper construction supervision by government inspectors endangered final loan approval, for instance, an oversight that won't be allowed to happen again.

But the most important lesson is for those who had assumed they could never leave their familiar unpainted shacks once and for all, to live in tight houses of their own with the decencies of running water and electricity. They have learned that poor people working together can effect real change in their own lives.

That is a lesson with broad implications for America's rural poor.

Spiders in the House & Workers in the Field

by Ernesto Galarza
Notre Dame Press

This excellent history of the bitter farm struggle in California several decades ago was written by one of its early pioneers. Ernesto Galarza, scholar turned organizer and officer in the National Farm Workers Union, which pre-dates the United Farm Workers Organizing Committee by over 20 years, was closely involved in the events he vividly describes in this timely and readable book. The strike he describes was subjected to vicious strike-breaking efforts by local law officers and the U.S. Department of Agriculture. It was broken in 1950 with a false document issued by three Congressmen, including Representative Richard Nixon.

Student Projects Aid Louisiana Poor

Farm laborers in nineteen sugar cane parishes of Louisiana are coming together to end a social, political, and economic system that has not changed substantially since pre-civil war days. Six students last year conducted a survey to document their conditions.

This year students of Oberlin College presented their research results in stunning testimonies at the U.S.D.A. sugar cane wage and price hearing in Houma, Louisiana. Student efforts the year before had helped bring about a ten cent increase in farm wages. But this was not enough.

Working in small groups, 40 students this summer have divided up and are assisting day care centers, credit unions, voter registration, co-operative purchasing clubs on plantations, youth recreation projects, housing, and the development of local newspapers.

A $5,000 grant from National Sharecroppers Fund acted as "seed money" for the $25,000 summer project. NSF's grant was supplemented by $20,000 from OEO's Off Campus College Work-Study Program.

RURAL ADVANCE is published by the Rural Advancement Fund of the National Sharecroppers Fund, Inc., Editorial Office, 112 East 19th Street, New York, New York 10003. Frank P. Graham, President Emeritus; Frank McCallister, President; A. Philip Randolph, Vice-President; Benjamin E. Mays, Secretary-Treasurer. Copies are available on request.

Farm Labor Notes

UFWOC'S BIGGEST BREAKTHROUGH leading to negotiations with Western Employers Council growers came on June 26 when Tenneco Corporation, a conglomerate with about 5,000 acres in table grapes in California and Arizona, and S. A. Camp, a San Joaquin Valley grower with 7,500 acres in table grapes, signed union contracts. With this, grower resistance to unionization was broken, and by mid-July contracts had been signed with growers controlling 25 percent of the table grape acreage.

The contracts, however, have not been confined to grape growers. Abatti Brothers, Coachella Valley's largest cantaloupe grower, signed a contract when faced with a $30,000 a day strike. Hollis Roberts, one of the largest fruit and nut growers in California, with 48,000 acres in production, quickly signed up after union workers struck his peach crop.

Contract provisions with grape growers have, for the most part, included wage rates of $1.75 per hour plus 25 cents a box; 10 cents per hour per worker for a health plan; 2 cents per day per worker for a special economic development fund; a union hiring hall, eliminating the need for labor contractors; a successor clause, guaranteeing fulfillment of the contract even if the land is sold; a ban on the use of DDT, aldrin, and other "economic poisons which under any circumstances cannot be used without extreme danger to the farm workers . . . ."

THE FIFTH CIRCUIT COURT OF APPEALS in New Orleans, ruling on a suit brought by the Amalgamated Meat Cutters and Butcher Workmen of N.A., AFL-CIO, for Louisiana sugar cane workers, ordered a three-judge hearing on a complaint made by 325 tractor drivers that they were being discriminated against by their exclusion from the National Labor Relations Act. H. L. Mitchell, agricultural representative of the union, said: ". . . we believe that ultimately the U.S. Supreme Court will strike down the thirty-four year legal discrimination against the nation's farm workers and guarantee them the right to organize and bargain collectively."

MIGRANT FARM WORKERS will probably find fewer jobs awaiting them this year as they move northward into Michigan and Wisconsin. Farm mechanization could eliminate an estimated 6,000 to 10,000 jobs in Michigan alone. Nevertheless, 50,000 migrants, mainly Mexican-Americans from Texas, are expected to enter the state looking for work. This is the same number as last year. In Wisconsin an estimated 2,000 farm jobs will be eliminated by acreage cutbacks, mechanization, and a slowdown in the economy.

Also, in Michigan, housing for migrants is expected to be scarcer, primarily because of a refusal of growers to comply with tougher federal and state regulations.

Virginia Co-op Expands Production

The RAF/NSF-assisted farmers co-op in Halifax County, Virginia has expanded operations in its second season of helping former small tobacco farmers diversify into more profitable vegetable crops.

This year members have added squash, peppers, and cantaloupes to the produce they will grow and market commercially with the help of the co-op. Formerly dependent on the losing one-crop economy of small tobacco allotments, the farmers are pleased with the changeover their cooperative has made possible.

"The co-op has meant a lot to me as a low-income farmer," says member Joseph Forster of Nathalie. "I used to grow three acres of tobacco for my main income, but in 1969 I leased my tobacco allotment because I couldn't make ends meet. I grew sweet potatoes and cucumbers for the co-op instead. From the sale of my half acre of cucumbers I made more to go in my pockets than I've been able to make from any acre of tobacco since I've been farming." He adds, "Thanks to the co-op we're able to do something for ourselves. Without this I don't know what we would have done."

Another member, Leroyal Davis, leased 4½ acres of his land to the co-op so it could grow a demonstration plot of vegetables. "I was proud to be able to do this because I had gained confidence in the co-op," he said. "I felt it would be a benefit to us low-income farmers."

An essential part of the farmers' ability to plant the new crops was a vocational agriculture course which the co-op sponsored this spring. About 65 members attended the training, which was taught by instructors from the state agricultural extension service.

Other services offered for the first time this year included a used clothing center run by members' wives; a credit union to provide cheap operating loans; and an open-air market where members can sell their excess garden produce directly on the local market.

Georgia Co-op Spurs Area Development

New cooperative ventures are giving the poor of Burke County, Georgia the hope of a modestly prosperous life.

The first concrete boost in their faltering agricultural economy came with the establishment in 1968 of the East Georgia Farmers Cooperative. Set up by the local poor folk with help from RAF/NSF's Southern Rural Project, an OEO-funded program for rural development in Georgia, the co-op last year opened a service station and started a sewing club. Because of its low initial capital the station barely broke even in 1969; but this year members are able to save on gas and repairs, and the station is returning a modest profit to the co-op. Donated sewing machines have helped the small sewing club to bring extra income to members' wives.

This year the co-op has raised the farmers' prospects by signing a renegotiable contract with a pickle company anxious to buy all the cucumbers members can raise. The co-op is seeking secured markets for other crops, and is in process of setting up a feeder-pig program with timber for the pens donated by members.

(Continued on Page Four)

Georgia Co-op

(Continued from Page Three)

EGFC president K. C. Childers hopes to be able some day to buy a sweet potato drying machine that will allow the co-op to store that crop for high market prices. But for now, that project has to wait.

"What we really need is a long-term loan, to use for a revolving fund," says Mr. Childers. "The people in the co-op don't have much money to begin with, and nothing extra."

But change *is* coming to Burke County, with the co-op in large measure a catalyst in the process of making people believe in themselves. Community leaders have formed a housing corporation which soon will begin construction on the first 22 houses in what should one day be an entire new community built by and for poor people. And a plan is being developed to bring full medical facilities to the county's poorest and most isolated families for the first time.

Burke County's years of silent poverty are ending with the change in poor folks' thinking. "As long as we have problems," says president Childers, "we're going to try to do something. As long as we keep our heads, we can move."

James Pierce Appointed

(Continued from Page One)

"It is gratifying to know that Fay Bennett, our executive director for nearly two decades, will continue to give us the benefit of her many talents," Mr. McCallister commented. "Under her able leadership, NSF has grown

from a tiny nucleus with two employees to a nationally-known organization with a staff of 40, influential educational and legislative programs, and numerous field projects."

Mr. McCallister also noted that Miss Bennett had served as executive secretary of the National Advisory Committee on Farm Labor from 1958 to 1968. She initiated NSF's Southern Rural Training Project and Southern Rural Project, financed respectively by the Department of Labor and the OEO. She has also served on many national committees.

"Fay and Jim have already begun a series of joint meetings to ensure a smooth transition and productive division of responsibilities," Mr. McCallister added. "We can look forward to a period of even greater expansion in program and influence."

Mr. Pierce began his new assignment by visiting all RAF/NSF field projects. Citing the need for greatly increased federal expenditures on programs for rural areas, he said that NSF would continue to do "an awful lot of lobbying to change the laws, as well as a lot of program development." He commented enthusiastically on "the close alliance this group has with the trade union movement."

He also said that the caliber of NSF's board was an important factor influencing his decision to join the NSF staff. "The board members are more than interested," he declared. "They are committed."

Jim Pierce's empathy with minority groups stems in part from the fact that he is part Cherokee Indian and grew up on a reservation. He is married to the daughter of a former sharecropper.

Coming In RURAL ADVANCE . . .

Articles in the next issue of *Rural Advance* will discuss the impact of food programs on hunger, the $20,000 limitation on farm subsidies, the danger of agricultural chemicals to farm workers, along with reports on local efforts to alleviate rural poverty. For further information or a literature list on issues affecting the rural poor contact National Sharecroppers Fund, 112 East 19th Street, New York, N.Y. 10003.

Rural Development Special

A Supplement | Wednesday, April 21, 1971 | The Daily Tifton Gazette

Rural Development-Reverse Flow

Rural development as a concept had its origin in days long passed.

The Land Grant College with its programs of instruction, research and extension came into being to meet the training and education needs of a country which at that time in history was still strongly agrarian. Extensive research programs have resulted in the development of very rapid advances in technology in industry and on the farm.

Education programs have taught the farmer to be more efficient, to utilize newly developed practices and to use the latest in equipment.

In fact, the American farmer is now so efficient that in 1969 he produced what at least seven farmers produced at the turn of the century. He is so efficient that it takes only 5 percent of our total population to produce our requirements in food and fiber.

While the advances in technology have made the farmer more efficient and have reduced the number of people needed in the production of agricultural crops these same advances have had some decidedly counterbalancing or opposite effects.

The need for farm labor was greatly reduced resulting in a tremendous movement from the rural to urban areas. Since World War II we have had within the boundaries of the U. S. one of the largest migrations of people in the history of mankind. Over 25 million have moved from the rural and small town areas to the burgeoning urban centers. Many of these people were ill-prepared for the jobs and the environment they found. They are contributing to the already complicated and sizeable problems of the urban centers and inner city ghettos.

Most rural young people who could and did secure past-high school education and training prepared themselves for non-agriculturally related jobs. Not only was manpower drained away but so was the developing leadership.

As a consequence, many rural communities find themselves void of both manpower and leadership. In many instances only the very young and the older residents were left behind. These are often referred to as the "forgotten" people.

The "technical revolution" has produced some very serious complications. Our urban centers are vastly overcrowded, population pressures in the urban areas are rapidly becoming explosive and vast quantities of federal and state funds are being spent in an effort to alleviate these urban pressures. President Nixon's Task Force on Rural Development reports "the solution may be as near as the countryside."

Rural Development has taken on new meaning, direction and purpose. The goal of the Rural Development Center, simply stated, is to develop programs that will help make our rural and small town communities better places in which to work, live and enjoy life. The main objective is to reverse the "flow that became a flood" in the last two decades. It is essential that we find ways of bringing good and desirable work opportunities to rural America.

The nation must process more of our produce near the point of harvest so the dollar value added stays in the local community. Every effort must be made to improve existing services and develop new services for the people of our communities. This means schools, health facilities, recreational facilities, housing, cultural programs, sewerage, water, zoning and government — to name but a few.

It also means that we must be prepared to train and retrain people for the new jobs that are to be available to them in our rural communities.

Rural development has been given new meaning and purpose. Also it has been given new life. There is rapidly developing among both state and federal leaders the recognition that the time for action has arrived. President Nixon has delivered messages to Congress in each of the last two years outlining the problems and citing the need for action.

Sen. Herman Talmadge, as newly appointed chairman of the senate agricultural committee has seen fit to appoint a special subcommittee on Rural Development. He exercises every opportunity available to address himself to the problems of rural areas.

Rep. Dawson Mathis, Second District congressman, is on the House Agricultural Subcommittee for Rural Development. He, like Sen. Talmadge, is very vocal with respect to the challenges that lie before those of us who are concerned for the future of our state.

Gov. Jimmy Carter, himself a product of rural Georgia, has asked that goals be set for the state — goals that will help us chart new courses in the quest for a better life for all our people. He speaks of rural-urban balance and of the need to breathe new vitality and vigor into our rural communities. The task is clear. Our programs must address themselves to the needs of people, not things. Rural Development as a "people program" is an idea whose time has arrived.

Sen. Talmadge Working For Rural Development

I am very glad to have this opportunity to join Abraham Baldwin College in the observance of Rural Development Week in Georgia. I especially want to congratulate all of you on the dedication of the Rural Development Center in Tifton.

Rural Development is an idea whose time has come. There has been a great deal of time and money put forth in efforts to solve what is called the urban crisis. Finally, however, we are coming to the realization that we will not make much headway on critical social and economic problems of cities, until we take more positive action to revitalize rural and small-town areas.

Since 1940, about 25 million displaced farm and rural residents have migrated to metropolitan areas in search of new economic opportunities.

Many people who have migrated to cities have done little more than trade rural poverty for urban poverty. Because of inadequate education and training, they quickly found themselves unable to cope with the employment demands of business and industry. The nation's welfare rolls list many such people.

The tremendous problems that plague our cities, poverty, crime, and congestion, make it clear that we cannot go on repeating mistakes of the past that have caused the mass migration of millions of people from rural to urban areas.

One of my first moves as Chairman of the Agriculture Committee was to create a new subcommittee on rural development.

I intend to step up efforts on the Agriculture Committee toward rural development. We already are about 25 years behind, and it is in the national interest that we move

Sen. Herman Talmadge

ahead in the field as rapidly as possible.

The heavy migration of people from the country to the city, adding to the already serious crisis of welfare, crime, pollution, housing, and transportation, must be stopped and hopefully reversed.

This calls for greater decentralization of industry, the creation of more jobs in rural areas, better schools and manpower training, improved water and sewage systems, hospitals and health facilities, and many other advances that will make rural living more attractive.

I am looking forward to working in this field on the Agricultural Committee, and I commend Abraham Baldwin College for the good work it is doing in this area.

Gambrell Praises Concept

I have been asked to give my views concerning rural development as a part in the celebration of Rural Development Week in Georgia — April 18 to 24.

Promotion of Rural Development is of special significance to you and me because Georgia's rural land area and population is among the highest of any State in the United States. Thus we have one of the greatest opportunities to gain from development of rural areas.

During the past 100 years, population shifts have changed this country from one that was once 75 per cent rural to one which is now 73 per cent urban. There has been a continuing migration of rural people into the cities of our country.

Today, there is a growing recognition of the desirability of redeveloping our rural areas as a means of making our most attractive environmental resources available to more people. Hopefully, one of the important results will be relief from the problems of overpopulation in our cities.

Our State and local governments and our Federal government, through enlightened leadership, have accepted rural development as a logitimate aim, and a number of programs are being directed toward that end.

The goals of rural development should be to create incentives for people to stay in, or return to rural communities.

Rep. Mathis Supports Rural Development Aim

One of the most pressing problems facing America today is the need for orderly, progressive development of our rural areas and the preservation of family farms.

By the year 2000, we expect to have another 100 million people in the United States. Will these people add to the existing problems of our cities — or will they contribute to the revitalization of Rural America?

Let's face facts. The problems of our cities today have resulted from ignoring the problems of Rural America in the past.

Families and individuals by the hundreds of thousands have been forced off the land for a multitude of reasons — often fleeing to the cities in pursuit of a job — only to find themselves hopelessly trapped in the unreal world of poverty. . . filth . . . smog . . . noise . . . crime. . . and deterioration of human character.

The nation and its people may no longer be able to withstand the strain of the stifling concentration of population and industry within just two percent of available land area.

The small cities and towns of the countryside are the gateways to the remaining 98 per cent of the land area and natural resources in the United States.

There can be no doubt that this is where America's future lies.

However, the continuing loss of population in Rural America is making it increasingly difficult to support viable

Rep. Dawson Mathis

community services and job opportunities for remaining rural residents.

We must reverse this alarming trend if we are to save our cities from self-strangulation and our countryside from abandonment.

The need for rural development cannot be over-emphasized.

There is much to be done in Rural America if we are to attract new industry and hold our farms.

As a member of the House Committee on Agriculture and the subcommittee on Family Farms and Rural Development, I hope to be able to contribute in some small way toward finding a solution to these pressing problems.

The Rural Development Center in Tifton exists for the sole purpose of finding solutions to our rural problems. Its work can not be underestimated at this time when we must be concerned with population pressures and the location of people.

The Gazette expresses its appreciation to Tyron Spearman, public relations director for Abraham Baldwin College, and to the professional staff of the Rural Development Center, without whose help this special edition would not have been possible.

Manpower Training Thrust of RDC

Georgia's newly established Rural Development Center here has an overall goal to help make rural Georgia a better place in which to live, work and play.

It is believed that realization of this goal will not only stop out-migration of rural citizens to already overcrowded urban areas, it will also relieve the mounting pressure on urban areas by enticing many disenchanted city dwellers to "return to the land."

To accomplish its overall goal, the Rural Development Center has set forth these four initial objectives, or thrust areas:

1. To increase agricultural and forest product efficiency through continued research in agricultural and forest production and through the broad application of research findings;

2. To advance the development of marketing and utilization of farm and forest commodities;

3. To aid in the development of communities and in the solution of problems on how and where people can best live and relate to one another; and,

4. To further manpower training and utilization in order to provide more skilled workers in various types of agribusiness, and to assist general farm workers to prepare for new forms of employment as farm technology takes over their former jobs.

Working under the general supervision of the Center's director, Dr. S. E. Younts, four coordinators (one for each thrust area) support the overall goal of the Center by striving to reach the objectives of their respective areas of endeavor. Examples of how the manpower training and utilization coordinator works to fulfill the responsibilities of his thrust area are outlined in the remainder of this article.

Upon determining the need for a new or modified education or training program in rural areas, the coordinator of manpower training meets the need in one of three ways, namely:

1. By working with existing training and-or educational institutions so that the human and physical resources of such institutions are brought to bear upon the problem.

This approach was used, for example, to help establish "Project Motivation" at Abraham Baldwin Agricultural College. It is a pilot-type educational program of young ladies who for various reasons dropped out of high school, but who later demonstrated aptitude and interest in completing high school or its equivalent.

The type assistance rendered by personnel of the Rural Development Center toward getting this program underway was mostly in the realm of arranging for funding of the program — through the Coastal Plains Community Action Agency and the Rockefeller Foundation.

The program has been operating since January 1971. Much has already been accomplished as evidenced by the progress and enthusiasm of the young ladies themselves and by the open support and enthusiasm of their counselor and instructors. The RDC is, therefore, not only seeking funds to continue the program at ABAC beyond December 1971, but it is also negotiating for much broader financial support of this type program so that it can be conducted on a continuing basis at several locations within Georgia.

Dr. S. E. Younts
RDC Director

Larry Marchant
Program Planner

Millard Blakey
Coordinator

2. By setting up highly specialized educational or training activities of relatively short duration for people who need additional training or education.

This technique was used in obtaining Federal support of a special pilot project for concentration on the training and education needs of citizens in Atkinson, Bacon, and Pierce Counties, and that portion of Ware County north of the Satilla River. This project, which is called Concerted Services in Training and Education (CSTE), was initiated on January 18, 1971 by its coordinator, Allen Bower of Alma.

It is believed that the CSTE effort will help to consolidate the combined resources of appropriate Federal, State, and local agencies to meet the occupational training and related educational needs of the people in the CSTE area.

In addition, it is hoped that such concerted efforts will demonstrate that education and occupational training, when accomplished in conjunction with economic development activities, can significantly increase employment opportunities in a given geopraphical area.

3. By arranging for a combination of the foregoing; i.e., by working with personnel of existing institutions to conduct highly specialized, short-duration educational or training programs at the Rural Development Center or elsewhere.

The coordinator of manpower training and utilization is also involved in the development of a variety of other projects which will be expressly designed to meet needs of people in rural areas.

These include: educational and training programs associated with activities of the evolving Georgia Blueberry Association; a cooperative effort to establish a managerial program for black people who are engaged in small business; training programs for dairy farm workers, floral designers, general farm workers, agricultural power and equipment mechanics; and educational programs for paraprofessionals who will serve as assistants to rural physicians.

congratulations

Researchers Play a Vital Role

By DR. FRANK KING

Since its early inception, the Coastal Plain Experiment Station has conducted research with beef cattle and swine.

But with increased emphasis on rural development and the agricultural economy, these areas of research are being expanded and a third area of food production — catfish — is being added.

The expanded cattle feeding program facilities are already under construction with four silos and one high-moisture grain bin having been completed. Sometime during the next six months a steer feeding facility designed to handle approximately 200 steers at the time will be started.

In addition to the feeding barn, feed preparation facilities including grinders, mixers and storage facilities will be added. These facilities will enable the station to expand its research program and, in cooperation with RDC, provide more intensive and effective teaching and demonstration in the handling of feed, management of feeding cattle and cattle waste. When these facilities are completed, they will represent approximately $450,000 investment.

The station's swine research program has dealt with breeding, nutrition and swine management. This basic program will be strengthened and enlarged to include more effective work in baby pig production and management and in work in swine nutrition. Barn and swine handling facilities will be greatly improved. Nutrition research will be considerably expanded and the basic feed production will be handled in the larger beef cattle feed processing and handling facility.

The swine expansion program will consist of new feeding and farrowing facilities and feed handling equipment. Total capital outlay will be approximately $175,000.

Catfish production represents a new area of research for the Coastal Plain Experiment Station. Capital items are now under construction which will consist of a seven-acre pond, virtually completed, a deep well for supplying water for the work, one 8-100' section raceway now about one-half completed, one 4-100' raceway yet to be started, and one approximately one-acre moat to be constructed. Research in these facilities immediately will be limited to production of catfish under raceway and moat systems.

Dr. Tom Hill, a recent graduate of Auburn's Entomology and Fisheries Departments, has the direct responsibility of operation of these units. Dr. Hill is currently conducting catfish production in cages in existing ponds and will continue a limited amount of this work after the raceways are developed. Sometime during this spring, the first raceway production units will be put into operation.

The catfish program, new to the station, will be used in cooperative programs with RDC to provide for those people who are interested, research information as it is developed. Catfish production is potentially an important enterprise for Georgia. The Coastal Plain Experiment Station scientists and Rural Development Center staff recognizes that much work is yet to be done on production problems and in the area of catfish genetics.

Part of the program for RDC dedication includes tours for those who are interested in seeing the developing cattle and catfish facilities as well as other work in progress on the station.

Cooperation Is Theory Behind RDC

By T. D. AARON

If it is true that more can be accomplished by working together than by working alone, then the RDC should be a success.

It was conceived and built on the theory of cooperation. The problems on which it will work are problems whose solutions require cooperation — cooperation between agencies which supply expertise and resources as well as cooperation among people who will apply the solutions.

The physical location of the RDC, adjoining Abraham Baldwin College and the Coastal Plain Experiment Station, is indicative of the cooperative nature of the venture. Some 16 staff members of the Cooperative Extension Service will be housed in the facility. This also points up the close cooperation which is expected between the RDC and Extension.

Since its inception, the Coastal Plain Experiment Station has been oriented toward research on farm enterprises which would benefit the region. The Extension Service has delivered recommendations based on this research to the residents for implementation.

The staff of the Division of Agriculture, Forestry and Home Economics of Abraham Baldwin Agricultural College has worked closely with both groups in order that they might offer the latest information to their classes. This arrangement has benefitted all three groups.

The Extension specialists can quickly bring new problems to the researcher so that new research projects to deal with them can be more readily initiated. By the same token, the researcher can furnish the very latest research results to the Extension specialist. The classroom teacher at ABAC can incorporate new techniques and information into his course offerings thus turning out a better trained and more completely equipped graduate.

This arrangement has produced good results over the years and is expected to continue.

The First Of Its Kind In The United States...

and We Were The General Contractors

114 Baldwin Drive Albany, Ga. 436-8403

Word Center, Cafeteria, Radio Room

Latest Concepts Used In Main RDC Building

The strikingly designed Rural Development Center building, with 25,000 square feet of floor space, is located West of I-75 near the intersection of U.S. 41 and I-75. It is faced with red brick and white cast concrete and was designed by Ellis & Ingram of Valdosta.

Inside one finds a large lobby area which leads to an auditorium seating 340 in a UN assembly fashion. To the right of the auditorium is to be found a conference room seating 75. Across the lobby are two smaller meeting rooms seating 40 each. A divider can be pushed aside to form one large room seating 80 or more. Beyond the auditorium is a cafeteria which seats 98 at a time.

Down the halls leading to the left of the main lobby are offices for the current 7-men RDC staff, for 16 cooperative extension specialists, for the ABAC short course staff and a representative from the Vocational Education Department of the State Department of Education.

A radio suite has been included where, when it is equipped, tapes will be made for distribution to local stations throughout Georgia. To improve the accoustical properties of the recordings room in the suite the walls have been carpeted.

In the Word Processing Center is found the latest equipment for efficient, speedy production, processing, and mailing of all written communications. Communications dictated from the individual offices are registered on magnetic belts in the Word Processing Center. The messages on these belts are transcribed by skilled operators onto magnetic tapes which can then be used to reproduce an error free communication. The same tape can be used to reproduce as many original copies as may be desired.

An attractive, invitingly appointed reading room is provided for guests of the center who may wish to browse between conference sessions or appointments.

The auditorium is equipped with a projection room. Each conference room is equipped with an electrically operated screen to be used in the projection of slides and movies.

A special suite was designed for the director. It includes the director's office, an office for the director's secretary, an office for the Dean of Agriculture, University of Georgia, an office for the program specialist, and an executive conference room. The Assistant Director for Extension has a separate suite.

The building was constructed by Anderson & Davis of Albany, Georgia. Construction started in January of 1970. The contract price was $559,574.78.

This Is the Main (Administration) RDC Building

Administration Building Has Its Own Cafeteria

Library, Auditorium, Etc.

More Facilities To Be Constructed

Breaking of ground on December 11, 1969, heralded the beginning of what is expected to develop into a Rural Development Complex composed of several buildings.

Plans for the recently completed administration building were developed and drawn by Ellis, Ingram and Associates of Valdosta.

Plans call for the complex to be composed of a series of buildings so located as to be connected by an enclosed air-conditioned mall. In the complex will be (1) a library, (2) a shops-laboratory-classroom building, (3) a large auditorium, (4) a services building, and (5) a communications center.

The library will contain the Coastal Plain Experiment Station Library collection, the Coastal Plain Regional Library, the Tifton Film Library and the Rural Development Center Library.

Programs in manpower training and education will be offered in the shops—laboratory-classroom building. As graduate program offerings are developed they will be offered in this facility.

The auditorium, expected to seat up to 1,500, will serve to house large conference groups and will be available for a wide variety cultural and educational programs that will be attracted to the community.

A services building will provide for food and banquet service and continuing education program administration.

TV and radio programs to be taped and distributed throughout the state and region will be produced in the communication center. It is expected that courses in the communication arts will be offered utilizing these facilities for presentation and training.

When these structures have been completed they will be connected by an air-conditioned mall that will give the impression of openness and brightness. Spaces for exhibits, demonstrations, and lounging are to be designed for this spacious area.

The program from which the library will be designed is written so it can be developed as soon as funding becomes available. It is anticipated that the RDC program will move forward so the entire complex can be completed by 1976.

CITY OF TIFTON

NATURAL GAS DEPARTMENT

RDC a Great Asset For Tiftarea, State

By S. E. YOUNTS

Any way you wish to add it up the Rural Development Center is a big, big asset to Tiftarea.

This facility and its staff are added dimensions to educational and research efforts of Abraham Baldwin Agricultural College, the Coastal Plain Experiment Station and the Cooperative Extension Service.

One of the principal functions the RDC will be to serve as a continuing education and conference center for South Georgia. Conferences, short courses and expositions dealing with agricultural and forestry production, marketing, community development will be held in the new facility.

These kinds of activities will bring to Tifton hundreds of additional visitors each year from the state, Southeast and nation. Many of the visitors will stay in Tifton for extended lengths of time bringing added business to local motels, restaurants and shops.

The RDC also adds jobs. Some 20 professional and non-professional workers already employed. Obviously, more jobs will be created with future expansion.

More dollars to Tiftarea through increased revenues and jobs are important, but of greater significance is the physical facility itself, and what it will mean to people, the citizens of Tifton, rural Georgians, the Southeast and the nation. This is the forst Rural Development Center in the United States.

Rural development is an idea whose time has arrived and the RDC staff and others in the University System will address themselves to helping make rural areas more viable.

Innovative pragrams are already being planned to promote agricultural and forestry production, marketing and processing of Georgia produce, community development and manpower training. The prime target area is the Coastal Plains region of the state with secondary efforts above the fall line.

Tifton will be the focal point, the center of activity for rural development. Georgia has taken the lead in the nation. Thousands of people will visit RDC to discuss what can be done, to plan, to execute, to observe and to work.

RDC LEADERS — These four are the leaders of the Rural Development Center. They are (from left) Dr. Frank King, assistant director; Dr. S. E. Younts, director; Dr. Tom Aaron assistant director, and Dr. Frank McCain, assistant director.

Funding for RDC State Effort Only

Funding of any public agency and its program is a matter of considerable interest to the citizens of a state.

People throughout the state can take pride in the fact that the Rural Development Center Administration building is theirs. No federal funds have been sought for its construction. Currently, most of the operational funds and staff salaries come thorugh the University of Georgia College of Agriculture budget.

As specific programs are developed funding is being sought from both federal and private sources. In many instances the Rural Development Center staff will serve only to assist other agencies to secure direct funding.

Examples are the In-Service Training Program for the teachers of the Tift County Public schools which has been conducted on the ABAC campus under the direction of Dr. Thomas Milam, chairman of the Social Science Division of ABAC Funding for this program came directly to the Tift County Public School system even though they were sought for the system by RDC staff members.

Another example is the funding of the Georgia Blueberry Association located in Alma. RDC staff personnel, assisted by Cooperative Extension and Coastal Plain Experiment Station personnel, helped to organize the Association and helped to seek initial funding for the organization's program from the Coastal Plain Regional Commission and the Model Cities Program of the Department of Housing and Urban Development.

Project Motivation, and RDC developed program currently being conducted by the faculty of ABAC, has received funding from the Coastal Plain Community Action Agency and the Rockefeller Foundation.

A major objective of the RDC is to bring back to Georgia more of the dollars its citizens pay out in federal taxes.

SECRETARIES — These ladies provide the secretarial work for the Rural Development Center staff. They are (from left) Mrs. Jane Day, Mrs. Fredda Phillips, Mrs. Evelyn Wilcox, Mrs. Martha Harrell, Mrs. Mary Alice Yarbrough, Mrs. Frances Mathis, Mrs. Jane Coley, Mrs. Bonnie Kennedy, Miss Teresa Hurst, Mrs. Annette Sumner, Miss Charlene Fallin and Miss Joan O'Gorman.

RDC Part Of Georgia University

The Rural Development Center is an agency of the University System of Georgia, and the program is being developed cooperatively by the University of Georgia, Abraham Baldwin Agricultural College and other units of the System.

The Center was created by the Board of Regents in order to bring to bear appropriate resources of the state's higher education units to deal with problems in rural Georgia on an area-wide basis.

Tifton is a natural and logical site for the new facility. Tremendous advantage is gained by being located in close proximity to Abraham Baldwin Agricultural College and the Coastal Plain Experiment Station. A strong arm of the Cooperative Extension Service is also in Tifton.

These groups are working in concert to give added dimensions to programs in rural development. Tifton is the heart and crossroads of rural Georgia. It is a good base for outreach activities and is easily accessible to citizens in at least two-thirds of the state.

WORD CENTER—Mrs. Mary Alice Yarbrough, in charge of the RDC Word Center, operates one of the facility's sophisticated pieces of communication equipment.

Four areas of activity or thrusts serve as the bases for program development. The four are: 1. Agricultural and forestry production efficiency; 2. Marketing and utilization of agricultural and forestry products; 3. Community development; and 4. Manpower training and utilization. The principal objective of the program is to help make rural areas more attractive for more people to live and thus help to effect a better balance of population in rural and urban areas.

The program is administered by the University of Georgia's College of Ariculture and Abraham Baldwin Agricultural College. Dr. S. E. Younts serves as director of the Center and as associate dean of the University's College of Agriculture.

Serving with Dr. Younts are three assistant directors: Dr. T. D. Aaron, Jr., who is also assistant director of the Cooperative Extension Service; Dr. Frank P. King, who is also director of the Coastal Plain Experiment Station; and Dr. F. S. McCain, who is also chairman of the Division of Agriculture, Home Economics and Forestry at ABAC.

Other principals of the RDC staff are coordinators of the four thrust areas, a program specialist, a conference plan-specialist, a conferences planner and a fiscal officer. Two coordinators, Dr. J. E. Burnside, Jr. and Dr. Millard L. Blakey, joined the staff during the past year. It is anticipated that the other two coordinators will be added by July 1, 1971. The program specialist is Darl E. Snyder. Larry L. Marchant is conference planner and Billy Selph is the fiscal officer.

A 17-acre tract of Coastal Plain Experiment Station research land was selected for the RDC location. The building being dedicated on April 22 is the Administration Building. It is the first of a complex of buildings which when completed will also include a library, a classroom-conference room building, a communications center, a 1,500-seat auditorium and a service building.

The Administration Building was constructed at a cost of $552,000. Contained in 25,000 square feet of floor space are offices for 40 professionals, a word processing and reproduction center, a radio recording suite, a 344-seat auditorium, three conference rooms, a kitchen and snack bar, a reading room, a lobby and reception area.

Famed Short Course Program To Become Part of the RDC

By T. M. CORDELL

The Short Course Program was started at Abraham Baldwin Agricultural College in 1940 on an experimental basis.

This was something new for a junior college, and it was not known how well the public would accept a program of this kind. The Sears-Roebuck Foundation sponsored this program in the beginning.

At first, short courses were held for farmers and they ran for a week. During this time a complete farm program was studied. Farmers came and lived in dormitories on campus and had meals in the college dining hall. It became apparent rather early that most farmers could not be away from home for a week.

Therefore, they were cut down in duration to one or two days. The programs were changed from the farm set-up to single enterprises such as cotton, swine, etc.

As was stated earlier this was an experiment and during the first two years, 1940-42, only 28 short courses were held with attendance of 1,339. At this time, our country was involved in World War II and there was a shortage of labor, tires, gasoline and the director of the program was in the Navy. Therefore, the program was discontinued until the end of the war.

In 1946 the short course program was started again. The Board of Regents had agreed to finance short courses. The program was gradually expanded in variety and the number held. During the past several years Abraham Baldwin Agricultural College has averaged holding between 40 to fifty short courses annually, and it is not uncommon to hold three in one week. About 50 per cent of the short courses now held are on some phase of agriculture. The other 50 per cent covers a wide variety of subjects for ladies, business and law enforcement.

From the beginning until the end of the last fiscal year (June 30, 1970) a total of 889 short courses had been held with a total attendance of 115,-638. These pepole came from 156 Georgia counties, 36 states and 41 other countries. The largest attendance any one year was 8,136 and the most Georgia counties represented any one year was 123.

The program has been successful because of the fine cooperation from all educational and business organizations, particularly The Georgia Coastal Plain Experiment Station and The Cooperative Extension Service

Also, there is an Advisory Council of approximately 100 leading citizens that meets one day in May each year to plan and evaluate the short course program. By using this council it is felt that they can be kept on a sound, practical basis, giving the people what they need and want.

Now that the Rural Development Center has been completed, short courses will be held there beginning next year. This center will no doubt be a big boost to continuing education for our citizens.

Darl E. Snyder
Program Specialist

Dr. Joe Burnside
Ag & Forestry Coordinator

Importance of Water To Be Thrust of Expo

The average 50 inches of rainfall in Georgia would appear to be adequate for the agronomic crops adapted to the State.

But, the interest in irrigation during the last three years would suggest there is more to this than the above figure would indicate. The writer of Ecclesiastes 3:1 through 9 sums it up very well. It is a matter of timing.

This is just as important or more so, than simply the gross amount. If our annual rainfall was properly distributed it would be adequate but this is not the case. For instance, the greatest need for water by the soybean plant is during the critical pod filling.

The current thinking is to consider rainfall as a supplement to irrigation. In this concept, irrigation is a crop production tool and is not considered as insurance as it has been in the past. In this light, the practice of irrigation is a completely new ball game.

In order for the producer to "think irrigation" he must consider new production practices and adapt, in many cases, a completely new set of criteria. In many instances the changes involve different land preparation techniques, new varieties and fertilization practices, different planting dates, new techniques for insect and weed control, and a new approach to harvesting methods.

He must also realign his thinking with respect to fertilization rates and plant population. He must realize that all of these things are important. The entire production picture must be considered in this new light of a highly coordinated and intensified system of water agriculture.

Such practices very dramatically increase the yield ceiling for agronomic and horticultural crops. It has been estimated that the average yield of agronomic crops in Georgia is approximately 10 to 20 percent of the maximum potential.

Perhaps the most important benefit from all of this is that the grower is pretty much guaranteed a satisfactory yield each year rather than a feast and famine type situation. This is most important because the production margins are much tighter now than they have ever been, and this is going to be par for the course. Margins over cost of production used to be 30 to 40 percent.

Today, and in the immediate past even in the more efficient operations, they are frequently 5 to 6 per cent. This also makes for a very tight production credit sysetm.

The producer must also consider the soil type with which he is confronted and the fact that it is the soil that is irrigated and not the plant. Sandy soils have a limited water holding capacity as compared to the heavier clay soils of our state. Consider that as the texture changes from sand to clay the water stored per foot of soil varies from 0.75 inches to as much as 2.5 inches per foot.

If the rate of water application exceeds the capacity of the soil the water is wasted and excessive leaching of nutrients occurs. The rate of application should be somewhat less than the water holding capacity of the soil. On the other hand, plants growing on sandy soil can experience drought stress in just 5 days.

According to C. W. Sever, geologist for Rainbow Manufacturing Co., the Coastal Plain area is richly bessed with copious quantities of underground irrigation water.

We Share Tifton's Pride In This Needed Facility — The FIRST Of It's Type In Our Nation!

THE BROADWELL CO.

P. O. BOX 366 ALBANY, GA.

Soybeans and Swine Featured

Soybeans

The first Soybean Expo is sponsored by the Cooperative Extension Service, the Coastal Plain Experiment Station, Abraham Baldwin College and the Rural Development Center.

The one-day meeting will be held at the Rural Development Center on October 26, 1971. In addition to a program of outstanding speakers, the Expo will feature machinery and equipment pertaining to soybean production, harvesting, storage and processing. A noon luncheon is being planned that is based primarily on soybean products.

According to James E. Jackson, Cooperative Extension Service agronomist, University of Georgia, "Soybeans is the only major agronomic crop that has markets looking for it". One reason for this is the fact that during 1970 Georgia producers grew 11.9 million bushels of beans, while the capacity of the processing industry is about 40 million bushels.

This deficit of 28 million bushels represents a potential production worth 81 million dollars. Small wonder that soybeans is referred to as the golden crop. Clearly, Georgia producers need to increase yield and acreage and consider soybeans as a primary crop worthy of their first attention.

C. P. Eley, agricultural economist with the Economic Research Service of the U. S. D. A. estimates that the use of soy proteins in foods has been increasing about five to seven percent annually. This is expected to continue at least another two or three years.

The 25 new members of the Georgia Moneymaker Soybean Club for 1970 averaged 40 bushels per acre on 1,166 acres at a production cost of $1.01 per bushel. This represents a net profit of over $75.00 per acre. This club is jointly sponsored by the Cooperative Extension Service and Gold Kist, Incorporated.

When one considers the many uses of soybeans and soybean by-products, we can appreciate the value of this crop. Food technologists say a new frontier is being forged by the development and use of soy protein for human food in our country. Soy based foods and specialty products are gaining wide acceptance by the American housewife. The specific uses of this versatile vegetable protein range from noodles to snack items to meat balls.

As a matter of fact, soybeans is the most promising source of high quality, low cost protein that is available in sufficient quantities to meet human needs on a worldwide basis. This can be readily understood when one considers that the retail cost of a pound of protein from beef is about $4.44, while that from soybeans is only 11 cents. Consider also that the relative yield per acre is 58 and 508 pounds respectively.

The newest use for isolated soy protein made from defatted soy flakes is in the area of dairy type products such as coffee cream, whipped toppings, frozen desserts and cheese-like spreads and dips. The soy protein also functions as moisture retainers, foinders, and emulsifiers in many food products.

Swine

Swine producers in Georgia and surrounding states will have an opportunity to observe the latest in swine buildings, equipment, and production practices December 1 and 2 of this year.

Plans are well underway for Livestock Expo 71. This event will be sponsored by the Cooperative Extension Service, the Coastal Plain Experiment Station, Abraham Baldwin College and the Rural Development Center.

The Expo will be somewhat like the Midwest Farm Show or the Swine Equipment and Trade Shows sponsored by the American Pork Congress. This first Livestock Expo will be concerned with all phases of swine production, processing and marketing. Expanding to other species and areas of interests will be a future consideration.

Invitations to participate in Livestock Expo 71 will be extended to companies or agencies that are engaged in a business or activity that support or are directly concerned with swine production, processing and marketing.

This includes the National Purebred Swine Associations, the Georgia Swine Growers Association, the Georgia Veterinary Medical Association, similar organizations in other states and any of the commodity commission groups.

Exhibits and equipment displays will be housed under large circus type tents. Outside exhibit and demonstration areas will be planned in the area immediately adjacent to the sheltered equipment and exhibit areas. Live animals will be used in some of the exhibits to demonstrate certain pieces of equipment.

Plans are also being made for type and carcass demonstrations. Adequate space for the Expo and parking for the attendees is readily available in the 17 acres surrounding the RDC building complex.

The swine industry in Georgia has become so important to the economy of the state and reached such a sophisticated stage of development that it can best be served by shows specifically designed for the agribusiness man engaged in his specialty, the production of pork. There is much room for increased pork production in Georgia. We are still importing $8,250,000 of pork each year.

The Southern Farm Show that has been held in Atlanta will be in Macon for the first time this year. This show differs from the proposed Livestock Expo in that it attempts to cover all segments of agriculture.

Editor to Join Staff at RDC

So that the public will become more knowledgable about the day-to-day operations and programs of the RDC, an editor will be added to the staff on July 1, 1971.

He is Barry Jones.

Jones will be a member of the Cooperative Extension Service editorial stafff. He completes requirements for the Master's degree in journalism at the University of Georgia early in June.

His wife, Sue, is presently serving as editor of "The Columns," a public relations publication of the University of Georgia.

We are delighted to welcome the

Conference Schedule Full One

By LARRY L. MARCHANT

The broad scope of the Rural Development Center can easily be seen by taking a look at the conferences on schedule for the next 12 months.

It started off the year with a "Catfish Disease Short Course" held on March 22, 23 and 24. The month of April has already seen a "Multi-Media Workshop" sponsored by the Second District, Georgia Department of Instructional Supervision on 14 April and followed closely on 15 April by a seminar entitled "The Minister and the Community."

Looking ahead, the RDC has coming up on May 4 and 5 the third annual "Community and Resource Development Conference" which is being organized by Mr. Dewitt Harrell, Department Head, Community and Resource Development, Cooperative Extension Service, University of Georia. This Conference will take a specific look at some successful local Georgia community and resource development cases.

During the month of June, a major conference is planned which is entitled simply "Rural Development Conference". Rural development is a topic of great interest to many individuals and groups today.

Among these are the State Department of Planning and Community Affairs, the Coastal Plains Regional Commission, the Area Planning and Development Commissions, the State Rural Development Committee, County Rural Development Committees, the Office of Economic Opportunity, Farmers' Home Administration, Soil Conservation Service, U. S. and Georgia Departments of Labor, State Department of Education, Regents of the University System.

At this conference, plans for rural development programs from Washington will be discussed. In addition, implications for agriculture, forestry, marketing, manpower training and community development will be presented.

The month of July will see a repeat of the very successful RDC "Irrigation Expo". The Expo is planned for July 7 and 8 at the RDC and on the Abraham Baldwin Agricultural College campus. Exhibitors from across the United States are expected to show land forming and irrigation equipment around Lake Baldwin.

The morning sessions of the Expo will be held at the RDC building and there will be some up-to-date research experiences on: peanut production, corn production, soybean and cotton production, tobacco production, vegetable crop production, and pecan production. Other areas to be discussed will be: "Drainage and Land Forming," "Sources of Irrigation Water", and "A Banker Looks at Irrigation".

Some additional Expos to watch for will be the "Soybean Expo" scheduled for 26 October 1971, and the "Livestock Expo" planned for December 1 and 2, 1971.

The programs listed so far are conferences of major importance to the Rural Development Center. Many additional programs are also planned which have not been assigned a specific date as yet.

Tom Riley
RDC Custodian

Regents Outline Objectives

The Rural Development Center is a new educational unit of the Regents of the University System of Georgia located at Tifton, Georgia. The educational program of the Rural Development Center is directed toward rural community development; toward utilization of the social and economic potential of these regions of the state.

The Center's program has four initial objectives:

A. To aid community development and to solve problems concerning how and where people live and relate to each other.

B. To further manpower training and utilization; to provide more skilled workers in various types of agribusiness that are needed in the area; and to assist general farm workers to prepare for new forms of employment as farm technology takes over their former jobs.

C. To increase agricultural and forest production efficiency through continued research in agricultural and forest production and the broad application of research findings.

D. To advance the development of marketing and utilization of farm and forest commodities.

THE NEWS-EXAMINER

VOLUME 12 APRIL 22, 1971 NUMBER 15

THEY INVITE YOU! – These are the leaders of the new Rural Development Center program in Tifton and they have issued an invitation to the public to attend dedication ceremonies and open house today. Gov. Jimmy Carter is to give the dedicatory address in a program starting at 10 a.m. The leaders are, L-R: S. E. Younts, associate dean of the College of Agriculture and director of the Rural Development Center; Frank King, director of the Coastal Plain Experiment Station; Thomas D. Aaron, assistant director of the Cooperative Extension Service, and F. S. McCain, chairman of the division of agriculture at Abraham Baldwin Agricultural College. King, Aaron and McCain are also assistant directors of Rural Development. See a special section on the RDC starting on Page 3.

LAURIE ROWE WEARS CROWN – The new Miss Tifton, crowned Saturday night at the annual pageant, is Laurie Rowe, daughter of Mr. and Mrs. Lester Rowe. Miss Rowe, second from left, is shown with her predecessor, Debbie Milam (right), and first runnerup Kathy Kent (second from right), and second runnerup Connie Purser, at left. Miss Kent was named Miss Congeniality. Miss Rowe is a Junior at the University of Tennessee, where she was first runnerup for Miss University of Tennessee. She has worn the crowns of: Georgia Tobacco Queen, Miss Georgia Agriculture and Miss Southeastern Wool. She was first runnerup in the national tobacco queen contest and in the Miss Tifton Pageant two years ago. She will represent the Southeast (eight states) in the Miss American Wool contest at San Angelo, Texas June 21. Miss Rowe is majoring in interior design at U-Tenn. and she is a Dean's List student. Rounding out the five finalists in the Miss Tifton Pageant were Bonnie Tucker and Susan Branch.

Everyone needs Chamber of Commerce, speaker declares

If it's good for Tifton let's get it."

In connection with a talk about the origin and work of the Tift County Chamber of Commerce, Vice Mayor George Bailey attributed the above statement to the late Judge Raleigh Eve.

Bailey, a Chamber director, spoke at the Tifton Kiwanis Club. He specifically emphasized the membership drive which is currently under way.

"The goal is to get 200 new members and enough pledges from them and old members to make a budget of $35,000," Bailey said. "The present budget is far from being adequate for a city of Tifton's size."

Tracing the history of the Chamber, Bailey said the organization was started about 1908 as the Board of Trade. Through the years the Chamber has had only one woman president – Mrs. P. D. Fulwood Sr., who served in the 1930's.

"Under her leadership a Chamber was organized in Ty Ty, which at that time was a good-sized town," Bailey said.

He listed numerous accomplishments of the Chamber, and its part in the growth of Tifton. These activities included supporting the successful move to have the old A. & M. College (now Abraham Baldwin Agricultural College) established in Tifton, working to get the old tobacco stemming plants (no longer in existence) located in Tifton; working in the Highway 319 Association years ago and again at the present time in the effort to get the highway four-laned.

A number of industrial parks have been built and new industries established employing hundreds of people through leadership of the Chamber of Commerce, Bailey said.

He said, however, that the work of the Chamber is not limited to industry. Its activities include promotion of agriculture, retail trade, tourism, education, health, and other facets of development for the city and county.

Mr. Bailey said the Chamber was instrumental in having the county named "Tift" for the founder of Tifton, Capt. Henry Harding Tift. He said there was some opposition to the name from some people who felt that a county should not be named for a living person.

Dr. Richard Jones had charge of the program. Dr. John R. Cole Jr., vice president, presided.

'Keep Tifton Growing' is drive theme

"Keep Tifton Growing" is the theme of the 1971 Chamber of Commerce membership drive, underway now, according to Henry Sutton, membership chairman.

Leaders in the drive are Pat Atwater, John Blanton, Bill Blomgren, Ellis Brown, Dr. Robert Coleman, Sonny Hamilton, Ray Jensen, Dr. Carl Pittman Jr. and Wright Turner.

Mr. and Mrs. Russell Doss

"Soybean Expo" Set for Tifton on October 26

TIFTON—Soybean growers were being urged this week to mark October 26, 1971, on their calendars and datebooks.

That's the day the Rural Development Center here will stage Georgia's first "Soybean Expo."

Larry Marchant of the RDC staff said the program will get under way at 9 a.m. and continue until 5 p.m.

Exhibits, a tour of soybean research plots, and talks by researchers, extension specialists and outstanding growers are on the agenda.

Marchant said the emphasis will be on "the tremendous potential for growing soybeans in Georgia."

In Athens J. R. Johnson, head of the University of Georgia Extension Service agronomy department, said farmers have indicated they will plant 737,000 acres of soybeans this year. As recently as 1964 there were fewer than 100,000 acres of 'beans in the state.

Production in 1970 totaled 11.9 million bushels and generated $34.5 million in cash farm receipts.

But processing plants in Georgia can handle nearly 40 million bushels of soybeans a year.

LOOKIN' AND LISTENIN'

By Pauline Tyson Stephens

DANA BOWEN AND HER CAREER

Miss Dana Bowen was at home the Easter week-end spending holidays with her parents, Mr. and Mrs. Calhoun Bowen on West 20th Street.

Dana is studying speech pathology on a fellowship at the University of Virginia in Charlottesville, Va. When she flew down to Atlanta she was met at the airport by her parents. They all drove up to Asheville, N. C., where Dana applied for work at the Asheville Orthopedic Clinic. She got the job and will be serving her nine months of internship there later on.

The patients at the clinic are all children, but adults are being added. The adults will mainly be stroke victims.

Dana graduated from the University of Georgia, but her chosen career as speech pathologist required two additional years of study. She has been at the University of Virginia for the past year. There she lives in a dormitory. She plans to spend two weeks in Richmond, Va. between spring and summer quarters working in a Veterans Administration Hospital.

Dana has chosen a "wide open" field. There are very few persons in the South working in speech pathology and speech therapy.

Mrs. Bowen said Dana became interested in speech pathology when she went to Washington while she was the Girls State governor of Georgia. There she learned of the need for such workers.

I saw Dana at church on Easter Sunday with her mother, and she looked more beautiful than ever. I've always admired this young girl since the days when I watched her sing in the choral chior at church.

She was wearing to church a new style dress. It was just below the knee in length. She looked like a princess. The dress was gold with bands of green and lavender at the waistline and on the bottom.

CAL BOWEN BACK FROM HAWAIIs,

Calhoun Bowen, Mr. and Mrs. Calhoun Bowen's son, has just returned to this country from Hawaii, where he has been spending a year and a half with the Navy. He called his parents from Treasure Island, at San Francisco, as soon as he landed.

Cal's wife, who has been living in Atlanta while he was away, is the former Marcia Poetter of Douglasville. Cal lacks one quarter at the University of Georgia getting his diploma.

Cal spent his four years in the Navy at Bainbridge, Md., Great Lakes, Ill., Norfolk, Va. and in Hawaii. He was on a top secret job, his mother said.

WALTON COUPLE BACK FROM GERMANY

And now another Tifton couple who has been in Germany has returned.

Lt. Sonny Walton, son of Mr. and Mrs. Abel Walton, and his wife, Peggy, daughter of Mr. and Mrs. Ernest Yates, were statione; in Friedberg, Germany. They lived in the city of Friedberg in apartments for military people. He will be stationed in Ft. Meade, Maryland.

Sonny graduated in pharmacy from the University of Georgia before he went into service. He and his wife have a 10-month-old daughter named Itara Marie. They call her "Tara". The first name is for Mrs. Yates, and the second is for Mrs. Walton.

While Sonny and Peggy were in Germany they traveled over much of Europe, including Germany, Italy, Switzerland and other places.

Mr. and Mrs. Yates flew to Germany last summer and joined the young Waltons on some jaunts over Europe.

MARY ELIZABETH SANDERS' PLANS

When Mary Elizabeth Sanders weds Capt. Miles Clements Jr. on June 19 she will be wearing the georgeous white dress worn by her sister, Barbara in her wedding to William McClearen a few months ago.

This bridal couple attended elementary, junior high and high school together, but it was not until last Christmas that they started going together.

Mary Elizabeth will be given in marriage by Harry Marchant, of Detroit, Mich., the same uncle who gave away Barbara. Ed Leichner, superintendent of schools in Cook County, will sing at the wedding. Mary Elizabeth did her parctice teaching in Cook county, and she liked Mr. Leichner and his singing.

Capt. Clements is the eldest of Mr. and Mrs. Miles T. Clements' six children. He gratuated at North Georgia College at Dahlonega before going into military service.

Mary Elizabeth and Miles will live on the post at White Sands Missile Range. Miles works with computers which have something to do with stimulating safeguarding the missile system.

"There's sand all around – no trees or growth except things that grow in the dessert," Mary Elizabeth said. "It is near a region of rocky mountains."

The site is only a few miles from Lascruces, Mexico, which is a good-sized town, Mary Elizabeth said. She's now working as visiting teacher in Brunswick. She hopes to find a job in some type of social work in the area where she will be living.

BARBARA McCLEAREN

Barbara Sanders McClearen and her husband, Bill, who live in Washington, Ga., were in Tifton over the Easter week-end visiting her parents, Mrs. Hervert Preston Sanders on Upper Ty Ty Road.

She was joyful over the fact that she and Bill have just moved into their new three bedroom brick home in Jackson Heights just outside of Washington. The house is in a pine-covered area like the lot around the house where she was reared in Tift County.

Barbara said most of the house is decorated in her favorite color scheme – gold and green. She was taking back to Washington an antique spool bed and accompanying furniture which has for long been stored in an attic at the home of her aunt, Miss Agnes Marchant. The furniture at one time belonged to her "Anut Ada Porter", who lives in Missouri. The furniture is in such good condition it doesn't even need refinishing.

"I'm just delighted with it," she said.

To take the furniture back with them Barbara and her husband came in one of the carrying trucks used in the McClearen electrical supply business.

Barbara said she loves living in Washington. She said it is a city of Old Colonial homes. She has enjoyed visiting the Museum there which is occupying an old home formerly belonging to Robert Toombs. The house has been repainted and restored and turned into a museum.

"In the Museum they have clothes like those of 100 years ago, peppers hung on strings in the kitchen, old cooking utensils, coins, old carriages, and several thousand other items reminiscent of a century ago," Barbara said.

There is an old loom where one of the hostesses sometimes weaves cloth for amusement of tourists.

And let me not forget that Barbara is teaching a third grade in Washington. She has met up with the former Cornelia Harris, who at one time was head of the home economics department at Abraham Baldwin College.

Cornelia left ABAC to marry William Johnson of Washington. Now they have a little girl who is in the third grade in Barbara's room. Mrs. Johnson is the grade mother for that room.

I'm sure many people in Tifton will remember Cornelia Harris. She was an active member of the Pilot Club. It's difficult to remember that she has been away from Tifton long enough to have a child in the third grade. How time flits!

MRS. SANDERS' YARD

I took note of Mrs. H. P. Sander's gorgeous lawn the other day when driving by. It is one of the most beautiful places in the area.

On that day huge clumps of azaleas which line the circular road around the house were in full bloom, as well as the myriad bushes on the pine-covered lawn in front. The lawn is triangular shaped.

MARY JO GARRISON

After Mary Jo Garrison of Tifton marries James Buchanan Squier Jr. of Atlanta on April 24, she will live in an apartment in the capitol city.

The couple has been working together furnishing their future home. Mary Jo is a home economics major and she sews well. She has used her talent in making draperies for the apartment.

Mary Jo has also antiqued an old, old trunk which had been stored in office used by her father, Andy Garrison, when he was in the building supply business.

Mary Jo and her future bridegroom attended the University of Georgia. He is with McCormick Food Brokerage in Atlanta. He is the sone of Mr. and Mrs. James Buchanan Squier Sr.

This wedding will have a number of Garrisons in it. The bride-elect's uncle, Dr. Searcy S. Garrison, executive secretary of the Georgia Baptist Convention, will give her in marriage. Her aunt, Mrs. Allen Doehler of Atlanta and her cousin, Carl Minter Jr. of Thomasville will sing. Her cousins husband, Ed Timmerman of Cairo will play the organ.

Mary Jo's sisters, Doris and Peggy will be bridesmaids and their husbands, David Jones and Don Hayes, will be usher-groomsmen. Some of the bride's sorority sisters will also be in the wedding, which will take place in the Tifton First Baptist Church.

PAULINE'S PATTER.... Tifton's new city manager, the handsome Harry G. Perkins, is getting around to civic clubs here – I've seen him at two clubs already – he's a very cordial, friendly man, and I think we'll all like him.....

Ray Jensen, Tifton's world-traveled turfgrass man, was dressed up to match his business the other day at the big Turfgrass Conference – he was wearing a pretty green suit of clothes.

Fred Grau, of College Park, Maryland, who advanced the idea 25 years ago for standing turfgrass research at the Coastal Plain Experiment Station, was at the conference here.

Welcome Rural Development Center

Any way you wish to add it up, the Rural Development Center is a big, big asset to Tifton area. This facility and its staff are added dimensions to educational and research efforts of Abraham Baldwin Agricultural College, the Coastal Plain Experiment Station and the Cooperative Extension Service.

One of the principal functions the RDC will be to serve as a continuing education and conference center for South Georgia. Conferences, short courses and expostions dealing with agricultural and forestry production, marketing, community development will be held in the new facility. These kinds of activities will bring to Tifton hundreds of additional visitors each year from the state, Southeast and nation. Many of the visitors will stay in Tifton for extended lengths of time bringing added business to local motels, restaurants and shops. The RDC also adds jobs, some 20 professional and non-professional workers already employed. Obvioulsy, more jobs will be created with future expansion.

More dollars to Tiftarea through increased revenues and jobs are important, but of greater significance is the physical facility itself, and what it will mean to people, the citizens of Tifton, rural Georgians, the Southeast and the nation. This is the first Rural Development Center in the United States.

Rural development is an idea whose time has arrived and the RDC staff and others in the University System will address themselves to helping make rural areas more viable. Innovative programs are already being planned to promote agricultural and forestry production, marketing and processsing of Georgia produce, community development and manpower training. The prime target area is the Coastal Plains region of the state with secondary efforts above the fall line.

Tifton will be the focal point, the center of activity for rural development. Georgia has taken the lead in the nation. Thousands of people will visit the RDC to discuss what can be done, to plan, to execute, to observe and to work.

The Building

Your Rural Development Center Administration Building will be dedicated on Thursday, April 22. Governor Carter will speak of the contributions the programs eminating from this Center will make to the people of the State and to their future.

The strikingly designed building with 25,000 sq. ft. of floor space is located west of I-75. It is faced with red brick and white cast concrete and was designed by Ellis & Ingram of Valdosta.

Inside one finds a large lobby area which leads to an auditorium seating 340 in a UN assembly fashion. To the right of the auditorium is to be found a conference room seating 75. Across the lobby are two smaller meeting rooms seating 40 each. A divider can be pushed aside to form one large room seating 80 or more. Beyond the auditoium is a cafeteria which seats 98 at a time.

Down the halls leading to the left of the main lobby are offices for the current 7-man RDC staff, for 16 cooperative extension specialists, for the ABAC short course staff and a representative from the Vocational Education Department of the State Department of Education.

A radio suite has been included where, when it is equipped, tapes will be made for distribution to local stations throughout Georgia. To improve the accoustical properties of the recordings room in the suite the walls have been carpeted.

In the Word Processing Center is found the latest equipment for efficient, speedy production, processing, and mailing of all written communications. Communications dictated from the individual offices are registered on magnetic belts in the Word Processing Center. The messages on these belts are transcribed by skilled operators onto magnetic tapes which can then be used to reproduce an error free communication. The same tape can be used to reproduce as many original copies as may be desired.

An attractive, invitingly appointed reading room is provided for guests of the center who may wish to browse between conference sessions or appointments.

The auditorium is equipped with a projection room. Each conference room is equipped with an electrically operated screen to be used in the projection of slides and movies.

A special suite was designed for the director. It includes the director's office, an office for the director's secretary, an office for the Dean of Agriculture, University of Georgia, an office for the program specialist, and an executive conference room. The Assistant Director for Extension has a separate suite.

The building was constructed by Anderson & Davis of Albany, Georgia. Construction started in January of 1970. The contract price was $559,574.78.

Welcome To Tifton
Rural Development Center

"We have identical objectives... working for better communities."

The Farmers Bank of Tifton

A FULL SERVICE BANK

218 Love Ave. and Town & Country Plaza

FDIC

RDC is a Cooperative Effort

T. D. AARON

If it is true that more can be accomplished by working together than by working alone, then the RDC should be a success. It was conceived and built on the theory of cooperation. The problems on which it will work are problems whose solutions require cooperation – cooperation between agencies which supply expertise and resources as well as cooperation among people who will apply the solutions.

The physical location of RDC adjoining ABAC and the Coastal Plain Experiment Station is indicative of the cooperative nature of the venture. Some 16 staff members of the Cooperative Extension Service will be housed in the facility. This also points up the close cooperation which is expected between the RDC and Extension.

Since its inception, the Coastal Plain Experiment Station has been oriented toward research of farm enterprises which would benefit the region. The Extension Service has delivered recommendations based on this research to the residents for implementation. The staff of the Division of Agriculture, Forestry and Home Economics of Abraham Baldwin Agricultural College has worked closely with both groups in order that they might offer the latest information to their classes. This arrangement has benefited all three groups.

The Extension specialists can quickly bring new problems to the researcher so that the new research projects to deal with them can be more readily initiated. By the same token, the researcher can furnish the very latest research results to the Extension specialists. The classroom teacher at ABAC can incorporate new techniques and information into his course offerings thus turning out a better trained and more completely equipped graduate.

This arrangement has produced good results over the years and is expected to continue. The RDC will work with all three groups to strengthen the relationship. In addition, many of the problems now facing rural areas involve disciplines and resources outside the traditional field of agriculture. Through its connections with other units of the University System outside agencies, the RDC will deal with these problems of area-wide interest.

TO HELP DEDICATE RDC BUILDING – Top officials of the University of Georgia system will be in Tifton Thursday to help dedicate the new administration building of the Rural Development Center. Gov. Jimmy Carter will be the principal speaker. Participating, also, will be (from left) Dr. George L. Simpson Jr., Chancellor, University System; Dr. Fred C. Davison, president, University of Georgia; and Dr. H. F. Robinson, Vice-Chancellor, University of Georgia System.

Here's the Concept of Rural Development

Rural development as a concept had its origin in days long passed. The Land Grant College with its programs of instruction, research and extension came into being to meet the training and education needs of a country which at that time in history was still strongly agrarian. Extensive research programs have resulted in the development of very rapid advances in technology in industry and on the farm. Education programs have taught the farmer to be more efficient, to utilize newly developed practices and to use the latest in equipmnet.

In fact the American farmer is now so efficient that in 1969 he produced what at least seven farmers produced at the turn of the century. He is so efficient that it takes only 5 per cent of our total population to produce our requirements in food and fiber.

While the advances in technology have made the farmer more efficient and have reduced the number of people needed in the production of agricultural crops these same advances have had some decidely counterbalancing or oppsite effects.

The need for farm labor was greatly reduced resulting in a tremendous movement from the rural to urban areas. Since World War II we have had within the boundaries of the U. S. one of the largest migrations of people in the history of mankind. Over 25 million have moved from the rural and small town areas to the burgeoning urban centers. Many of these people were ill-prepared for the jobs and the environment they found. They are contributing to the already complicated and sizable problems of the urban centers and inner city ghettos.

Most rural young people who could and did secure post high school education and training prepared themselves for non-agriculturally related jobs. Not only was manpower drained away, but so was the developing leadership. As a consequence, many rural communities find themselves void of both manpower and leadership. In many instances only the very young and the older residents were left behind. These are often referred to as the "forgotten" people.

Our "technical revolution" has produced some very serious complications. Our urban centers are vastly overcrowed, population pressures in the urban areas are rapidly becoming explosive, and vast quantities of federal and state funds are being spent in an effort to alleviate these urban pressures. President Nixon's Task Force on Rural Development reports "the solution may be as near as the countryside."

Rural Development has taken on new meaning, direction and purpose. The goal of our Rural Development Center, simply stated, is to develop programs that will help make our rural and small town communities better places in which to work, live and enjoy life. Our main objective is to reverse the "flow that became a flood" in the last two decades. It is essential that we find ways of bringing good and desirable work opportunities to rural America. We must process more of our produce near the point of harvest so the dollar value stays in the local community. Every effort must be made to improve existing services and develop new services for the people of our communities. This means schools, health facilities, recreational facilities, housing, cultural programs, sewerage, water, zoning, and government – to name but a few. It also means that we must be prepared to train and retrain people for the new jobs that are to be available to them in our rural communities.

Rural development has been given new meaning and purpose. Also it has been given new life. There is rapidly developing among both state and federal leaders the recognition that the time for action has arrived. President Nixon has delivered messages to Congress in each of the last two years outlining the problems and citing the need for action.

Building Better Communities

What a Worthy Goal!

Best Wishes to The Rural Development Center From Everyone at

Georgia Power Company

"A Citizen Wherever We Serve"

RDC Has Four Major Thrusts

Manpower Training And Utilization Thrust

As stated earlier in this series of informative articles about Georgia's newly established Rural Development Center at Tifton, the overall goal of the Center is to help make rural Georgia a better place in which to live, work and play. It is believed that realization of this goal will not only stop out-migration of rural citizens to already overcrowded urban areas, it will also relieve the mounting pressure on urban areas by enticing many disenchanted city dwellers to "return to the land".

To accomplish this overall goal, the Rural Development Center has set forth these four initial objectives, or thrust areas:

1. To incresase agricultural and forest product efficiency through continued research in agricultural and forest production and through the broad application of research findings;

2. To advance the development of marketing and utilization of farm and forest commodities;

3. To aid in the development of communities and in the solution of problems of how and where people can best live and relate to one another; and,

4. To further manpower training and utilization in order to provide more skilled workers in various types of agribusiness, and to assist general farm workers to prepare for new forms of employment as farm technology takes over their former jobs.

Working under the general supervision of the Center's director, Dr. S. E. Younts, four coordinators (one for each thrust area) support the overall goal of the Center by striving to reach the objectives of their respective areas of endeavor. Examples of how the manpower training and utilization coordinator works to fulfill the responsibilities of his thrust area are outlined in the remainder of this article.

Upon determining the need for a new or modified education or training program in rural areas, the coordinator of manpower training meets the need in one of three ways, namely:

1. By working with existing training and/or educational institutions so that the human and physical resources of such institutionsare brought to bear upon the problem. This approach was used, for example, to help establish "Project Motivation" at Abraham Baldwin Agricultural College. It is a pilot-type educational program for young ladies who for various reasons dropped out of high school, but who later demonstrated aptitude and interest in completing high school or its equivalent. The type of assistance rendered by personnel of the Rural Development Center toward getting this program underway was mostly in the realm of arranging for funding of the program – through Coastal Plains Community Action Agency and the Rockefeller Foundation. The program has been operating since January 1971. Much has already been accomplished as evidenced by the progress and enthusiasm of the young ladies themselves and by the open support and enthusiasm of their counselor and instructors. The RDC is, therfore, not only seeking funds to continue the program at ABAC beyond December 1971, but it is also negotiating for much broader financial support of this type program so that it can be conducted on a continuing basis at several locations within Georgia.

2. By setting up highly specialized educational or training activities of relatively short duration for people who need additional training or education. This technique was used in obtaining Federal support of a special pilot project for concentration on the training and education needs of citizens in Atkinson, Bacon, and Pierce counties, and that portion of Ware County north of the Satilla River. This project, which is called Concerted Services in Training and Education (CSTE), was initiated on January 18, 1971 by its coordinator, Mr. Allen Bower of Alma. It is believed that the CSTE effort will help to consolidate the combined resources of occupational training and related educational needs of the people in the CSTE area. In addition, it is hoped that such concerted efforts will demonstrate that education and occupational training, when accomplished in conjunction with economic development activities, can significantly increase employment opportunities in a given geographical area.

3. By arranging for a combination of the foregoing; i.e., by working with personnel of existing institutions to conduct highly specialized, short-duration educational or training programs at the Rural Development Center or elsewhere. For example, this approach is being used to arrange for an educational program on the relationship of agricultural practices to environmental quality. This one-day program will probably be conducted at the RDC initially, then carried to several college campuses in south Georgia over a period of several months. It will most likely be led by specialists from the Cooperative Extension Service and other units of the University System.

The coordinator of manpower training and utilization is also involved in the development of a variety of other projects which will be expressly designed to meet needs of people in rural areas. These include: educational and training programs associated with activities of the evolving Georgia Blueberry Association; a cooperative effort to establish a managerial program for black people who are engaged in small business; training programs for dairy farm workers, floral designers, mechanics; and educational programs for paraprofessionals who will serve as assistants to rural physicians.

Obviously, the Rural Development Center's coordinator of manpower training and utilization is but one of many people who are involved in the complex process of providing needed educational, training, and employment opportunities for Georgia's rural citizens. He does not and cannot operate in a vacuum. Instead, he simply serves as a member of a large, cooperative team of dedicated individulas who collectively comprise the University System of Georgia.

Barry Jones Named to Publicity Post

So that the public will become more knowledgable about the day-to-day operations and programs of the RDC an editor will be added to the staff on July 1, 1971. He is Barry Jones.

Barry will be a member of the Cooperative Extension Service editorial staff. He completes requirements for the Master's degree in journalism at the University of Georgia early in June.

His wife, Sue, is presently serving as editor of The Columns, a public relations publication of the University of Georgia.

RDC Initiates Project Motivation

When the Home Economics Steering Committee to the Rural Development Center in Tifton met for the first time, one important fact was cited – Approximately 20,000 high school students are listed as drop outs each year and approximately half of these are females.

The committee felt the new Rural Development Center could do something to help these students. A program entitled Project: MOTIVATION was launched. A meeting with the Coastal Plain Community Action Agency and the Office of Economic Opportunity proved the program was desperately needed.

The cited purpose of the program was to motivate the disadvantaged female student to encourage them to move from the poverty role to the role of contributing to society.

The first program of it's type in the nation, one of it's goals will be to take high school drop-outs and qualify them, within one year, to pass the GED Test to get the equivalent of a high school diploma.

Following a study of the merits of the pilot program, the Office of Economic Opportunity under the leadership of Colonel F. J. Smrcina and Robert Ohls, approved an initial grant of $28,000 to launch the program. The Rockefellow Foundation was contacted for assistance and the program merited their approval of an additional $15,000.

The program was coordinated by Dr. Frank McCain, Assistant Director of the Rural Development Center.

McCain, in his dual role as assistant director and chairman of the Agriculture, Forestry, and Home Economics Division at ABAC, was given the duty of providing an atmosphere on the campus for motivation of the students and the overall duties of making the program a success.

A committee consisting of Mrs. Clevinna Able, Robert Ohls and Colonel F. J. Smrcina of the EOE Office, Miss Virginia Quattlebaum of ABAC's Social Work Program, Mrs. JoAnn Redeker, Director of the Project: MOTIVATION, and Dr. Loyal Norman, ABAC's Academic Dean was formed to interview and select the students based upon the criteria set-up by all agencies involved.

The committee agreed that the girls would be brought to the Abraham Baldwin College campus for four quarters of intensive training and personal advisement. The students were between the ages of 16 and 21 years of age from disadvantaged families, as determined by the Office of Economic Opportunity. The girls possessed a potential to respond to the training as judged by the interview committee. The students are considered as high school drop-outs and are willing to move to the campus for the training.

Twenty girls were selected for the first session of Project: MOTIVATION. Although 5 whites and 15 blacks composed the group, it was agreed by the committee that these students had the greatest potentiality to being motivated and would respond to the training.

Mrs. Ann Powers, a former Home Economist with a Masters Degree in Guidance and Couseling was employed to live with the students on campus. A special faculty committee was formed for the preparation of curriculm for the students. The specially designed courses included remedial training in math, English, art, reading, social studies, clothing construction, physical education, social development, foods, and vocational secretarial courses. ABAC faculty agreed to provide basic training for the students as their contribution to the program. The faculty donated this extra time needed to teach the students.

According to faculty members teaching the remedial courses, the progress has been phenominal. Interest has been high and the students seem to be getting more interested in the classes each session.

Although three months of the 12 month program have been completed, certain problems have been noted by the directors of the pilot program. Some of the cited problems of the students are the adjustment of living in a new environment, learning to live with others and to respect the rights and priviledges of fellow students.

Unforeseen problems such as medical attention and lack of clothing has also been noted. After being informed on the purposes of the program, local agencies and businesses have been exceptionally helpful in providing free clothing and medical care. The Tift County Medical Association has provided free medical checkups for the students and members of the community have contributed clothing so they can complete the program. Various commodities such as food has been provided for classroom laboratory training at no cost to the program.

A first quarter review of the program produced some unusual results. Jesse Perry, a representative of the Rockefellow Foundation, found the progress to be almost unbelievable. The girls presented clothing they had made, and several spoke before the group on the value of the program to them. According to Colonel F. J. Smrcina, Director of the OEO, "Everyone was delighted at the progress of the girls."

As Coordinator of the Program, Dr. Frank McCain stated, "I think the prospects for high school drop outs take on a different look when you can bring a few together and accelerate their training as we have these 20 students." McCain cautioned, "We are not trying to replace high school training. We are simply trying to take care of individuals who find it necessary due to circumstances to drop out of school."

McCain agrees that similar programs should be started by the Rural Development Center and other agencies to take care of the low income population and help to remove more from the welfare roles.

McCain emphatically points out, "You can't buy people out of poverty---you have to get them motivated to get out of poverty---and this program clearly illustrates this point."

In citing future developments from the program, McCain states, "Funds are a must to support a follow-up study on the jobs, pay scale and other aspects of the program. Other funds will be needed to support the students if they decide to seek training in higher education."

Project: MOTIVATION is the first of many programs being coordinated by the Rural Development Center under the Manpower Training thrust.

PROGRAM FOR DISADVANTAGED – Telephone calls are an important part of dormitory life. Here Neomi King of Ocilla takes a message.

HEALTH AND 4-H

A 4-H Club in Mississippi, made up of only 18 girls, voted to use the money in their treasury to buy and wrap packages for the Red Cross at Christmas. Then they sold tickets to raise money for exceptional children and had two bake sales to buy clothes and food for a cancer victim's family. And this wasn't all. The 18 girls bought school lunches for a month for five children, raised $140 for an invalid recovering from brain surgery, and did a house-to-house canvass for the March of Dimes.

STATE HOG CHOLERA FREE - Commissioner of Agriculture Tommy Irvin, right, accepts a Certificate from Under Secretary of Agriculture Phil Campbell which recognizes Georgia as a hog cholera free state in special ceremonies in Atlanta, Georgia, which ranks 8th in the nation in swine production, began hog cholera eradication efforts in 1962 and has experienced no outbreak now in more than a year. (PRN)

Abundance of Conference Programs Set

Conference programs for Georgians are being planned in considerable abundance at the Rural Development Center. Included are the ABAC Short Courses and special programs sponsored by Cooperative Extension Services.

Special RDS programs now planned are:

1. Rural Development Colloquium with the theme – Direction For Action, scheduled for June 2. Speakers of national prominence will appear.

2. Irrigation Expo – July 7 and 8. A program built on the highly successful Irrigation Expo of 1970 which attracted about 800 plus 30 exhibitors.

3. Soybean Expo – October 26 – to include a field trip to visit a wide variety of test plots at the Coastal Plain Experiment Station and a luncheon where the menu will contain soybean derived foods.

4. Livestock Expo – December 1-2 which will concentrate on swine production and a display of equipment to be used by swine producers.

Programs on Vegetable Growing and Processing, Mechanization and its Social Implications, Environmental Quality in Agriculture, and of the Future Farm are being developed. No specific dates have been established for any of these conference activities.

The Building Project

Breaking of ground on December 11, 1969 heralded the beginning of what is expected to develop into a Rural Development Complex composed of several buildings. Plans for the recently completed administration building were developed and drawn by Ellis, Ingram and Associates of Valdosta.

Plans call for the complex to be composed of a series of buildings to be located as to be connected by an enclosed air conditioned mall. In the complex will be (1) a library, (2) a shops-laboratory-classroom building, (3) a large auditorium, (4) a services building, and (5) a communications center.

The library will contain the Coastal Plain Experiment Station Library collection, the Coastal Plain Regional Library the Tifton Film Library and the Rural Development Center Library.

Programs in manpower training and education will be offered in the shops-laboratory-classroom building. As graduate program offerings are developed they will be offered in this facility.

The auditorium, expected to seat up to 1500, will serve to house large conference groups and will be available for a wide variety of cultural and educational programs that will be attracted to the community.

A service building will provide for food and banquet service and continuing education program administration.

TV and radio programs to be taped and distributed throughout the state and region will be produced in the communication center. It is expected that courses in the communication arts will be offered utilizing these facilities for presentation and training.

When these structures have been completed they will be connected by an air conditioned mall that will give the impression of openness and brightness. Spaces for exhibits, demonstrations, and lounging are to be designed for this spacious area.

The program from which the library will be designed is written so it can be developed as soon as funding becomes available. It is anticipated that the RDC program will move forward so the entire complex can be completed by 1976.

Soybean Expo 71

The first Soybean Expo is sponsored by the Cooperative Extension Service, the Coastal Plain Experiment Station, Abraham Baldwin Agricultural College, and the Rural Development Center. The one-day meeting will be held at the Rural Development Center on October 26, 1971. In addition to a program of outstanding speakers, the Expo will feature machinery and equipment pertaining to soybean production, harvesting, storage and processing. A noon luccheon is being planned that is based primarily on soybean products.

According to James E. Jackson, Cooperative Extension Service Agronomist, University of Georgia, "Soybeans is the only major agronomic crop that has markets looking for it". One reason for this is the fact that during 1971 Georgia producers grew 11.9 million bushels of beans, while the capacity of the processing industry is about 40 million bushels. This deficit of 28 million bushels represents a potential production worth 81 million dollars. Small wonder that soybeans is referred to as the golden crop. Clearly, Georgia producers need to increase yield and acreage and consider soybeans as a primary crop worthy of their first attention.

Mr. C. P. Eley, Agricultural Economist with the Economic Research Service of the U.S.D.A. estimates that the use of soy proteins in foods has been increasing about five to seven percent annually. This is expected to continue at least another two or three years.

The twenty-five new members of the Georgia Moneymaker Soybean Club for 1970 averaged 40 bushels per acre on 1,166 acres at a production cost of $1.01 per bushel. This represents a net profit of over $75.00 per acre. This club is jointly sponsored by the Cooperative Extension Service and Gold Kist, Incorporated.

When one considers the many uses of soybeans and soybean by-products, we can appreciate the value of this crop. Food technologists say a new frontier is being forged by the development and use of soy protein for human food in our country. Soy based foods and specialty products are gaining wide acceptance by the American housewife. The specific uses of this versatile vegetable protein range from noodles to snack items to meat balls.

As a matter of fact, soybeans is the most promising source of high quality, low cost protein that is available in sufficient quanitities to meet human needs on a worldwide basis. This can be readily understood when one considers that the retail cost of a pound of protein from beef is about $4.44, while that from soybeans is only 11 cents. Consider also that the relative yield per acre is 58 to 508 pounds respectively.

The newest use for isolated soy protein made from defatted soy flakes is in the area of dairy type products such as coffee cream, whipped toppings, frozen desserts and cheese –like spreads and dips. The soy protein also functions as moisture retainers, binders, and emulsifiers in many food products.

Strictly speaking from the standpoint of a protein product, the spun proteins and textured proteins are the big news among the food processors. The former product is the source material for the simulated natural products, such as chicken, ham, frankfurters, and other specialty products. Foods made from these spun proteins have no bones, skin or excess fat and there is no waste or shrinkage. The textured product can be produced with a meat-like appearance and taste. It can also be produced to simulate nut meats, fruit bits, and coconut chips. Flavor, texture and shape can be controlled as can the nutrient properties. This makes for a very versatile product to say the least. Soy milk, soy beverages and blended food products are other important uses for the golden bean.

Recent developments in the area of animal nutrition may have far reaching implications on the use of the soybean crop. Livestock producers may now feed full fat soybeans directly to their animals. On-the-farm processing equipment is readily available that will heat treat the whole soybean so that it may be fed directly to finishing beef cattle and swine. This means that the farmer may feed his own soybeans instead of feeding soybean oil meal that must be purchased. Two cookers and one soybean extruder are currently available that will efficiently accomplish this heat treatment.

Why Irrigation Expo 71

The average 50 inches of rainfall in Georgia would appear to be adequate for the agronomic crops adapted to the State. The interest in irrigation during the last three years would suggest there is more to this than the above figure would indicate. The writer of Ecclesiastes 3:1 through 9 sums it up very well. It is a matter of timing. This is just as important or more so, than simply the gross amount. If our annual rainfall was properly distributed it would be adequate but this is not the case. For instance, the greatest need for water by the soybean plant is during the critical pod filling.

The current thinking is to consider rainfall as a supplement to irrigation. In this concept, irrigation is a crop production tool and is not considered as insurance as it has been in the past. In this light, the practice of irrigation is a completely new ball game! In order for the producer to "think irrigation" he must consider new production practices and adapt, in many cases, a completely new set of criteria. In many instances the changes involve different land preparation techniques, new varieties and fertilization practices, different planting dates, new techniques for insect and weed control, and a new approach to harvesting methods. He must also realign his thinking with respect to fertilization rates and plant population. He must realize that all of these things are important. The entire production picture must be considered in this new light of a highly coordinated and intensified system of water agriculture.

Such practices very dramatically increase the yield ceiling for agronomic and horticlutural crops. It has been estimated that the average yield of agronomic crops in Georgia is approximately 10 to 20 per cent of the maximum potential. Perhaps the most important benefit from all of this is that the grower is pretty much guaranteed a satisfactory yield each year rather than a feast and famine type situation. This is most important because the production margins are much tighter now than they have been, and this is going to be par for the course. Margins over cost of production used to be 30 to 40 percent. Today, and in the immediate past, even in the more efficient operations, they are frequently 5 to 6 percent. This also makes for a very tight production credit system.

The producer must also consider the soil type with which he is confronted and the fact that it is the soil that is irrigated and not the plant. Sandy soils have a limited water holding capacity as compared to the heavier clay soils of our state. Consider that as the texture changes from sand to clay the water stored per foot of soil varies from 0.75 inches to as much as 2.5 inches per foot. If the rate of water application exceeds the capacity of the soil the water is wasted and excessive leaching of nutrient occurs. The rate of application should be somewhat less than the water holding capacity of the soil. On the other hand, plants growing on sandy soil can experience drought stress in just 5 days.

According to Mr. C. W. Sever, Geologist for Rainbow Manufacturing Company, the Coastal Plains area is richly blessed with copious quanities of underground irrigation water. He estimates that if all the 25,000,000 acres of land in the Coastal Plains area were cleared and planted to crops they could be irrigated with about 1.7 inches of water per day just from the water stored in underground aquifers alone.

Georgia producers are using this water to a good advantage and at an accelerated pace. Extension Service figures for 1970 indicate that 146,029 acres received irrigation water. This represents 6,572 different farms.

Most of the systems used on these farms were of the hand-moved, portable type. These are rapidly being replaced by the self-propelled automatic systems. The main reason for going to the self-propelled equipment is the labor factor. The labor available today does not like to become involved with portable irrigation equipment. The work is too hard, hot, humid and muddy. This is accentuating the trend of self-propelled equipment. At the present time, there are twenty-eight manufacturers of irrigation equipment in the United States. With these permanent type self-propelled irrigation systems available, researchers and producers are taking a hard look at fertigation and chemigation. These practices are rapidly becoming precise and practical. They have many hours of labor that can be used to a good advantage in other phases of crop production.

Irrigation Expo '71 will be held on July 7 at an ideal location. The setting will be a large lake just to the west of Abraham Baldwin Agricultural College campus. In the area surrounding the lake you will be able to observe the displays of many types of irrigation equipment. Some of the systems will be demonstrated and you can observe them in action. You will also have the opportunity to talk with the people that are using them and the people that are selling them. An outstanding program has also been arranged for this two day event. Topics range from financing to production practices.

This event will be sponsored by the Cooperative Extension Service, the Coastal Plain Experiment Station, Abraham Baldwin Agricultural College, and the Rural Development Center.

Best Wishes to The Rural Development Center

HORTICULTURE Notes, Comments

By: Major C. Collins

HOW CITRUS FRUITS REACHED AMERICA

Citrus fruits – oranges, grapefruit, lemons, and many more kinds – are enjoyed by the people of the western world. In fact, citrus is one of the most popular fruits in the United States according to the amount of citrus fruits solds in this country.

All species of citrus are believed to be native to subtropical and tropical regions of Asia. Oddly, the citron was the first member of the citrus tribe to become known in Europe. It was mentioned about 310 B.C. by Theophrastus. The citron is not commonly known as a commercial fruit here, except in the candied form used in fruit cakes. These are grown in Southern Europe and imported to our country.

They came to Europe in this order, but perhaps centuries apart, the sour orange, the lemon, and the sweet orange. This last species, the sweet orange was not known in Europe for its fruit until approximately 1400 A.D., about seventeen centuries later than the citron. There is some evidence however, that the citrus tree was grown in Italy, and it could possibly be a sweet orange as evidenced in the mosaics of Pompeii, which was destroyed in 79 A.D. But there is a strong suggestion that the citrus there did not fruit. (Possibly killed back each year by freezes?)

Other writers have suggested that citrus of various kinds were spread throughout Asia Minor, or as we say nowdays, the Middle East. At any rate, the sweet orange was widely grown in the early sixteenth century. The Portugese contributed much to the spread of citrus fruits, and among other places, brought this fruit to the Canary Islands.

On Christopher Columbus' second voyage, it was widely known that he brought many plants, seeds and the like to establish colonies in the Western World. Thus evidence indicates that he planted citrus seeds in Hispaniola (Haiti), soon after his arrival on November 22, 1493. According to records, he put in at the Canary Islands October 5, 1493, where he provided his fleet with some cattle, hens, grains and seeds of oranges, lemons, and citrons as well as all kinds of vegetables. It is supposed that he did not get the citrus seeds in Spain when he sailed because it was too early in the season to secure mature seeds for his purpose.

In this brief sketch, is shown the origin of citrus and several other plants that were not native to our country.

PROPAGATION – AIR LAYERING

Spring is the time to begin on propagation projects. Multiplication of the number of plants by air layering is one such device. The Cooperative Extension Service, U. of Ga. College of Agriculture has a folder giving directions, illustrated with pictures of air layering. The folder is written by Mr. Troy Keeble, Extension Horticulturist. If you are unable to get this folder at your county agent's office, contact me, and I will make every effort in securing one for you.

In addition to the directions given in the above folder, I would suggest that some time, say a week or two prior to airlayering, cut a notch, or otherwise cause the stem to form a callus or scar tissue at the point that you want the roots to sprout. Roots will put out at the damaged place where the callus has formed.

TREES FOR PURER AIR

Early man had to live by his wits so he studied the laws of nature very closely. In our urban society of today, too many of us have drifted away from the laws of nature. Man has always gotten into trouble when he disobeyed the laws of nature and this may be the reason for many of our troubles today. A good example of the disregard of the laws of nature today is our polluted air and waters. No people can do their best using poor quality water, and breathing polluted air. At least some of the air pollution can be alleviated by preserving as many of our trees as is possible. Trees are nature's air conditioners.

The above brief article appeared in this column several months ago, and was picked up by the North American Fruit Explorers publication "Pomona". It appears in the April 1971 issue. I feel that this little message bears repeating for those that might have missed it the first time around.

TODAY'S FAIRY STORY

"Mr. President, I'm the bureaucrat that you appointed several months ago to solve the war on poverty. I wish to report that the problem has been solved, and I am awaiting your dismissal of me from the bureau, and to disband this agency. Also, I wish to turn in one hundred and sixty eight million dollars, that was not needed and was not used by my office."

LIME DOES MORE

Lime not only corrects soil acidity and raises pH levels. It is also a fertilizer material, containing calcium and—if dolomitic lime is used—magnesium as well. Both of these elements are essential for plant growth.

POISON PREVENTION

Poisons come in many disguises. But household poisons and various insecticides seem to be the greatest culprits because they are so often stored haphazardly in the home. Extension Service home economists point out that things like bleaches, oven cleaners, solvents and old medicines are usually easy for the toddler to find. And like all children, what they see goes into the mouth before even the most alert mother can prevent it. Safe and proper storage is the answer.

GROW HOLE-FREE TOBACCO

One 2 lb. can of Lannate® stops insect damage on up to 8 acres of tobacco

Insects hit directly by the spray begin falling minutes after spraying. Some LANNATE is absorbed into the plant, where it continues to kill insects as they feed. Yet LANNATE doesn't linger. It does its job and then breaks down into materials commonly found in nature.

LANNATE performs at low rates, and that means more for your money when you're buying insecticides. This unique formulation of *water-soluble* powder dissolves easily and contains no solvents to "burn" foliage.

Remember—it's the worm that costs you money, not the insecticide. Start early and get a jump on the bugs.

As LANNATE is a highly toxic chemical and protective equipment is recommended, read and follow label instructions and warnings carefully.

DU PONT Lannate®
METHOMYL INSECTICIDE

Braves TALK

The Official Report from Georgia's Big League Team

ATLANTA (PRN) – The National Safety Council will tell you that "Speed Kills," but Atlanta Braves' centerfielder Sonny Jackson will tell you that "Speed" is what could take the 1971 Braves to the World Series.

"You can't beat speed," Jackson said. "For the last few years, the Braves have had to depend completely on power, and that's just not enough to be a consistent winner in today's game.

"You've got to have speed to win. Last year there were only me, Hammer (Hank Aaron) and Felix (Millan) who could run. Now we've got Ralph Garr and Dusty Baker and might be the fastest team in the league.

"You can see the difference already. The other night the opposing pitcher was nervous and kept trying to pick Garr off first base. He finally threw the ball over the first baseman's head and Ralph went to second. As a result, we scored the next pitch on a single.

"One thing, too. The speed is going to help our power hitters. For instance, Hank's going to see more fast balls this season than ever before. With me and Ralph hitting in front of him, the pitchers know they have to throw the ball hard or we'll be on second with a stolen base."

Jackson also feels that his conversion from shortstop to center field will help the 1971 Braves.

"I hit the ball pretty good when I'm healthy, and I haven't stayed healthy a full season since my first year when I went to bat over 600 times," he continued. "I hit .292 that season. With my added experience from six seasons in the big leagues, I think I can easily be a .300 hitter.

"Playing center field is easier on me physically," he added. "It's basically the same as playing shortstop since everything you go after is coming up the middle, but it lets me use my speed more. And without the quick stops and starts that you have to make at shortstop, there is less chance of leg injuries."

How fast is Sonny Jackson?

"I'm really not sure," Sonny answered. "In high school, I ran the hundred yard dash in 10.1 when I was 14 years old. I know I got a lot faster after that, but nobody ever timed me again.

"I'm not as fast as Ralph is at running to first base," he continued. "I'd say I probably make it in about 3.4 or 3.5, and they say that Ralph can do it in three seconds flat. But once I get going, I'm a little faster than he is. I take long strides and can get to second or third pretty fast."

***

One of the most enjoyable Braves home dates of the season for youngsters is coming up this Sunday, April 25th, when the Braves play the San Diego Padres in a doubleheader at Atlanta Stadium, starting at 1:35. The time between the two games of the doubleheader will be designated to the Braves Circus Day festivities with clowns, funny cars, bands, special circus acts and a grand finale of the great Malakova walking the high wire in center field. Circus Day is being sponsored by the Atlanta Shrine Temple, which also sponsors the big Shrine Circus at the Atlanta City Auditorium (April 16-24).

Free Circus Day balloons will be given to the youngsters who attend the games. Plenty of good tickets are still available and can be purchased at the advance ticket windows at Gate G of the Stadium.

You and Your Dollar

by the Georgia Consumer Services Program

FAIR CREDIT REPORTING

A store has just refused to let me charge something, and I want to know why. I've always paid my bills. How can I get them to tell me why I can't charge there?

After April 25, they'll have to tell you if it's a bad credit report. That's the date that the new Fair Credit Reporting Act goes into effect. Under this law, a merchant must tell you if he is denying you credit or raising your payments because of a bad credit report, and refer you to the local credit bureau to find out more. If he received a bad report on you directly from another store, you have 60 days to demand a written explanation.

A credit bureau is obligated to report to you the nature of everything in your file, except medical information. Additionally, the credit bureau must tell you the sources of their information, except for the names of the people who gave information regarding morals and character.

If you disagree with anything in your file, the bureau must re-investigate. If it turns out that the information was wrong, the bureau must delete it from your file, and notify, free of charge, anyone receiving the report in the last six months. Even if, after investigation, the bureau finds grounds to leave the bad part in, you have the right to include your own version of the facts in the file. This must be sent to recent receivers of the report, at no charge, within 30 days, and for a small charge if later.

Finally, this law provides that information concerning a bankruptcy cannot be included in a credit report after 14 years, and other adverse incidents, such as suits, judgments and arrests, must be left out after seven years.

Conferences: From Catfish to Ministry

By: Larry L. Marchant

The broad scope of the Rural Development Center can easily be seen by taking a look at the conferences on schedule for the next 12 months.

We started off the year with a "Catfish Disease Short Course" held on March 22, 23 and 24. The month of April has already seen us hold a "Multi-Media Workshop" sponsored by the 2nd District, Georgia Department of Instructional Supervision on April 14 and followed closely on April 15 by a seminar entitled "The Minister and the Communtity".

Looking ahead we have coming up on May 4 and 5 the third annual "Community and Resource Development, Conference" which is being organized by Mr. Dewitt Harrell, Department Head, Communtiy and Resource Development, Cooperative Extension Service, University of Georgia. The Conference will take a specific look at some successful local Georgia communtity and resource development cases.

During the month of June, we have a major conference planned which is entitled simply "Rural Development Conference". Rural development is a topic of great interest to many individuals and groups today. Among these are the State Department of Planning and Community Affairs, the Coastal Plains Regional Commission, the Area Planning and Development Commissions, the State Rural Development Committee, County Rural Development Committees, the Office of Economic Opportunity, Farmers' Home Administration, Soil Conservation Service, U. S. and Georgia Departments of Labor, State Department of Education, Regents of the University System.

At this conference, plans for rural development programs from Washington will be discussed. In addition, implications for agriculture, forestry, marketing, manpower training, and community development will be presented.

The month of July will see a repeat of the very successful RDC "Irrigation Expo". The Expo is planned for July 7 and 8 at the RDC and on the Abraham Baldwin Agricultural College campus. Exhibitors from across the United States are expected to show land forming and irrigation equipment around Lake Baldwin. The morning sessions of the Expo will be held at the RDC building and there will be some up-to-date research experiences on: peanut production, corn production, soybean and cotton production, tobacco production, vegetable crop production, and pecan production. Other areas to be discussed will be: "Drainage and Land Farming" "Sources of Irrigation Water", and "A Banker Looks at Irrigation".

Some additional Expos to watch for will be the "Soybean Expo" scheduled for October 26, 1971, and the "Livestock Expo" planned for December 1 and 2, 1971.

The programs listed so far are conferences of major importance to the Rural Development Center. Many additional programs are also planned which have not been assigned a specific date as yet. Some examples of these are as follows: "The Family Farm", "Vegetable Procession", "Effective Methods of Marketing the Individuals Farm Products", "The Rural Job Market", "Housing – What is the Answer?".

Ideas for the programs named here have originated from a number of sources. The RDC has been guided by steering committees representing such areas as home economics, horticulture, agronomy, forestry and animal science.

Funding the RDC

Funding of any public agency and its program is a matter of considerable interest to the citizens of the state. People throughout the state can take pride in the fact that the Rural Development Center Administration building is theirs. No federal funds have been sought for its construction. Currently most of the operational funds and staff salaries come through the University of Georgia College of Agriculture budget.

As specific programs are developed, funding is being sought from both federal and private sources. In many instances the Rural Development Center staff will serve only to assist the other agencies to secure direct funding. Examples are the In-Service Training Program for the teachers of the Tift County Public Schools which has been conducted on the ABAC campus under the direction of Dr. Thomas Milam, Chairman of the Social Science Division of ABAC Funding for this program came directly to the Tift County Public School system even though they were sought for the system by RDC staff members.

Another example is the funding of the Georgia Blueberry Association located in Alma, Georgia. RDC staff personnel, assisted by Cooperative Extension and Coastal Plain Experiment Station personnel, helped to organize the Association and helped to seek initial funding for the organization's program from the Coastal Plain Regional Commission and the Model Cities Program of the Department of Housing and Urban Development.

Project Motivation, an RDC developed program, currently being conducted by the faculty of ABAC, has received funding from the Coastal Community Action Agency and the Rockefeller Foundation.

A pilot project, Concerted Services in Training and Education (CSTE), developed by the USDA and involving six other federal agencies was funded by the State Labor Dept. with money made available for the purpose by the U. S. Dept. of Labor. This project, under RDC direction, is being conducted in an area encompassing all of Atkinson, Bacon, and Pierce Counties and the northern portion of Ware County. There are only ten such pilot projects in the United States. These projects are designed to help bring federal manpower training and education programs to rural areas. Such programs already in force in other states are proving to be most effective.

A major objective of the RDC is to bring back to Georgia more of the dollars its citizens pay out in federal taxes.

Food: Beef, Catfish, Swine; Research Facility Expansion

Since its early inception, the Coastal Plain Experiment Station has conducted research with cattle and swine. But with increased emphasis on rural development and the agricultural economy, these areas of research are being expanded and a third area of food production – catfish – is being added.

Livestock Expo 71

Swine producers in Georgia and surrounding states will have an opportunity to observe the latest swine buildings, equipment, and production practices December 1 and 2 of this year. Plans are well underway for Livestock Expo 71. This event will be sponsored by the Cooperative Extension Service, the Coastal Plain Experiment Station, Abraham Baldwin Agricultural College, and the Rural Development Center.

The Expo will be somewhat like the Midwest Farm Show or the Swine Equipment and Trade Shows sponsored by the American Pork Congress. This first Livestock Expo will be concerned with all phases of swine production, processing, and marketing. Expanding to other species and areas of interests will be a future consideration. Invitations to participate in Livestock Expo 71 will be extended to companies or agencies that are engaged in a business or activity that supports or is directly concerned with swine production, processing, and marketing. This includes the National Purebred Swine Associations, the Georgia Swine Growers Association, the Georgia Veterinary Medical Association, similar organizations in other states and any of the Commodity Commission groups.

Exhibits and equipment displays will be housed under large circus type tents. Outside exhibit and demonstration areas will be planned in the area immediately adjacent to the sheltered equipment and exhibit areas. Live animals will be used in some of the exhibits to demonstrate certain pieces of equipment. Plans are also being made for type and carcass demonstrations. Adequate space for Expo and parking for the attendees is readily available in the 17 acres surrounding the RDC Building Complex. The Swine Industry in Georgia has become so important to the economy of the state and reached such a sophisticated stage of development that it can best be served by shows specifically designed for the agribusiness man engaged in his specialty, the production of pork.

The expanded cattle feeding program facilities are already under construction with four silos and one high-moisture grain bin having been completed. Sometime during the next six months, a steer feeding facility designed to handle approximately 200 steers at the time will be started. In addition to the feeding barn, feed preparation facilities including grinders, mixers, and stoarge facilities will be added. These facilities will enable the station to expand its research program and, in cooperation with RDC, provide more intensive and effective teaching and demonstration in handling of feed, management of feeding cattle and cattle waste. When these facilities are completed, they will represent approximatley $450,000 investment.

The station's swine research program has dealt with breeding, nutrition and swine management. This basic program will be strengthened and enlarged to include more effective work in baby pig production and management and in work in swine nutrition. Barn and swine handling facilities will be greatly improved. Nutrition research will be considerably expanded and the basic feed production will be handled in the larger beef cattle feed processing and handling facility. The swine expansion program will consist of new feeding and farrowing facilities and feed handling equipment. Total capital outlay will be approximately $175,000.

Catfish production represents a new area of research for the Coastal Plain Experiment Station. Capital items are now under construction which will consists of a seven-acre pond, virtually completed, a deep well for supplying water for the work, one 8-100' section raceway now about one-half completed, one 4-100' raceway yet to be started, and one approximately one-acre moat to be constructed. Reserach in these facilities immediately will be limited to production of catfish under raceway and moat systems. Dr. Tom Hill, a recent graduate of Auburn's Entomology and Fisheries Department, has the direct responsibility of operation of these units. Dr. Hill is currently conducting catfish production in cages in existing ponds and will continue a limited amount of this work after the raceways are developed. Sometime during this spring, the first raceway production units will be put into operation.

The catfish program, new to the station, will be used in cooperative programs with RDC to provide for those people who are interested, research information as it is developed.

Church Directory

BAPTIST CHURCHES

EASTSIDE BAPTIST CHURCH
Old Ocilla Road
REV. EDDIE ALLEN, Pastor
7:30 p.m. — Prayer Service
9:45 a.m. — Sunday Schoool
11:00 a.m. — Morning Worship Service
6:45 p.m. — Training Union
8:00 p.m. — Evening Worship
8:00 p.m. — Wed. Prayer Service

PINEVIEW HOLINESS BAPTIST
5 Miles South of Tifton
REV. WELDON ALLIGOOD, Pastor
10:00 a.m. — Sunday School
11:00 a.m. — Morning Worship

MISS NANCY CECILE CHAMPION

Miss Champion to wed Joseph B. Wetherington

Mr. and Mrs. James H. Champion of Tifton announce the engagement of their daughter, Nancy Cecile to Joseph Bailey Wetherington, son of Mr. and Mrs. Berry W. Wetherington Jr. of Tifton.

The bride-elect is the granddaughter of Mrs. O. C. Weston and the late O. C. Weston of El Paso, Texas. She graduated from Tift County High School, attended Abraham Baldwin Agricultural College and is currently attending the University of Georgia.

Mr. Wetherington is the grandson of Mrs. Berry W. Wetherington and the late B. W. Wetherington of Tifton. He graduated from Tift County High School and attended Oxford College. He is presently attending Emory University and plans to graduate in June.

The marriage will be solemnized June 12 in the Chapel of the First United Methodist Church of Tifton. Invitations are being mailed.

1st Assembly youth receive commendation

A special letter of commendation and congratulations has come to the youth of Tifton's First Assembly of God because the youth of the church raised and contributed to the Speed the Light Program of the Assemblies of God in the amount of $1,012.00 during the year of 1970. A beautiful plaque will be presented to the president of the youth group at the Georgia District Council of the Assemblies of God in Albany in May.

The Speed the Light Program of the Assemblies of God is a youth missionary arm of the church designed to purchase vehicles and radio equipment for missionaries on mission fields. During the year 1970 this arm assisted missionaries with 283 vehicles to be used on their field bringing the total over the 26 year span of the history of Speed of Light to 3,856 vehicles. During the year of 1970 alone, over 1 million dollars was raised for missions throughout the 9,000 churches.

School Menu

Monday – April 26

Chicken and noodles, peanut butter and jelly sandwiches, rutabagas, combination salad, corn bread, prunes, butter, milk.

Tuesday– April 27

Hamburger, green beans, tomato slices, buttered corn, grapefruit sections, milk.

Perch fillet, catsup, buttered potatoes, crispy cabbage salad, mixed vegetables, cornbread, butter, apple cobbler, milk.

L-R: Mrs. Berry Rigdon, Mrs. W. A. Hodges, Mrs. Carl Pittman Jr., Miss Ruth Britt, Mrs. J. L. Stephens and Mrs. Ben Bowen Sr.

Garden club members visit 43rd annual convention

The Tifton garden clubs were well represented at the 43rd annual convention of the Garden Club of Georgia meeting at Callaway Gardens April 13 through 15.

Those going from Tifton were Mrs. Ben Bowen, Sr. and Mrs. W. A. Hodges, representing the Council of Garden Clubs of Tifton, Mrs. Wm. Y. McLain and Mrs. Robert H. Jones (Camellia), Mrs. Carl Pittman, Jr. and Mrs. Darl Snyder (Azalea), Mrs. Berry Rigdon (Pine), Mrs. Bob Kennon amd Mrs. Paul Foolwood III (Gardenia), and Miss Ruth Britt and Mrs. J. L. Stephens (Tifton Garden Club).

The three days were filled with convention activities including excellent reports, interesting speakers, as well as tours of the gardens that were at their peak in spring blooms and foliage.

Those in charge of affairs reported that this was the greatest registration in the history of the Garden Clubs of Georgia.

During the Awards Banquet on Wednesday evening, Tifton was well represented when they received the top Council award and a silver trophy for outstanding work done by the Council this year. The Primrose Garden received third place in the Conservation category, and the Tifton Garden Club third place for its work in therapy for the past year.

The 44th Convention will be held in Macon with the Camellia District as host. Because this is the district of which the Tifton clubs are a part, delegates began this week looking forward to that event.

The garden club members returning say that each session was so exciting and the flower decorations at each event were "breath-taking".

Sue Majeski elected AMCC state president

Sue Majeski, president of the Tift County High Allied Medical Careers Club, was elected State President for 1971-72 at the Thirteenth Annual Convention at Rock Eagle April 16-18. She is the daughter of Mr. and Mrs. Charles H. Majeski.

Elaine Dees, dauther of Mr. and Mrs. Thomas Dees, was Sue's campaign manager.

The club's scrapbook won second place in competition. Its theme was "Reach Out Your Hand."

Main speaker at the "Medical Live-In" convention was Mrs. Lillian Carter, mother of Governor Jimmy Carter, who told of her experiences as a member of the Peace Corps in India for two years.

David White, youthful Science Fair Sweepstakes Winner, was also one of the speakers. He showed slides and told of his original research done on Cancer Cell-Division.

There were 21 exhibits, films and discussion groups representing different medical careers running simultaneously.

Miss Lynette Wells represented Nursing at Grady Memorial Hospital and Miss Wylene Spradley, attending Georgia State, represented Physical Therapy. Both girls are from Tifton.

There were workshops for all youth and adult leaders in Parliamentary Law, Club Projects and Activities, Club Publicity, and Adult Leaders and Advisors. All workshop leaders were State officers. Mrs. Paul Lucas led the workshop on Adult Leaders and Advisors.

Fifteen students, one advisor and three chaperones attended from Tifton.

Personals

Sonny Strange, son of Mr. and Mrs. Walter G. Strange, was recently installed as secretary of Phi Kappa Tau Fraternity at Auburn Univeristy for the 1971-72 school year.

MRS. JAMES LESLIE

Primrose club hears Mrs. James Leslie

Guest speaker at the April meeting of the Primrose Garden Club was Mrs. James Leslie of Shellman who spoke on Bulbs. She gave a most informative talk and showed specimens of daffodils brought in a unique carry-all. Mrs. Leslie made a lovely arrangement of Bersheba daffodils with Arium Italicum which is greenery grown in California. Mrs. Ben Bowen introduced the speaker.

The meeting was held at the home of the president, Mrs. W. B. Johns, on the Moultrie Road. Mrs. Johns called the meeting to order and presided over the business session.

Welcomed as visitors were Mrs. T. E. Phillips Jr. and Mrs. Dewey Walters.

Appointing the dining room table was a bouquet of iris, dogwood and various bulb flowers from the garden of Mrs. Ben Bowen.

Members and guests were served delicious refreshments following the meeting.

RECEIVE GOOD LUCK GIFTS – "This group depicts only one of the monthly visits to the local Draft Board office made in the last two years by representatives of Tift County Post and Unit 21 American Legion and Auxiliary," said Mrs. Sylvia McMillian, Executive Secretary for the local Draft Board. "Many times the hour was 6:30 a.m. or whenever the boys being inducted into service for our country were scheduled to leave." This is a special project of Post and Unit 21 in which each boy being inducted is given a "Good Luck" envelope which contains useful items often not easily accessible when he reaches the Induction Center. These envelopes are assembled by Unit 21 Rehabilitation Chairman Mrs. Loy Morgan and her committee. The main purposes of this project are to express "care" and appreciation to each boy going to serve his country and wish him God's richest blessings and a safe return home at the end of his tour of duty. L-R: Mrs. Clyde Beggs, Auxiliary president, Mrs. Morgan, and boys being inducted, Mikie Whittington, Michael West, Jimmie V. Webb and Johnnie Brown Jr.

T. G. H. Auxiliary installs new officers

Installation services of the T.G.H. Auxiliary were held at Tift General Hospital on April 5 for new members of the Pink Ladies and Red Coats.

Mrs. Beth Norris, Vice-President of the Southwest District, opened the installation with the Auxilian Prayer.

B. L. Southwell, Chairman of the Hospital Authority, installed all of the members.

Mrs. Myrtice Parker, President of the Council on Auxiliaries of the Georgia Hospital Association, installed the officers who are as follows:

Mrs. Ivy Hasty – President, Mrs. Mickey Goodwin – Vice-President, Mrs. Sylvia Taylor – Recording Secretary, Mrs. Lois Robertson – Corresponding Secretary, and Mrs. Evelyn Hasty – Treasurer.

Among those attending the installation services were Virgil Parker, Administrator of Tift General Hospital, and Mrs. Gail Brooks, Director of Volunteers.

Seated, l-r: Mrs. Hallman Hasty, Mrs. Carl Parker, State Auxiliary president; Mrs. Ralph Norris, District vice president; Standing: Mrs. Wayne Goodwin, Mrs. Lois Robertson, Mrs. Ray Taylor and Mrs. O. H. Hasty.

Three of new members at JWC meeting, l-r: Mrs. Vernon Googe, Mrs. Gary Adams, and Mrs. Danny Sterling.

New members welcomed at Junior Woman's Club

The Junior Woman's Club met at the Farmers Bank Camellia Room for their monthly meeting with President Ann Prince presiding. Pat Slack read the Collect.

It was announced that four departments won second place in District of the Federated Women's Clubs. They were Public Affairs, International Affairs, Conservation and Education.

Patricia Pittman was second place winner in the District sewing contest.

The Public Affiars Department was in charge of the program. Larry Marchant, Conference Planner for the Rural Development Center, spoke on the functions of RDC.

Four new members were initiated into the club: Kay Adams, Annette Googe, Beverly Sterling, and "Twinkle" Yates.

Nancy Fulp was welcomed as a transfer member.

Mrs. Florence Blumkin of New Rochelle, New York was a guest at the meeting. She is the mother of Wendy Eastman.

Refreshments of coffee and sweet rolls were served following the meeting.

Duplicate Bridge

Winners of last week's Duplicate Bridge Club were:

First place – Mrs. C. L McMullen and Mrs. Harry Huff; second – Lewis Underwood and Bill Tomme; third Mrs. Abbi Quinn and Mrs. Helen Shoquet both of Albany; fourth – Fran Harmon and Miss Innes, both of Valdosta; and fifth – Mrs. C. C. Perry and Mrs. Murray Marcus.

Walter Johnston speaks to Garden Gate Garden Club on "Drugs."

Mr. Johnston discusses drugs at Garden Gate club meeting

Walter Johnston, Director of the Coastal Plain Regional Library and a member of CODE-50, Tift County's Committee on Drug Education led an informative discussion on Drug Abuse at the April meeting of the Garden Gate Garden Club. The meeting was held at the home of Mrs. Horace Veal with Mrs. C. R. Gentry and Mrs. Ernest Bishop serving as co-hostesses.

Mr. Johnston showed a film which identified and explained the drugs' chemical names and their slang jargon. Education kits containing Marijuana, Heroin, all types of pills that are used as depressants and stimulants and the different types of syringes used by persons to insert drugs into their bodies were also shown. A chemical facsimile of Marijuana was burned so those present could become acquainted with the odor of its smoke. Mrs. O. R. Spradley introduced Mr. Johnston.

Mrs. Spradley, president, presided over the business session. Mrs. Frank Hogan reported on the newly organized Community Clubs Council in conjunction with SURGE and announced that it was to meet Tuesday, April 13, at 7:30 in the Rural Life Building at ABAC. The Garden Gate Garden Club is responsible for selecting the Garden and Beauty Spot of the month. Attractive new year-books were given members.

During the social hour delicious refreshments were served from a beautiful fully appointed table in the family room. Arrangements of mixed spring flowers accented with Easter bunnies were placed throughout the receiving rooms of the Veal home. Mrs. Cecil Bishop received the attendance gift.

BE&PW hold second prayer breakfast

The dining room of the Holiday Inn was setting for the second early morning Business and Professional Women's Club Prayer Breakfast.

The Rev. Charles Culberth of Sylvester First Methodist Church was guest speaker. Rev. Culberth inspired each one present with his inspirational devotional on prayer and love reading from Ephesians 4:1-7. He stressed that Jesus prayed about everything He faced and how important prayer should be in our daily life today.

Mrs. Gail Wyles, head bookkeeper for Kraft Homes and Mrs. Nell Wollard, Worth County Hospital official, accompanied Rev. Culberth to Tifton and gave their personal testimony which was most inspiring and uplifting.

Prior to the delicious breakfast the Rev. Raiford Archer gave the invocation after which the group sang "He Lives" led by Bobby Usury and accompanied at piano by Miss Susan Archer.

Mrs. Erie Archer and Mrs. Blanche Gregory, Civic Participation Chairman and Co-Chairman were in charge of this inspirational breakfast.

Rituals held at sorority meet

At the regular monthly meeting of Beta Sigma Phi, held at the Camellia Room of the Farmers Bank, Mrs. David Willis was recipient of the lovely and inspiring Ritual of Jewels Degree which was given by President Mrs. Floyce Richards. Candlebearers were Mrs. Robert Wachholz and Mrs. Carlton Kirby. Mrs. Sam Thompson presented the new sister to the sorority.

Next was the impressive Pledge Ritual. Those receiving this ritual were Mrs. Danny Sterling, Mrs. John M. Davis and Mrs. L. E. Lucas Jr. Ushers were Mrs. Thompson and Mrs. Gene Branch.

During business discussion it was announced that several of the members had put out Easter Seal boxes in the downtown business district and in both shopping centers.

Also announced were plans for our annual Founders' Day Banquet to be held on May 1 at the Holiday Inn.

Election of officers for the coming year was held with the following results:

President – Mrs. H. E. Branch, Vice Presidnet – Mrs. Carlton Kirby, Corresponding Secretary – Mrs. A. L. McClellan, Recording Secretary – Mrs. Matthew Eastman, Treasurer – Mrs. Shell Hartley Jr. and Extension Officer – Mrs. Jim Nelson.

Highlight of the evening was Secret Sister unveiling. Each person enjoyed exchanging gifts an d finding out who their secret sister had been for the past year.

L-R: Mrs. Floyce Richards, Mrs. David Willis, Mrs. John M. Davis, Mrs. Danny Sterling and Mrs. L. E. Lucas Jr.

The price of everything has gone up. Right?

Wrong.

The price of almost everything has gone up. But there's one important exception: your electric service.

Since 1960, the national cost of living has risen more than 35 percent. In the same period, our average residential price per kilowatt-hour has dropped almost 16 percent.

And electricity gives you full value for the price you pay. For example, just two cents' worth of electricity will brew 50 cups of coffee. Or toast 100 slices of bread. Wash eight loads of laundry or shave a face every day for two years. That's getting your two cents' worth and more. Much more.

Now wouldn't you agree that electricity is the biggest bargain in your family budget?

Right.

COASTAL PLAINS REGIONAL COMMISSION

GRANTS FOR PREPARATION OF COMPREHENSIVE AREA PLANS FOR WATER AND SEWER SYSTEMS

The Farmers Home Administration may make grants to public bodies for the preparation of comprehensive area plans for water and sewer systems in rural areas.

Eligibility:

Organizations eligible for comprehensive planning grants include public bodies such as counties and townships, also state,regional and local planning commissions. To be eligible an organization must:

1. Lack the resources to immediately finance the planning.
2. Be as broadly-based and representative of the interests of the rural area as it can be under state statutes.
3. Have a proposal for comprehensive planning that is supported by local officials and private and public agencies interested in the development of water and sewer facilities in the area concerned.
4. Have the authority to prepare official comprehensive plans for the development of water or sewer systems in rural areas.

Use of Grant Funds:

Comprehensive planning grant funds may be used for:

1. Technical and professional services obtained through contract.
2. Salaries of technical, professional and clerical assistants employed specifically to work on the plan, also pertinent administrative costs.
3. Necessary test wells and soil and water investigations. The funds cannot be used for the complete development of wells.

Area to be Covered by Plan:

The rural area to be included in a plan may be an extensive area in open country as well as towns and villages with populations of 5,500 people or less. The area may include an entire county or several counties, or areas which form a logical geographic or economic section of a state.

The Plan:

The plan should encourage efficient and orderly development of rural communities by assembling information needed to avoid overlapping, duplication, under-design or over-design of community water and sewer facilities that may be constructed in the area. The plan should include the existing situation as well as projections of such factors as: population distribution, economic strength of local agriculture, industry and business, natural resources, land-use patterns, local or public facilities such as schools and roads, and other items which affect community development.

The plan must take into account the existing plans of public agencies and private interests for the development of the area. The plan will describe the present and potential water and sewer needs of each segment of the area covered by the plan.

Applications:

Organizations may apply for grant assistance at the Farmers Home Administration county office serving the area in which the organization is located.

Rural Housing

AN OPEN LETTER CONCERNING RURAL SLUM HOUSING

May, 1969

Howard R. Grumpelt, Ph. D.
Chairman of the Housing Committee
Kent-Queen Anne-Talbot Area Council
Federal Building
Centreville, Maryland

National Rural Housing Conference
Working Paper #5

May 12, 1969

AN OPEN LETTER CONCERNING RURAL SLUM HOUSING

Slum housing in rural areas is probably far worse than it is in our cities. Some of the most impoverished slum housing in Maryland, and perhaps in the country, exists on the Eastern Shore of Maryland. The only governmental agency that currently has the authority and flexibility to have a significant effect on rural slum housing is the Farmers Home Administration. However, because of a very limited number of staff and meager funds for home mortgages, the impact of the Farmers Home Administration is at present almost nil. Something needs to be done.

On March 11, 1969, a meeting was held in Washington to explore this issue. The following named people and groups were represented: the boards and staff of the Kent-Queen Anne-Talbot Area Council, the Area Council, the Dorchester Community Development Corporation and Shore-Up, Inc., the Talbot Action Group, the Dorchester League of Women Voters, Mr. Philip Campbell, Under-secretary of Agriculture, Mr. James Smith, (National) Director of the Farmers Home Administration, and Congressman Rogers C. B. Morton, Senator Joseph Tydings and Senator Charles Mathias. Congressman Morton aided in making arrangements for the meeting.

I would like to try to summarize the presentation that was made by Mrs. William R. Hopkins, representing the poor, Mr. Samuel F. M. Adkins, representing local builders, Mrs. Edward E. Colledge, representing the Dorchester League of Women Voters, and myself, Dr. Howard R. Grumpelt, representing the Kent-Queen Anne-Talbot Area Council. I have added a few facts in support of some of the statements which were made at the meeting.

1. Local banks are charging between 7 1/2% and 8% interest rates on home mortgages and rates are rising 1/4 of a percentage point a month. Poor people cannot afford to pay these rates and applications for home loans have decreased severly. The uninformed might think that the Federal Housing Authority could be of major value; however, this agency was developed primarily to aid cities. It is not able to have more than a minor effect in rural areas because it requires adhering to regulations which most rural areas would not be able to meet for several years (e. g., building, plumbing, electrical codes, plus a housing authority).

2. The Farmers Home Administration (FmHA) has both the authority and flexibility to have a very significant impact on rural slum housing. They can a) grant loans with interest rates as low as 1% depending on how poor a family is, b) check

credit and job stability records of applicants and c) supervise construction to insure that a home is well built. The FmHA has had little success in stimulating rental housing because it is unable to make outright grants of funds. However, it can very significantly stimulate house construction for family ownership. Unfortunately, on the whole of the Eastern Shore the Farmers Home Administration has processed only 365 home mortgage loans since July of 1967, resulting in an average of 24.3 home loans in each county per year. This is hardly keeping up with the rate of home deterioration. The Farmers Home Administration does not have the staff (10, including secretaries, for the whole Shore) nor the loan funds to have an impact.

3. Currently many poor people must wait between nine months and a year in order to procure a loan from the Farmers Home Administration. Poor people generally require more aid than others in developing an application. In addition, a number of builders would like to construct large numbers of low-cost homes at once and sell after construction. This would cut costs to buyers but builders cannot tie up huge sums for long periods of time. The FmHA, the major rural creditor for the poor at present, cannot process loans rapidly enough to allow builders to work in this manner.

4. The Eastern Shore of Maryland needs help desperately. We

have a rising population, a high percentage of poor people, and housing on the Shore is miserable. Consider the following facts:

a. Between 1950 and 1965 the population of the Shore increased 15.2% (from 177,267 to 208, 970 - Md. Dept. Health Publication).

b. Median Income of families in 1960 was $3,992 compared to $6,309 for Maryland and $5,660 for the U. S. as a whole. The Shore is 36.7% below Maryland and 29.5% below the U. S. in median family income.

c. While family income has undoubtedly risen since 1960, one indicator suggests that we are falling further behind the rest of the state. According to a 1966 Sales Management Survey, between 1959 and 1965 there was a 24.8% increase in effective buying income per household for the Shore. However, for Maryland as a whole there was a 36.4% increase.

d. The Shore had a high percentage of people employed for less than 26 weeks per year (24.2%), a high rate of unemployment (7.6% vs. 4.8% and 5.2% for Maryland and the U. S.) and our non-white unemployment was especially large (average rate of 14.2% vs. 9.5% for Maryland and 8.7% for the U. S.) as of 1960.

e. 27.3% of homes on the Shore were considered dilapidated or deteriorating in 1960, whereas for Maryland and the U. S. as a whole the comparable figures were 13.9% and 18.8%. In addition, on the Shore 30.4% of homes had no toilets, whereas only 7.1% in Maryland and 10.2% for the U. S. lacked this facility.

In other words, we have an increasing population with a high proportion of poor families who live in wretched slum housing. The need for relief seems monumental.

5. Unless otherwise indicated, the above statistics were derived from the 1960 U. S. Census Report. Unfortunately, no more recent and reliable data is available; however, we believe that problems in housing have deepened, not diminished. One report analyzing the situation on a national level supports this view. A semi-annual survey of U. S. housing just published by Advance Mortgage Corporation concluded that the housing shortage is now the worst it has been in 20 years. For instance, an inventory of completed houses for sale at the end of 1968 showed 42,000 compared with 94,000 at year-end of 1965. Problems are compounded by a 30% increase in household formation and the fact that the home buyer today will "pay 25% more in monthly payments for the

same house as a year ago," due to price, interest, tax and insurance increases. If these figures are accurate, it appears that the problem is getting worse all the time. We know families that have temporarily broken up because only a single room could be found at a reasonable rent. Some family members have to live elsewhere.

6. We understand that the Congress must establish priorities concerning how funds are spent. We feel that people on the Shore and in rural areas throughout the country consider housing to be one of the highest priorities. We have attended a number of open meetings at which angry people have come forth to complain about housing. At our local level there are few issues that people are more concerned about. And yet frustration mounts as few concrete gains are seen.

7. One grossly unfair aspect of current U. S. laws is that a middle or upper income person can pay high interest rates and then deduct this interest from the amount of his income for tax purposes. On $30,000 of borrowed money at 8% interest, a $15,000 a year man with a wife and child will save, at a very minimum, $487, on his federal tax of $2,483 (assuming standard deduction), effectively reducing his interest rate to 6.7%. The poor person who has a more diminutive loan and who is paying a small income tax will save little, if anything at all, by paying interest. Richer people get

a helping hand, the poor do not.

8. While the above analysis suggests that the Eastern Shore of Maryland desperately needs help, help which could be provided by an increase of staff and loan funds from the FmHA, it does not indicate the positive influences which could accrue from this help. These influences can be briefly described.

a. Most FmHA home mortgages are used by individuals to purchase a home of their own. For the poor this leads to increased pride and greater investment in their communities.

b. City government officials relate that migration to cities, especially by the poor, compounds problems that exist in urban environs. If more adequate housing was available in rural areas, fewer rural people would move to cities.

c. State and local governments are strongly in need of additional revenues. By increasing home ownership, revenues to these groups will be enhanced.

d. The cost to the federal government of making a tremendous impact on rural slum housing is minimal because most of the funds used by FmHA are in the form of federally insured notes for loans which are purchased by banks and commercial credit houses. In addition, the poor have been excellent risks.

Of 590 rural housing loans currently outstanding to the Farmers Home Administration from the Shore, all but 22 are up-to-date with their repayments.

e. Finally, although some areas of the country are economically overstimulated, the Eastern Shore is not. Median incomes are low on the Shore and jobs are continually being lost as farmers turn to the use of more mechanized equipment. We have estimated that an addition $54,000,000 could come to the Shore over the next five years if the FmHA could substantially increase their ability to process home loans.

9. We believe that the problems in housing which we have outlined are not peculiar to the Eastern Shore. We believe that if appropriate studies were undertaken, it would be found that most of rural America is suffering from the same difficulties. Must rural areas be neglected?

10. Finally, we turn to some possible ways of resolving our difficulties. We believe that the Farmers Home Administration is at present having little influence on rural slum housing. This agency in 1962 took on vast new responsibilities by becoming involved with home mortgages for a large portion of the rural population. However, it is one of the few federal agencies that has not increased its local staff in over

22 years. In 1946 we had 10 people employed in local FmHA offices on the Eastern Shore of Maryland. Today we have 10, exactly the same number. The following alternatives could each aid in resolving our problems:

a. Increase the allotment of funds for staff and for the processing of mortgages. At least three times the current staff at local levels is required for the FmHA to be capable of significantly reducing slum housing (one secretary, one bookkeeper, one loan writer, two inspector-appraisers and one supervisor per office). This would seem to be the simplest and most equitable solution to the problem.

b. Allow state agencies and volunteer groups to aid FmHA offices. The law presently prohibits much aid for most of the important work in processing loans. (Recently in New Jersey, the State paid staff to work on home loans in FmHA offices but it was ruled that this was not allowed under present law.) In addition to changing the law, a program should be developed to train volunteer groups for some of the slightly complicated aspects of FmHA functioning. We currently have volunteer groups who are willing to provide some help, but they would need training

Background Paper # 9

ECONOMIC DEVELOPMENT OF RURAL AREAS

GROWTH CENTERS CONCEPT -- HOAX OR PROMISE?

Dr. W. Nelson Peach
University of Oklahoma

ECONOMIC DEVELOPMENT OF RURAL AREAS

GROWTH CENTERS CONCEPT -- HOAX OR PROMISE?

The people will live on.
The learning and blundering people will live on.
They will be tricked and sold and again sold
And go back to the nourishing earth for rootholds,
The people so peculiar in renewal and comeback,
You can't laugh off their capacity to take it.
The mammoth rests between his cyclonic dramas.[1]

In a real sense it is a devastating reflection of our national goals that we advertised to the world that we had discovered the secrets of the atom a quarter of a century before we discovered poverty in the United States. The awful truth is that at the meetings of the Chambers of Commerce, the DAR and thousands of other patriotic and super-patriotic gatherings we are prone to boast of our accomplishments and only reluctantly admit the existence of 30 millions of people living in poverty. And all too often, in this land of affluence, poverty is attributed to indolence or sin, or both.

Herein lies the answer to the question posed in the title of this paper. Whether growth centers outside our central cities will be a promise or a hoax depends essentially on our attitudes. No responsible person seriously doubts our ability to develop growth centers outside our metropolitan dung heaps if we wish to do so. Surely a nation about to put a man on the moon can develop growth centers if it so desires. Surely a nation about to squander a hundred billion dollars or more on a worthless ABM system has the resources to develop growth centers, if it wishes.[2]

[1] *Complete Poems*, Carl Sandburg, New York, Harcourt, Brace and Company, 1950, p. 615.

[2] The current appropriation request is for a few billions only, but we can have confidence in the Pentagon to increase this to more "reasonable"cost levels.

It might be too great a shock to our national character to suggest that a program of growth centers be financed by diverting part of the funds we now spend on cat food, dog food, or bird food and supplies, or part of the funds now spent at beauty parlors to develop all manner of outlandish hairdos and wigs, or part of the funds now spent on such approved activities as the billions spent advertising cosmetics, soap, cigarettes, and living bras. It would perhaps be more unthinkable to suggest that we devote the cost of a few more planes or a battleship or a few more surplus hydrogen bombs to such a doubtful undertaking. Nor apparently can we afford the slighest slowdown of our feverish activity in the fields of chemical and biological warfare. The Pentgon, its contractors, and a growing number of academic prostitutes foul the air with their incessent barrage of propaganda to the effect that these things are all necessary to save us from communism.

The corollary is that less essential activities--the ghettos, our polluted air and water, and other problems--must wait--perhaps another century. This is where we stand with respect to growth centers. There is polite agreement that they offer some hope of relieving part of the growing pressures in our ghettos but the development, financing and implementing a program of growth centers does not foot up to a token program--up to the present.

Most Americans agree that a broad program of rebuilding our major cities is long overdue. One could also compile a rather long list of isolated efforts to do something in this area. There have also been some solid achievements. But there is no vigorous national movement which promises to get the program off the ground. Despite our programs to date, it is fair to state that the problem has been getting worse, rather than better. Indeed, if we treated the Pentagon with the same fiscal generosity we have shown toward our major city programs, it is doubtful if the Pentagon could mount a successful invasion of

Anguilla. Our program to date might appropriately be labeled the half per cent approach, meaning that we are appropriating perhaps half a per cent of the funds needed. To make our major cities livable by the end of the present century will cost trillions of dollars. Projections of our national economy indicate that we can well afford such costs, if we place them high enough on our list of priorities.

Data on Housing of the Poor

It is also a reflection of our lack of interest in the problem that data on rural housing is scarce. Once a decade in connection with the population census required by the Constitution a few questions are asked about housing conditions, their age, their bath facilities, the existence or lack of hot and cold running water, and a few other items. When the Census proposes to add a question or two, there is always an angry outburst to the effect that this is an invasion of privacy. For example, it had been proposed that Census takers ask in 1970 if a bath is shared with others.

In a daring display of statesmanship 120 Congressmen recently joined to co-sponsor a bill that will limit mandatory Census questions in 1970 to six questions: name, age, sex, race, marital status, and relation to the head of the household. Census questions have been mandatory since 1790. Persons who are prosecuted and convicted of refusing to answer Census questions are subject to a possible fine of $100 and six months in jail. It is worthy of note that since 1790 two persons have been convicted, both in 1960. They were each fined $100.[3]

---

[3] See *The Washington Post*, April 2, 1969, p. A2. A decision was made later at the White House level that the Census Bureau should proceed to have the necessary 150 million forms printed in order to be able to meet the April 1, 1970 deadline. *Ibid.*, April 8, 1969, p. A9. A few days later it was announced that questions relating to the adequacy of kitchen and bathroom facilities had been reworded. *Ibid.* May 18, 1969 p. A14.

A record of this type can hardly be called an epidemic. So far as I am aware, there are no cases on record where an individual has given information to a Census taker and demonstrated that this information on the individual was ever revealed.

What, then, is the basis for the opposition of these self-appointed protectors of the nation's morals and privacy to questions proposed by the Bureau of the Census? My suspicion is that it is fear that national, state, and local totals might so shock the nation's conscience that we might be forced to do something to alleviate the condition. It may be recalled that there was vigorous opposition to Census questions relating to income during the past several decades. The opposition had a point. Income data collected during the past three Censuses (supplemented by sample data during intercensal years) have documented beyond any reasonable doubt the existence of mass poverty in this affluent nation. The result has been that we have a poverty program, whatever its shortcomings.

We do not have data on the number of rural homes that have been abondoned during the past couple of decades. But, for many of our poorer areas it may be suggested that the number of abandoned houses far exceeds the number of new houses built in these areas. One arrives at this tentative conclusion by observation, rather than by actual count.

We have detailed information on each professional baseball player in the United States. We know how many times he has played a part in getting an opponent out, how many times he has been at bat, how many times he has struck out, been safe at first, second and third, and how many home runs he has hit. We have similar information on every professional sport, some of it running back many decades or a century. We have warehouses full of this kind of trivia and it continues to accumulate at an almost alarming rate. The reason we have it is

that there is a market for it. The reason we have such scant information on housing in rural poverty areas is the lack of a market for it, and our reluctance to develop one.

Desmond Morris, in his bestseller entitled *The Naked Ape* (New York, Dell Publishing Company, 1967, p. 119), makes the point that we have designed our zoos much like our cities. I would like to suggest that the similarity not be interpreted too literally. Without presuming to be an authority on zoos, it seems fair to note that they are much better designed and maintained than our central cities. Generally, zoo inhabitants have clean air, clean water, and adequate food. The Society for the Prevention of Cruelty to Animals would not tolerate for one day the conditions that prevail in our typical ghetto. One is tempted to make the observation that *The Naked Ape* enjoys no counterpart to the SPCA. There have been no press reports of riots protesting intolerable living conditions among zoo inhabitants, such as those becoming an increasingly favorite pastime among their Naked Ape descendants.

If we are seriously searching for a 10 year goal and program for rural housing, we might set our sights on raising the housing levels for humans at least up to the standards currently enjoyed by our ancestral apes.

Profile of a Model County*

The fad these days is to speak of model cities, cities that have solved their major problems, and something to be imitated by others. Examples are difficult to find. I wish to provide a brief profile of a model rural county, not in the sense of something to be imitated,but rather as representative or typical of hundreds of rural counties in poverty areas around the nation. The particular county we will describe is in the Ozarks area, and has officially been designated as a poverty area, a title for which it has qualifications in

---

*This is a discussion of conditions in an actual county. The name of the county has been deliberately omited. Data on which the comments are mainly based are presented in tables in the Appendix.

abundance. The county is as amply endowed in its own way as the latest sex symbol is in her way.

Population poured into our model county between 1907 and 1920, and total population more than doubled. But the county never recovered from the post World War I depression, and net out migration began during the 1920s. Some, who had migrated, returned to the farm during the depressed 1930s and population reached a peak in 1940. Since then more than half the people living in the county have migrated elsewhere, in the largely vain hope of finding a better living. Population in 1960 was less than it was half a century earlier.

Our model county suffers from an excess of the very young who have not yet entered the labor force, from an excess of the aged who have retired from the labor force, and from a below average participation in the labor force by those in the age group 18 to 64. For example, in 1930 only 3.6 per cent of the total population was in the age group 65 and over. This had risen to 15.6 per cent by 1960.

More than 90 percent of the population of our model county is white, supplemented with a sprinkling of negroes and Indians. Among the 25 years of age and over group, less than four per cent has received four years or more of college training.

The number of persons employed in our model county declined 50 per cent between 1940 and 1960. Agriculture had been the principal source of employment and as late as 1930 accounted for more than half of all jobs. Thirty years later agricultural employment had declined 80 per cent. Although the land in farms doubled during this period, the number of farms was cut in half. There were about as many autos in the county in 1930 as there were three decades later, but the number of trucks increased sevenfold and the number of tractors increased a hundredfold.

increased a hundredfold.

Mechanization and the increased size of farms pushed the bulk of the farm population out of the county or into two other traditionally low paying industries -- retail trade and service. Those who insisted on remaining on the farm found the going tough. In 1959 the average value of farm products sold per farm was only $2,000 and more than 90 per cent of the total came from the sale of livestock and livestock products. Most farm operators in our model county are forced to supplement their income by working off the farm. In a recent year more than half the total number of farm operators in the county received more income from nonfarm sources than from the sale of farm products. Mineral production, except for the sale of small amounts of sand and gravel, is not important. Manufacturing is virtually nonexistent.

In 1959 there were 2,437 families in our model county. Two out of three of these families received incomes of less than $3,000 -- the widely accepted poverty level of income. Five out of six families had incomes under $5,000. Only four families in the county had incomes of $15,000 to $24,999. The number of families with incomes of $25,000 or more was too small to be reported.

Government welfare payments and government employment account for more than half the total of all personal income in our model county. Income from government is more important than all the farm income and private nonfarm income. For persons interested in these kinds of statistics, the county has become more than one half socialist.

Housing conditions in our model county reflect these low incomes. The number of housing units declined 30 per cent between 1940 and 1960. Almost two thirds of the housing units do not have a flush toilet, bathtub or a shower. Almost half the housing units have no piped water available. In the 1960 census about half the housing units were rated sound; the other

half were in the categories: deteriorating or dilapidated.

In a recent year (1964) there were no daily newspapers in the county, although there was one weekly. There were no radio or TV stations. More than 85 per cent of the 1,000 miles of highways were unpaved.

Another quote from Carl Sandburg comes to mind:

> "I'm holding my own,"
> said more than one pioneer.
> "I didn't have anything
> when I landed here
> and I ain't got anything now
> but I got some hope left.
> I ain't lost hope yet.
> I'm a wanter and a hoper."[4]

One wonders how many of the people in our model county have much hope left.

Rural America During the 1970s

What, then, can be done to improve living conditions in rural America during the next decade? First, I think substantial progress can be made in a decade but I doubt that a problem that has been half a century in the making is likely to be solved in such a short period of time.

It seems that a realistic program can be divided into two parts. One is improvement of existing towns and cities. The other is the construction of new towns and cities. We will discuss improvements in existing towns and cities first.

I think it is a mistake to concentrate on a housing program to the exclusion, or relegation to a minor role, of other essential programs. During the past half century most of the people in rural America have migrated to our cities in the hope of finding better jobs. Thousands of once prosperous small towns that served our farming areas have dried up because our farm population has shrunk. I have seen a cow performing its

---

[4]Carl Sandburg, *op. cit.*, p. 486

natural functions in an abandoned bank building, possibly on the same spot where a stern banker once decided which applicant secured a loan and which one was refused. No conscious effort was made to provide decent jobs for our uprooted farm population.

Recently, a businessman, contemplating the construction of a plant in a small city near our model county, was forced to abandon the project, because, he said, the labor force was functionally illiterate. What he meant was that as a group the education of the potential workers was so poor that they could not be trained for jobs in a modern plant.

If we are to work toward improved living conditions in our small towns and cities, I think we must work simultaneously on three fronts: (1) an improvement in the physical appearance (housing, parks, playgrounds, school, streets, sewer systems, water supply, etc.), (2) improved education at the grade school and high school level, and vocational training, and (3) providing incentives (bribes) to induce businessmen to locate plants in our small towns and cities.

Within many small towns there is growing concern about the future, and this includes the power elite in many instances. In one small city in the Ozarks, a gentleman who happens to own a department store, a feed store, a grocery store, a car agency, a truck agency, (and sundry other enterprises) has been financing a number of inhabitants to enable them to get started in the chicken farm business. As he puts it, every time one of them makes a living, he is a customer at his department store, his grocery store, his feed store, and he may buy an auto.

I suggest that one, or a small number of small towns be selected for immediate improvement. The town might be selected because the bulk of its citizens show a genuine interest in improvement. There are many such towns. With

relatively little effort and relatively small expense, existing houses can be repaired and painted. In many small towns it almost seems that none of the houses has been painted in the postwar II period. Hot and cold water can be provided, as needed. A bath can be installed. The infrastructure can be raised to acceptable standards--streets, sewers, the public water supply, etc.

While this is going on, the educational system can be improved. Teachers might be provided an incentive to return to the classroom as pupils for a year or two. Part of the incentive might be that their salaries could be continued while they attend school, and their regular annual salary can be raised when they return to their usual place of employment. New courses can be added to the curriculum. Vocational schools can be started or improved. The goal here is to prepare as large a percentage of the population as possible for productive employment in a modern plant.

As the town's physical appearance and educational system improves, it becomes eligible for a wide variety of modern plants. The head of one of the nation's largest firms in selecting plant sites has made the significant observation that 80 per cent of the plants built during the past quarter of a century could have been located almost anywhere. The traditional close connection between the location of physical resources (coal, iron, and other minerals) and plant location is no longer a deciding factor in most instances. If one is tempted to doubt that statement, he need only look at what has happened to the largely destroyed economy of Japan since 1945. Importing most of her coal, iron, and petroleum (frequently from half way around the world) she has become one of the top four producers of goods and services in the world. She has been able to do this mainly because her most valuable resource--her people--has been trained to work in modern industry.

What Japan has demonstrated is that any area of the world--however poorly endowed with physical resources--can attain a decent standard of living if its people are prepared for work in modern industry. What has happened in Japan can happen in rural America if we wish it and if we are prepared to take the necessary steps. We can't do it with miserable housing and inadequate schools.

If we are to induce businessmen to locate plants in our smaller towns and cities--i.e. those that have taken the trouble to prepare for industry,--one of the basic requirements is an efficient, low cost transportation system--by air, land, or water--as the case may be. In many cases this may involve only the construction of a modern highway that connects to an existing, nearby modern highway. In many other cases, the city is already located adjacent to a modern highway. Tax inducements of various types can also be offered, provided care is taken to assure that benefits go to legitimate firms--not to low paying, fly by night organizations.

I suggest that if a few of our smaller towns are revitalized in the manner just outlined, word will spread rapidly throughout the land. The cost of such a program will be relatively small, especially when compared with the benefits. It should be regarded as an investment in human resources and their environment--an investment that is almost certain to pay high and continuing dividends. Viewed narrowly as a business proposition, according to accepted principles of private enterprise, the process of converting a stagnant, miserable small community, with low incomes and a big dose of welfare money into a healthy, prosperous, expanding community makes good sense. To the statesman or politician, it means a reduction in welfare payments and an increase in taxes. The increased taxes will amount to about 25 per cent of the increase in income. (Even the Pentagon should be happy about

such a development, as they stand to receive the bulk of the increased taxes, if we continue past policies). To the businessman improved incomes in rural areas mean new markets for billions of dollars of goods and services.

A program of building new towns and cities within a radius of up to 100 to 150 miles of major cities offers genuine prospects for relieving the congestion of our large cities. I refer to the design of new cities with a built-in maxium population of, let us say, 150,000, something akin to the new towns being built around London, England. Technical problems of designing such cities are minor. Architects, planners, sociologists and others are prepared to design any given number of them, if the attitude and adequate financing become available. To provide residents of new cities with the advantages of the large city, but without the principal disadvantages, will require modern transportation facilities from the new city to the large city--typically a modern highway, or possibly an airport. An essential element in such new towns and cities will be adequate provision for integrated housing. Incentives to private business to induce them to locate plants in new towns and cities will also be required.

These two programs--modernizing of existing small towns and cities, and the building of entirely new towns and cities--offer real hope for relieving some of the congestion in our major cities. There is no reason to think they can't be successful, if we want them to be.

APPENDIX

The information in the following tables relates to the *Profile of a Model County*. Most of the tables appeared first in a series of small volumes on 17 counties in the Ozarks area entitled: *Human and Material Resources of ------County*, by W.N. Peach and R.W.Poolex. The volumes were published by the Technology Use Studies Center, Southeastern State College, Durant, Oklahoma, 1966. The Center was established under a contract with the National Aeronautics and Space Administration.

The general source for Tables 1 through 5 and Table 8 is the U.S. Census of Population for the indicated years; for Tables 6 and 7 is the U.S. Census of Agriculture for the indicated years; for Tables 9 and 10 is U.S. Census of Housing for the indicated years. More detailed source citations are available in the publications cited above.

Note: Components may not add to total because of rounding.

Rural Development: How USDA Helps

FOREWORD

The purpose of rural development is to create job opportunities, community services, a better quality of living, and an improved social and physical environment in the small cities, towns, villages and farm communities in Rural America. It is hoped that the migration of people to the great metropolitan centers can not only be stemmed, but reversed.

Rural Development is not a new agency of government. Built on local initiative, it is a movement which encourages local citizens to identify their problems, their assets and their needs and then encourages them to develop action programs which would both improve the environment and expand the opportunities for productive employment.

The U.S. Department of Agriculture offers educational, organizational and financial assistance which may not be available locally. This booklet is intended to outline that assistance.

The agencies of this Department urge you to contact their local representatives for more information.

Clifford M. Hardin

COOPERATIVE EXTENSION SERVICE

The Extension Service conducts educational programs to stimulate rural development activities. These are conducted for groups, individuals, and personnel of public and private agencies interested in developing the economic, social and cultural livability of their community.

These programs are designed to stimulate interest among local leaders and to develop understanding so that the principle of rural development may be effectively applied.

Cooperative Extension:

* Conducts **educational programs** to help rural development leaders recognize opportunities, analyze problems, evaluate alternatives, set priorities, and organize to achieve goals.

* Trains leaders to learn about and use government and private **services and resources** for development.

* Assists other government agencies involved in planning and development activities.

* Makes available professionals from the land-grant universities to assist local groups.

* **Assists local groups** in evaluating progress toward locally identified goals and reporting this to the community.

FARMERS HOME ADMINISTRATION

The Farmers Home Administration is USDA's rural credit agency, providing loans and grants to individuals, groups and communities to finance a broad spectrum of programs contributing to rural development.

More than $1.6 billion was invested in rural America by the Farmers Home Administration in fiscal 1970. Except for a few million in grant funds, all of this will be repaid with interest. In 1971, more than $2.1 billion is expected to be invested in the agency's programs.

Loans are made only to individuals and groups unable to obtain credit elsewhere, and only in communities of not larger than 5,500 population.

Highlights of the **Farmers Home** program are:

* **Rural housing loans.** More than 61,500 families obtained new or improved housing last year as a record $587.9 million was advanced, over 98 percent provided by private investors on an insured basis. Nearly 300,000 people are included in the families served.

* **Water and waste disposal systems.** Almost four million rural residents have benefitted from installation of modern facilities in the countryside and small communities under this program. About 4,000 communities have participated in one or both of these loans.

* **Economic opportunity loans.** These low-interest loans are made to low-income farmers and other rural citizens to improve the borrower's farming capability or to enable him to develop or expand a small business or service. Cooperatives serving low-income people also are eligible.

* **Farmer program loans.** Farm ownership loans, to finance or refinance mortgages on property, and operating loans, to provide funds for feed, seed, fertilizer and other farm expenses, support the family farm concept.

* **Emergency loans.** Emergency loans at low interest are made in designated disaster areas.

Other loan programs of the Farmers Home Administration include those to construct housing for farm laborers, to develop rural homebuilding sites and to build self-help housing units. Watershed improvement loans, including projects for flood control, soil conservation and recreation, also are available.

Farmers Home Administration provides counsel and technical advice on rural development projects through 1,700 county offices and 41 state offices serving America's 3,000 counties.

FOREST SERVICE

Forest Service programs, all related to forest resources, have an important and direct effect on Rural Development.

The National Forest System contains 186 million acres of working lands which provide 25 percent of the timber processed by the wood-using industries, generating hundreds of millions of dollars in payrolls and work for thousands of people in rural communities.

The **Forest Service** provides:

* Training and work experience to help upgrade the skills of rural youth and adults through the Neighborhood Youth Corps, Work Study and Work Experience programs, Operation Mainstream, and Manpower and Training Act Programs.

* **Research** that contributes to new and expanded industries for rural communities.

* To **State Foresters** in all 50 States, programs that result in new industries, income and jobs.

* **Cooperation with other agencies** in resource management, planning, and economic development.

* **Economic and feasibility studies** and technical assistance, actively seeking out development opportunities for local communities.

RURAL ELECTRIFICATION ADMINISTRATION

The primary role of the Rural Electrification Administration in rural development is to provide financial and technical assistance for the development of electric and telephone facilities in rural areas.

REA assists the more than 1,900 rural electric and telephone systems it finances in efforts that contribute to the growth and development of the areas they serve.

Participating with other local organizations **REA** borrowers:

* **Assist in** the organization of local corporations to develop and finance businesses and industries.
* **Develop brochures** and other materials describing area resources.
* **Survey** available labor supplies and sponsor manpower training programs.
* **Determine housing needs.**
* **Locate technical and financial assistance** for businesses and industry interested in expansion and new locations.
* **Contribute to the planning of recreational projects,** health facilities and housing and community facilities.

REA supports borrowers' efforts by cooperating with other groups on the national level in providing guidance and direction to the rural development program of the U.S. Department of Agriculture.

The Soil Conservation Service gives technical assistance to individuals, groups, and local and State governments to help improve the use of land and water resources.

It works through local conservation districts, which cover 99 percent of the Nation's farms and ranches. Land users receive onsite assistance from district soil conservationists who last year helped land owners and operators prepare 80,829 new conservation plans and revise almost 38,000 existing plans.

The **Soil Conservation Service:**

* **Administers the Great Plains Conservation Program,** an intensified, long-range program for farmers and ranchers in a large area of high winds, uncertain rainfall, and climatic extremes.

* **Supports watershed protection and flood prevention** projects with financial and technical help. These projects assist an area's economy, provide dependable water supplies for farmers and small town residents and give flood protection.

* **Assists** local citizens to develop and carry out **multicounty resource conservation and development projects** to improve the area's economy, social conditions, health and education facilities, and use of natural resources.

* **Provides technical assistance to** landowners to establish outdoor recreation areas, and stimulates cities, counties, and States to develop public recreation.

* Administers the **National Cooperative Soil Survey,** makes snow surveys, issues water supply forecasts, and heads the USDA National Inventory of Soil and Water Conservation Needs (CNI).

SOIL CONSERVATION SERVICE

AGRICULTURAL RESEARCH SERVICE

The Agricultural Research Service contributes to rural development by providing scientific support for the programs of Department of Agriculture action agencies.

The new plant varieties, improved animal breeds, and other innovations that flow from research laboratories have bolstered the economics of thousands of rural communities. Although most of the research contribution to rural development is indirect, a part of the ARS program is aimed specifically at improving incomes and living conditions in rural communities.

Agricultural Research Service:

* **Publishes information** on maintaining a balanced diet with inexpensive food, including techniques of gardening and food preservation.

* **Designs** moderately-priced rural housing for low-income families.

* **Helps** communities develop new industries. For example, ARS scientists are finding ways to develop commercial rosin derivatives from ponderosa pine stumpage in Arizona and New Mexico, and establishing community canneries for locally grown vegetables.

* **Develops marketing facilities** in rural areas, to stimulate efficient marketing of farm commodities in areas where they are produced.

The Agricultural Stabilization and Conservation Service, with offices in each State and 2,800 counties, administers programs designed to stabilize the Nation's agricultural economy, conserve farm resources, protect food and feed reserves, and aid in defense.

ASCS operates programs to balance supply and demand of certain farm products, through production adjustments, price support loans, purchases and payments, and management of stocks of commodities acquired under its programs.

Such programs contribute to rural economic progress and stability. They are carried out through farmer committees appointed at State, and elected at county and community levels.

Through the **Agricultural Conservation Program,** the Federal Government shares about half (more, for low-income farmers) of the cost of conservation practices which reduce pollution from agricultural resources, protect the soil, permit more efficient use of land and water, benefit wildlife, beautify the countryside, and retain open space.

* **ACP special projects** assist communitywide attacks on special conservation problems affecting both rural and urban areas.

* The **Cropland Adjustment Program** encourages farmers to take acreage out of production under long term contracts, offering them incentives to share their land facilities with town and city people.

* The **Cropland Conversion Program,** on a test basis, has encouraged conversion from low-income crop production to other income-producing uses such as grass, trees, recreational, and wildlife developments.

AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE

The Cooperative State Research Service administers Federal grants for research in agriculture, agricultural marketing and rural life, and for cooperative forestry research and other needed research facilities.

Funds are made available to State Agricultural Experiment Stations and other qualified institutions of higher learning in the 50 States and Puerto Rico.

The technical staff reviews research, proposed and in progress, and advises and assists in planning and coordinating the research among the States and between the States and the U.S. Department of Agriculture.

Research findings, translated into action programs, contribute to rural development through improved jobs and opportunities, improved income both farm and non-farm, and improved community institutions and services.

Some examples of current research include:

* **Growth opportunities** through comprehensive development of recreational resources, including zoning best suited for recreation, residential, and industrial development.

* **Economic analysis** of the market structure of the commercial fishing industry.

Requests for information and needed research may be made to the director of any State Agricultural Experiment Station or to the Administrator of the Service.

COOPERATIVE STATE
RESEARCH SERVICE

ECONOMIC RESEARCH SERVICE

Economic Research Service provides economic information to the public, Government agencies, and the Congress. Data and information are prepared and used to analyze specific problems. These studies evaluate the consequences of alternative courses of action for solving many problems.

ERS often provides economic appraisals useful for improving programs of other USDA agencies.

It also does research and provides related special services to other Federal agencies.

The Economic Research Service:

* **Studies rural people** and their communities to learn how to improve incomes and the quality of living.

* **Studies changes** in composition and migration of the rural population.

* **Develops data** on the size and structure of the farm labor force, the sources and distribution of incomes of rural people and the effects of alternative programs to improve incomes and levels of living of the poorest families.

* **Determines** the availability of community services and how to help local governments improve those services.

Members of the ERS field research staff serve as consultants to State economic development committees.

Through cooperative work with universities, ERS supplies results of studies to Cooperative Extension Service specialists.

FARMER COOPERATIVE SERVICE

Farmer Cooperative Service helps rural-based cooperatives through research, giving technical advice on specific problems, and providing general information.

Cooperative business enterprises implement rural development by providing jobs, generating income, adding to the tax base, and helping farmers increase their incomes by marketing and buying more effectively. They also help to train and develop community and area civic leaders.

Specific FCS programs geared to the needs and goals of cooperatives include:

* **Feasibility Studies.** Staff specialists go into an area to determine if a new service proposed for a cooperative or a new cooperative is likely to succeed.

* **Technical Assistance.** Staff specialists work closely with rural leaders, cooperative groups, and other agencies and institutions to provide help needed. One of its most valuable services is informing local groups on where they can go for advice and assistance.

* **Demonstration Program.** Farmer Cooperative Service has a contract with the North Carolina Rural Fund for Development. This makes possible one man's services for on-the-scene daily assistance to a new cooperative.

October 1971

United States Department of Agriculture
Washington, D. C.

SUMMARY OF SELECTED PLANNING AIDS

This statement describes briefly the technical and financial assistance provided by agencies of the U. S. Department of Agriculture in support of State and local planning programs. Agencies of the Department referred to are the Farmers Home Administration, Soil Conservation Service, Forest Service, Agricultural Stabilization and Conservation Service and Economic Research Service. Certain programs of State Cooperative Extension Services and Agricultural Experiment Stations also are described.

AREA WATER AND SEWER PLANNING: As of June 30, 1971, Farmers Home Administration had approved 1,635 grants totaling $19,516,000 for areawide comprehensive water and sewer plans. Such plans are made on a county, multicounty, regional or Statewide basis. County or State agencies are the usual recipients, although grants may also be made to substate regional agencies that are public bodies. Eleven States and Puerto Rico received grants for Statewide planning. Seventy-seven regional planning agencies, with a total of 406 counties, also received grants. In the grants made through June 30, 1971, 2,285 counties in 47 States and Puerto Rico were included. Two million dollars was appropriated for the program in FY 1972, which began July 1, 1971.

(Contact: State and County Farmers Home Administration Offices)

PLANNING AIDS OF THE SOIL CONSERVATION SERVICE: The Soil Conservation Service operates a national soil and water conservation program through locally organized and managed Soil and Water Conservation Districts. These Districts (generally coterminous with counties) use SCS technical aid to improve conservation and land use on farms and other individual land holdings and to support community-wide resource planning and development.

SCS consultant services to local planning agency officials are rising sharply. In fiscal 1971, basic data was provided locally in connection with the preparation or revision of some 9,500 comprehensive land use plans. Specialized programs of SCS include:

-- National Cooperative Soil Survey: Surveys measuring the suitability of different kinds of soil for various purposes have been completed on about 811 million acres. The data obtained is of direct use in local planning programs.

-- Resource Conservation and Development Projects: Ninety-eight of these multicounty projects, which include 624 counties and cover 373 million acres in 48 States and the Carribean area, now have been authorized. The Department of Agriculture assists local RC&D sponsoring agencies in developing and carrying out conservation plans to improve economic opportunities in the project area.

-- Watershed Development: SCS also is assisting local groups in 1,634 small watershed areas to develop plans for land treatment and structural measures for flood prevention, irrigation, drainage, public recreation and municipal and industrial water supplies.

-- River Basin Surveys: SCS provides technical assistance in cooperation with other agencies to survey large watersheds and waterways as a basis for development. In 1972 the agency will participate in 62 such river basin surveys.

(Contact: Soil Conservation Service State Conservationists and Local Soil and Water Conservation Districts)

COMMUNITY EXTENSION WORK: Cooperative Extension Services of the Land Grant (State) Universities and Colleges provide education, organizational assistance and specialized technical assistance in support of local planning and development programs. Each State Extension Service staff has a program leader in community resource development whose responsibility includes assisting State and local planning agencies. District and county Extension staffs work directly with county and multi-county agencies and organizations to establish planning agencies, implement planning programs and conduct community educational programs on various planning issues. Local Extension personnel also help planning agencies obtain specialized technical assistance from Land Grant Universities.

(Contact: State Directors of Cooperative Extension Services and Local County Agents)

FOREST AREAS: The Forest Service and cooperating State forestry agencies directly support programs of State and local planning agencies. Assistance provided includes resource inventories; feasibility studies for forest-based enterprises; direct technical forestry assistance to individual woodland owners, loggers, processors, associations and communities; multiple use plans (including resource use, open space, recreation, environment and natural beauty). A total of 750 U. S. counties contain National Forest land, and 1,400 additional counties have large acreage of other public and private forest land.

(Contact: Forest Service Regional and Area Offices, National Forest Supervisors and State Foresters)

AERIAL PHOTOGRAPHS: Aerial photographs obtained by the Agricultural Stabilization and Conservation Service for crop adjustment programs are also useful to local planning bodies. Photographs in the agency's files now cover about 80 percent of the nation's land area, not including Alaska. They accurately represent ground features, such as roads, streams, trees, buildings and fence lines. These photos, which also cover most towns and major portions of metropolitan areas, are used extensively by State and local governments in setting boundaries, locating roads, reservoirs and drainage structures and for many other planning uses. They are available at cost to public agencies and the general public.

(Contact: County Agricultural Stabilization and Conservation Services Offices)

RESEARCH BASED DATA: Some Economic Research Service reports and studies can be helpful to planners having a need for specialized information, for example: tabulations and summaries of underemployment by county, annual surveys of the hired farm work force, economic analysis of particular areas, case studies of local industrialization projects and of local government consolidation, and studies of major economic adjustment problems of farm and other rural people. A monthly checklist of these and similar ERS reports is available on request.

(Contact: Division of Information, Office of Management Services, Department of Agriculture, Washington, D. C.)

State Agricultural Experiment Stations also conduct research on a wide variety of subjects related to the social, economic and physical development of rural communities, with particular emphasis on those in the State where the station is located. Stations operate research programs concerned with natural resource use, human resource development, community organization and services, and other fields of inquiry of interest to planners. Their personnel also are available in some cases to provide advice and counsel to planners in connection with specialized local problems.

(Contact: Director of the Agricultural Experiment Station of the State where the planner is working. In general, Stations are in the same location as the Agricultural College of the State University.)

licensing and registration: an issue that won't go away

by Robert C. Einsweiler
First Vice President of AIP

The issue of whether or not to license or register planners has been a controversial, and even divisive, one for nearly two decades. In the past 10 years, two states have initiated licensing or registration (New Jersey and Michigan).

AIP has, on several occasions, attempted to come to some sort of national posture on this issue during that time. AIP moved from a relatively neutral position when the issue was not of great concern to planners generally to a position in opposition of licensing in the early 1960's. This latter position grew out of a difficult situation in New Jersey as the nation's first planners licensing law was passed, as explained in the accompanying story; and there was a certain flexibility in AIP's position. Although in opposition to licensing, this early position endorsed registration of title if absolutely necessary to stave off the actual licensing of practice.

The most recent round of activity on this issue has resulted in an AIP position in opposition to both licensing and registration.

However, positions on this issue are not fully accepted or let stand without controversy the way that, for example, most national legislative positions of AIP are generally accepted by the membership. The reason is undoubtedly obvious; licensing and registration of planners can directly affect a member's work and income in a variety of ways. Also, New Jersey and Michigan have such laws now; and many other states are discussing them. Local circumstances differ and the planners in different states are affected differently by local politics and other factors involved in such an issue.

But, and perhaps even most from the most affected states, pressure continues from AIP's membership for AIP to come to a national position on this matter which can serve as guidance to all chapters and individual members. When one considers that the two existing state laws are quite different in their effect on planning and that AIP members in those states do not fully agree as to the merits of those laws, it becomes apparent that this is a difficult issue for a national organization which tries to reflect the views of its members. Our difficulty in settling this issue once and for all is compounded by the ever-changing Board of Governors and Chapter Presidents Council which makes it difficult to achieve a continuing nature in work on any long-range issue. For example, the Blessing Committee, the final report of which is published here, was appointed in January 1970; and it submitted progress reports to two different Boards and Chapter Presidents Councils before it presented its final report 14 months later. Today, the Board is 2/3 different people than in January, 1970; and the Chapter Presidents Council is probably 90% different people. In both cases, some of the new representatives have no familiarity with former debates over this issue within AIP. Certainly, few on the Board, the Council or the AIP staff today went through the discussions of the late 50's which produced AIP's first public national position on licensing and registration.

One essential charge of the Licensing and Registration Committee chaired by Charles Blessing in 1970-71 was to collect and synthesize the past history of this issue. It was also charged to look at the current situation in the states which have such laws or are considering them; and it was to recommend policy to the Board of Governors. Its final report, published here, was heavily discussed at the March, 1971, Board meeting. The Board did not adopt it, however, since it was felt to be somewhat ambiguous and did not seem to represent the opinion of the Board which had a stronger inclination toward outright opposition to licensing and registration. Therefore, since it was not adopted by the Board, the Blessing committee report was not published at that time.

An earlier staff memo prepared for a meeting of the Interprofessional Council on Environmental Design (ICED) on this subject had been previously adopted in principal by the Executive Committee for use at the ICED meeting. The Blessing committee had been asked to comment on it; and had taken a neutral position. This ICED memo was attached as an informational piece to the Blessing committee final report to the Board in March; and Board discussion finally reaffirmed the endorsement in principle of the ICED report since it made a stronger statement as to why planning should not be licensed.

The Board, at that meeting, directed a Board Committee of myself and William Bonner to redraft the ICED memo,

(*Continued on page 2.*)

taking into account comments of the Chapter Presidents on the issue where possible. The redraft was to make a clear statement opposed to licensing and registration and to strengthen the recommendations for implementation of such a policy. This redrafted ICED memo was published in the August 1971 *AIP Newsletter* for membership comment.

Nature of the Board Discussions

If your interest in this subject is sufficient, you may wish to refer to the lengthy August 1971 published statement for comparisons with the Blessing committee report contained herein. The following discussion assumes reference to these two reports.

In March, 1971, when the Board of Governors gave the topic substantial debate, one of the prime issues was "ambiguity." Did the Blessing committee report advocate registration or oppose it? The paper seemed to favor registration without directly saying so. For example, the "whereas" items repeatedly refer to the design professions, professions that are registered.

The "Short Range Approach" says *The Institute should be prepared to assist its members, sections and chapters concerning state licensing and registration issues*. How? In support of registration? In opposition to it?

The next paragraph says that *These guidelines should be developed to assist members to respond to their specific licensing and registration problems in effective ways*. What are effective ways? Support, oppose, remain neutral?

The guidelines suggested by the committee were not consistent. The earlier ICED memo was unequivocal. It called for repeal of existing planner registration laws. The committee report was silent, but it appeared to advocate licensing and registration for the long range. (See Section 2(C) in particular.)

A committee spokesman explained the reason for lack of further clarity. The committee felt local areas must be free to take appropriate action. Different parts of the country have different views on the issue; so, he said, a sharper position would not represent the full membership.

The Board then attempted to distinguish between ambiguity and neutrality. The national position, whatever it may be, should be clear. It should clearly support, oppose or leave the decision to local groups.

The Board chose to oppose registration.

A second issue discussed was whether planning is a design profession. The "whereas" clauses constantly refer to the "other" design professions or list planning with design professions. Many members of AIP are not designers, nor are they physically oriented in their work. The Board wanted the policy to be clear in stating that planning is **not** a design profession; it is something greater in scope as expressed in the ICED memo.

A final issue was the approach to be taken. The committee report seemed to advocate guidelines leading to registration, if necessary as a defensive measure. The Board preferred a positive statement that made a strong case for why registration was undesirable, rather than developing a weak or ambiguous case and then pulling out a "model" law if caught.

The problem is that some of the pressure for registration from outside the planning profession comes from the design disciplines. They understand defining a profession in design terms similar to their own. Such approaches tend to "define out" the newer aspects of planning practice. As such, registration as a means to "insure that qualified planners may practice freely" – a national AIP objective – may protect the physically oriented planner from incursion by design professionals; but it excludes non-physically oriented planners.

To pursue this more positive approach, the Board wanted a program of activity to implement the policy. The committee report in effect continued the previous approach of general statement and guidelines, with assistance as a response.

Since the ICED memo came closer to meeting the Board's objectives than the committee report, the ICED memo was adopted in principle subject to revision as explained earlier and to adapt it for use with local officials. The rewritten report was made available to Chapters for review prior to action by the Board, thus it was published in the August, 1971, *AIP Newsletter*. Studied, thoughtful responses were received from more than 30 members. The main points are summarized later.

One-third of AIP Queried

An attitude survey dated September 15th by J. Paul Jones was distributed to one-third of the AIP membership. This survey stated "the other side of the coin," or a position in opposition to the Board's position.

Responses have been received from 77 members, 1 nonmember and 1 former member. Of the members, 41 agreed with the statement opposed to the Board position, 33 revised the questionnaire and supported the Board position, and 3 were neutral.

The survey and letters provide some insight into the licensing and registration issue. First, the membership is not of one mind; but a limited number of members are sufficiently concerned to speak out on the issue.

Of those who opposed the board position (41); over half came from three states – Michigan (11), California (7) and Florida (5). The other half came from 15 other states. As to employment, 17 work for public agencies (12 city, 3 county, 2 regional); 22 are consultants, 2 university, and 1 unidentified. Of the consultants, almost half are identified in firms where engineering, architecture or landscape architecture is listed first and planning is second or third. A number of others were with firms identifying services in urban renewal, central business district and other small scale planning work. One of the university respondents was a student, the other a faculty member and professional engineer.

Clearly, the great majority of this group of respondents is engaged in planning practice at smaller geographic scales and with close contact and work relationships with the design disciplines.

Of those who supported the Board position (33); 10 were from New York and the remainder from 16 other states. As to employment, 18 work for public agencies (7 city, 2 county, 5 regional, 4 state); 10 are consultants (only 3 are identifiable as having a design orientation), 4 are university faculty, and 1 is employed by a business-supported planning group.

These figures are given to indicate that there are different practice orientations among the members. This difference must be considered in any final position.

The thoughtful letters in response to the published August report were similarly geographically distributed – 5 Michigan, 4 California, and one or two from each of 16 other states – and similarly divided with 14 opposing, 13 supporting and several offering comment without a position.

Although the revised report was published in the August *Newsletter* to enable chapter reaction, the report itself was not on the agenda of the Chapter Presidents Council in San Francisco. Rather, there were two resolutions prepared by the Michigan chapter which were in response to the report. The first resolution was addressed to the planner's responsibility for the public health, safety and general welfare. The resolution failed in adoption by one vote. The second resolution called for reappointment of the Licensing and Registration Committee and for placing the issue before the entire membership. This failed by a very wide margin.

Some Specific Points

Not a legal issue. Licensing and registration is not a legal issue; it is for AIP a political decision. The legal arguments in the August report and in the ICED memo are weak. A legal basis for licensing or registration exists if the profession wishes to pursue it. There is no legal necessity to license and register. The question is whether benefits to the public and to the members outweigh the disadvantages. This decision must be made by members as well as others. This section of the report will be substantially revised.

Public Health and Safety. The item causing greatest concern was the one of relation to public health and safety. Two related concerns were expressed. First, if planners do not directly affect public health and safety, and we so say, then planners do nothing worthwhile and we are relegating the profession to permanent second class status. The second concern was that, even if indirectly related, the profession should be registered to protect that public interest, however small.

The counter arguments presented in other letters stated that being registered is no mark of doing worthwhile work. Indeed others in government – managers, budget officers, contract officers, elected officials – actually make decisions on matters that touch the public health and safety more directly than the planner. Their work is worthwhile and not registered. A more persuasive argument was that registration has the effect of dividing decisions between skilled (registered) and unskilled or lay people because whatever task is so critical as to require a registered or licensed person to produce is removed from the decision domain of the elected official. Therefore in the field of planning, especially where it is practiced as a broad policy-oriented function, the interference with the democratic process could be great. The same argument applies to the ever broadening definitions advocated by the design professions. Therefore, legislation pursued to protect the public interest could actually work the opposite; and legislation to protect the right to practice from incursion by other professionals could be against the public interest by diminishing the area of decision-making of the elected official.

It is agreed that planning is concerned with and does affect the public health and safety. The question is whether what the planner does is sufficiently direct and causal that the public benefit of competent professional decisions offsets the loss of decision-making freedom by elected officials.

Local Option. Another issue causing substantial comment was local or state determination on licensing and registration legislation. The arguments presented in letters for local determination indicated that geographic differences could be taken into account. The arguments presented for national determination, rather than local, were the need for a national perspective since AIP is a national organization and the need to protect right to practice of every member. Clearly this requires further study. It appears obvious, however, that each viewpoint must be developed, and there cannot be an either/or pre-emption of decision in the matter. The national policy may well run counter to local policy. The question is what effect the national policy can and should have on local action.

Registration Trend. Another point posed in a few letters is the growing trend toward registration in many fields. This was suggested as a reason for pushing registration now. But there is a strong counter trend. The New Jersey legislative committee report to remove nine occupations or professions from registration is a case in point. More far-reaching actions were discussed at an ICED meeting in late November. Consumer organizations, some of them federal and state agencies, are taking on licensing and registration boards across the country.

The legal challenges argue that the boards are protecting the personal interests of their professions and not the public interest. Proposed solutions include abolition of the boards or restructuring with a majority of consumers. Civil rights advocates see the boards as one more impediment to equal opportunity for minorities. Another trend is toward overlapping registrations in architecture and engineering, for example, with the board determining whether the work was competently performed not whether it was performed by the right jurisdiction.

Next Steps

At the October Board meetings, the Board accepted in principle the draft which had been published in the August Newsletter; but it acknowledged the remaining clumsy language and the unresolved issues which the membership comments had brought out. Therefore, AIP today does not have an adopted detailed statement of its position on licensing and registration.

A new Licensing and Registration Committee has been appointed; and the core of this new committee is three Board members. Assistance will be drawn from a corresponding group made up of some of the previous respondents and reflecting the diverse responses; another corresponding group made up of representatives from states where licensing and or registration exists or has been under recent consideration; and though liaison with the American Society of Consulting Planners and with ICED.

A final attempt at a detailed position statement is underway, taking into account the responses and comments explained in this article. The proposed schedule aims at having a new draft to circulate for comment in advance of the Chapter Presidents Council and Board meetings at ASPO in April.

It is my hope that this article and the factual material in the accompanying final report of the Blessing Committee at least give an outline of the many facets of this complex and controversial issue so that AIP as an organization can now proceed from here. The question of how an organization such as ours can implement and enforce a policy on this issue remains crucial.

The Board of Governors is currently on record as opposed to licensing or registration in principal, although a detailed statement has not been adopted. Although the position may be changed as a result of the work we will be doing this year, it is the basic guideline at present for members and chapters.

aip newsletter

January 1972 Volume 7 Number 1

Editor — Gail O'Gorman

The AIP Newsletter is published monthly by the American Institute of Planners, 917 15th Street, N.W., Washington, D.C. 20005. Subscription rates are $5.00 a year, $.50 for single issues. Second Class postage paid at Washington, D.C.

Institute Staff

Executive Director – Thomas H. Roberts, AIP
Director of Chapter and Department Services – Loretta Taylor
Director of Professional Development – Gerald Mylroie, AIP
Director of National Affairs – Albert L. Massoni
Director of Publications and Information – Gail O'Gorman

more aip committees

President McGrath has appointed the following committees. They are in addition to those listed in the two previous editions of the *AIP Newsletter.*

Licensing and Registration

Robert C. Einsweiler, *chairman*
William S. Bonner
Paul Davidoff

See separate story this newsletter.

AIP-ASCP Liaison

Leon Eplan, *chairman*
Charles Kirchner
Robert Jentsch

The above three persons represent AIP on this liaison committee. The three persons listed below represent ASCP (The American Society of Consulting Planners) on this committee, although they are members of both ASCP and AIP.

George Raymond
Harry C. Adley
Herman D. Ruth

Bicentennial Programs

George Marcou has been appointed AIP's representative to the Historic Conservation Advisory Panel of the Heritage '76 Committee of the **American Revolution Bicentennial Commission.** The chairman of this committee is the President of the National Trust for Historic Preservation, James Biddle. The duties of the panel will be to advise the commission on bicentennial activities and to encourage public programs related to the bicentennial. This is a two-year appointment.

Two ICED Task Forces

Clark Turner has been appointed AIP's member on the Interdisciplinary Council in Environmental Design (ICED) task force just created to revise the **ICED mediation procedures** by which members of the member professions may agree to take interdisciplinary disputes to the national ICED organization for mediation. Members of ICED are: AIP, AIA, ASCE, NSPE, CEC, ASCP, ASLA.

Douglas Powell has been appointed to a new ICED task force to revise the **Environmental Design Collaboration Policy.** This is the normal five-year revision for this document which suggests guidelines for member professionals to follow when working on interdisciplinary projects.

AIA Urban Design Comm

Norman Day, Chairman of the new AIP Urban Design Department, has been appointed to represent AIP on the **AIA standing committee on Urban Design.** Dorn McGrath formerly held this position for several years.

AIP-DOT Liaison

Robert N. Young, *chairman*
Rodney Engelen
George Marcou
Alan M. Voorhees
William McGrath

This committee maintains continuing liaison with the federal Department of Transportation in Washington through regular meetings and informal contact.

Status of Planners in the Federal Government

Marjorie Berger (an affiliate of AIP), Associate Director, ASPO, has been appointed to serve on this committee in addition to those listed in the November Newsletter.

Women's Rights Committee

Gloria McGregor has been appointed to the Women's Rights Committee as described in the November *Newsletter.*

Environmental Meeting

C. David Loeks and **Calvin Hamilton** have been appointed AIP representatives to a special conference on Managing the Environment in the World Ahead at Santa Barbara, California, January 27-29, 1972. This meeting will furnish input to the forthcoming White House Conference on the Industrial World Ahead and to the United Nations Stockholm Conference on environmental problems.

voorhees elected chairman of hrb

Alan M. Voorhees, AIP, has been elected the 1972 chairman of the Highway Research Board's 26-man policy-making executive committee. He is well known as a transportation planning consultant, and he was President of AIP 1968-69. Voorhees is a member of several HRB committees concerned with urban transportation planning.

Robert N. Young to Committee

Robert N. Young, AIP, and past chairman of AIP's Metropolitan and Regional Planning Department has been named a new member of the HRB Executive Committee. Young is Executive Director of the Regional Planning Council in Baltimore, Maryland; and he was AIP Vice President under Voorhees.

sam joroff dies

Samuel Joroff, who was a candidate for the AIP Board of Governors in the 1971 election, died December 7 of leukemia. He had been very active in New York Metropolitan Chapter activities for many years, and he was president of that chapter in 1959-60.

The New York Metropolitan Chapter of AIP gave Sam Joroff an award for outstanding performance shortly before his death.

1970-71 licensing and registration committee final report

This is the final report of the Licensing and Registration Committee which was appointed in January of 1970. This report was submitted and debated by the Board in March, 1971, but was not adopted. (See separate story.) Members of this committee were: Charles Blessing, chairman; Alden Aust, James A. Barnes, William S. Bonner, Douglas S. Powell, and Robert E. Grunwald.

This report, which is now part of the many-year record on this subject, is printed here at the request of the Chapter Presidents Council and others keenly interested in the issue of licensing and registration.

new jersey licensing law

The New Jersey law grants the right to practice planning to those persons who satisfy minimum standards of education and experience, pass a written examination and are subsequently issued a license to practice. The law includes a grandfather clause and exempts registered architects, licensed engineers, and licensed land surveyors from meeting the qualifications in order to obtain a license.

In 1958 there were several unsuccessful attempts by planners to get a bill enacted. In 1961 the New Jersey Chapter of AIP and the New Jersey Society of Professional Engineers sponsored separate bills. In 1962 a "compromise" bill was enacted by the legislature. The "compromise" averted the regulation of planners by a licensing board of engineers; however, it did provide for the automatic licensing (upon application) of registered architects, licensed engineers and licensed land surveyors. A successful attempt was made by AIP in 1964 to remove from the law provisions for automatic licensing. However, after an appeal by engineers, the New Jersey Supreme Court reversed the decision. In the fall of 1967 the United States Supreme Court refused to review the case.

In 1967 the AIP Executive Committee appointed a Special Committee on the New Jersey Registration Act. The committee stated *It should be the continuing policy of the AIP to work for repeal of this law or modifications of it so that the public's interest in the competent practice of planning is protected.* An attempt at repeal failed.

In 1969 the New Jersey Society of Professional Planners (composed of engineers newly licensed as planners) sued the New Jersey Chapter of AIP and its members for libel. After protracted negotiations through counsel, the New Jersey Society of Professional Planners and the chapter have agreed on the language of a brief statement of apology. This statement satisfied the requirements of the Society of Professional Planners for terminating their libel action against the chapter. The action taken in 1969 resulted from a letter written by the chapter president commenting on the automatic granting of licenses to engineers, architects, and land surveyors. The plaintiffs allegation was essentially that it is libelous to state publicly that a New Jersey Planners License is not proof of competence to practice planning. The statement of apology is: *Reference is made to my March 3, 1969, open letter to Senator J. Edward Crabiel which states our position on licensing. It has been called to my attention that my choice of language has offended certain of your members. I sincerely regret this and assure them that no offense was intended.*

In October 1969 the AIP Board of Governors passed the following resolution: . . . *reaffirms the earlier decision of this Board to work toward repeal of the New Jersey licensing law.*

A bill to repeal the Planners Licensing Law was reintroduced in the Assembly on February 16, 1970. The bill was a repeat of a similar measure introduced the previous year. The chapter officially supported the repeal measure. In 1969 editorial support for repeal came from newspapers in central New Jersey and Bergan County.

In March 1970 a member of the State Professional Planners Licensing Board attended an AIP Executive Committee meeting to convey views on the workings of the licensing law, its prospects and impending actions to be taken by the Board. In summary these were:

1. In the view of the Licensing Board, the law is not working so badly as to justify its repeal,
2. It is doubtful, in the Board's view, that a repeal measure can win. (Repeal was opposed in 1970 by the legislative committee of the League of Municipalities and Federation of Planning Officials.)
3. The Licensing Board favors action to amend the law to improve its working on a variety of matters including easing the process by which out-of-state AIP planners may obtain planning positions in New Jersey prior to holding a license.
4. The Board will soon take up questions concerning malpractice by persons not holding licenses.

During late 1970 the Board began sending letters of warning to a variety of persons allegedly practicing the profession of planning without having been licensed under the Planners Licensing Law. Certain of these addressed to AIP members have been brought to the attention of the chapter for advice by the chapter concerning possible chapter action.

At the year's end the bill had not been reported out of the Commerce Industry and Professions Committee. This inaction was purposeful pending completion of the work of the legislature's Professional and Occupational Licensing Study Commission. Since the legislature operates on a two-year calendar, the repeal measure continues on the Committee's agenda in 1971.

During 1970 this study commission held hearings and took testimony on matters pertaining to New Jersey practices in licensing professions and occupations. Testimony on behalf of the New Jersey Chapter of AIP was presented by William E. Roach. This testimony urged repeal of the Planners Licensing Law. The Commission recommended that state regulation be terminated for nine licensed professions and occupations among them the planners. The Commission gave its reasons as: (1) no substantial threat to the health, safety and welfare of the public is posed; and (2) other checks exist. The Commission is preparing an omnibus bill which will carry out all of its recommendations. Such bill will be submitted to the legislature within the coming months.

Ed note: During the legislature referred to here, the Assembly bill was placed on the board for vote three times, but it was never brought to a vote. A similar bill was introduced into the Senate, and no action was taken there either. There is a new legislature in 1972, but the persons

(Continued on page 6.)

Committee Report *continued . . . .*
who were sponsors of the repeal bills in prior legislatures are still seated. They have indicated that they will be introducing similar bills again this legislature. Chances for such repeal bills appear to be better.

michigan act registers planners

The Michigan law provides for "registration of title" allowing only persons registered under the act to use the title "professional community planner" or "community planner". In order to qualify a person must meet specified education and experience requirements and pass a written examination. The law includes a grandfather clause but does not exempt other professionals from meeting the requirements.

A committee of the Michigan Chapter prepared a draft of a bill as early as 1959. Several early registration proposals failed to be approved by either the Chapter or the Board of Governors. However, starting in 1963 a concerted effort was made to draft an acceptable bill. The Registration bill was signed by the Governor on July 11, 1966. A Registration Board was appointed some months later. A long period of organization followed for the Registration Board until the first registrations were issued late in 1968. A total of 444 applications for registration were received and 354 were granted registration under the grandfather clause as of March 9, 1971. Decisions on 32 applications have not yet been made and 58 were not granted registration. The 354 registered planners represent 31 states and Hong Kong. The first examination date will be in the middle of May at which time as many as 40 persons are expected to take the examination.

current proposals

The following information on state legislative proposals on licensing or registration of planners or proposals that might impinge on the right of planners to practice planning summarizes these proposals, as the committee knows them.

Nebraska: In 1970 a Joint Legislative Committee from the design disciplines prepared a registration bill to control the registration of persons practicing architecture, engineering, landscape architecture, land surveying and planning. Committee members representing planning were Alden Aust, AIP and Douglas E. Brogden, AIP.

The proposed law establishes six examining boards, one for each design discipline and a joint-registration board composed of one member from each design discipline examining board. The former "are established for the purpose of determining the ability of persons coming before it to practice that particular discipline." The joint board "shall receive from each of the Examining Boards, a written report recommending the issuance of a certificate of registration or an in-training certificate for each individual examined." The definition of a planner is based on the Institute's oral examination and includes the twelve areas of concentration.

The Joint Legislative Committee is reworking parts of the proposed law and may seek to have it introduced in the 1972 session of the legislature.

Oregon: In 1971 an act was introduced to, among other things, define the practice of engineering by saying:

"the term includes service or work as a consultant or in investigation, appraisal, evaluation, planning and design of engineering works and systems, *in planning the use of land*, air and water, in engineering surveys, and in responsible charge of works;. . . ." (italics added)

There is no report as to the status of the act that included this language.

Montana: In 1971 an act was introduced to, among other things, redefine practice of engineering to:

"include any professional or certain engineering service performed in connection with city, county, regional or state planning."

There is no report as to the status of the act that included this language.

Missouri: A proposed bill was developed to register planners. The Chapter President recently reported that the bill is patterned after the Michigan law and that it will not be submitted to the legislature this year.

Alabama: Discussions have taken place on registration and licensing however the Alabama Section is waiting for the Institute position on the issue before taking one.

proposed institute position

The following was proposed to the Board of Governors of AIP:

1. WHEREAS problems of inter-professional overlap have been a complex and long term concern between and among architects, engineers, planners, landscape architects and other design and non-design professionals, and
2. WHEREAS viewpoints regarding this concern have developed at the national level of professional organizations that at times have differed in perspective from viewpoints at the state levels of such organizations, and
3. WHEREAS there is a growing nationwide scope to the problems of overlap and in reflection of this growing involvement and direction-setting by national professional societies to ameliorate and eliminate interprofessional problems at the state level, and
4. WHEREAS in the interest of promoting the public health, safety and general welfare, the following national organizations representing members of the design professions who deal with research, planning, design and construction of man's living environment have jointly approved and adopted a "Guide on Professional Collaboration in Environmental Design," June 1966.

   The American Institute of Architects
   The American Institute of Consulting Engineers
   The American Institute of Planners
   The American Society of Civil Engineers
   The American Society of Landscape Architects
   The Consulting Engineers Council of the United States
   The National Society of Professional Engineers, and
5. WHEREAS the above specified national professional organizations which approved and adopted the "Guide for Professional Collaboration in Environ-

mental Design" recognize that "the environmental design professions are learned professions requiring of their members sound technical training, broad experience, personal ability, honesty and integrity," and

6. WHEREAS the above specified national professional organizations by approving and adopting the "Guide for Professional Collaboration in Environmental Design" state that the environmental design professions include architects, engineers, landscape architects and *planners*, and
7. WHEREAS the above mentioned national professional organizations have by their official action acknowledged that *planning is a learned profession requiring of its members sound technical training, broad experience, personal ability, honesty and integrity*, and
8. WHEREAS the above mentioned national professional organizations established in the "Guide for Professional Collaboration in Environmental Design" that "each design profession is cognizant of the training and experience required for competency in the design professions and *does not render his services in those areas in which his qualifications are not established*," and (italics added)
9. WHEREAS the above mentioned national professional organizations in approving and adopting the "Guide for Professional Collaboration in Environmental Design" established that "the education, experience and registration (as prescribed by state law) of each of the collaborators qualify him for *design services of particular type and scope*," and (italics added)
10. WHEREAS the American Institute of Planners adopted a resolution at its October 17, 1970, meeting establishing as AIP Policy that:
    (a) Present Institute membership requirements can suitably be applied to qualify persons in other professions who wish to practice planning, and
    (b) Until such time as this qualifying procedure shall have been implemented, ICED member organizations *should* work toward modification of state planner licensing and registration laws consistent with *AIP membership requirements*, and
11. WHEREAS The American Institute of Planners has defined Planning Education to be that offered by university programs in planning which have been *recognized by AIP* and has specified such education as partial fulfillment of the requirements for admission to membership in AIP, and
12. WHEREAS The American Institute of Planners has established the years of credit toward partial fulfillment of membership requirements in AIP of university degrees in other professions than planning including both the other design professions and the social sciences, and
13. WHEREAS the American Institute of Planners has established in addition to specified professional education requirements for membership, the number of years of experience in the profession of planning as a requirement for membership in AIP, and
14. WHEREAS requirements for membership in the American Institute of Planners include in addition to credits granted for professional education the requirement of a minimum number of years of professional experience in the *profession of planning*. AIP experience requirements *do not recognize experience in the fields of architecture, engineering or landscape architecture* as professional planning experience for membership in AIP.

NOW THEREFORE BE IT RESOLVED that the Board of Governors, upon recommendation of the Licensing and Registration Committee, adopt the following statement of policy on licensing and registration:

1. **SHORT RANGE APPROACH**—Within the short time frame, the Institute should be prepared to assist its members, sections and chapters concerning state licensing and registration issues.

   The Board of Governors recognized this need in adopting the 1970 and 1971 objectives when its said "Insure that qualified planners may practice freely by developing guidelines on such matters as state licensing and registration." These guidelines should be developed to assist members to respond to their specific licensing and registration problems in effective ways.
2. **LONG RANGE APPROACH**—Beyond the short time frame, AIP shall seek to obtain agreement among the design professions that the procedures for qualifying persons to practice planning by the appropriate *design* and social science professions be the subject of *joint* development and continued liaison on qualifying procedures. To attain this goal it shall be the policy of AIP that:
   (a) Present Institute membership requirements can suitably be applied to qualify persons in other professions who wish to practice planning, and,
   (b) Until such time as this qualifying procedure shall have been implemented, ICED member organizations should work toward modification of state planner licensing and registration laws consistent with *AIP membership requirements.*
   (c) AIP establish as policy, guidelines on state licensing and registration to insure that qualified persons may practice freely but that persons *not qualified* by professional education and professional experience in planning may *not practice* as planners—as specifically stipulated in the ICED "Guide on Professional Collaboration in Environmental Design' in the following statement:
   "The education, experience and registration (as prescribed by the state law) of each of the collaborators qualify him for design services of particular type and scope. Each design professional is cognizant of the training and experience required for competency in the design professions, and will not render his services in those areas in which his qualifications are not established."

(*Continued on page 8.*)

guidelines

Because the issue of licensing and registration is being continually raised in the various states, it is necessary to provide timely assistance to chapters and Institute members as their needs arise. It is recommended by the Licensing and Registration Committee that the following materials be made available to chapters and individual members, upon request, to deal with licensing and registration issues as they come up:

1. The position of AIP adopted by the Board of Governors.
2. The August 4, 1970, memorandum representing AIP's position before the ICED. (published, with amendments, in August 1971 *AIP Newsletter.*)
3. The statement of the "Scope of Profession" adopted by the Board of Governors October 10, 1968.
4. AIP oral examination requirements.
5. Recommendations and guidance from the national office. This includes a summary of experience in other states, background of AIP involvement, recommendations on what to do in the immediate future and interpretation of the Institute's written materials. This does not include legal services or fees, state legislative lobbying or protracted technical assistance.

---

wrapup of the first session of the 92nd congress

By Albert L. Massoni
Director, National Affairs

The first session of the 92nd Congress adjourned in mid-December having prepared the way for active consideration of important and critical domestic legislation early in the second session (due to reconvene on January 18, 1972). Congress and the Administration concentrated much of their activity on the economy. From the opening days of the 92nd Congress through the final days of debate, the economy of the nation in one form or another was the major concern. No doubt it will continue to be an important issue in the next session of Congress. And, even though significant domestic proposals have been debated and held over till the second session, this will be a highly political year in which the political climate may temper legislative activity.

housing and community devel

Both the House and Senate Housing Subcommittees plan to begin mark-up sessions on the several housing and community development bills now pending before them. During the first session, six major bills were introduced, three dealing with community development block grant legislation and three with differing aspects of current housing programs. Full hearings on all but one of these measures were completed in both the House and Senate with AIP presenting testimony at each of the hearings. By early February, the staffs for both Subcommittees expect to have completed the analysis and redrafting necessary for executive mark-up of the legislation by Subcommittee members.

Earlier newsletters have reviewed at length the legislative proposals under study. (See October 1971 *AIP Newsletter*, pages 8-9.) Briefly the major bills are the Administration's housing consolidation and simplification bill (HR 9331 and S 2049); the Administration's urban community development special revenue sharing bill (HR 8853 and S 1618); the House Subcommittee's own bill (HR 9688), representing the legislative proposals formed as a result of the studies by the three panels of Subcommittee members; and the community development assistance bill (S 2333) introduced by Senator Sparkman.

Near the end of the last session of Congress Senators Brooke and Mondale introduced a series of Housing Reform Amendments to the Administration's Housing Consolidation and Simplification bill (S 2049). These amendments call for the reorganization of the various existing federally-assisted housing programs into a single program with a flexible subsidy formula based on need and with standardized requirements. The Brooke-Mondale amendments would enable each community to determine what mix of income groups needs to be assisted and the federal government would make up the difference between the housing payments received and the actual cost of the housing. Communities providing such housing for low and moderate income families would be eligible for special incentive "public service" grants to help offset any increases in public service costs that result.

At this writing, Congressional indications would seem to favor major new legislation because of the scheduled expiration of so many key authorizations and programs. Before adjourning for the holidays, Congress approved emergency extension of some housing and urban development programs until June 30, 1972, thereby setting an objective of passing an omnibus housing bill by that date. It is presumed that the final Housing and Urban Development bill will include a block grant program for community development as an alternative to the Administration's plan for special revenue sharing; certain aspects of consolidation and simplification of various housing programs that have been proposed by the Administration and the House Subcommittee panels; and possible key provisions of the Brooke-Mondale amendments.

More difficult to predict would be the inclusion of two highly controversial proposals that have the strong support of AIP. The first is Senator Ribicoff's Government Facilities Location Act (S 1282) which would require that federal contractors and state governments insure that adequate housing for low and middle income employees be available wherever they locate or expand their facilities. The second is the House Subcommittee's proposal for the establishment of state and metropolitan housing agencies through which federal housing subsidy assistance would be channeled to support housing programs and the distribution of low and moderate income housing on an area-wide basis.

comprehensive planning grants

Interwoven in the House, Senate and Administration housing and urban development proposals is a rewriting of the 701 program. (See August 1971 *AIP Newsletter*, pages 10-13.) Briefly, it is presumed that the 701 section of existing housing legislation will be considerably rewritten with major changes focusing on the number and types of clients for 701, the purpose of 701 planning and management assistance, a method of allocating 701 funds, and public adoption of comprehensive plans. Land use planning may

be an additional responsibility funded through 701, as well as capital programming, housing planning, and policy evaluation. Projected authorizations over the next three years could amount to over $500 million.

In one of the last minute actions before adjournment, Congress passed Senate Joint Resolution 176, an interim extension of certain housing and banking laws. Included in this bill were increases of authorization in the current fiscal year for the comprehensive planning program by $50 million and for the open space land ("legacy of parks") program by $100 million. You will recall that an earlier similar resolution S. J. Res. 52 died in the House for lack of action. This new authorization will meet the expanded roles of these two programs. The Administration intends to ask for a supplemental appropriation early this year to provide the additional funds authorized, thereby doubling the program over the past year.

Included in S. J. Res. 176 was an extension until June 30, 1972, of the period within which communities must meet full comprehensive planning requirements in order to be eligible for basic water and sewer grants.

rural development

A number of efforts supporting AIP's call for balanced national policies supportive of rural development are underway in Congress and hopefully will give real meaning to rural development through strengthened legislation. (See July 1971 *AIP Newsletter*, pages 18-19.) Because of quorum problems and the nomination hearings on Agriculture Secretary Earl Butz, the Senate Agriculture and Forestry Committee adjourned without acting on Senator Humphrey's "Consolidated Farm and Rural Development Act", (S 2223).

It is now expected that the full Committee will return to its executive mark-up sessions on pending rural development legislation late in January. S 2223 is primarily concerned with non-farm rural development, which so many members of Congress and the Administration consider the key to achieving balanced national growth. Many consider this the most comprehensive, resource-laden piece of rural development legislation ever to come before the Congress. It expands the authorities of the Farmers Home Administration to provide massive financing assistance for practically every kind of rural development purpose, including job-creating enterprises, essential community facilities and a host of other things, and it sets up a borrower-owned multi-billion dollar banking system that could supply additional billions for the same purposes plus subsidies in the form of interest payments on loans and free capital to spur industrial development. At the local level, district rural development credit agencies would be subsidiary agencies, administered by the local multi-county regional councils.

The Administration's bill (S 1612) in the form of special revenue sharing for rural development would take eleven categorical grant programs administered by various departments and turn it over to the states for redistribution to local communities. Heavy opposition by rural groups has been voiced against S 1612.

Amendments have been proposed to both the Humphrey and Administration bills, and the House will continue consideration of its own bill, the "Rural Development Act of 1971" (HR 10867) until January 25. It seems that rural development is shaping up as a major political test for both Congress and the Administration.

water pollution

Water pollution control legislation was introduced in both houses of Congress this session. The Senate passed the so-called "Muskie Bill" (S 2770) early in November and soon after the House came out with a bill of its own (HR 11896). Under pressure from the Administration and industry, the House Committee took the unusual step of reopening hearings on its bill and the Senate passed measure. Both bills contain important new concepts for establishing new national cleanup objectives with increased Federal grants to local governments, and special emphasis on regional plans for developing and implementing programs for alleviating water quality problems. Both the Senate and House bills would provide substantial water quality planning funds. The Senate bill would specifically earmark 5% of all construction grants for planning purposes. Under this proposed legislation approximately $400 million in planning funds would be generated during the first three years of the program. The House bill specifically authorizes $225 million for regional planning in the first three years of the program. The House bill will be reported to the floor for a vote early in the session and it is fairly certain that major water pollution control legislation will be adopted with strong planning requirements.

dept of community development

Administration proposals for massive reorganization of the Executive branch of government made little progress in the Congress last year. President Nixon proposed the abolishment of seven departments and innumerable agencies and the realignment of their activities, along functional lines, into four super-departments concerned with human resources, natural resources, economic affairs and community development.

Brief hearings were held on the proposed Department of Community Development and these hearings will be reconvened early in the year, with AIP testifying in support of major provisions of the bill. The proposed department would consist of all of HUD plus the highway and mass transit programs from DOT, the rural housing and development programs of the Department of Agriculture, and OEO's Community Action Program. It is anticipated that there will be criticism of the reorganization on many levels. It is questionable whether the reorganization will be adopted by Congress in 1972, but the Department of Community Development is considered the one proposal with a possible chance of adoption.

highways & transportation

The House and Senate Public Works Committee will start public hearings in March or April on several highway needs reports being submitted by DOT. Last year the Senate Commerce committee held only one day of hearings on a proposed National Transportation Act (S 2279) and the establishment of a National Transportation Trust Fund (S 295). AIP will testify in the spring on these and other transportation bills. Heavy interest is being generated in Washington on considerations of the interstate highway system, the highway trust fund, and planning and multi-modal transportation systems.

In the meantime the Administration has proposed a special revenue sharing bill (S 1693) to consolidate and integrate grants for Urban Public Transportation, Highway Safety and Highway Beautification. Even though the Administration's individual special revenue sharing proposal has not received much public support, inevitably this legislation, which would provide grants for all facets of trans-

(*Continued on page 10.*)

Legislative Wrapup *continued . . . .*

portation activity, will be stressed in the spring hearings.

environmental quality

Very few organizations involved in environmental considerations have felt that 1971 was a good year for accomplishments in this field. In fact, the second year of what has been described as the environmental decade has turned out to be a disappointment as far as great progress in environmental legislation. The defeat of the controversial Supersonic Transport (SST) was labeled an early victory for environmentalists. Many other bills relating to the environment have been held over for action in the second session and much of the proposed legislation supports expanded emphasis of comprehensive planning to help achieve environmental goals.

national land use policy

Various bills pertaining to national land use planning have been introduced in the Congress. (See July 1971 *AIP Newsletter*, pages 16-18.) Both the Senate and the House Interior Committees hope to report out a bill by March 1. Both the Senate and the House Committees are trying to resolve issues relating to federal encouragement of comprehensive statewide planning. The Administration's proposals (S 992 and HR 4332) would require states to establish policies over areas which have critical environmental and developmental impact and would provide $20 million annually for planning. Senator Jackson's land use bill (S 632) would authorize the states to develop statewide land use policies and would provide $100 million annually for planning. At the same time other committees of the Congress have been developing Coastal Zone Management bills (S 583 and HR 9229) that would authorize states to undertake planning and management for coastal and estuarine zones. Here again there is recognition of the need for comprehensive planning programs and the bill provides for $62 million in total planning funds over a five year period.

It is fairly certain that environmental concern about land use and coastal zone management will be adopted in some manner as federal policy in 1972, the questions still to be resolved of jurisdictional controls will help determine whether these bills are reported individually or in a comprehensive national land use policy.

aip insurance program expanded

The AIP Insurance Program has undergone considerable transformation since the new Administrator, George Kelly & Associates, took over in July 1971 (see September 1971 *AIP Newsletter*). Existing insurance plans have been expanded and new insurance plans have been added. We thought this would be a good time to survey our present Insurance Program and let the membership know what insurance activity is scheduled for the new year.

Present Plans in Effect

The following plans are currently in effect and open to all members for enrollment:

AIP LIFE PLAN. Effective date, June 1959. The plan is individual term life insurance policies, individually numbered. The carrier is United American Mechanics of Philadelphia, Pa. The benefits are $15,000 life insurance; additional units up to $50,000 can be obtained.

Consultants evaluation: This was the first AIP Insurance Plan. Designed in 1958, it provides 10 years of level premiums, a unique feature. Its rate structure is very favorable at certain ages such as 34, 38, 39, 44, 48, 49. It is not so favorable at young ages. This plan may be continued by present insureds, but the New Life Plan is designed to supplant it.

AIP LOSS OF INCOME PLAN. Effective date, February 15, 1960. The type of plan is Group Accident and Health Insurance, policy #01A8123. The carrier is CNA insurance. The benefits are Weekly Income of $55 to $110 paid up to lifetime for accidental disability, up to two years for a sickness disability. There is no waiting period for accident benefits, a two week waiting period for sickness.

Evaluation: Another early AIP Insurance Plan, it has paid out substantial benefits to AIP policy holders. While soundly designed and priced, the plan is too limited in benefit structure. The plan is being dramatically expanded by the New AIP Loss of Income Plan which will carry the same policy number. Present insureds can continue their present level with benefits, or update them.

AIP HOSPITAL MONEY PLAN. This is now a New Plan. The original effective date was December 1, 1965; the plan was amended effective December 1, 1971. The type of Plan is Group In-hospital Indemnity Insurance, policy #305A0265. The carrier is CNA/Insurance. The benefits are choice of $20, $30 or $40 a day for each day *hospitalized* up to 365 days.

Evaluation: This plan is a good example of the importance of updating benefits as the original plan offered only the $20 a day benefit. This plan pays cash directly to you in addition to any other insurance you may have. It is a valuable supplement in these days of excessive medical costs.

AIP WIDE RANGE ACCIDENTAL DEATH AND DISMEMBERMENT INSURANCE. This is a new plan effective October 1, 1971. The type of plan is Group Accident Policy #T22BA-7285. The carrier is Mutual of Omaha. The benefits are: (1) $25,000 to $100,000 for Accidental loss of life, sight or multiple dismemberment, one half the principal sum for single dismemberment or loss of sight; (2) Payment of medical expenses for accidental injuries. Coverage available to AIP members *and* their employees, available in reduced amounts for spouses and dependent children of members and their employees.

Evaluation: This New Plan merits your fullest support, especially if you do any traveling. It is a terrific buy. For just $72 a year, you can get $100,000 of insurance payable in the event of any kind of accidental death except war or flying as a pilot or crew member. Bear in mind that accidental death is the number one cause of death under age 45 and the number four cause of death for all ages.

AIP RETIREMENT PLAN. Effective date, June 1, 1969. The type of plan is Group Variable Annuity Contract #CVA70023, GVA10069. The carrier is Lincoln National Life Insurance Company. The benefits are variable accumulation and variable life income.

Evaluation: SEC regulations do not permit evaluation.

New AIP Plans In 1972

The insurance plans described above, including the New Wide Range Accident Insurance and the New Hospital Money Insurance are all open for immediate enrollments. The following plans will become open during 1972.

NEW AIP LOSS OF INCOME. Effective date – February 15, 1972. This is an updating and expansion of the existing policy discribed above. There are eleven classes of benefits ranging from $55 to $330 weekly disability income paid up to lifetime for accidental disability and from 2 years to up to age 65 for sickness disability. Choices for waiting or benefit elimination periods range from 1st

day and 14 days for accident and sickness to 30 and 60 days for accident and sickness.

Evaluation: The extension and expansion of benefits provided by this new plan give you a true long term disability income plan which you can keep intact from job to job. The rate structure and benefit structure are so flexible that any member can tailor his own coverage to fit his income. Plan should merit enthusiastic support. Detailed brochures containing a complete description of benefits, rate schedules and an application were mailed to the entire membership in January.

NEW AIP LIFE PLAN. Effective date, June 1, 1972. The type of plan is Group Life Insurance. The carrier is CNA/Insurance. The benefits are $10,000 to $30,000 life insurance for a member of AIP, $2,500 for member's spouse, $1,000 for member's dependent children.

Evaluation: The new AIP Life Plan is true group insurance; no physical exams will be required. The rate structure is extremely good; imagine being able to get $10,000 of life insurance for only $11.90 *a year* if you are under age 30. Dependent insurance is also an important plus. Members currently participating with the present life plan can continue, switch or carry both plans. Detailed brochures containing a complete description of benefits, rate schedules and applications will be mailed to the entire membership about April 15, 1972.

AIP EXCESS MAJOR MEDICAL INSURANCE. Effective date August 1, 1972. The type of plan is Group Excess Major Medical Insurance. The carrier is CNA/Insurance. The benefits are up to $100,000 in major medical expense benefits, $15,000 deductible.

Evaluation: Excess Major Medical is the latest development in Association Group underwriting. The very high benefit limit of $100,000 and the $15,000 deductible are designed so that this plan can be superimposed on your own group insurance, such as Blue Cross – Blue Shield. The result is that you get insurance against truly catastrophic medical costs for very little cost – like $12.40 a *year* for a member under age 40. $36.80 a *year* for a member and his entire family. Detailed brochures containing a complete description of benefits, rate schedules and applications will be mailed about June 15, 1972.

Specific information on the AIP Insurance Program, brochures and applications can be obtained from the new program administrator. Write or call:

new urban design dept begins membership drive

As reported in the November *Newsletter*, the AIP Board of Governors approved the creation of an Urban Design Department at the annual AIP conference in October. This action culminated a year long effort by an AIP Urban Design Task Force, appointed in October 1970 and chaired by William Sheveland, to investigate the feasibility of creating an urban design department within AIP, to recommend appropriate actions, and to initiate the process of petitioning the Board for its approval.

The new department, the fourth created within AIP, is an outgrowth of the old Urban Design Committee first created in 1960 under the leadership of Charles Blessing. After several years of diverse activities, this committee, under the direction of Sid Williams, was instrumental in writing and promulgating the Policy Statement on Urban Design adopted by AIP Board of Governors in January 1969.

Organization

Upon approval of this new department the Board also designated temporary officers to serve for the first year of operation. These officers are: (1) Norman Day of Philadelphia to serve as Chairman; (2) William Sheveland of Dallas to serve as Vice-Chairman; (3) James Kise of Philadelphia to serve as Secretary.

The first business meeting of the newly created department was held in San Francisco following the Board's action to approve provisional by-laws, a first year work program, and a first year operating budget. It is the intention of the present officers to present these by-laws as modified to the membership at the next annual business meeting in October 1972 for formal adoption. Election of new officers to take office at the AIP's Boston conference in 1972 will take place by mail ballot in September 1972.

Purpose of the Department

The purpose of the Urban Design Department (as stated in the by-laws and presented here in abbreviated form) is to advance the theory and practice of Urban Design as a part of the comprehensive planning process by: (1) promoting urban design as an element of public policy formulation and program implementation; (2) promoting urban design principals and practices to improve the planning process; (3) establishing urban design and resource allocation priorities; (4) improving techniques and procedures of urban design practices; (5) promoting quality urban design education and research; (6) disseminating information concerning the availability of useful data, techniques and procedures among members of the department and fostering professional contacts and interchanges; (7) assisting the Institute in implementing the urban design policy statement; and (8) Liaison with governmental agencies and other professional organizations involved in urban design.

Activities and Services

As a membership organization, the activities of the department will be focused primarily on providing a variety of types of services of interest to its members. Following are a variety of things the department hopes to eventually undertake:

Sponsor and assist in the preparation of department programs of special interest to the membership at the annual AIP national conference, at the annual ASPO national conference when possible, and at meetings of other professional societies when invited.

Hold conferences, prepare background papers, prepare legislative testimony and recommendations and work closely with relevant federal agencies in collaboration with AIP and other professional organizations.

Monitor notable Urban Design activity in the United States and abroad and disseminate information about projects, techniques, methodology, and key personnel to the membership if and as budget or volunteer labor allow.

Publish background and conference papers, summaries of urban design research and activities, a quarterly newsletter, and membership lists, as possible.

Raise funds and obtain grants to facilitate sponsored urban design research whenever possible.

First Year Efforts

A number of specific activities have already been initiated or are being planned for the first year of operation in addition to a membership drive and other initial organizational functions.

Following the success of the heavily attended urban design sessions in San

17-06780 A2 70/11 A
ARTHUR C CAMPBELL
3501 STONE RD SW
ATLANTA GA 30331

Francisco (the presentation by Alan Jacobs of the Urban Design Plan for San Francisco, and a review of the Urban Design work of Weiming Lu in Minneapolis) focused on city-wide urban design efforts, the department has agreed to sponsor a major session at ASPO's Detroit conference in April focusing on the conduct and contribution of urban design in inner city neighborhoods using Detroit as a primary case.

For the 1972 AIP Conference, the Department will sponsor a number of sessions devoted to an exploration of the relationship between human perception and behavior and the built physical environment in the context of physical planning and design in new communities and large scale increments of suburban development.

Establishing liaison with other professional organizations will also be an important activity during the first year. The American Institute of Architects has already invited the Chairman of the new department, Norman Day, to serve as a consulting member of the AIA's Urban Planning and Design Committee for the coming year. It is further intended that a working relationship with the American Society of Landscape Architects, The American Society of Civil Engineers, and other relevant professional societies will be explored. In addition, contacts will be established with appropriate officers in HUD, DOT and other federal agencies.

Operating committees are currently being initiated to assist the temporary officers. These initial committees are: Membership, Finance, Programs, Publication, Professional Relation, and a corresponding committee. A nominating and teller committee will be appointed in mid 1972 for purposes of conducting the election of the 1972-74 officers.

Membership Drive

The current officers believe that an early and effective membership drive is of utmost importance because the purpose and proposed activities of the department cannot be realized without a large and active membership.

Membership is open to any individual, whether an AIP member or not, and to consulting firms and public agencies. Membership dues have been set at $10.00 per year for individuals and $50.00 per year for firms or agencies on a calendar year basis.

join a department

This month all members of AIP will receive an invitation to join one or more of the AIP departments for department fiscal year 1972. (The departments are on a calendar fiscal year and not on the same fiscal year as regular membership dues.)

At present AIP has four departments in existence. They are:

Metropolitan and Regional Planning
Information Systems
Planning Education
Urban Design

Detailed information about the above departments and their programs to date can be found in the 1971 *AIP Newsletters.* Check the Guide to Contents of the 1971 issues on the back of the December issue. The preceding story in this newsletter explains the newest department, Urban Design, in detail.

This is Not a Bill

Dues are $10 a year for individuals and $50 for organizations for most of the departments. This information will appear on the mailer you receive, and you will be able to check off the departments in which you are interested and remit payment. The mailer you will receive is **not a bill**; there is no obligation for any member of AIP to join a department. If you are not interested in joining any department, you may simply discard the mailer.

Environmental Department

Plans are now in process to create an Environmental Department, but it has not yet been created. (See December 1971 *AIP Newsletter.*)

If you have any questions regarding departments, please call or write Loretta A. Taylor, Director of Chapter and Department Services, at the AIP national office.

letters to the editor

I have just received a copy of the AIP Background Paper, *Housing Planning* and feel I must take the time to congratulate the Institute, and members of the Task Force on an excellent job.

The report is the best single source of information on housing planning available and greatly clarifies the issues involved. One oversight which should be corrected is the failure to acknowledge the excellent work of National Service to Regional Councils which during the past year has issued a series of reports, proceedings and newsletters on regional housing planning which are invaluable to housing planners.

I would sincerely recommend that AIP make *Housing Planning* available in bulk rate so that the wide distribution it deserves can be achieved.

Alan S. Levin, Assoc AIP
Seattle Housing Authority

Ed note; The National Service to Regional Councils' work on Housing under a HUD grant was just beginning at the time the AIP task force did its work. NSRC's address is: 1700 K St., N.W., Washington, D.C. 20006. Also, all AIP publications are available at a 10% discount for 20 or more copies.

More Family Planners

Ed note: In the October 1971 AIP Newsletter we carried an article on the many families which have come to our attention because more than one member is a planner. Since then, the following persons have let us know that they are also related planners.

Dell R. Tredinnick, AIP, has a daughter and son-in-law who are planners. **Lynn and David Froehlich** just completed a Peace Corps stint in Iran as community planners; and David is now on the staff of the Bucks County Planning Commission in Pennsylvania. Lynn is an associate member of AIP.

Thordis and Erling Helland, both AIP, have worked together in the consulting firm of Erling Helland Associates in Tulsa, Oklahoma, since 1958. Erling is a member of the AIP Board of Examiners now, and he was a member of the AIP Board of Governors from 1959-1962.

Robert K. Middleton, AIP, who was mentioned as the son of planner **Paul Middleton**, let us know that his son, **Robert K. Middleton, III** is a graduate planning student at the University of Washington in Seattle.

Res.

13 Hamilton Street
Holyoke, Mass. 01040
FEBRUARY 1972

Dear reader:

Here is a jumbo request for help and your input. A number of low income people like myself, a Head Start father of six, have been busily working in the New England area getting ourselves together, or trying at least! This effort has been mostly without outside help or financing.

We've come a long way and have found ourselves individually or collectively wrapped up in a lot of groups we'd like to tell you about and invite you to join and/or support. We've pooled our resources for this mailing to over 3,000 people all over the country.

B.C. res. should order pamphlets for inclusion in bins

Locally we have formed the New England Poor Peoples' Congress with members from the six New England states and upstate New York. We meet every six wks. or so and our dues are $1.00 per year. We need funds for a regionwide conference in May on coops, legal lay advocates, and day care. Our treasury is under $15. and our membership over 300! We want new members and...APPEAL: ...Donations, members, technical assistance, ideas, and volunteer time...

Our members succeeded, with endorsement from National Association for Community Development, in helping to form two NATIONWIDE organizations:

1) THE NATIONAL RURAL COALITION, INC., a non-profit corp. formed in Seattle, Wash. on March 31, 1971 and incorporated in Vermont shortly afterward. We have 500+ members in 24 states. There is NO DUES requirement. A description of our history and purposes is available for a donation and to become a member one merely asks to be put on the mailing list. One interim planning meeting was held last June in Tell City, Indiana and our annual meeting will probably be held in late April. NEEDED: money for mailings, a newsletter, and names of potential and interested new members.

WOULD LIKE THIS INTO AC.

2) THE NATIONAL POOR PEOPLES CONGRESS, a loosely knit group consisting mainly of small local groups and members of other statewide poor peoples groups and a handful of advocates who have kept the concept alive and to the point where we are now ready to become more structured. Dues structure is $1.00 poor/$3.00 advocate. Only the poor vote and the criteria is the NWRO adequate income figure of $6,500. per year for a family of four. The rate for affiliated groups is $10.00 per year, except that state and local poor peoples groups may join for a token membership of $1.00. NEEDED: funds to help pay for travel for low income members to a nationwide workshop, to develop a newsletter and to hire one or more full time persons to start a lobbying effort in Washington.

3) WORK, INCORPORATED, another activity with no geographical boundaries - a PROFIT MAKING corp. which desires to become an umbrella type structure for low income controlled self-help projects of any kind. Shares are currently selling at $1.00 each, and the first project is well underway; Work, Inc. has just bought a 16 family brick tenement in the lower income area of Holyoke, Mass. A low income owned attic cleaning service is also right around the corner. Tenants are becoming partial owners of their own building, both thru purchase of shares and (more often) in exchange for labor. Shares are open to ANYONE, but one man, one vote previals. INVEST your funds and put your dividends to work supporting our other efforts. A 6page narrative is available for 25¢, and is included on the order blank we've enclosed.

Finally, I'm editor of a newsletter for grass roots Headstart/day care folk put out by the Comprehensive Early Childhood Education Resource & Training Center, Arnold House, Univ. of Mass., Amherst, Mass. which sells ten issues for $1.50, or 30¢ for a sample. We welcome contributions of materials and news for use in our newsletter and to share with others thru the center.

Yes, we've been busy and succesful, but we can't grow now without additional support and exposure. We need to share our experiences nationally and learn from others as well. Together we must confront the many issues of racism and poverty and bring the peace movement to the poor as well since the poor have been the real losers at this end from the Asian war.

Please give us a hand, send your ideas, recommend us to others, help financially if you can and look through the materials we are selling. All profits will be distributed equally over our projects unless you direct otherwise.

Sincerely,

John Hammar

RURAL AMERICA, ITS PEOPLE AND ITS DEVELOPMENT

As a farmer who lives near one town with a population of 1,606, another with a population of 516, and a third with a population of 350, I know what rural America is. Rural America is a place where you can walk in the evening and hear the crickets and the frogs. But it is also a place where 63 percent of the housing still lacks complete plumbing, where an average family income is 23 percent less than in metropolitan areas. The challenge in rural development is simply to make rural America a better place to live and a better place to work.

Rural development is, of course, economic development where we strive for more jobs and a prosperous agriculture. It is also developing community facilities such as transportation, utilities, sewer and water system, and recreation, and land use planning. With all of these there is people building through programs of education and health, and volunteer leadership in reaching out to less privileged people.

It is most important to remember that successful rural development requires a balanced comprehensive approach simultaneously involving economic development, people building, community facility improvement and environmental quality. Deficiency in any of these areas will be the limiting factor in a community's fulfillment.

When you look at the size of the task ahead of us and the already overstrained Federal budget, it is clear that to achieve our goals, we are going to have to encourage more citizen participation in volunteer movements to meet the needs of rural America.

In all of the rural communities that I have known, the people who live there want to decide the direction of their future. The rural citizen's basic desire to serve, coupled with his vision of the destiny of his own community, provide opportunity and challenge for leadership for all of us who are dedicated to the development of rural America.

Working with all of you toward our common goal of enriching quality of life in rural America is an opportunity which I look forward to with great enthusiasm.

William Erwin
WILLIAM ERWIN
Deputy Under Secretary
for Rural Development

HOPE SPRINGS FROM DESPAIR
AS HOUSING BOOMS IN TULIA, TEXAS

Business in Tulia, Texas, slowly withered away. In the downtown section, 25 commercial and business buildings stood abandoned and shuttered.

"Sunset Addition," a dilapidated slum occupied mostly by Negro families, blighted an entire section on the "wrong side" of the tracks.

Services from the town languished as the tax base dwindled and community activity retreated to the most basic and necessary functions.

Finally, the problems of the town became too large to ignore. Local leaders realized that if their town was to prosper, or perhaps even continue to exist, they would have to act decisively.

They confered with housing specialists of the Farmers Home Administration who found Sunset Addition beyond hope of rehabilitation. In exploring alternate solutions, the town leaders learned that Farmers Home could make new home loans to low-income families if suitable building sites were available.

Government leaders, civic organizations, and private citizens soon agreed that FHA financed homes could be built on any suitable site in town. Within months, the first housing construction started, and the families of Sunset Addition began moving into Tulia. Spanish surname and white families soon followed and applied for similar housing loans. The Tulia housing boom developed.

Within two years, the Tulia office of the Farmers Home Administration approved 286 housing loans for a total of $3.5 million dollars. All homes are individually built, many with brick veneer. Most of them have three bedrooms, but some for larger families have four bedrooms, and others for senior citizens have two bedrooms. Builders have kept the average construction cost at about $13,500.

As families move from dilapidated shacks to new homes, the old houses are demolished, either voluntarily by owners, or by official city council condemnation. The cleared ground is used for new building sites.

Vacant and unsightly areas of the town are steadily being upgraded, improved, and beautified through construction of new homes. Homes financed by Farmers Home compare favorably with more expensive, conventional housing as they stand side-by-side throughout the town.

The influx of construction money, plus new tax revenues have spurred business activities in the town and employment is up.

POPULATION TURNAROUND

The flow of people out of the rural South during the 1950's slowed to a trickle the next decade. Four million more people left the area than moved in between 1950 and 1960, but during 1960-70 out-migration dropped 60 percent to 1.5 million and the South's total population actually grew nearly 6 percent. Total outmigration from the rest of rural America did not slow as much. The population turnaround in the rural South is spotlighted in the April Farm Index. A limited number of single copies of this monthly U.S. Department of Agriculture publication is available by writing the Editor, Farm Index, OMS Information, U.S. Department of Agriculture, Washington, D.C. 20250.

STAND TALL--AND PAY ATTENTION TO DETAILS

Driver education, seemingly a trivial segment of adult training, is a vital part of the new community development program sponsored by the South Carolina rural electric system.

Urban employers balk at hiring rural workers unless they can drive. When a carpool has only one driver and he is away for any reason, they lose at least four workers that day.

Attention to such details as driver education is one of the reasons Stand Tall is succeeding in community development in South Carolina. It is one of the reasons the Rural Electrification Administration is urging its borrowers nationwide to adapt such a program to their communities.

No item which will upgrade rural life is neglected in the Stand Tall program, initiated about 18 months ago by the South Carolina Electric Co-operative Association, Inc. Furthermore, the poor are involved in each community's program from its inception.

As a community forms a Stand Tall commission, nothing is left to chance. From the start, the local group receives assistance from the Statewide Stand Tall organization--step by step guidelines, suggestions for meeting agendas, forms on which to report progress, survey forms, and other guidance. A fulltime development specialist from the local electric co-op acts as the commission chairman's assistant.

The cooperatives make surveys, help establish nonprofit industrial development corporations and handle other special problems for the community.

One of the great stumbling blocks of community development, duplication of effort, is minimized by outlining each commission project in advance. Another important detail.

Stand Tall's aim is any State's aim: to make the State's rural areas attractive industrial bases, offering not only water and sewage treatment but better education, housing, medical centers, better roads, job training, recreation and an improved environment.

Worthy goals in any State, yes, but Stand Tall has gone beyond the talking stage. Detail by detail, they are developing their communities.

As of February 1972, 15 rural electric cooperatives were involved in this program as sponsors of 16 Stand Tall Commission organizations. For further information, contact Robert D. Bennett, Ex. Vice Pres., or Al Ballard, Director of Industrial and Community Development, South Carolina Electric Cooperative Association, Inc., 808 Knox Abbott Drive, Cayce, South Carolina 29033. REA offers a colorful booklet on the program, ACTION NOW--TOTAL COMMUNITY DEVELOPMENT THRU CO-OP LEADERSHIP.

WHAT ARE YOU PLANNING FOR COUNTY FAIRS?

Housing exhibits for county fairs were put together by a multi-agency team in Pennsylvania last year. Table-size scale models of homes designed by the Forest Service were accompanied by technical information provided by the Extension Service and Farmers Home Administration. Considerable public interest brought many inquiries for literature and detailed house plans. For details, see a local Forest Service official or write The Northeastern Office of the Forest Service at 6816 Market St., Upper Darby, Pennsylvania.

FARMERS MARKETS SPREAD IN NEW MEXICO

Thanks to the League of Women Voters in Los Alamos, N.M. the farmers of small acreages began to increase their income in 1970 by selling fresh vegetables at a local farmers market.

Members of the League, noticing farmers were selling vegetables beside the road and from door-to-door, located a parking lot for their use each Thursday and promoted the new Los Alamos Farmers Market. The Extension Service and other USDA agencies helped the farmers with problems such as better vegetable varieties, irrigation and insect and disease control. 38 farmers participated the first year, more the next.

In 1971, the League of Women Voters in Santa Fe sponsored a new Farmers Market for that city, and this year a group called the Friends of Taos Valley will sponsor a Farmers Market in Taos, N.M.

SLIDE PRESENTATION AIDS ENVIRONMENTAL CLEAN-UP

Environmental Thrust is the subject of a new full color, 50-frame slide set and filmstrip released by the U. S. Department of Agriculture.

It was prepared to help inform the public about the resources available through the national network of USDA offices to help challenge pollution, ugliness and blight, discussing subjects such as soil and water pollution control, housing, waste disposal, and cost-sharing programs for planting trees and shrubs. A cassette carrying music and dialogue helps tell the story in an informal treatment.

The filmstrip can be ordered for $5.50 from Photo Lab, Inc., 3825 Georgia Avenue, N.W., Washington, D.C. 20011. Order the slide set for $13.00 from Photography Division, Office of Information, U. S. Department of Agriculture, Washington, D.C. 20250. The cassette is available from either source for $3.

RURAL DEVELOPMENT MOVIE AVAILABLE

A 26 1/2-minute color movie on rural development has been completed by the Cooperative Extension Service of New Mexico State University and the Extension Service of the U.S. Department of Agriculture. Narrated by Chet Huntley, "What Do You Want" is designed to help people decide what kind of development they want in their community. It may be purchased for $245 from Bandelier Films, 2001 Gold S.E., Albuquerque, N.M.

RURAL HOUSING SITE LOANS

The Farmers Home Administration, an agency of the United States Department of Agriculture, makes loans for the development of building sites in rural areas for sale, on a nonprofit basis, to be used for housing for low and moderate income families.

Who May Receive A Loan

Public or private local nonprofit organizations which have legal authority to buy, develop and sell home-sites on a nonprofit basis to applicants eligible for rural housing loan assistance from the Farmers Home Administration or from the Department of Housing and Urban Development.

How May Loan Funds Be Used

Funds may be used to:

- Buy and develop building sites, including the construction of essential access roads, streets, and utilities which become a permanent part of the development.

- Pay engineering and legal fees, and actual cash cost of incidental administrative expenses such as postage, telephone, advertising, and temporary secretarial help, provided funds for these expenses are not otherwise available.

Limitations of Loan

Loans may NOT:

- Be made, generally, when the total indebtedness exceeds $100,000.

- Be used to buy land in excess of immediate needs in the locality.

- Be used to buy land directly or indirectly from a member of the applicant-organization unless prior FHA consent has been obtained.

- Be used to develop lots that are excessive in cost or unsuitable for the type of housing needed and planned.

Terms for Financial Assistance

Repayment from sale of lots is expected within two years. The interest rate on site loans is 6-1/4 percent except 3 percent on loans if all sites in the tract will be used for housing to be built by the mutual self-help method.

Special Conditions

WHO MAY BUY SITES - Developed sites may be sold only to (1) families having a low or moderate income who qualify for an individual rural housing loan from Farmers Home Administration or a section 235 HUD insured mortgage; or (2) nonprofit organizations eligible for a rural rental or cooperative housing loan from Farmers Home Administration or a section 236 HUD insured mortgage.

LOCATION OF SITES - Building sites should be located so that desirable residential communities can be developed.

BEFORE LOAN CLOSING - Applicant must provide firm information as to the number of sites to be developed, the proposed development cost, and evidence of a need for proposed building sites in the locality.

- Applicant must not start work nor incur obligations in connection with site development before loan is closed.

Security Required for a Loan

Each loan will be adequately secured to protect the interest of the government. Loans will be secured by liens on property purchased or improved with the loan.

Where Are Applications Made

Applications for loans are made at the local county offices of the Farmers Home Administration. The office staff will be glad to discuss services available from the agency and explain how to prepare a written application.

ISSUANCE OF CONDITIONAL COMMITMENTS FOR RURAL HOUSING LOANS

The Farmers Home Administration, an agency of the United States Department of Agriculture, issues Conditional Commitments on single-family dwellings in the open country or rural communities up to 5,500 population. The program is designed to encourage the construction or rehabilitation of single-family dwellings in rural areas for sale to low and moderate income families.

What is a Conditional Commitment

Assurance to a builder or seller that the homes to be constructed or rehabilitated will meet Farmers Home Administration lending requirements if built as proposed and that, subject to the availability of funds, the agency would be willing to make loans to qualified applicants who may want to buy the homes.

- This assurance does not reserve funds for a loan nor does it provide for construction financing.

Who May Apply for Conditional Commitments

An individual, partnership or corporation engaged in the construction or the rehabilitation and sale of homes may apply for a Conditional Commitment.

What is Required of an Applicant for a Conditional Commitment

- Have demonstrated ability to complete the construction of single-family dwellings in a competent and workman-like manner.

- Must be financially responsible and have the ability to finance the proposed housing construction or rehabilitation.

- Plan to build or rehabilitate homes that will be acceptable for purchase by families who qualify for rural housing loans through the Farmers Home Administration. Houses may also be sold to families who obtain financing elsewhere.

- Agree to certify that there will be no discrimination in the sale of the dwellings.

- Conform with local building codes and regulations regarding housing construction.

- Have the legal capacity to enter into the required agreements and the actual capacity to carry them out.

Limitations on Conditional Commitments

* Must be for newly constructed single-family dwellings, including manufactured homes .. or homes which require major repairs, additions, structural changes or installations.

* Does NOT include homes on which construction has been started nor homes on which conditional commitments have been issued by the Federal Housing Administration or the Veterans Administration.

* Outstanding Conditional Commitments held by an applicant may not exceed 15 at any time.

* Total number of commitments issued by Farmers Home Administration in any locality will not exceed the number of homes for which there is an immediate and ready market.

Terms of Conditional Commitments

The Conditional Commitment is good for 12 months from date of issue. It may be extended for an additional 6 months if justified because of unexpected delays in construction caused by such factors as bad weather, material shortages, or other unforeseen difficulties.

Commitment applications must be accompanied by an application fee for each house based on the following schedule:

- Construction of new home - $45.
- Rehabilitation of existing home - $35.

How to Apply

Applications are made in the form of a letter specifying:

- Number of homes for which commitments are being requested and a description of the type and location of the homes involved.
- Number of previous commitments issued by Farmers Home Administration on homes that are unsold as of the date of application.

Attached to the application should be supporting data such as plans, specifications, proposed selling price and other information related to the property.

Where to Apply

Applications for a Conditional Commitment are made at the local county office of the Farmers Home Administration, usually located in the county seat town. The office staff will be glad to discuss services available from the agency and explain how to prepare a written application.

Information Office
Area Code 202-388-4323

TECHNICAL ASSISTANCE FOR SELF-HELP HOUSING

The Farmers Home Administration, an agency of the United States Department of Agriculture, provides qualified public and private nonprofit organizations with the financing needed to carry out effective programs of technical and supervisory assistance to help low income families build homes in rural areas by the self-help method.

Who May Receive Assistance

A public body or a public or private nonprofit corporation with the legal, administrative, and technical capacity to carry out the objectives of the program may qualify. An applicant organization must show that:

- A need clearly exists in the area for self-help housing.

- Personnel can be hired to carry out the objectives of a technical assistance program.

- Funds are not available from other sources to provide these services. If the applicant is a nonprofit corporation, it must also have either:

- Successful experience in the field of self-help housing; or

- A sponsoring organization with this experience or with proven ability in related business fields.

How May Funds Be Used

Organizations may use technical assistance funds:

- To hire the personnel to carry out a program of technical assistance for self-help housing.

- To pay necessary and reasonable office and administrative expenses.

- To make essential equipment such as power tools available to families participating in self-help housing construction.

- To pay fees for training self-help group members in construction technique or for other professional services needed.

Conditions Under Which Assistance Is Available

The applicant organization must show that self-help housing clearly is needed in the area where it proposes to supply assistance, and that services and equipment to be paid for with technical assistance funds cannot be financed through any other source.

An initial agreement with an organization may provide for not more than $100,000. The amount will be based on estimates of reasonable costs per house as determined by the Farmers Home Administration.

An agreement between FHA and a recipient organization may cover assistance to be rendered by the organization for up to 2 years.

The organization must keep records and provide the Farmers Home Administration with monthly financial and progress reports.

Funds may not be used for:

- Hiring personnel to perform actual construction work for families participating in a self-help project.

- Buying real estate, building materials or other property for participating families.

Where Applications Are Made

Applications should be made at local county offices of the Farmers Home Administration. The office staff will explain the services available from the agency and help organizations complete their applications.

Other Assistance To Self-Help Housing

The Farmers Home Administration makes rural housing loans to individual families to pay the costs incurred in the construction of their homes by the self-help method. Loans also are made to public and private nonprofit organizations to develop home building sites for sale to families participating in self-help housing projects. Information on these programs is also available from county offices of the Farmers Home Administration.

Branching Out

Rural Electric Co-Ops Diversify in Attempt To Keep More Customers Down on the Farm

By JAMES C. TANNER
Staff Reporter of THE WALL STREET JOURNAL

LAFAYETTE, La. — An aggressive new business is beginning to surface in small-town America. It is called a rural electric cooperative.

By name at least, the nonprofit consumer-owned co-ops known as rural electrics are old-timers. Farmers started them in the 1930s with 2% loans from the Rural Electrification Administration. They drove the kerosene lamp from the countryside, only to find that more than bright lights were needed to keep people down on the farm.

But now the rural electrics are making a comeback—by shedding the farmer image and by becoming activists in their communities.

This new approach by the rural electrics has made a homeowner out of Rodney Savoy. The 23-year-old truckdriver from nearby Scott, La., had given up on getting a home loan until he attended one of the meetings on housing being held in this area by Southwest Louisiana Electric Membership Corp., or Slemco, of Lafayette. The co-op steered him to the Farmers Home Administration for financing and told him how to apply. Mr. Savoy now is building a three-bedroom brick house.

Thanks also to Slemco's efforts, a new school for mentally retarded children is being built in the little town of Iota. At the town's request, Slemco helped Iota make a pitch in the Louisiana legislature for the school.

Boosts Plant, Handles Hiring

The Lafayette co-op gets considerable credit, too, for a yarn products plant under construction at St. Martinville. The plant will provide 1,000 jobs for the area, reports U. J. Gajan, general manager of Slemco. He should know. After helping St. Martinville get the new industry, he sent Slemco staffers to the town to screen job applicants for the plant.

Around the oil fields, rice paddies and crayfish and catfish farms of Cajunland—this French-speaking part of south Louisiana—Slemco is considered somewhat of a swinger. Its annual meeting of consumer-members draws more than 10,000 and is considered one of the biggest fetes of the year in Lafayette.

Slemco isn't a typical co-op. With 38,000 consumer members, it is one of the largest, if not the biggest, in the nation. But its change in emphasis to community development is being shared increasingly by the other rural electrics.

The co-ops are sponsoring and promoting, and in some cases building, new houses, schools, parks, golf courses, swimming pools, hospitals, resorts and factories in the rural areas. Samplings of scores of the nation's 1,000 rural electrics indicate that at least three out of every 10 are involved in such nonpower projects in the regions they serve, and the trend appears to be snowballing.

"We've got to make the rural areas more palatable to stop the migration to the cities," says W. V. Thomas, general manager of the Wisconsin state association of rural electrics.

Growing evidence suggests the migration already has stopped and perhaps reversed. With new highways and the clean air of the countryside beckoning, more urbanites are moving to smaller towns and commuting to jobs in the cities. Many others are building weekend and vacation homes in the rural areas. "Everybody wants his five acres in the country," says a Texas co-op official.

Obviously, the rural electrics are beginning to benefit. Nationally, these co-ops have 6.5 million meters linked to their lines and are expected to add at least 150,000 more this year. More than half of the 20 million to 25 million people provided power by the co-ops, based on four persons per meter, already are "nonfarm" (electricity users who may live on the farm but don't make their living there), and seven out of eight new customers of the co-ops fall in this category.

The metamorphosis in membership rolls is reflected in part by the changing attitudes of the co-ops. "To say we took the lantern off the farm means nothing to most of our members now," says Ronald J. Knouse, manager of member and community services for Blue Ridge Electric Membership Corp., Lenoir, N.C. He notes that only 10% of Blue Ridge's customers derive most of their income from farming today, versus 90% 25 years ago.

Even so, the so-called investor-owned and municipal power companies are continuing to cut into the territories of the co-ops, leaving many of them only with still-sparsely settled regions. And many of the residents of these regions are among the nation's poorest.

Uniquely Equipped Catalysts

An estimated 14 million impoverished Americans live in the rural areas. Some 50% of all rural housing is said to be substandard, compared with an estimated 14% in urban America. One South Carolina co-op surveyed just one of its counties and found that 40% of the 7,000 houses had no toilet facilities.

Armed with such evidence, South Carolina's rural electrics are launching "Stand Tall" programs throughout the state to develop jobs and job training and to provide housing, water and sewer systems, schools and recreation for the rural poor. "These are the people who would go on to the slums of the cities if not helped and become dope addicts," says a spokesman for the state's electric cooperatives.

The co-ops have their own interests at heart, of course. J. U. Gajan II, director of power sales for Slemco, notes that the co-ops can increase their electricity loads by improving the lot of their customers. "We're not really looking at it moneywise—it's hell to be poor—but if we can move someone from a $2 a month house to a $5 a month (electric bill) we're helped too," he says.

Whatever the motive, the rural electrics appear to be uniquely equipped to become catalysts for a turnaround in rural America. "The co-ops, usually the largest single business organizations in their communities, have a corporate citizen interest in this whole matter," says Robert D. Partridge, general manager of the National Rural Electric Cooperative Association. "Many millions of future Americans," he adds, "are going to have to have jobs and live in what are now rural areas. The cities can't absorb them, and the co-ops need these additional consumers to offset their loss of farm consumers."

A Push in Housing

Other observers agree. "It's the greatest development idea beyond the city limits," says David A. Hamil, administrator of the Rural Electrification Administration, which still provides financing of around $345 million a year to the co-ops but only for power purposes. And Congressman Wright Patman of Texas told the co-ops at their recent Dallas convention: "Slowly we are making headway in this area, but the rural electric cooperatives must still provide the nucleus of any new efforts to revitalize rural communities."

If anybody's unhappy about the co-ops' expanded activities, in fact, it's mainly the investor-owned utilities who don't get the benefit of low-cost government loans for their power facilities. Utility executives grumble that if they were able to get 2% loans, they, too would have more profits left over for community development activities.

The biggest push by the co-ops is in housing. Their national association lobbied through Congress a liberalization of lending policies as well as additional funds for the Farmers Home Administration. On the home front, the co-ops began vigorously rounding up home-buyer prospects to use up the $1.5 billion the Farmers Home Administration has available this fiscal year.

The result has been a flood of home-loan applications into understaffed FmHA offices. Mills J. Vautrot, assistant county supervisor for the FmHA office in Lafayette, says he is closing twice as many housing loans this year.

Just a Coincidence

Many co-ops have begun helping process loan paperwork for the FmHA. A North Carolina rural electric hired an additional man for this purpose. Some co-ops have put on, or at least assigned, as many as four staffers to handle FmHA loans. At Jackson, Ga., the co-op's "Power-Use Organization," wives of consumer-members of Central of Georgia Electric Membership Corp., has made housing its club project this year. "By financing homes for them, we can hold people in the country and keep the poor devils out of the city," says Robert F. Armstrong, manager of the Georgia co-op.

Some co-ops are going even further on hous-

World Bank Announces

WALL STREET JOURNAL
May 28, 1971

ing. Wisconsin's rural electrics set up a statewide housing cooperative that is using government grants and loans to construct homes for the rural poor. Similarly, at Wilburton, Okla., a nonprofit housing co-op recently established by Kiamichi Electric Cooperative is constructing more than 600 homes for low-income families. It is only coincidental, the co-op says, that the houses are all-electric.

But houses alone aren't enough, the co-ops figure. So they are pressing for other amenities, too.

In Texas, the rural electrics have helped establish several hundred water districts and are involved at the moment in developing LBJ State Park, named after the former President. In New Mexico, electric co-ops rode to the rescue of a narrow-gauge railway abandoned by the Denver & Rio Grande Western Railroad. A resulting two-state joint venture begun by New Mexico's rural electrics has salvaged a 67-mile stretch of scenic route in Colorado and New Mexico. It will be reopened this summer for tourists and narrow-gauge railroad buffs.

Plugging Rural Virginia

Clinton County Electric Cooperative at Breese, Ill., helped establish a junior college at nearby Centralia and then got behind community campaigns to improve medical facilities. One of the co-op's officers headed a financing drive that resulted in a new 100-bed hospital. Now he directs a group that's trying to bring in more doctors and nurses. The organization already has netted one new doctor with its campaign this year.

Jobs are important, too, and that's why the co-ops are hustling for new industries for their areas. Earl J. Shiflet, executive manager of Virginia's statewide association of electric cooperatives, now spends half his time making speeches in the cities to plug the industrial attractions of rural Virginia.

North Carolina's Blue Ridge Electric says it has brought nine industries to its area in the past 12 months. They include textile, woodworking, metalworking and furniture plants and provide 1,200 jobs.

At Medford, Wis., Taylor County Electric Cooperative puts up seed money to get new industries started. It's also keen on airport improvements, perhaps because its 68-year-old manager, Charles W. Berglund Jr., got his pilot's license last November.

Georgia's statewide co-op association recently hired an industrial-development specialist who's trying to fill the state's empty buildings with new firms. "Cotton is dead," says a spokesman for the Georgia co-ops, "and there seem to be a lot of vacant warehouses."

Eastern Maine Electric Cooperative parlayed a vacant warehouse, its own, into a thriving new industry for Calais, Maine. The industry, a shirt factory, did so well it has moved into its own new plant. Now the co-op is trying to get someone else to occupy the warehouse, and a winemaker and a paint-brush manufacturer have expressed interest. "This is the grass roots," says Robert V. Clark, manager of the co-op, adding: "If it doesn't start here, it doesn't start."

Dorsey Corp. Acquisition

CHATTANOOGA, Tenn. – Dorsey Corp. which manufactures road trailers, and glass containers, said it bought Polyco Inc. from Alcon Laboratories Inc., for an undisclosed amount of cash. Polyco, a maker of plastic containers in Atlanta and New Orleans, has annual sales of $3 million.

I. THE REALITY OF INTERDEPENDENCE

A. Common Advantages

Contributing to the realization that our society is becoming more urbane is the fact that many rural residents want, can expect to obtain, or already have, all of the transportation, communication, social health and cultural services which are common to urban residents. By the very same token, the advantages which contribute to better family group and recreational life, which were once primarily rural, are now sought after and largely the possession of urban people.

> "The change from the dirt, noise, and congestion of life in the city to suburban living is comparable to the change brought about by electricity in the farm."

In the past, the country has provided men, materials, and motives which the city has turned into multitudes, machines, and managers. This, of course, continues to prevail but the fabric of our society is becoming more interwoven.

B. Diversifying of Services

The diversifying of industrial operations and business and professional services has also made greater inter-relatedness. Some progress has been made but there remains much to be done concerning more comprehensive local government. In July 1961, the U.S.D.A. in public bulletin #864, analyzed "The Stake of Rural People in Metropolitan Government":

> "Urbanization will continue to spread out into rural portions of our metropolitan areas, bringing such problems as urban sprawl, traffic congestion, slums, automobile 'graveyards' and ribbon developments along the highways. Both the traditional

rural systems of government and many of our present urban governments are inadequate to cope with these problems. At the very least there must be regional cooperation so that local government officials in the area can get together to discuss area problems.

"It has become increasingly evident that because metropolitan area boundaries are indeterminate, it is unwise to attempt to draw a single boundary line around the area. However, some form of city-country government system must be evolved to meet the particular area situation. Rural residents who want new services will be in a better position to obtain them if they are represented in the governing unit."

According to Ernest Nesius, vice-president of West Virginia University,

"...we should recognize that a great paradox exists in our rural society in that on the one hand it strives hard to preserve the least government concept, yet at the same time additional program services and the resulting complexities demand more government. According to the Committee on Economic Development, five major problem situations need to be corrected at the local government level if modernization is to take place--one, local government units are too small for operational efficiency; two, considerable overlap among the various local governments is to be found in the municipal, township, county, and school district operations; three, popular control over local government operation means satisfying factional and partisan politics; four, an antiquated administrative system generally results in cumbersome decision-making; and five, unqualified personnel seated in technical positions results in funds allocated to the wrong uses."

II. NEW FORMS OF COMMUNITY

A. The Force of Technology

Technology has drastically changed both urban and rural communities. The dramatic features of mechanization and automation are, however, only part of the new picture. Emerging into focus are constellations of new forms of community for which specialized study

planning and action must be forthcoming. Many small towns have become permanent refugee camps for an increasing number of unemployed and/or underemployed mining, agricultural, fishery, forestry as well as industrial workers. Other communities are fast becoming settlements exclusively for the aged. And still other town and country areas are rapidly shifting to the flourishing industry of tourism. There is little sense of community and much depersonalization in such areas. It is most interesting to note that the technology which the farmers in this country so quickly embraced - to the benefit of us all, is now being used as a weapon to destroy them - and this, too will affect us! Some central cities have become glittering centers of the arts while others are brutal wastelands of the desparing and defeated. The lack of adequate institutions is also a characteristic of these areas in which the poor predominate. The reports "The People Left Behind" and "Hunger U.S.A." as well as the Poor People's Campaign indicates the extent of this problem. The mobility of our age has broken traditional patterns of moral control - and this is good to the extent that inadequate local totems are left behind, but it has also resulted in the loss of a sense of belonging, and of the putting down of roots which makes community possible. However, there is emerging a new awareness and valuing of one's distinct culture or racial or ethnic group. We now recognize that it is not so much one's cultural distinction but his or the culture's isolation that is debilitating. In an article in the July 31, 1968, issue of "The Christian Century" John C. Bush states:

"The problems of agropolitan America are essentially the same as those of the metropolis with two obvious exceptions: population density and cultural diversity. But the opposites of these two conditions - population scarcity and cultural homogeneity - create their own kinds of problems.

"Population scarcity means that older persons idle away their time in loneliness not unlike some of their counterparts in city apartments. It means difficulty in the areas of education, youth services, health care, housing and labor.

"Cultural homogeneity means that we have white rural ghettos, cut off from the broadening, humanizing experiences that come from involvement with people of other racial or ethnic backgrounds. It sometimes produces fear and an extreme white racism, often resulting from the isolation of persons different in culture or physical features from the majority. In seven counties of west central Missouri, for example, there are 488 non-whites (mostly Black) in a total population of 86,000. One of these, Hickory County, has an entirely white population. Only one, Henry County, has a non-white population of more than 1 percent. Missouri's non-white population accounts for 9.2 percent of the total population.

"IN OTHER WAYS, the problems besetting the agropolitan community are akin to those of the cities: alienation of the poor from centers of authority, scarcity of adequate leadership, problems of housing, employment, education, health care, basic services.

" - For some in rural communities, isolation from political power is being felt as a rude shock as a result of the 'one man, one vote' ruling of the Supreme Court. But for the rural poor, however, lack of representation is nothing new.

" - There is a leadership lag, with many community leaders being older persons who have done a commendable job during the decades of decay, but who are unprepared to exert the quality of leadership needed by agropolitan communities in their time of rediscovery. This is illustrated by the poor planning (or more likely, absence of planning) on the part of communities being caught up in population influx and other changes facing these areas.

" - As agropolitan communities grow the new-comers often are non-farm persons moving out from cities. Lines of division appear between 'old timers' and the new rural urbanites who have a different perspective and different expectations. The intensity of this separation rivals racial segregation in the hostility it evokes."

B. Suburban "Utopias"

The flight to suburbia, or the rural-urban fringe if you will, lives behind an over-supply of both facilities and organizational structures which is no longer effectual for the new age. The buildings become shrines, and like far too many shrines, ugly. The organizations are anachronistic hodgepodges devoid of vitality - and even at their best are dull. All of this results in such a concern for survival that it is all but pathological. Most of the attemps at cooperation in both city and country came too late and for the wrong reasons. And all that is reaped is the ridicule of pagans.

But now our plight becomes more desperate as our suburban utopias in which we placed so much of our hope often reveal themselves as mere sterile concentration camps and we are shocked to find our churches held captive in an environment which commands only their conformity.

We have at least learned that community - which makes for wholeness in man, cannot be engineered even by a real estate developer, but can only evolve - and that under special circumstances.

Community has become an indistinct term that formerly defined one's place of residence and corporate role. Sister Marie of the Glenmary Order defines community as "brotherhood of man - an attitude of the mind which is not limited within space. Brotherhood necessitates an openness of heart and mind to everyone - an acceptance of everyone's similarity as a person and uniqueness as a personality." Community may be relative to residence, vocation, leisure, religion or interest, but "I" do relate to "Thou!"

Perhaps we can approximate preciseness by using the term community as an adjective rather than as a noun: Community attitude, - awareness, - approach, - minded or - relationship.

The return to community which involves leaving both rural isolation and city crowding in favor of group life can mean a totally new and better society. However, so many of these new centers of population are bodies without souls. The evolving of a soul involves both time and tradition and the contribution of life - the Church. Confirmation of this concept is provided by John Herman Randall, Jr. of Columbia University:

> "Until the 1930's one really could make out a case against religion. But since the '30's we have learned something that may turn out to be the most important discovery of the 20th century, namely, if you take religion out of the social structure, all the evils remain - the bigotry, the wars, the group hatreds, everything that one objects to in religious history remains. All that is taken away is the mitigating influence of religion, as one can see by observing the events of the past thirty years."

Again we note an insight from Dr. Nesius in that

> "Through the school network, young people in local communities can find identity and, if the school is a community center, as it should be, we will also find the means for important local social controls. The school with the churches inter-related then becomes essential as the concept of a true community center which meets our personality and socialization needs."

III. RURAL-URBAN BALANCE

At the Symposium on Communities of Tomorrow - National Growth and Its Distribution in Washington, D. C., December 11, 1967, several cases were made for the creation of a national urban policy:

LIVING SPACE. The Honorable Arthur S. Flemming, Masalester College.

> "The desirability and possibility of new goals for community are expressed by A. N. Whitehead when he states that, 'High aims are worthwhile, they harbor a certain extravagance of objectives.' Thus, men often wander beyond personal satisfaction.
>
> "The process of defining or redefining objectives is one of the most neglected and most difficult processes of government. The question is raised, should there be a clearly defined policy of rural-urban balance? In any case, intelligent use should certainly be made of land and human resources.
>
> "The concept of Communities of Tomorrow includes these characteristics: 1)Larger geographic area (or multicounty), 2) Natural geographic structure, 3) Full range of employment.
>
> "The avoidance of being bound by either the traditions of the past or the predictions of tomorrow is important. Even our founding fathers were concerned with disruption and innovation. Multi-county government can be developed only if there is a sharp break with the past and an acceleration of planning. This will demand simplifying, rather than complicating, organizational structure and processes.
>
> "The U.S. Department of Commerce predicts no reversal of population and migration trends.
>
> "The new national goals must not be advanced as a substitute for the rehabilitation of cities and counties - education, housing, and all the phases of the war on poverty.
>
> "There are some 'communities of tomorrow' in existence today that enable us to evaluate. But today there is no national policy - no consensus - on urban-rural balance."

Mayor Arthur F. Naftalin, Minneapolis, Minnesota:

"There is no debate over values or goals. They include livable environment, fully productive people with meaningful roles in life, and the elimination of pollution.

"We tend to identify the deficiencies of urban centers while we ignore their sources of economic and social strength. Is it size or neglect that creates the problem?

"There is a great failure to understand the nature of scale - the organic planning of an area and the extent of its potential. It is the corporations and large universities that have discovered the importance of scale.

"Our whole economy is based on the specialization of labor - the demands and needs of human beings. We become more dependent, so we seek each other out in larger settings. Secretary of HUD, Robert Weaver has said, 'The more urbanized we become, the more we become dependent on each other.'

"A national urban policy would liberate the cities to consider their problems.

"There is a limit to the economies of scale when measured against the social costs e.g. congestion, pollution, anomie, etc. But an arrangement of scale could modify these costs. Locking children into a poor educational system through the location of an industry in a small town is also a social cost. Chicago affects the entirety of Lake Michigan and the Mississippi River, and armaments as a locational advantage must also be considered. Critical scale is the separation of functional units and manufacturing establishment."

Dr. C. E. Bishop, University of North Carolina:

"The old rural-urban dichotomy is dead - let us bury it. The issue is a balance of growth. In some regions, it will take 100 towns to make up a sufficient basis for development.

"There is less change in governmental structures than in economic and social structures, and there is a static or eroding tax base.

"To improve the economic and social situation in the central cities, without a corresponding improvement in rural areas, is to be self-defeating for it will only create more migration.

"The metropolitan centers are being rewarded for the dramatic ways of making their demands known.

"People are not looking for land but for economic opportunity, social justice, and political power. Few people above 45 years of age gain from migration. Regional development commissions are an absolute necessity."

In the September 1967 issue of Ramparts magazine, Paul Goodman indulges in a phantasy as if he were writing history in 1984.

1. Socio-Psychological Factors

"There were two main movements toward rural reconstruction in the early '70's. The first was the social decision to stop harassing the radical young, and rather to treat them kindly like Indians and underwrite their reservations. This humane policy - instead of raids of Treasury agents on the colleges, horrendous sentences for draft card burning, cracking children's skulls on the Sunset Strip - was the idea of social engineer Donald Michael, of the Institute for Policy Studies. Michael argued that, if the serious aim of society was to increase the GNP, it was more efficient to treat the non-conformists like Indians. Naturally, this was difficult when their reservations were in the middle of metropolitan areas, like the Haight-Ashbury or East Greenwich Village, or on the big university campuses. But this plan became much more feasible when an inventive tribe, the Diggers, suddenly remembered the peasant and Taoist origins of their ideology and began to forage in the country.

"The second wave of ruralism was the amazing multiplication of hermits and monks who began to set up places in the depopulated areas for their meditations and services to mankind. There had always been individuals who felt that the mechanized urban areas were ugly and unhygienic and who, therefore, fled to the country, at first only for the summers. (I can remember a nest of

these in the '50's around Wardsboro, members of the Congress for Cultural Freedom supported by CIA.) But it was not until the early '70's that humanists began to realize that society had indeed reverted to Byzantine or Late Imperial times, and who therefore withdrew to save their souls.

2. Ecological and Economic Factors

"Generally speaking, emigration and rural reconstruction were unexpected consequences of the Great Enclosure policy which was supposed to get most people off the land and speed up urbanization. This is another example of the rule that, if people survive, inept social engineering will produce a contrary effect.

"The American Enclosure of the 20th century consisted of subsidizing chain grocers and agrindustrial plantations, giving high profits to processors and packagers, befuddling the public with brand names, destroying fertile land for suburban sprawl and aircraft companies, destroying water supplies and importing expensive water, preventing rural cooperation by monopoly tactics, destroying villages by highways and supermarkets. By the '60's only six per cent of the population was rural. Vast beautiful areas had been depopulated and were returning to swamp, as in the later Roman empire.

"Meantime there were obvious signs of urban over-population. Urban costs mounted geometrically, for utilities, sanitation, policing, housing, schooling, welfare, transit, etc. To live in a densely populated area, in however degraded a condition, was itself a luxury; yet the inhabitants were becoming poorer and poorer. The middle classes, who had options, fled to the periphery to avoid taxes and the lower classes. Despite the agricultural technology, the price of food did not diminish, since the economics of scale went to the middlemen; and once the possibility of small competition was destroyed, the chains went to town. One could no longer buy an edible tomato. When Southern sharecropping was destroyed by mechanization, no effort was made to give subsistence to the Negroes; they were forced to come to northern urban areas, even though the worst public housing cost $20,000 a dwelling unit to provide. (I say 'urban areas' because there were no longer such things as

'cities.' I say 'dwelling unit' because there were no longer such things as 'homes.') A psychiatric survey of midtown New York in the '60's showed that 75 percent of the people were neurotic and 25 percent needed immediate treatment. There were 70,000 heroin addicts in New York.

Rural Reconstruction

"The tendency of efficient technology since 1900 - electrification, automobiles, power tools, distant communication - was toward dispersal and decentralization. Only promoters and self-aggrandizers had pushed the urbanization. Thus some kind of rural reconstruction was bound to occur. When cybernation made possible absolute concentration of a whole industry in a small area with a small labor force, the vast agglomerations of factory towns towns became obsolete; and there was no technical reason why decentralized teams of designers and programmers should not tend their gardens or go fishing. Nevertheless, it has been a gradual process, full of serendipity and hang-ups, for rural life to find its present shape.

"But to end on a merrier note, let me mention the beginning of specialist farming, where I happen to know the inside story, entirely typical of our human arrangements, alas. M., the mayor of a rather large urban area in the middle west, was the brother-in-law of L., who owned one of the hotels. L. thought he could steal a march on his competitors if he could revive the novelty of edible food. He got M. reelected and M. rammed through the quizotic reestablishment of a farmers' market, where L. signed the prime contracts. But to everybody's consternation, this tipped off the national fad of Quality that boomed in the middle '70's. Luckily it happened overnight. By the time the chain grocers tried to have fresh food banned under the Food and Drug law, it was too late."

Truth is said to be stranger than fiction. It would seem that Goodman's fiction is more familiar than truth.

IV. REORGANIZATION OF AGRICULTURAL INSTITUTIONS

In view of the fact that whatever else is true - and the need to maintain world markets is not inconsiderable - the present U.S. farm policy rewards the few (large farmers) and penalizes the many (small farmers and agricultural workers). This would be bad enough in itself, but it has contributed to the crisis in the cities. Vast numbers of untrained people have flooded into the cities and not finding work have exploded in their frustration. To stem this tide revisions in all aspects of production and marketing are necessary. According to the National Commission on Food Marketing in seventeen years the farmers' share of the retail price of a basket of food fell from fifty-one to thirty-seven percent.

Stanley Andrews, head of the Point IV program under President Truman and a keen observer of the agricultural scene suggests:

> "Forty years of major government intervention in agriculture in an effort to bring producer income and living standards in Rural America somewhere in line with industrial and urban centers suggest--
>
> 1. A need for a look in depth at Rural America and the establishment of principles and guidelines for rural leadership and government programs for the years ahead.
>
> 2. It is time to quit bragging about how few farmers feed how many people with over-emphasis on production of things rather than the effect of programs on people and the rural community.
>
> 3. It is time to look ahead and not look backward. A time to decide what kind of tomorrow we want and expect for Rural America and rural people, and to establish priorities in the use of our resources to that end.
>
> 4. It is time to look at agriculture in the context of rural life, not just the commercial farm.

"Eight years ago a Rural Areas Development program was undertaken to create new jobs in the rural community for these underemployed, both in the agriculture per se and rural dwellers generally. This has been generally successful in the promotion of recreational areas, establishment of small industries in some communities and has been one means in some places of concentrating the resources in government, local community and private industry into a pattern which has profoundly affected a given community. However, this program to date has only demonstrated WHAT CAN BE DONE, rather than being taken on as a real national effort and full use of all resources, government, private, and local, to in effect rebuild and reinvest in Rural America.

"First and foremost, the next president of the United States and his Secretary of Agriculture should avoid any new and startling programs or changes of direction in the present structure serving agriculture for a period of at least two years. A thorough and in depth study and review, conducted outside government structure as the first order of business. Such a study would seek to define the needs and the priorities for Rural America in the decades ahead with recommendations on the changes in bureaucratic structure and emphasis, oriented toward the welfare of people. This first step might take the form of a Country Life Symposium approved by government but financed and carried out by two or three of the great foundations combining resources at the request of the government. This symposium which should be preceded by at least two years of genuine preparation, might well have on its agenda such questions as these--

1. The dangers and inadequacies of the popular idea of a Guaranteed Minimum Income for all people. This intriguing idea undoubtedly would help in instances of chronic welfare but as today's great social unrest and frustrations so well demonstrate, the mere assurance of an income, even a very large one by world standards, is NOT enough to provide real fulfilment to the individual human being. These unseen factors should be studied.

PAGE PARTIALLY ILLEGIBLE

2. The future role of artistic and cultural occupations and activities to supply self-satisfactions and expressions in an increasingly affluent society. Much is being done about outdoor recreation and this is good. Mere recreation does not fill the gap.

3. The corporate threat to family farming.

4. An exploration to avenues of more rewarding or fulfilment living especially for those reaching the retirement age, now ranging to as low as 55 years (something for them to do). Some of these avenues for Rural America are:

a. Riverside homesteads.
b. Municipal gardens.
c. Forest homesteads.
d. Strengthened family farming with wider opportunities for young people who want to stay on the land.

5. Human needs and aspirations in an era of achieved advanced education.

6. Education for fulfilment living rather than just a job alone.

7. Studies and long range forecasts of labor force and GNP as these relate to transference from production to a fulfilment oriented society.

"Other probably more pertinent areas could be added to this list and explored. This exploration should be wide open so far as ideas are concerned and should attract the best brains from every segment of the total society directly relating to what is happening and may happen in Rural America to the rest of the nation, now predominately urban. This sysposium should seek a concensus on what is really important at this time and set up priorities for the use of resources and personnel to carry out those priorities.

"Reorganization and reorientation of the bureaucratic structures in agricultural institutions will be required. The U.S. Department of Agriculture and its main cooperating agencies, and the Land Grant Agricultural College System have over the years been one of the most flexible and responsive agencies of government in meeting new conditions and especially responding to public demand for action in rural problem areas, mostly production and marketing.

"The proliferation of straight line bureaus reaching from Washington to the local community, a system more generally followed by U.S.D.A. than by

any other agency, works fairly well as an administrative device at the top, but it offers the local community a whole series of offices, people and programs, in every county in the United States operating from the ground to Washington with little or NO REAL relationship with each other.

"If we are capable of establishing priorities in agriculture in Rural America, then why not direct some of this research resource in men and personnel, to these top priorities. Let's direct research, instead of mere production orientation toward QUALITY--quality of products in terms of enjoyable eating, not merely a means of survival--QUALITY of life and fulfilment living rather than mere existence. All production, agricultural and industrial, is being dangerously concentrated into fewer and fewer hands. While those who do not control the means of production and are merely workers in the system are perhaps better off materially than in any other country in the world, history of every civilization REPEATS and shouts the warning, that merely being kept and provided for as a good animal is kept and provided for, does NOT satisfy the human species beyond a certain minimum. Participation and a sense of ownership of something far outweights the merely comfortable existence.

"This has been submitted NOT as a complete or detailed blueprint but as a series of suggestions which might be considered as we enter a new period not only in Agriculture and Rural America but as a nation moves into new paths and new directions in search of the American dream."

V. RELOCATION SYSTEMS

The Urban Studies Center of the University of Louisville is completing the preliminary design of a comprehensive system of assistance to families moving from rural to urban regions. First, we are attempting to design a system that could be applicable to and utilized by any region which is both an economic growth and a labor shortage region. Second, we are designing a demonstration test of this system to assist 5,000 families moving from Eastern Kentucky, helping them

to move into the Louisville urban region over an eight-year period. Studies indicate that growth will take place in regions totalling 250,000.

In designing such a system we have kept constantly in mind the human needs of the people of the rural areas. Past migration has resulted in the movement of too many people who were totally unprepared for life in the city and employment in an industrial setting. Therefore, this system will provide various educational, vocational, social, housing and health components that a rural family would need to be able better to adjust to urban life. The goal of the Urban Studies Center is to help rural families wanting to move, to move to an urban region where they will be welcomed with a good job, good, moderately priced housing, good schools and friendly neighbors, where there are good health and social service facilities, and where there is the maximum opportunity for joining the mainstream of American life. People have tended to move to cities of reputation (past opportunity) rather than to growth centers. Furthermore, it is invalid for anyone to be moved who will earn less than $5,200 in the new setting.

In addition, there will be other benefits from such a program. Many of the problems of urban America are rooted in its rural life. By bringing employable rural residents to the urban regions that will welcome them, welfare costs will be lessened, continued maximum economic growth will occur, and the life of the nation as a whole will be bettered.

Such a system will better the economic, social, and educational life of the rural areas of our nation. By training potential migrants in a rural setting before migration the educational resources of rural areas will be strengthened, local governments will be strengthened, burdensome welfare rolls will be pruned, and a supply of skilled workers will be developed and stockpiled nearby for that future time when economic development envelops the now rural region.

To combine these three-fold needs, that of helping the rural poor, that of assisting in the development of rural America, and that of maximizing national growth in a humane way, we have devised a system which we believe can effectively assist people moving from rural to urban America. This system is based upon the belief that rural families should not move to urban areas without training, education, practical orientation to urban life, and a system to meet whatever problems they might encounter in their particular urban destination region.

In practice, a family living in a rural area such as Eastern Kentucky desiring to move to an urban area would undergo the following process: First, the family breadwinner, while living in his home country, would be paid to take part in an intensive period of orientation and training for work and living in the urban region. Both the breadwinner and his wife, and in some instances the children, would receive orientation in consumer education, job skills, homemaking, credit buying, introductions to urban laws, etc., --all <u>before</u> moving.

While actually involved in such training, these families would visit the Louisville area in preparation for understanding the resources of the city that are available, probably two or three times. While visiting they would be the guests of a host family in whose home they would stay for the weekend to become better acquainted with the community of which they will become welcomed members and neighbors.

While the rural resident is training, the urban area will be preparing for the arrival of him and his family. Job commitments at an adequate pay scale will be secured for him. Educational, health and social facilities will be expanded to adequately service his family. We will also be building a new community in which such families would live. Because of the shortage of low-cost housing in Louisville, we would build twice the number of homes needed for those who would migrate. Those not needed by the migrants would be sold on the open market to other residents in the Louisville area, thus solving the problem of housing of migrants and generally increasing the supply of low-cost housing in the urban region. The migrating family would have the option to buy or lease such housing, whichever is preferred.

VI. OPEN SPACES CITIES

In a speech by E. W. Kiley, Rural Area Development Specialist, at the National Advisory Committee on Rural Areas Development, March 26, 1968, some new concepts in "open spaces city" planning were presented.

"The population density, for instance, of North Dakota today is less than 10 people per mile. That's too sparse; but the population density of Harlem approaches 200,000 per square mile. Indeed, if every United States Citizen were crowded together as they are in Harlem, the entire population of the country could live in New York City alone. These conditions are intolerable and cannot be allowed to continue. The size of cities, it can be argued, must be limited if they are to be viable structures of this civilization. The crowding such as exists in Harlem no longer produces a viable society, and all scientific experiments with animals, and all sociological experimentation with people tend to confirm this problem. Yet, each major city approaches more and more closely the same intolerable conditions. What we need to do is to diversify our population and our industry and our facilities across this land under a better plan.

1. A Change in Concepts

"Let us take another look at our cities. We can use New York, Chicago, Detroit, or Los Angeles, but let us use a smaller city, Washington, D. C., where I currently live, and examine it more closely. Let us examine this from the standpoint of time and distance. I live in Washington, D. C.; yet, I don't really. I live in another county; in fact, in another state. One of my good friends also lives in Washington, D. C.; yet he lives in still another county and another state. The distance between Rockville, Maryland, a suburb of Washington and another, Mt. Vernon, Virginia, is somewhere between 30 and 40 miles. More important the distance between my home and his is somewhere between an hour and 15 minutes to an hour and a half. The distance between my home and my office is not four miles, but 25 minutes.

"When I fly from Washington I can fly from either of my Washington Airports, neither of which are located in Washington, D. C. I am approximately an hour away from Dulles International Airport in Virginia or Baltimore Friendship Airport in Maryland. Yet, these are Washington Airports. If I go to a movie or to a play or to see a musical review I travel anywhere from a half an hour to an hour, yet I consider them local Washington entertainments. On these trips I completely disregard the state

lines, the county lines, city limits, township limits, etc. To me, I am merely catching a plane, seeing a movie, attending a play or a musical "in-town." If we had a map of time instead of miles of my city in Washington and superimposed it on almost any rural area I think you could begin to see my point. You would have a city of open spaces between neighborhoods and shopping centers. A city where between the neighborhoods and shopping and service centers you could fish, hunt, play golf, hike, and enjoy life. In Central North Dakota for instance, I see a city whose South side is Bismark, whose East side includes Devils Lake, whose near North side includes Bottineau and whose West side includes Minot. I see a city which includes the magnificant Garrison Reservoir and the Missouri River and Lake Darling and the International Peace Gardens with many beautiful and delightful places to live in between.

2. Horse and Buggy Governments in the Jet Age

"Let us go back again to our study of New York City. Do you know how many units of Government are in the city of New York? You won't believe this, but today there are over 1,300 different Government units being supported within metropolitan New York. Can you imagine the cost of supporting 1,300 units of Government in one city? At least they have one Mayor and one unifying body. The State of Georgia boasts 159 counties. Does this make sense in modern Georgia? Georgia, however, has now taken the leadership in modern thinking by developing 13 Area Planning and Development Commissions. The artificial boundaries of counties were drawn generally to indicate the distance one could travel by horseback in one day. But, what do these artificial boundaries have to do with our present way of life? Counties, townships, village limits and city limits were made for our convenience and for our practical use. Obviously we can not throw out county, city and township Governments and other municipal bodies, but we can at least strive for the cooperation which has allowed multi-county rural electric systems to grow and flourish. So our thinking today must be in terms of modern time and distance. If we apply our time and transportation overlay to Central North Dakota we can begin to see how we could benefit by consolidated services and cooperation with this "Open City." We could see how

a development on the South side of the city affects the whole city. How a central service facility when applied to our time and distance concept, serves the whole "Open City," that the development of an industry in the center of our new "Open City" provides jobs and opportunities for those who live in the South side, the East side, and the North side, and the people coming into our new "Open City" will choose to live on all sides of town.

3. A New Age of Transportation

"Let us look now to our emerging transportation pattern. Each of our major wars has produced new transportation systems. If any good can be considered as coming out of a war; transportation and medical breakthroughs might be considered in this light. World War I hastened the development of the airplane. World War II introduced the jet age. The end of the Viet Nam conflict will certainly put us into the helicopter age. With our present rate of production of helicopters up to over 100,000 a year already, we will obviously see a dramatic effect and impact immediately after this war. Are we building with this fact in mind? The helicopter has changed transportation and supply logistics and medical facilities completely in Viet Nam. Field hospitals for the treatment of the wounded as we knew them in World War II are a thing of the past. Major hospitals are now built far behind the lines and helicopters transport the wounded to them. The helicopter age will introduce new time and space concepts and must be therefore considered in our "Open City." Other vertical take-off transportation and hover-craft will be hard on the heels of the helicopter. Our municipal buildings, our State buildings, our Federal buildings, and new industries and other collection points of humanity ought to be built with heliopports in mind. Planning for such new transportation changes within the "Open City" I am describing, and where new public facilities are placed, will need to take this into account.

"Our roads within our "Open City" must be designed to facilitate our moving from the North side to the South side with ease, to our open spaces, to our facilities, and services, to our schools, to our homes, and to our airports. Let's

confine our rivalries to the High School and College fields which by the way are every bit as strong in the city of New York as they are with one small community against the other. Let's put an industrial park in the center of activities so that all villages and all cities can equally receive the benefits from the industry that would be developed. After all, the most successful research and industrial center in the nation today is the research triangle in North Carolina between three cities, Raleigh, Durham, and Chapel Hill. Who is best equipped to develop this kind of program? The utility that serves the rural areas who have already demonstrated this kind of cooperation: the rural electric systems.

4. Credit and Investment in an 'Open City'

"In Central North Dakota, NRECA and the rural electric systems there have determined to outline a plan for providing development funds through an Area or District Development Corporation. This can become a reality with SBA furnishing up to 90% of the capital needed for industrial land, plant, and equipment for new industries. With the Board of Directors of the rural electric systems becoming the nucleus of the Board of the Development Corporation and the Manager of Central Electric Power Cooperative in Minot becoming the Executive Secretary, they can provide needed capital throughout the whole 'Open City' such as I am describing. This development corporation could also provide the vehicle through which private investments could be made from within the outside of our 'Open City.' A South side bank in our new 'Central City' would want to invest in a North side business interest knowing it will benefit the whole community. The state could locate new facilities anywhere within the new 'Open City' knowing it has the support and cooperation of the whole city, as could the Federal establishment invest in the 'Open City' knowing it had the support of all within our 'Central City.'

"Private industry, seeing the cooperation, facilities, and advantages of our 'Open City' in terms of labor force, industrial sites, transportation and other services will seek to join the industrial development of the area. The cooperation by all people in our new 'Open City' will

lend strong political support to each of its parts and this political muscle will be felt all the way to Washington.

"To sum up what I am suggesting is to break out of the box-type thinking which we have been doing and prepare for the future, which after all is only tomorrow.

"If you begin to think in terms of time-distance, as we do in the cities; if you recognize the age that is upon us in transportation variations; if you see the advantages of an 'Open City'--if you see the whole area as an 'Open City' containing plenty of clean air and water and open spaces and containing within its borders all of a city's services and facilities and the most modern concepts in transportation and education; if you provide credit and investment capability through a district-wide development corporation; then you have within your power the ability to arrest and then reverse a trend which we all feel is unhealthy for America, and produce a healthy life and economy for rural areas of America.

"From this nucleus of a district development corporation, we can produce a total plan and program of development.

"NRECA can assist rural Americans in the development of a master-plan to provide the jobs, homes, recreational and health facilities, water and sewer systems, training and education, transportation and other services to make this new 'Open City' the most exciting and satisfying place to live."

VII. OVERCOMING WORLD HUNGER

A major issue affecting nonmetropolitan society is carried by parts of the report of the Thirty-Fourth American Assembly, November 3, 1968.

"As a result of dramatic declines in death rates without corresponding decreases in birth rates, the world's population in the year 2000 may be double that of 1965, or six to seven billion people. To provide nutritionally adequate diets

for this many people will require much more food, especially more protein. The developing world needs at least a 4 percent annual increase in food production over the next 25 to 30 years.

"Hope that the world's population of 2000 A.D. can be fed and fed better than in mankind's entire history arises from dramatic breakthroughs achieved in the 1960's. This hope can be realized with technology now available, and with continuing research. But the necessary widespread and affective application of this technology will require major economic, social, and political changes in developing countries, and a much larger scale of effort. Such efforts must be accompanied by continuing, concerted and expanded assistance from advanced nations.

"The temptation is strong in the United States to turn inward, to concentrate primarily on domestic problems while relying upon our geographical location and military strength to protect us from social and political disturbances elsewhere. We reject this temptation as unrealistic in today's world. The magnitude of the need requires contributions from all advanced countries including the U.S.S.R. and Eastern European countries. The Assembly urges lower expenditures for armaments by all countries - and more expenditures of population control and agricultural development.

"We realize that the essential elements to eliminate hunger from the earth are:

- Effective measures to reduce population growth;
- Effective measures to increase food production in hungry nations, and to assure its effective distribution to all persons in the population of each country, with interim food aid from advanced countries;
- Economic, political and social changes in developing countries designed to promote total economic development, without which the above cannot be achieved; and
- Substantial assistance toward all these objectives by the advanced countries.

"Advanced nations should continue to make food aid available to the hungry nations but in such a manner that agricultural development among the recipients will not be retarded. Future emphasis should focus upon improved nutrition through more

protein and upon sound economic growth and less upon total food tonnage and surplus crop disposal.

"International trade and monetary policies should be modified to encourage balanced economic growth in all countries and to permit developing nations to earn foreign exchange increasingly through commercial trade rather than through grants and concessional loans. At a minimum, the discriminatory barriers to imports from developing countries should be removed by the United States and other advanced nations with appropriate adjustment assistance to those adversely affected.

"Farmers of developing nations should be encouraged and assisted in establishing cooperative organizations so they can share in the investment and in the use of needed inputs more advantageiously, promote better markets for their products, and obtain credit on more favorable terms.

"Greater efforts must be made by churches, public information media, universities and other concerned organizations in the United States to increase public awareness of positive accomplishments of United States foreign assistance and of the need for continuing and greatly enlarged commitments of resources of this purpose in the future.

"The advanced nations have a common interest in providing technical and capital assistance to the developing nations. We deplore the fact that, in recent years, while other developed nations have been increasing their aid, assistance by the United States has been drastically reduced. We now rank seventh in the percentage of national income that we devote to foreign aid. We recommend that the level of United States assitance should not only be returned to earlier levels, but should be further increased by about 50 percent. Such assistance from the developed countries is essential to achieve the goals outlined above.

"An effective political constituency for foreign aid is needed and can be developed in this country through the traditional American mechanisms, with public discussion and confirmation among groups having diverse interests leading to agreement on common goals and policies."

VIII. INDUCING SOCIAL CHANGE

A. Direct Action

The challenge of the needs of Society is of such magnitude that the Church is taking a more direct role in inducing social change.

In the January 1967 issue of Playboy magazine, Harvey Cox further clarifies the nature of this more direct role - especially by the younger churchmen:

> "The new reformation of Christianity is already under way. It is bringing with it changes incomparably more sweeping and profound than those of the 16th Century. Both in America and abroad, churches have plunged into a tempest of theological innovation, liturgical experiment and social activism. Nuns infuriate religiously inclined bigots by carrying placards in racial demonstrations. Theologians formulate secular interpretations of the Bible. Trap drums and electric guitars pulsate in chancels. The former world capital of anticommunism, the Vatican, openly questions America's war in Vietnam. In dozens of American cities, churches organize poor people to battle city hall. What's going on? Will the new reformation bring a new division of Christendom?
>
> "This younger generation of Christians insists that the Church must now either live up to its words or get out of business. They see the present liturgical innovation and political engagement of the churches as signs of hope. For these new-breed Christians, man encounters God not just inside the walls of church buildings but in the complexity of everyday life in the world, with all its terror and delights. Faith has more to do with one's fondest hopes for this world than with saving one's soul in the next. This growing group of young churchmen includes not just laymen but an increasing number of ministers, priests and nuns bent on moving the Church toward a more direct role in inducing social change."

Growing out of the analysis by Harvey Cox, we can note an increasing dissatisfaction with service to the institution of the Church unless there is full opportunity for a wider role in Society. This means participation in the action and affecting the points of influence. W. H. Ferry of the Center for Democratic Institutions indicates that he is not sure of what is meant by the religious crisis.

> "Is the crisis due to religion's yeilding too much power into non-religious hands? Has religion failed to provide sufficiently attractive goals? Is it that the religious establishment finds itself so feeble and confused that it cannot provide the world with a convincing ethical order? Or is it that there are not sufficient resources in Holy Writ to provide the aims, the moral guidance, and the restraints needed by an armed, polarized, vexed world?
>
> "A bystander gets the impression," Ferry added, "that religion today is usually found in one of three stances: walking on the edges of the turmoil, wringing its hands and wondering what it might do; remaining within the walls of the church and waiting for people to return to its teachings and promises; or mixing into the fray and thereby becoming almost indistinguishable from other well-intentioned contestants for followers."

B. <u>Open Use of Power</u>

The more indirect appeals of previous days are being supplanted by an open use of power by the Church or in cooperation with social groups to achieve reconciliation.

Recent experience in programs of civil rights and anti-poverty have confirmed for many the necessity of equalizing opportunity - particularly economic opportunity, and that this cannot occur apart from a transfer, or sharing, of power.

Voluntary groups can most effectively provide a voice for the powerless or dispossessed. Such groups can be the means for sharpening issues - of even bringing hidden conflicts into the open, that communication and decision making can occur.

The Delta Ministry is a program that seeks to aid in reconciliation by way of equalizing the economic, social, political and religious opportunities of the people of Mississippi. Obviously, if one segment of the society functions at a gross disadvantage to other segments of society, the possibility of reconciliation is precluded. It also follows that those who know only advantage are shut out from renewal. Renewal is a by-product of reconciliation, and reconciliation does not occur in the midst of inequality and/or oppression. Only those individuals and churches that engage in the correcting of inequities experience renewal.

In many ways this open view of the importance and use of power is complemented by a similar understanding of the validity of community programs.

C. God in the World

The recognition that non-church situations and structures are authentic foci for God's activity, coupled with the impossible expense of maintaining separate church programs of education and benevolence, has resulted in a revision of the allocation of resources.

Perhaps the most striking change in thinking that has occurred is the shift (not too evident as yet) by the Roman Catholic Church

regarding parochial education. Two recent studies, "The Education of Catholic Americans" and "Catholic Schools in Action: The Notre Dame Study," indicate that Catholic education is virtually wasted on three-fourths of those in Catholic schools.

Campus ministries have been based on the same fallacy as all other ministries than the local church; i.e., from a separate position ministering to the students. With the Maryland Court decision on no federal aid to sectarian schools as a guide, most states will likely follow a similar pattern and church-related colleges will either become secular or go out of business. This can mean an increase of support for work on the college campus.

Seminaries of practically every denomination, unless they are related to a large university, will find it increasingly difficult to provide adequate education. Already most of the denominations are putting more and more of their resources into programs of continuing education that are either ecumenical or in connection with a secular university.

Such community-oriented programs as the Urban Training Center and the Ecumenical Institute in Chicago, The Great Plains and Appalachian Planning Commissions, the Ecumenical Center of Renewal and Planning at Indianapolis, MUST in New York, the Los Angeles Goals Project, Columbia Maryland Religious Facilities corporation, anti-poverty groups such as CCAP, world hunger agencies, and community organization groups are commanding more and more time and money from the denominations.

IX. CREATIVE COOPERATION

A. Competent Pastors and Services

There is an increasing demand for highly imaginative as well as dedicated pastors coupled with a growing shortage of such pastors. Could it be that this is an evidence of God's judgment for failing to be good stewards of our pastoral resources?

There is an increasing need for such specialized services as counseling, religious education, recreation, including music, drama and the plastic arts, youth work coupled with a growing shortage of such specialists, plus the limitation of facilities, plus the folly of needless duplication. The forms of cooperation exemplified at Lunenburg, Massachusetts; Dale Hollow, Tennessee; Schellsburg, Pennsylvania; and Aberdeen, South Dakota should be increased. To do so will involve planning, self-study, alliances and diversification.

B. Better Administration

There is an increasing awareness on the part of nearly all social agencies that central services are not only necessary, but more valid in our mobile and heterogeneous society coupled with a tendency of each church unit to want to "go-it-alone." In fact, the claim of the consolidated school is that all the aforementioned problems are solved in regards to education and teachers in such schools. If this is true then small church units under the administration of poorly equipped pastors can only be justified on the basis of "folk religion" - each family with its private "witch doctor."

C. Mission and Unity

As we have come to an appreciation of specialization in other areas, so now we need to utilize this approach for local churches. Programs, either nationally or locally conceived, should be designed for the total parish. Each church of whatever denomination should become a work group for a specific area of ministry and all churches contribute to the whole ministry to the area. The existence of multiple churches could then be a resource rather than a threat. As they engage in planning and projects it is for the object of mission. And when groups cooperate together on community projects unity often emerges. Christians will find their oneness in Christ as they participate in God's mission in the world. Furthermore, the pastors must not only function as a team between themselves, but at a second level with the other disciplines represented in the community. However, if this is to occur, there must also be developed new support structures to sustain this creativity. This will of necessity hasten the process of the reordering of denominational and ecumenical structures on a regional basis - providing the financing of those structures proves feasible.

D. New Ministries

When there are several organizations that share in the meeting of needs, the Church is provided the freedom to pioneer in other areas. The horizons are unlimited for the Church's opportunity in

community organization, conservation, housing, economic development, study groups, geriatrics, leisure-time activities (made possible through a shorter work week), labor management problems, and the whole field of Christian vocations wherein a new concept of usefulness is urgently needed. The Church need not complain that some of her projects are now being carried on by other institutions, but she should be concerned if there is a lack of coordination and a failure to move toward the goal of: "Thy kingdom come, thy will be done on earth as it is in heaven."
(Mt. 6:10).

Rural Housing Ills Blamed On 'Failure to Communicate'

11/15/70 Mtg Ala

The problem is "if you're a good nigger, you get a house—if the white man says so."

So said Kenneth Ward as he detailed Saturday his grievances against Farmers Home Administration programs during the second day of a two-day probe into poor rural housing in Alabama by the National Association for the Advancement of Colored People.

Ward promised hearing examiners, federal officials and the audience alike he would "raise sand and raise hell" with anything and everything federal until he is certain justice is being done.

Ward was one of several rural Alabama homeowners to testify during the open hearings.

At the conclusion of Saturday's session, the examiners and federal officials summed up the reasons they believe Alabama's poor rural blacks have not—apparently—been taking part in federal home construction aid programs to a large extent.

And their common conclusion was the underlying problem was a failure to communicate.

The examiners also called for a re-evaluation of the state FHA's hiring policies and for vigorous investigation into any and all cases of alleged regulations abuse.

Garrett told the group he believes the state FHA program to help poor rural blacks purchase homes has made tremendous strides during the past few years.

Civil Rights Leaders Set Housing Tour

Mtg Ala 11/13/70

Civil rights leaders will take a look at rural housing conditions in Alabama in an afternoon-long tour Friday and an all-day hearing the following day.

The inquiry is sponsored by the National Association for the Advancement of Colored People, and the organization's housing director, William R. Morris of New York, is scheduled to take part.

NAACP officials, lawyers and others who will conduct the hearing have arranged a four-hour tour of nearby rural communities starting at 1 p.m. Friday. Newsmen have been invited to go along.

Among those scheduled to give prepared statements and exhibits at the hearing Saturday are state director John A. Garrett of the Farmers Home Administration; Mrs. Sallie Hadnott, NAACP branch president from Autauga County and an unsuccessful candidate for secretary of state in the and an unsuccessful candidate for secretary of state in the Nov. 3 election, and John Hulett of Lowndes County, a newly elected Negro sheriff.

Rural Housing in Alabama Shocks Civil Rights Group

Mtg Ala 11/14/70

Civil rights leaders meeting with newsmen here Friday night expressed shock, amazement and outrage at rural housing conditions in Alabama.

They were in Alabama for a two-day inquiry. A similar inquiry has been scheduled Dec. 4-5 in Long Island, N.Y. Both are sponsored by the National Association for the Advancement of Colored People.

The civil rights group, composed of regional, state and national NAACP officials, representatives of the President's Commission on Civil Rights and federal officials toured rural housing areas in Montgomery, Barbour, Bullock and Macon counties Friday afternoon.

"It was amazing to me to see in the shadow of Alabama's state capitol the number of colored people living in shacks that are reminiscent of the days of slavery," said Mrs. Ruby Hurley of Atlanta, NAACP southeast regional director.

William R. Morris of New York City, NAACP housing programs director, said however, that housing conditions for the rural poor are as bad in the North as in the South.

He said the NAACP is concerned with "the annual migration of workers to the large farms in the North" and the conditions they live under.

Rural Housing Authority Formed

Macon County has joined four neighboring counties in organizing an Area Rural Housing Authority. In their recent filing of the corporate papers for the non-profit corporation, the following counties and their representatives were listed:

Macon County—Freddie L. Washington, CAP Director; Bullock County—Don Priori; Crenshaw County—James Enis; Lowndes County—T. L. Coleman; Pike County—Gene Schroeder, CAP Director, Chairman of the Authority.

The Rural Housing Authority will have the power to apply for public low-income housing in the rural areas of its member counties, provide assistance to low-income rural tenants and assist the many communities under 5,500 population in bettering their housing conditions. A wide range of programs are available to such an authority. Some are: Rental and Cooperative Housing for Rural People, Rural Renewal, Water and Waste Disposal Systems for Rural Communities, Migrant Housing, Public Housing, etc.

As any Local Housing Authority, the Rural Housing Authority must determine the need for low-rent public housing; recommend where and in what form to provide it; carry through the planning, development and management processes; set rent schedules and income limits; and establish eligibility requirements.

The advent of this new organization gives new hope for the rural families in these five counties. Families who had no other choice but to build or seek rental housing in the nearest urban area, can now be provided an opportunity to find a better supply of decent housing in the rural area.

Re: Greer

THE AMERICAN BANKERS ASSOCIATION 1120 CONNECTICUT AVENUE, N.W., WASHINGTON, D.C. 20036

March 30, 1971

Mr. Arthur C. Campbell
Co-Director
Housing and Planning Program
Southern Regional Council, Inc.
5 Forsyth Street, N.W.
Atlanta, Georgia 30303

Dear Mr. Campbell:

I am sorry that we were unable to get together while you were in Washington recently.

I still feel strongly that there is some means by which we can develop financing for low-income families in rural areas throughout the South. The precise form may not be precisely what you suggest (i.e. second mortgage money or down payment or seed money loans) but nonetheless the same objectives can be accomplished.

I also regret not having had the time to talk with you while we were in Atlanta. I was most interested in the nominal support of the major Atlanta banks in providing various kinds of mortgage financing to the destitute areas of Atlanta. As I understand it, aside from what the C & S bank is doing in its own mortgage program, there is an organization on a city-wide basis that provides similar types of financing for low-income mortgages. The degree of its activity in the recent past need not be an indication of its adaptability for rural purposes, however.

I am sending a copy of this letter to Mr. William VanLandingham, executive vice president of the C & S bank, who has been most active with us in our commercial lending activities. If you have not been in touch with Bill about the C & S mortgage lending program, I suggest strongly that you write him to find out the particulars. In the meantime, I look forward to continued discussions with you at a future date concerning the possibility of bank participation throughout the entire South, not just Georgia, in providing an adequate supply of mortgage financing for reasonable rural home loans.

Sincerely,

John B. Nicholson
Program Associate, Housing
Urban Affairs Committee

TUSKEGEE GRAMS

A WEEKLY PUBLICATION

VII September 24, 1971 No.29

ANNOUNCEMENTS

Eleven new dietetic interns have completed an orientation period and are currently pursuing the school's certified program in Hospital Dietetics.

Research on sewage collection and disposal systems for small clusters of low-income, rural homes is being conducted by Tuskegee Institute through a cooperative agreement with the U. S. Department of Agriculture and the Farmers Home Administration. The two-year project is funded by the USDA's Agricultural Research Service.

TO: Participants

RE: Second National Rural Housing Conference

Thank you for attending the Second National Rural Housing Conference. Your participation in the conference demonstrated your concern for decent housing for rural Americans.

The fact that more than 750 rural housing leaders such as you from throughout the nation attended this conference helps immeasurably the efforts to provide decent homes for rural Americans.

As you know, the situation is much more critical now than when the conference was held because of the announcement of the total moratorium on rural housing subsidy programs.

Four copies of a report of the conference and of the resolutions adopted are enclosed.

This information can be the basis for letters to your congressmen and senators, for letters to the editors of your local paper or news releases. Additional copies of these reports and resolutions are available without charge, upon request.

COPIES: Bowie - Vick

SUBJECT:

I am pleased that you are an officer on the National Rural Urban Housing Coalition, for I think it gives the Council an opportunity to stay in close communication with other organizations in the field. Being privy to coalition strategy will enable you to better judge appropriate strategy for the Council.

It is a little bit unclear to me whether the Council should be a sustaining member, or whether you should be a sustaining member, or whether both should be members. You might want to feel this out, but in any event I authorize the payment of a sustaining membership of $50 a year to the Coalition, either in the name of the Council for you, or in the name of the Council with you becoming a supporting member. I would rely on your judgment as to which procedure to follow.

You should keep Harry and mayself informed from time to time about the activities of the Coalition.

National Rural Housing Coalition

Annual Membership Meeting 30 November, 1972

The Annual Membership Meeting of the National Rural Housing Coalition convened at 1:40 p.m., 30 November, 1972. A quorum was present. Approximately 25 guests attended the meeting.

Opening remarks were made by Clay L. Cochran, Chairman of the Board. He explained the formation of the Coalition in 1969 and remarked that the Coalition operates on an annual budget of $10,000 - $15,000 and is, and always has been, run by a part-time staff. He stressed that we are still far short of our goal and urged further communication with Congress on the grass roots level.

Jon Linfield, Executive Secretary, made a few brief remarks on the past year's legislative activities. The 1972 Housing Bill, in original form, contained no provisions for rural housing. The Coalition was instrumental in putting into it a list of amendments on rural housing. Jon also described the Coalition's efforts to increase the appropriation for farm labor housing. The appropriation was increased by only $1.25 million. (These funds were later frozen by OMB.)

The Chairman explained the formation and purpose of the Rural Housing Information Service and described its weekly newsletter, LEGISLATIVE READER.

In the absence of the Secretary-Treasurer, the Executive Secretary read the financial report as of 31 October, 1972:

Funds at start of year	$ 7,277.60
Income as of 10/31/72	7,655.81
Expenditures to 10/31/72	6,846.97
Balance as of 11/1/72	$ 8,086.44

Linfield also reported that as of 24 November, 1972, the Coalition membership consisted of 216 paid (up-to-date) members, and another 131 who are behind in their dues. He stressed the importance of keeping up-to-date on payment of dues.

Last month, the Coalition received tax-exempt status from IRS.

Amendment of by-law - Article II, Section 5:

> The Board of Directors shall be composed of not more than 50 members, all of whom shall be members in good standing of the National Rural Housing Coalition.

A motion was made to adopt the amended by-law. Seconded and passed.

Addition: When a Board member is more than 60 days in arrears in payment of his dues, his seat on the Board of Directors becomes vacant. Motion to adopt. Seconded, passed.

Election of the Board of Directors - There were 18 vacancies on the Board. The following 16 names were placed in nomination by the Nominating Committee: Art Campbell, Gordon Cavanaugh, Clay L. Cochran, Norman Dewire, Cushing L. Dolbeare, Pat Gish, Rev. Shirley Green, Jack Hernandez, Robert Marshall, Thomas G. Moore, Jr., Ben Neufeld, William Pursell, Gerald Robinson, Ed Smith, Karen Tobin, Eleanor Whalen. The following 7 names were placed in nomination on the floor: John Zippert, Mary Moss Young, D. Richard Neill, Lark Watson, Mary Ann Mikolay, Dave Hurlinger, Bill Powers. It was moved and seconded that nominations be closed. Passed.

A question was raised as to the identity of the nominees. The Chairman identified the 16 people nominated by the Nominating Committee, and nominators on the floor identified the other nominees. Followed a ballot vote by all members present. Business continued while ballots were counted.

The Chairman opened discussion on the legislative program of the National Rural Housing Coalition which was originally reflected in the first edition of "People Have a Right . . ." The program was amended and updated by members' actions at subsequent annual meetings. The question arose as to where we go from here - reaffirm the old program, adopt a new one?

A motion was made to adopt the resolutions of the Second National Rural Housing Conference. Seconded and carried. Suggestion was made and agreed to that a copy of the Conference resolutions would be made available to all Coalition members who did not attend the Conference.

Additional Resolutions Proposed:

By Tom Carey (Project Reach, New York) - That the Board of Directors of the Coalition appoint a subcommittee of members concerned about the farm labor housing program of FmHA to examine (1) its present funding status, (2) its present effectiveness, and (3) its future in regard to the next session of Congress. In addition, this subcommittee shall develop a strategy to approach the various difficulties presently confronting farm labor housing programs. A report shall be made to the members of the Coalition and interested parties before 1 February, 1973.

Motion to adopt this resolution was seconded and passed.

By Shar Belanger (Rural Housing Alliance, California) - Ms. Belanger made a motion to go on record in support of the McGovern/Abourezk bill. The motion was seconded and passed.

By Ben Neufeld (Maryland) - Mr. Neufeld proposed that we support the reintroduction of the McGovern/Abourezk bill. The motion was seconded and passed.

The Chairman urged a close study of the bill for any amendments, additions, etc. before hearings, and also a re-study of the section on rural areas withing SMSAs. Comments should be sent to the chairman of the Legislative Committee or to the Executive Secretary.

Karen Tobin (Project Funding Inc., New York) proposed that copies of the reintroduced bill be sent to all members. This was agreed to.

By Lark Watson (New York) - Be it resolved that the Executive Committee of the Board prepare a proposal for amendment of the by-laws to reorganize the Board of Directors and Executive Committee to the following effect: (1) The Board will have distinguishable representatives of the country and individual states in an orderly and recognizable fashion; such representatives shall have field responsibilities for carrying out NRHC objectives; (2) The Executive Committee will represent regions of the country. Discussion followed on the idea of organizing on a state/regional level. Motion was seconded and carried.

Tom Kehoe (New York) urged full-scale operation of NRHC. He wanted to know where the Coalition's money is going. He objected to the election of absentee members to the Board of Directors.

The Chairman commented that the past inefficiency in the Coalition's operations was due to lack of time and money.

A motion was made to adopt the following resolution: Whereas the concern for rural housing is also a concern for the economic situation of its residents; whereas the United Farm Workers Union is presently attempting to improve the economic situation of farm workers through the use of the lettuce boycott to gain their rightful recognition as a union; whereas the Union efforts are vital to the total improvement of the farm workers' situation; therefore, we, the National Rural Housing Coalition, go on record as an organization supporting this lettuce boycott and the Union's efforts, and that we as individuals pledge ourselves to purchase only union-picked lettuce. Motion was seconded and passed.

Election Results: Follows a list of the newly elected members of the Board of Directors of the Coalition: Art Campbell (Atlanta, Georgia), Gordon Cavanaugh (D.C.), Clay L. Cochran (D.C.), Norman Dewire (New York City), Cushing Dolbeare (Philadelphia), Pat Gish (Whitesburg, Kentucky), Jack Hernandez (Seattle, Washington), Robert Marshall (Visalia, California), Thomas G. Moore, Jr. (Burlingame, California), D. Richard Neill (Concord, New Hampshire), Ben Neufeld (Bethesda, Maryland), William Pursell (Durham, North Carolina), Gerald Robinson (D.C.), Ed Smith (Jamestown, North Dakota), Karen Tobin (Sodus, New York), Eleanor Whalen (Hughesville, Maryland), Mary Moss Young (Albany, Georgia), John Zippert (Epes, Alabama).

After the election results were read, the Chairman announced an open meeting of the Board of Directors immediately following the membership meeting.

The Annual Membership Meeting was adjourned at 3:30 p.m.

National Rural Housing Coalition

Board of Directors Meeting 30 November, 1972, 3:45 p.m.

Present at the Board Meeting were Clay L. Cochran, Jon Linfield, John Frisk, Ben Neufeld, Bob Johnson, David Raphael, Karen Tobin, Jack Hernandez, Don Hadwiger, Pat Gish, Bob Marshall, Dan Bedell, Bill Pursell, and approximately 25 guests and Coalition members.

First in the order of business was the election of Board officers. Robert E. Johnson's name was placed in nomination for the office of Chairman. Nominations were closed. Johnson's nomination was seconded and he was elected. At this point, Bob Johnson assumed the chair.

For the office of Vice-Chairman, the following names were placed in nomination: Clay Cochran, Pat Gish, and Bill Pursell. Cochran and Gish declined. Pursell's nomination was withdrawn. Cochran then nominated Art Campbell. Nominations were closed and Campbell was elected to the office.

For the office of Secretary-Treasurer the nominees were: Gordon Cavanaugh, Mary Nenno, and Steve Bossi. Mr. Bossi was elected to the office by a ballot vote.

Following the election of the Board officers was the election of the remainder of the Executive Committee. To this date, the Executive Committee consisted of three (3) officers and seven (7) other members of the Board. Motion was made and seconded to increase the total number on the Executive Committee to twelve (12), retaining a quorum of five (5). The motion was passed. Nominees for the Executive Committee were: Clay L. Cochran, Dan Bedell, Eleanor Whalen, Karen Tobin, Bill Pursell, Jack Hernandez, Gordon Cavanaugh, Pat Gish, Anthony Henry, and Henry Santiestevan. Nominations were closed. Because the nominations totalled 10, Karen Tobin moved to increase the Executive Committee to 13. The motion was seconded and passed. All 10 nominees were elected to the Executive Committee.

Ben Neufeld moved to create a Council of National Organizations whose representatives are on the Board of Directors of the Coalition. This would be a National Organization caucus and would have its own chairman. Discussion followed and the motion was withdrawn.

Karen Tobin moved to establish various specific committees within the Coalition organization. Cochran moved that the Chairman select a committee - an ad hoc "Structure Committee" - to organize the formation of the individual committees. A tentative date was set for the Structure Committee meeting - Thursday, 7 December, 1972, 12 p.m. The Structure Committee will consist of the following: Karen Tobin, Clay Cochran, Henry Santiestevan, Tony Henry, Steve Bossi, and Bob Johnson. The Committee will report on its actions by 1 February, 1973. Committees to be considered at that meeting will be: Goals and Objectives; Regional/State Organizations; Finance; Membership; Legislative; Farm Labor Housing; Publications.

Ben Neufeld moved to authorize Bossi to co-sign checks with Linfield. Seconded, passed.

Neufeld moved to thank former officers for their services. Carried by acclamation.

The meeting was adjourned at 4:45 p.m.

National Rural Housing Coalition

STRUCTURE COMMITTEE MEETING

Thursday, 7 December, 1972

Pursuant to a resolution passed by the members, the Chairman convened a meeting of the ad hoc Structure Committee at 12 noon, 7 December, 1972, in the Coalition offices in Washington. Present were: Robert E. Johnson (Chairman), Gordon Cavanaugh, Clay Cochran, Steve Bossi, Karen Tobin, Bill Powers, and Jon Linfield.

There was a general discussion of Coalition objectives, organizationally and legislatively, both long- and short-term. It was moved by Cochran, seconded and passed, that the following committees be established:

1. Regional/State Organizations
2. Finance and Membership
3. Legislative
4. Farm Labor Housing
5. Education and Publications

It was moved by Cochran, seconded and passed, that the Chairman appoint committee chairmen and members (subject to their approval) from among those suggested at the meeting. Mr. Johnson subsequently named the following people to the committees:

1. Regional/State Organizations: William Powers (Chairman), Jeff Monroe, Jim Stein, Jack Hernandez, Paul Chernick.

2. Finance and Membership: Dan Bedell (Chairman), Steve Bossi, Art Tennies, Gideon Anders, Lenin Juarez.

3. Legislation: Clay Cochran (Chairman), Gordon Cavanaugh, Mary Nenno, Anthony Henry.

4. Farm Labor Housing: Karen Tobin (Chairman), Art Collings, Lee Reno, Jim Upchurch, Eleanor Eaton, John Wilson, Boren Chertkov, Noe Lara.

5. Education and Publications: Norman Dewire (Chairman), Robert Johnson, D. Richard Neill, Phil Brown, Lucy Norman.

Chairmen of all committees are ex officio members of the Executive Committee and are urged to attend Executive Committee meetings, to be held in Washington the second Tuesday of each month at 12:20 p.m. in the Coalition offices.

There was a suggestion that a Congressional Rural Housing Coalition might be formed with a whip structure for critical votes. To be effective it would need the housing figures by Congressional District. Executive Secretary was asked to enquire into the possibility of obtaining those figures from the Legislative Reference Service. George Rucker should supply the proper questions.

The Executive Secretary was instructed to draw up a tentative outline of responsibilities of each committee, subject to revision by the committees themselves.

The meeting was adjourned at 2:30 p.m.

NATIONAL RURAL HOUSING COALITION

By-Laws

Article I Name and Purpose

Section 1 - The name of this organization is the National Rural Housing Coalition.

Section 2 - The purpose of this organization is to carry on a program of education and organization designed to provide a decent home and environment for every family or person in rural America.

Article II Organization

Section 1 - This organization shall be governed by a Board of Directors elected by the membership. The initial Board of Directors shall be elected by those present at the meeting October 31, 1969, and thereafter by the membership at the Annual Meeting.

Section 2 - The Board is authorized to select a Committee of Sponsors.

Section 3 - Membership on the Committee of Sponsors is honorary, and its function is to demonstrate support for the program of the organization. Sponsors are selected for one-year terms with no limit on their reselection.

Section 4 - The Board of Directors shall be elected for three-year terms; only one third of the Board members will be elected annually. The Board may fill any vacancy, including those created by death, resignation, or inability to function, as determined by the Board.

Section 5 - The Board of Directors shall be composed of not more than 50 members, all of whom shall be members in good standing of the National Rural Housing Coalition.

Section 6 - Any member of the Board of Directors with two unexcused, consecutive absences shall be automatically eliminated from the Board of Directors. The Board will pass upon reasons for absences at each meeting. When a member of the Board of Directors is a member of the Executive Committee, the same rule applies.

Section 7 - The Board shall meet at times mutually agreed upon by a majority of its members provided that it shall meet each year in conjunction with the Membership Meeting.

Section 8 - A quorum of the membership shall be 25.

Section 9 - A quorum of the Board of Directors shall consist of not less than five members.

Section 10 - The administration of the organization's affairs, financial or other, shall be carried out by the Board of Directors under the policies established by these by-laws and such other policies as may be established by the membership.

Section 11 - There shall be an Executive Committee made up of the officers and not less than seven other members with a quorum of five. The Executive Committee shall be elected by the Board of Directors annually, and is authorized to carry out all functions of the Board when not in session.

Article III Officers and Functions

Section 1 - The Committee of Sponsors may have such honorary titles as the Board may establish.

Section 2 - The Board of Directors shall elect from its members a Chairman, Vice-Chairman, and Secretary-Treasurer for one-year terms. No officer may serve in the same position for more than two full terms.

Section 3 - The duties of such officials shall be those normal to such positions.

Article IV Staff

~~Section 1 -~~ The ~~Executive Secretary of the~~ Coalition shall be named by the Board and shall serve at its pleasure.

Section 2 - The Executive Secretary shall be the principal administrative officer of the organization and shall have usual administrative powers, including the disbursement and receipt of funds, employment of personnel, etc., under policies established by the membership and the Board of Directors.

Article V Functions of the Organization

Section 1 - The Coalition shall be operated in accordance with these by-laws and the statement of purpose.

Section 2 - No officer or staff member of this organization may engage in partisan political activity in the name of the organization, or use his official time or the organization's funds to further any partisan cause.

Article VI Dissolution and Amendment of the By-Laws

Section 1 - In case of dissolution, any assets of this organization shall be turned over to a nonprofit organization designated by the Board, and no part of the income or property of the association may be transferred to any person.

Section 2 - These by-laws may be amended by the Board of Directors, provided 30 days advance notice is given to the members and Directors in writing.

Article VII Membership

Section 1 - The National Rural Housing Coalition shall solicit the active membership of all persons and organizations concerned with achieving the purposes of this organization. There are three classes of membership, all of whose dues will run for 12 months from date of receipt.

(a) Consumer members shall be individuals who pay at least $1 a year in dues.

(b) Supporting members shall be individuals and organizations who pay not less than $10 a year in dues.

(c) Sustaining members shall be individuals and organizations who pay not less than $50 a year in dues.

Section 2 - All members shall have equal voting rights.

Adopted: October 31, 1969
Amended: March 23, 1971
Amended: November 30, 1972

NATIONAL RURAL HOUSING COALITION

REPORT ON TERMS OF OFFICE OF THE PRESENT BOARD OF DIRECTORS

Following is a list of the members of the Board and the year in which the term of each expires:

Term Expires 1973 (17)
